ADVERTISEMENT FOR BIDS

SECTION 1 – INTRODUCTION/OVERVIEW

Objective/Background/Definitions

On behalf of the Warren County Water and Sewer Department (WCWSD) (Owner), AECOM (Engineer) is inviting you to submit a Bid for furnishing the goods and services described in this Advertisement for Bids. The purpose of this request is to solicit Bids from Original Equipment Manufacturers (OEMs) (Sellers) for the purpose of selecting an OEM prior to the bidding of the construction projects. The Engineer will act as the Owner's representative during this bidding process.

AECOM is the design engineer for two water treatment plant projects—the Richard A. Renneker Water Treatment Plant (RARWTP) and the Franklin Area Water Treatment Plant (FAWTP). Both projects are in Warren County, Ohio. The RARWTP construction contract is anticipated to bid in May 2020. The FAWTP construction contract is anticipated to be bid in June 2020. It is anticipated that each of these Contracts will be awarded by the end of August 2020. The General Contractors (Buyers) who are awarded these construction contracts will become the Buyers. The pricing information provided by the Bidder will be used to determine the Contract Price between the Seller and the Buyers. The RARWTP and FAWTP construction projects are being bid separately, and as such, the Seller will have to enter into Contract with up to two separate Buyers.

This solicitation does not constitute an offer by the Owner or the Engineer to enter into a contract with the Bidder. The terms of the Bid and resulting agreement shall comply with all applicable federal, state, and local laws.

SECTION 2 – BID INSTRUCTIONS AND REQUIREMENTS

Submission of Bids

Bids will be received by Engineer until May 15, 2020 @ 2:00 p.m Bids shall be submitted via email or via hand delivery, USPS, UPS, or FedEx to:

AECOM
ATTN: Matthew Noelker, P.E.
277 West Nationwide Blvd
Columbus, Ohio 43215
Matthew.noelker@aecom.com

Compliance with the Request for Bid

Bids shall be submitted in strict compliance with this Request for Bid. Failure to comply with all provisions of the Request for Bid may result in disqualification.

Inquiries

Any questions related to this Request for Bid shall be directed to:

Matthew Noelker
matthew.noelker@aecom.com
614-600-5980

Inquiries shall be received at least five (5) working days prior to the Bid due date. Responses to inquiries will only be official and binding where issued in a formal written addendum.

Ambiguity, Confliction, or Other Errors in the Request for Bid

If a Bidder discovers any ambiguity, conflict, discrepancy, omission, or other error in the Request for Bid or any document attached to, incorporated into, or referenced by the Request for Bid, they shall immediately notify the Engineer of such error in writing and request modification or clarification of the document. Modifications, where required, will be made by issuance of a written addendum. All parties who have received this Request for Bid from the Engineer will receive addenda. Failure of Bidders to receive or acknowledge any addendum shall not relieve them of any obligation under this Request for Bid. All addenda shall become part of this Bid.

Bid and Presentation Costs

The Owner and Engineer will not be liable in any way for any costs incurred by any Bidder in the preparation of its Bid in response to this Request for Bid, nor for the presentation of its Bid and/or participation in any discussions or negotiations.

Rejection of Bids

The Engineer reserves the right to accept or reject any or all Bids submitted. Reasons for which Bidders may be disqualified and their Bids not considered include, but are not limited to:

- The Engineer determines that the Bid is non-responsive to the Advertisement for Bid.
- The Engineer determines that the Bid is not in the Owner's best interest.
- The Bidder fails to complete the Bid in its entirety in response to this Advertisement for Bid.
- Reasonable grounds existing for believing that any Bidder has a proprietary or pecuniary interest in more than one Bid, or that collusion exists among the Bidders.
- Failure of the Bidder to satisfy any requirements of the Advertsiement for Bid.

Engineer's Right to Research Bidder's Experience

The Engineer, prior to or after receipt of the Bid, shall have the right to research work performed by the Bidder. This research effort will be conducted by the Engineer, as deemed appropriate, and may include site visits and interview with anyone involved with such projects.

The Engineer reserves the right to contact any and all references (including those not furnished by the Bidder in their Bid) to obtain, without limitation for the purpose of evaluating the Proper's qualification, the following minimum information regardless of Bidder's performance on the listed jobs:

- Was Bidder cooperative during the submittal process (e.g., negotiation of scope of supply, schedule,

shop drawings, etc.)?
- Did Bidder effectively address problems that arose during the project?
- Did Bidder address warranty and punch list items in a timely manner?
- Were Bidder's project manager, commissioning supervisor, and other key personnel competent and professional?
- Was the Owner satisfied with the finished product?
- Were there any issues related to project schedule at any point in the project, including design, construction, startup and commissioning, as a result of the Bidder's design submittals, Bidder's equipment supplied on the project, or the Bidder's personnel involved in the startup and commissioning of the project?
- Were there any claims or disputes initiated by or involving the Bidder associated with procurement, implementation, or startup of the Bidder's equipment supplied on the project?

Terms and Conditions

The Agreement resulting from this Request for Bid shall be subject to the conditions set forth in the Engineers Joint Contract Documents Committee (EJCDC) procurement documents, as amended, including the "Agreement between Buyer and Seller for Procurement Contracts", and the "Standard General Conditions for Procurement Contracts".

Terms of payment shall be in accordance with the "Standard General Conditions for Procurement Contracts" and the "Agreement between Buyer and Seller for Procurement Contracts".

The Bidder's standard preprinted terms and conditions will not be accepted as a substitute to the above referenced EJCDC procurement documents. Should the Bidder request modification to EJCDC procurement documents terms and conditions, they shall make a written request to the Engineer at least five (5) days prior to the Bid due date. Any accepted modifications will be addressed in an Addendum.

SECTION 3 – BID EVALUATION AND SELECTION

Consideration of Bids

Properly Identified Bids receveived on time will be publicly opened and read aloud.

The Engineer reserves the right to reject any or all Bids, and shall have no liability whatsoever to any Bidder whose Bid is not accepted. Bid Packages containing irregulatities, conditional or obscure language, or addtions not requested by the Bidding Documents may be rejected.

Acceptance of a Bid will not constintue an Agreement between thw Engineer or the Owner and the Bidder, and will not be binding unless and untl an Agreement coverimng all conditions and prvisions of the Work have been reduced to writing and excuted by the Buyer and the Seller.

All alternates are mandatory.

Low bidder will be determined by base bid, plus/minus any selected alternates. The Engineer reserves the right to request clarifications and/or corrections to Bids. Once the evaluation is complete, all responsive Bids will be ranked and the Bidder with the lowest total cost will be selected.

The Engineer will then issue the selected Bidder "Notice of Tentative Selection" indicating that, subject to the award of the general construction contracts, the Bidder's equipment and pricing will be incporated into the Project as the Basis of Design, and will be included in the the Construction Contract Documents.

Price

The Bidder shall complete the Itemized Price Proposal (Division 00, Section "Bid Form", Article 4) as part of their Bid.

Submittal of Bid indicates that the Bidder has a full understanding of the scope of work based upon a review of all information furnished with this Request for Bid. The prices entered shall reflect the scope of work requested in this Request for Bid, including any additive and deductive alternates, based on the requirements of this Request for Bid.

Projected Timeline of Deliverables

The Bidder shall complete the Proposed Project Schedule (Division 00, Section "Bid Form", Article 5).

SECTION 4 – BID FORMAT AND CONTENTS

General

The information listed below shall be submitted with each Bid and shall be submitted in the order shown. Each section must be clearly labeled the section titles below.

Bid Form

The Bidder shall complete and submit the Bid Form (Division 00, Section "Bid Form") included with this Request for Bid. The Bid Form includes the Bidder's Cost (Article 4) and Schedule (Article 5).

Attachments

Attachment 1: Bidder Qualifications

Bidder shall provide a list of at least four (4) projects of similar size (permeate capacity of at least 5 MGD) and scope previously completed and in operation. Information for each project shall be provided on the Bidder's Qualifications Form (Division 00, Section "Bidder's Qualifications") provided with this Request for Bid or a reasonably similar form provided by the Bidder. The Bidder make additional copies of the form as required. Only one project shall be listed on each form. All information requested in the form shall be provided in the order requested.

Attachment 2: Scope of Supply

The Bidder shall submit a detailed description of their scope of supply, including the name of the component manufacturer of all equipment supplied. Any exceptions to or deviations from the requirements of this Request for Bid shall clearly be described.

The System Manufacturer shall consider the cost of items required in this Request for Bid and whether some scope tems would be more cost effective if provided by the Contractor or different component manufacturer

than specified. Provide itemized price deductions for these items along with a description of alternate scope of supply.

Attachment 3: OEM Special Services

Bidder shall include a description of all OEM Special Services, per the requirements listed in Division 43, Section "Nanofiltration Membrane Equipment".

Attachment 4: OEM Warranty

Bidder shall include a description of the proposed warranty, per the requirements listed in Division 43, Section "Nanofiltration Membrane Equipment".

Attachment 5: Installation Instructions and Contractor's Responsibilities

Bidder shall include details regarding the Contractor's scope of work for Bidder supplied equipment. Include unloading, mounting, and installation instructions specifically noting any field assembly that is required. Include a list of any required components not included in the System Manufacturer's scope of supply that must be provided by the Contractor. Also include requirements for installation checklists and support during commissioning.

Attachment 6: Spare Parts

Bidder shall include a list and description of all spare parts, per the requirements listed in Division 43, Section "Nanofiltration Membrane Equipment".

SECTION 00 4113

BID FORM

TABLE OF CONTENTS

Page

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted to the Engineer via email or via hand delivery, USPS, UPS, or FedEx to:

AECOM
ATTN: Matthew Noelker, P.E.
277 West Nationwide Blvd
Columbus, Ohio 43215
Matthew.noelker@aecom.com

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Buyer in the form included in the Bid Documents to furnish the Goods and Special Services as specified or indicated in the Bid Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bid Documents.

1.03 The Buyer of the Goods and Special Services will be the successful Bidder(s) (Contractor(s)) for the referenced Projects.

ARTICLE 2 – BIDDER'S ACKNOWLEDGMENTS

2.01 Bidder accepts all of the terms and conditions of the RFP.

2.02 Bidder accepts the provision of the Agreement as to liquidated damages in event of its failure to furnish the Goods and Special Services in accordance with the schedule set forth in the Agreement.

ARTICLE 3 – BIDDER'S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bid Documents included with the RFP, other related data identified, and the following Addenda, receipt of which is hereby acknowledged:

Addendum No.	Addendum Date

B. Bidder has become familiar with and is satisfied as to the local conditions that may affect cost, progress, delivery, or the furnishing of Goods and Special Services.

C. Bidder is familiar with and is satisfied as to all federal, state and local Laws and Regulations that may affect cost, progress, and the furnishing of Goods and Special Services.

D. Bidder has carefully studied and correlated the information known to Bidder, and information and observations obtained from Bidder's visits, if any, to the Point of Destination with the Bid Documents.

E. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bid Documents, and the written resolution thereof by Engineer is acceptable to Bidder.

F. The Bid Documents are generally sufficient to indicate and convey understanding of all terms and conditions for furnishing the Goods and Special Services for which this Bid is submitted.

G. Bidder further represents that this Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any agreement or rules of any group, association, organization or corporation; Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid; Bidder has not solicited or induced any individual or entity to refrain from Bid; and Bidder has not sought by collusion to obtain for itself any advantage over any other Bidder or over Buyer.

ARTICLE 4 – BASIS OF BID

4.01 Bidder will furnish the Goods and Special Services in accordance with these Contract Documents for the following price(s), which do not include sales tax. Prices shall be guaranteed until August 31, 2020. After this date, if requested by the Buyer and approved by the Owner, Buyer's proposed prices may be escalated by the monthly change of the U.S. Consumer Price Index (CPI) as calculated by the U.S. Bureau of Labor Statistics.

4.02 Additional Proposed Costs:

Description	Proposed Price
The Seller's monthly fee for storage of Goods at Seller's facilities in the event that Buyer desires to delay shipment beyond the shipment date stated below in Article 5.02. Such fee shall include interest on money due Seller.	
The Seller's monthly fee for Buyer delaying the initiation of manufacturing of Goods or for not executing the Procurement Agreement within the time specified in 4.03 below.	

4.03 Seller and Buyer shall execute the Procurement Agreement within 30 days after the Contractor's/Buyer's Notice to Proceed from the Owner. Should the Procurement Agreement not be executed within said 30 days due to the fault of the Buyer, the Buyer shall be subject to the prorated additional costs identified in Paragraph 4.02 above. Should the Procurement Agreement not be executed within the said 90 days due to the fault of the Seller, Seller shall be subject to the liquidated damages provisions in the Procurement Agreement. The issue of fault will be determined by the Engineer.

ARTICLE 5 – TIME OF COMPLETION

5.01 Bidder agrees that the furnishing of Goods and Special Services will conform to the schedules set forth below, which will be incorporated into Article 5 of the Agreement.

Description:	Proposed Number of Consecutive Calendar Days:
Time required by Seller to submit approvable Shop Drawings (consecutive calendar days after Notice to Proceed is issued to Buyer)	
Time required by Seller after receipt of approved Shop Drawings to deliver acceptable Goods to Point of Destination: (consecutive calendar days)	
Time required by Seller to complete assembly of goods onsite (exclude time for unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power)	
Time required by Seller to complete all Special Services (consecutive calendar days after notification from Buyer to Seller to commence such Special Services.):	
Time required by Seller to be ready for Final Inspection and Acceptance of all Goods and all Special Services (consecutive calendar days after notification from Buyer to Seller to commence such Special Services.):	

5.02 Bidder agrees that the prices in Article 4 above are based on the condition that shipment of goods may be delayed by the Buyer.

ARTICLE 6 – BID DOCUMENTS

6.01 The following documents are attached with and made a condition of this Bid:

A. Attachment 1: Bidder Qualifications

B. Attachment 2: Scope of Supply

C. Attachment 3: OEM Special Services

D. Attachment 4: OEM Warranty

E. Attachment 5: Installation Instructions and Contractor's Responsibilities

F. Attachment 6: Spare Parts

ARTICLE 7 – DEFINED TERMS

7.01 The terms used in this Bid have the meanings indicated in the General Conditions. The significance of terms with initial capital letters is described in the General Conditions.

ARTICLE 8 – BID SUBMITTAL

8.01 This Bid is submitted by:

If Bidder is:

AGREEMENT BETWEEN BUYER AND SELLER FOR PROCUREMENT CONTRACT

TABLE OF CONTENTS

AGREEMENT BETWEEN BUYER AND SELLER FOR PROCUREMENT CONTRACT

This Procurement Agreement is by and between **[formal name of entity]** ("Buyer") and **[formal name of entity]** ("Seller").

Terms used in this Procurement Agreement have the meanings stated in the General Conditions of the Procurement Contract and the Supplementary Conditions of the Procurement Contract.

Buyer and Seller hereby agree as follows:

ARTICLE 1—PROCUREMENT CONTRACT

1.01 *Goods and Special Services*

A. Seller shall furnish the Goods and Special Services as specified or indicated in the Procurement Contract Documents. The Goods and Special Services are generally described as follows: membrane softening equipment for two (2) water treatment plants.

1.02 *The Project*

A. The Project, of which the Goods and Special Services are a part, is generally described as follows: membrane softening upgrades at two (2) water treatment plants.

1.03 *Engineer*

A. Buyer has retained **AECOM** ("Engineer"), to prepare Procurement Contract Documents and act as Buyer's representative. Engineer assumes all duties and responsibilities and has the rights and authority assigned to Engineer in the Procurement Contract Documents in connection with Seller's furnishing of Goods and Special Services.

1.04 *Point of Destination(s)*

A. The Point of Destinations are designated as:

RARWTP, 6193 Striker Road, Maineville, Ohio 45039

FAWTP, 6648 Shelly Street, Franklin, Ohio 45005

ARTICLE 2—PROCUREMENT CONTRACT TIMES

2.01 *Time of the Essence*

A. All time limits for Milestones, including the submittal of Shop Drawings and Samples, the delivery of Goods, and the furnishing of Special Services as stated in the Procurement Contract Documents, are of the essence of the Procurement Contract.

2.02 *Schedule of Procurement Contract Times*

A. The following schedule sets forth the Procurement Contract Times:

Milestone	Days
Submit approvable Shop Drawings	**[insert days from attached bid form]**
Deliver acceptable Goods to Point of Destination	**[insert days from attached bid form]**
Complete assembly of goods onsite (if required)	**[insert days from attached bid form]**
Complete Special Services	**[insert days from attached bid form]**
Readiness for Final Inspection and Acceptance of Goods and Special Services	**[insert days from attached bid form]**

2.03 *Shop Drawings and Samples*

A. *Submittal of Shop Drawings and Samples*: Seller shall submit all Shop Drawings and Samples required by the Procurement Contract Documents to Engineer for its review and approval.

B. *Engineer's Review*: It is the intent of the parties that Engineer will conduct its review of Shop Drawings and Samples and issue its approval, or a denial accompanied by substantive comments regarding information needed to gain approval, within 14 working days after Seller's submittal of such Shop Drawings and Samples, or within such longer period that is needed because of the quantity and quality of such submittals. Resubmittals will be limited whenever possible.

2.04 *Liquidated Damages*

A. Buyer and Seller recognize that time is of the essence as stated in Paragraph 2.01, and that Buyer will suffer financial and other losses if the Goods are not delivered to the Point of Destination and ready for receipt of delivery by Buyer within the time specified in Paragraph 2.02, plus any extensions thereof allowed in accordance with this Procurement Contract. The parties also recognize that the timely performance of services by others involved in the Project is materially dependent upon Seller's specific compliance with the delivery requirements of Paragraph 2.02. Further, the parties recognize the time, expense, and difficulties involved in proving, in a legal or arbitration proceeding, the loss (whether direct, consequential, or otherwise) suffered by Buyer if complete, acceptable Goods are not delivered on time. Accordingly, instead of requiring any such proof, Buyer and Seller agree that as liquidated damages for delay (but not as a penalty) Seller shall pay Buyer $1,000 for each day that expires after the time specified in Paragraph 2.02 for delivery of acceptable Goods.

B. Liquidated damages for failing to timely attain Milestones are not additive, and will not be imposed concurrently.

ARTICLE 3—PROCUREMENT CONTRACT PRICE

3.01 *Procurement Contract Price and Total Price—Based on Attached Bid*

A. For furnishing the Goods and Special Services in accordance with the Procurement Contract Documents, Buyer shall pay Seller the prices stated in Seller's Bid, attached hereto as an exhibit, subject to final adjustments for Unit Price Goods and Special Services and Buyer's Contingency Allowance, if any, and subject to the following Buyer-accepted alternates: **[identify accepted alternates, if any]**.

ARTICLE 4—PAYMENT PROCEDURES

4.01 *Submittal and Processing of Applications for Payment*

A. Seller shall submit Applications for Payment in accordance with Article 13 of the General Conditions and the following paragraphs. Engineer and Buyer will process such Applications for Payment in accordance with said Article 13.

4.02 *Progress Payments; Final Payment*

A. Seller may submit an Application for Payment requesting the stated amounts upon attainment of each of the following Payment Line Items:

Payment Line Item	Minimum or Maximum Percentage of Lump Sum
1. Receipt of Approval of Shop Drawings	10% maximum
2. Completion of Acceptance Testing	5% maximum
3. Delivery of Goods to Point of Destination in accordance with the Procurement Contract Documents	
4. Completion of assembly of goods onsite	
5. Completion of Special Services	10% minimum
6. Final Payment: Correction of non-conformities, acceptance of final Operation and Maintenance Manuals, submittal of all final documentation required	5% minimum

B. Buyer shall pay Seller the amount owed under an Application for Payment within 30 days after Engineer's presentation to Buyer of the Application for Payment and Engineer's recommendation.

4.03 *Interest*

A. All amounts not paid when due will bear interest as the rate of six percent per annum.

ARTICLE 5—ASSIGNMENT OF PROCUREMENT CONTRACT

5.01 *Assignment of Contract*

A. No assignment by a party hereto of any rights under or interests in the Procurement Contract will be binding on another party hereto without the written consent of the party sought to be bound. Specifically, but without limitation, Procurement Contract payments or other money that may become due, and Procurement Contract payments or other money that are

due, may not be assigned without such consent (except to the extent that the effect of this restriction may be limited by Laws and Regulations). Unless specifically stated to the contrary in any written consent to such an assignment, such an assignment will not release or discharge the assignor from any duty or responsibility under the Procurement Contract Documents.

ARTICLE 6—PROCUREMENT CONTRACT DOCUMENTS

6.01 *List of Procurement Contract Documents*

A. The Procurement Contract Documents consist of the following:

1. This Procurement Agreement.
2. General Conditions of the Procurement Contract.
3. Procurement Specifications as listed in the Procurement Specifications table of contents.
4. Procurement Drawings consisting of the Drawings listed on the sheet index.
5. Addenda Numbers.
6. Exhibits to this Procurement Agreement (enumerated as follows):
    a. Seller's Bid (and all attachments)
    b. Documentation submitted by Seller prior to Notice of Award.
7. The following which may be delivered or issued on or after the Effective Date of the Procurement Contract and are not attached hereto:
    a. Change Orders;
    b. Change Directives; and
    c. Field Orders.

B. The documents listed in Paragraph 6.01.A are incorporated into this Procurement Agreement by reference.

C. There are no Procurement Contract Documents other than those listed above.

D. The Procurement Contract Documents may only be amended or supplemented as provided in Paragraph 11.01 of the Procurement General Conditions.

ARTICLE 7—SELLER'S REPRESENTATIONS AND CERTIFICATIONS

7.01 *Seller's Representations*

A. In order to induce Buyer to enter into this Procurement Agreement, Seller makes the following representations:

1. Seller has examined and carefully studied the Procurement Contract Documents.
2. If required by the Instructions to Bidders to visit the Point of Destination and the site where the Goods are to be installed or Special Services will be provided, or if, in Seller's judgment, any observable local or site conditions may affect the delivery, cost, progress,

or furnishing of the Goods and Special Services, then Seller has visited the Point of Destination and site where the Goods are to be installed or Special Services will be provided (as applicable) and become familiar with and is satisfied as to the observable local and site conditions that may affect delivery, cost, progress, and furnishing of the Goods and Special Services.

3. Seller is familiar with and is satisfied as to all Laws and Regulations that may affect the cost, progress, and performance of Seller's obligations under the Procurement Contract.

4. Seller has carefully studied, considered, and correlated the information known to Seller with respect to the effect of such information on the cost, progress, and performance of Seller's obligations under the Procurement Contract.

5. Seller has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Seller has discovered in the Procurement Contract Documents, and the written resolution (if any) thereof by Engineer is acceptable to Seller.

6. The Procurement Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance of Seller's obligations under the Procurement Contract.

7. Seller's entry into this Procurement Contract constitutes an incontrovertible representation by Seller that without exception all prices in the Procurement Agreement are premised upon furnishing the Goods and Special Services as required by the Procurement Contract Documents.

7.02 *Seller's Certifications*

A. Seller certifies that it has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for or in executing the Procurement Contract. For the purposes of this Paragraph 7.02:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of anything of value likely to influence the action of a public official in the bidding process or in the Procurement Contract execution;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process or the execution of the Procurement Contract to the detriment of Buyer, (b) to establish bid or contract prices at artificial non-competitive levels, or (c) to deprive Buyer of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Buyer, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Procurement Contract.

ARTICLE 8—CONFIDENTIALITY

8.01 *Confidential Information*

A. Confidential information is information in documents submitted by Seller that Seller clearly and prominently labels in writing to be a trade secret, proprietary, or confidential. Such documents, if any, will be maintained in a manner that endeavors to avoid disclosing confidential information to third parties, to the extent allowed by Laws and Regulations.

B. Seller shall clearly and prominently mark confidential information with the word "CONFIDENTIAL" on each page or sheet or on the cover of bound documents. Place "CONFIDENTIAL" stamps or watermarks so that they do not obscure any of the required information on the document, either in the original or in a way that would obscure any of the required information in a photocopy of the document.

8.02 *Disclosure of Confidential Information*

A. If Buyer is requested to disclose confidential information, or becomes legally compelled (by oral questions, interrogatories, requests for information or documents, subpoena, civil or criminal investigative demand, public information requests, or other requests under Laws and Regulations) to disclose confidential information, or is required by a regulatory body, governing agency, or controlling authority to disclose confidential information, or make any other disclosure that is prohibited or otherwise constrained by the Procurement Contract, Buyer will provide Seller with prompt notice so Seller may seek an appropriate protective order or other remedy. Seller will be solely responsible for submitting to the regulatory body, governing agency, or controlling authority any arguments, briefs, memoranda, motions, authorities, or other information in opposition to disclosure.

B. Buyer's obligations with respect to confidential information are nullified by the following exceptions:

1. Confidential information becomes a part of the public domain through publication or otherwise, through no fault of the Buyer;

2. Buyer can demonstrate through suitable documentation that the confidential information was already in the Buyer's possession, and not previously marked as confidential, or was otherwise publicly available prior to the Effective Date of the Procurement Contract;

3. The confidential information is subsequently and independently disclosed to the Buyer by a third party who has a lawful right to disclose such information;

4. Buyer has a good faith belief that disclosure is required or justified; or

5. Buyer is required to disclose the confidential information by court order or by applicable Laws and Regulations.

8.03 *Waiver of Immunity*

A. Notwithstanding any other provision of the Procurement Contract, it is stipulated and agreed that by accepting confidential information, Buyer has not and does not waive its legal immunity (if any) from suit or liability.

ARTICLE 9—MUTUAL WAIVER

9.01 *Mutual Waiver of Consequential Damages*

A. Buyer and Seller waive against each other, and against the other's officers, directors, members, partners, employees, agents, consultants, and subcontractors, any and all claims for or entitlement to incidental, indirect, or consequential damages arising out of, resulting from, or related to the Procurement Contract. If Buyer (Project Owner) assigns this Procurement Contract to a construction contractor (Contractor/Assignee), then the terms of this Paragraph 9.01.A will be binding upon the Contractor/Assignee with respect to Seller and assignor. The terms of this mutual waiver do not apply to or limit any claim by either Buyer or Seller against the other based on any of the following: (a) contribution or indemnification, (b) liquidated damages, (c) costs, losses, or damages attributable to personal or bodily injury, sickness, disease, or death, or to injury to or destruction of the tangible property of others, (d) intentional or reckless wrongful conduct, or (e) rights conferred by any bond provided by Seller under this Procurement Contract.

IN WITNESS WHEREOF, Buyer and Seller have signed this Procurement Agreement. Counterparts have been delivered to Buyer and Seller.

The Effective Date of the Procurement Contract is **[date to be inserted at the time of execution]**.

STANDARD GENERAL CONDITIONS OF THE PROCUREMENT CONTRACT

TABLE OF CONTENTS

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Whenever used in the Procurement Bidding Requirements or Procurement Contract Documents and printed with initial capital letters, the terms listed below will have the meanings indicated, which are applicable to the singular or plural thereof. In addition to terms specifically defined, terms with initial capital letters in the Procurement Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Procurement Contract Documents.

2. *Application for Payment*—The document prepared by Seller, in a form acceptable to Buyer, to request progress or final payments, and which is to be accompanied by such supporting documentation as is required by the Procurement Contract Documents.

3. *Bid*—An offer or proposal of a prospective Seller submitted on the prescribed form setting forth the prices for the Goods and Special Services to be provided.

4. *Bidder*—An individual or entity that, as a prospective Seller, submits a Bid to Buyer.

5. *Buyer*—The individual or entity purchasing the Goods and Special Services.

6. *Change Directive*—A written directive from Buyer to Seller issued on or after the Effective Date of the Procurement Contract, ordering an addition, deletion, or revision in the Goods and Special Services.

7. *Change Order*—A document which is signed by Seller and Buyer and authorizes an addition, deletion, or revision to the Procurement Contract Documents or an adjustment in the Procurement Contract Price or the Procurement Contract Times, issued on or after the Effective Date of the Procurement Contract. Change Orders may be the result of mutual agreement by Buyer and Seller, or of resolution of a Claim.

8. *Claim*—A demand or assertion by Buyer or Seller seeking an adjustment of Procurement Contract Price or Procurement Contract Times, or both, or other relief with respect to the terms of the Procurement Contract. A demand for money or services by a third party is not a Claim.

9. *Contractor/Assignee*—A construction contractor with which Project Owner enters into a construction contract, and to which Project Owner, as initial Buyer, assigns this Procurement Contract.

10. *Effective Date of the Procurement Contract*—The date indicated in the Procurement Agreement on which the Procurement Contract becomes effective.

11. *Electronic Document*—Any Project-related correspondence, attachments to correspondence, data, documents, drawings, information, or graphics, including but not limited to Shop Drawings and other Submittals, that are in an electronic or digital format.

12. *Electronic Means*—Electronic mail (e-mail), upload/download from a secure Project website, or other communications methods that allow: the transmission or communication of Electronic Documents; the documentation of transmissions, including sending and receipt; printing of the transmitted Electronic Document by the recipient; the storage and archiving of the Electronic Document by sender and recipient; and the use by recipient of the Electronic Document for purposes permitted by this Procurement Contract. Electronic Means does not include the use of text messaging, or of Facebook, Twitter, Instagram, or similar social media services for transmission of Electronic Documents.

13. *Engineer*—The individual or entity designated as such in the Procurement Agreement.

14. *Field Order*—A written order issued by Engineer which requires minor changes in the Goods or Special Services, but which does not involve a change in the Procurement Contract Price or Procurement Contract Times.

15. *Goods*—The tangible and movable personal property that is described in the Procurement Contract Documents, regardless of whether the property is to be later attached to realty.

16. *Goods and Special Services*—The full scope of materials, equipment, other items, and services to be furnished by Seller, including Goods, as defined herein, and Special Services, if any, as defined herein. This term refers to both the Goods and the Special Services, or to either the Goods or the Special Services, and to any portion of the Goods or the Special Services, as the context requires.

17. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and binding decrees, resolutions, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

18. *Milestone*—A principal event specified in the Procurement Contract that Seller must attain by the date or within the number of days indicated, including but not limited to the delivery of the Goods and the furnishing of Special Services.

19. *Notice of Award*—The written notice, by Buyer to a Bidder, of Buyer's acceptance of the Bid.

20. *Point of Destination*—The specific address of the location where delivery of the Goods will be made, as stated in the Procurement Agreement.

21. *Procurement Agreement*—The written instrument, executed by Buyer and Seller, that sets forth the Procurement Contract Price and Procurement Contract Times, identifies the parties and the Engineer, and designates the specific items that are Procurement Contract Documents.

22. *Procurement Bidding Documents*—The Procurement Bidding Requirements and the proposed Procurement Contract Documents (including all Addenda).

23. *Procurement Bidding Requirements*—The advertisement or invitation to bid, Instructions to Bidders, Bid security of acceptable form, if any, and Bid Form with any supplements.

24. *Procurement Contract*—The entire and integrated written agreement between Buyer and Seller concerning the Goods and Special Services.

25. *Procurement Contract Documents*—Those items so designated in the Procurement Agreement, and which together comprise the Procurement Contract. Shop Drawings and other Seller submittals are not Procurement Contract Documents, even if accepted, reviewed, or approved by Engineer or Buyer.

26. *Procurement Contract Price*—The money that Buyer has agreed to pay Seller for furnishing the Goods and Special Services in accordance with the Procurement Contract Documents.

27. *Procurement Contract Times*—The times stated in the Procurement Agreement by which the Goods must be delivered, Special Services must be furnished, and other Milestones must be attained.

28. *Procurement Drawings*—That part of the Procurement Contract Documents prepared or approved by Engineer which graphically shows the scope, extent, and character of the Goods and Special Services to be furnished by Seller. Shop Drawings and other Seller submittals are not Procurement Drawings as so defined.

29. *Procurement Specifications*—That part of the Procurement Contract Documents consisting of written requirements for materials, equipment, systems, standards and workmanship as applied to the furnishing of the Goods and Special Services, and certain administrative requirements and procedural matters applicable thereto.

30. *Project*—The total undertaking to be accomplished for Project Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Goods and Special Services are a part.

31. *Project Owner*—The entity that has retained (or will retain) engineers, contractors, and others for the planning, study, design, construction, testing, commissioning, and start-up of facilities and improvements. As of the Effective Date of the Procurement Contract, the Project Owner is the Buyer.

32. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Goods and Special Services and which establish the standards by which such portion of the Goods and Special Services will be judged.

33. *Schedule of Submittals*—A schedule, prepared and maintained by Seller, of required Submittals and the time requirements for Engineer's review of the Submittals.

34. *Seller*—The individual or entity furnishing the Goods and Special Services.

35. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information which are specifically prepared or assembled by or for Seller and submitted by Seller to illustrate some portion of the Goods and Special Services. Shop Drawings, whether approved or not, are not Procurement Drawings and are not Procurement Contract Documents.

36. *Special Services*—Services to be performed by Seller (or its agents or subcontractors) in association with the Goods to be furnished by Seller, as required by the Procurement Contract Documents.

37. *Submittal*—A written or graphic document, prepared by or for Seller, which the Procurement Contract Documents require Seller to submit to Engineer, or that is indicated as a Submittal in the Schedule of Submittals accepted by Engineer. Submittals

may include Shop Drawings and Samples; schedules; product data; sustainable design information; information on special procedures; testing plans; results of tests and evaluations, source quality-control testing and inspections, and field or site quality-control testing and inspections; warranties and certifications; suppliers' instructions and reports; records of delivery of spare parts and tools; operations and maintenance data; record documents; and other such documents required by the Procurement Contract Documents. Submittals, whether or not approved or accepted by Engineer, are not Procurement Contract Documents. Change proposals, Change Orders, Claims, notices, Applications for Payment, and requests for interpretation or clarification are not Submittals.

38. *Successful Bidder*—The Bidder whose Bid the Buyer accepts, and to which Buyer makes an award of the Procurement Contract.

39. *Supplementary Conditions*—The part of the Procurement Contract that amends or supplements these General Conditions.

40. *Unit Price Goods and Special Services*—Goods and Special Services to be paid for on the basis of unit prices (if any).

1.02 *Terminology*

A. The words and terms discussed in Paragraphs 1.02.B and 1.02.C are not defined, but have the indicated meanings when used in the Bidding Requirements or Procurement Contract Documents.

B. *Intent of Certain Terms or Adjectives*

1. The Procurement Contract Documents include the terms "as allowed," "as approved," "as ordered," "as directed" or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Goods and Special Services. It is intended that such exercise of professional judgment, action, or determination will be commercially reasonable and will be solely to evaluate, in general, the Goods and Special Services for compliance with the requirements of and information in the Procurement Contract Documents and conformance with the design concept of the completed Project as a functioning whole, as shown or indicated in the Procurement Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective will not be effective to assign to Engineer any duty or authority to supervise or direct the furnishing of Goods or Special Services or any duty or authority to undertake responsibility contrary to any other provision of the Procurement Contract Documents.

2. The word "non-conforming" when modifying the words "Goods and Special Services," "Goods," or "Special Services," refers to Goods and Special Services that are unsatisfactory, faulty, or deficient in that they:

a. do not conform to or comply with the requirements of the Procurement Contract Documents;

b. do not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Procurement Contract Documents; or

c. in the case of Special Services, have not been completed.

3. The word “receipt” when referring to the Goods, means the physical taking and possession by the Buyer under the conditions specified in Paragraph 9.02.B.2.

4. The word “day” means a calendar day of 24 hours measured from midnight to the next midnight.

5. The word "furnish," when used in connection with the Goods and Special Services means to supply and deliver said Goods to the Point of Destination (or some other specified location) and to perform said Special Services fully, all in accordance with the Procurement Contract Documents.

C. *Procurement Contract Price or Procurement Contract Times*: References to a change in “Procurement Contract Price or Procurement Contract Times” or “Procurement Contract Times or Procurement Contract Price” or similar, indicate that such change applies to (1) Procurement Contract Price, (2) Procurement Contract Times, or (3) both Procurement Contract Price and Procurement Contract Times, as warranted, even if the term “or both” is not expressed.

D. Unless stated otherwise in the Procurement Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Procurement Contract Documents in accordance with such recognized meaning.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Delivery of Bonds and Evidence of Insurance*

A. When Seller delivers the executed counterparts of the Procurement Agreement to Buyer, the Seller also shall deliver to Buyer the performance bond and payment bond (if the Procurement Contract requires Seller to furnish such bonds).

B. *Evidence of Seller’s Insurance*: When Seller delivers the signed counterparts of the Procurement Agreement to Buyer, the Seller also shall deliver to Buyer, with copies to each additional insured (as identified in the Procurement Contract), the certificates, endorsements, and other evidence of insurance required to be provided by Seller in accordance with Article 5. Evidence of insurance to be obtained at a later date, such as insurance relating to transit or storage of the Goods, will be provided to Buyer at the time of such insurance is obtained.

C. *Evidence of Buyer’s Insurance*: After receipt of the signed counterparts of the Procurement Agreement and all required bonds and insurance documentation, Buyer shall promptly deliver to Seller, with copies to each additional insured (as identified in the Procurement Contract), certificates and other evidence of insurance (if any) required to be provided by Buyer.

2.02 *Copies of Documents*

A. Buyer shall furnish to Seller four printed copies of the Procurement Contract (including one fully executed counterpart of the Procurement Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

2.03 *Electronic Transmittals*

A. Except as otherwise stated elsewhere in the Procurement Contract, the Buyer, Seller, and Engineer may send, and shall accept, Electronic Documents transmitted by Electronic Means.

B. If the Procurement Contract does not establish protocols for Electronic Means, then Buyer, Seller, and Engineer shall jointly develop such protocols.

C. Subject to any governing protocols for Electronic Means, when transmitting Electronic Documents by Electronic Means, the transmitting party makes no representations as to long-term compatibility, usability, or readability of the Electronic Documents resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the Electronic Documents.

2.04 *Preliminary Schedules*

A. Within 15 days after the Effective Date of the Procurement Contract, Seller shall submit to Buyer and Engineer for timely review:

1. a progress schedule of activities, consistent with the Procurement Contract Times, including at a minimum, Shop Drawing and Sample submittals, tests, and deliveries as required by the Procurement Contract Documents.

a. The progress schedule will be acceptable to Buyer and Engineer if it provides an orderly progression of the Submittals, tests, and deliveries to completion within the specified Milestones of the Procurement Contract Times.

b. Such acceptance will not impose on Buyer or Engineer responsibility for the progress schedule, for sequencing, scheduling, or progress of Seller's performance of its obligations under the Procurement Contract, nor interfere with or relieve Seller from Seller's full responsibility therefor.

c. Such acceptance will not be deemed as an acknowledgment of the reasonableness and attainability of the schedule.

2. a preliminary schedule of Submittals.

B. No progress payment will be made to Seller until an acceptable progress schedule and acceptable schedule of Submittals are submitted to Buyer and Engineer (and other conditions applicable to progress payments are met).

2.05 *Preliminary Conference*

A. Within 20 days after the Procurement Contract Times start to run, a conference attended by Seller, Buyer, Engineer and others as appropriate will be held to establish a working understanding among the parties as to the Goods and Special Services and to discuss the schedules referred to in Paragraph 2.04.A, procedures for handling Shop Drawings and other Submittals, processing Applications for Payment, and maintaining required records.

2.06 *Safety*

A. Buyer and Seller shall comply with all applicable Laws and Regulations relating to the safety of persons or property, and to the protection of persons or property from damage, injury, or loss.

B. When Seller's personnel, or the personnel of any subcontractor to Seller, are present at the Point of Destination or any work area or site controlled by Buyer, the Seller shall be responsible for the compliance by such personnel with any applicable requirements of Buyer's safety programs that are made known to Seller.

C. If Buyer or its representatives visit the Seller's manufacturing or storage facilities, for testing, inspection, or other purposes, Seller shall inform Buyer in advance of any safety preparations, standards, or programs with which Buyer and its representatives must comply.

ARTICLE 3—PROCUREMENT CONTRACT DOCUMENTS

3.01 *Intent*

A. The Procurement Contract Documents are complementary; what is called for by one is as binding as if called for by all.

B. Any labor, documentation, services, materials, or equipment that may reasonably be inferred from the Procurement Contract Documents or from prevailing custom or trade usage as being required to produce or furnish the indicated Goods and Special Services will be provided, whether or not specifically called for, at no additional cost to Buyer.

C. Unless otherwise stated in the Procurement Contract Documents, if there is a discrepancy between the electronic or digital versions of the Procurement Contract Documents (including any printed copies derived from such electronic or digital versions) and the printed record version, the printed record version will govern.

D. The Procurement Contract supersedes prior negotiations, representations, and agreements, whether written or oral.

E. Engineer will issue clarifications and interpretations of the Procurement Contract Documents, as provided in Paragraph 3.04.

F. Any provision or part of the Procurement Contract Documents held to be void or unenforceable under any Law or Regulation will be deemed stricken, and all remaining provisions will continue to be valid and binding upon Buyer and Seller.

3.02 *Reference Standards*

A. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to Laws and Regulations, whether such reference be specific or by implication, means the standard, specification, manual, code, or Laws and Regulations in effect at the time of opening of Bids (or on the Effective Date of the Procurement Agreement if there were no Bids), except as may be otherwise specifically stated in the Procurement Contract Documents.

B. No provision of any such standard specification, manual, reference standard, or code, and no instruction of a supplier, will be effective to change the duties or responsibilities of Buyer, Seller, or Engineer from those set forth in the part of the Procurement Contract Documents prepared by or for Engineer. No such provision or instruction will be effective to assign to Buyer or Engineer any duty or authority to supervise or direct the performance of Seller's obligations, or any duty or authority to undertake responsibility inconsistent with the provisions of the part of the Procurement Contract Documents prepared by or for Engineer.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*

1. *Seller's Review of Procurement Contract Documents*: If, before or during the performance of Seller's obligations, Seller discovers any conflict, error, ambiguity, or discrepancy within the Procurement Contract Documents, or between the Procurement Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any supplier to Seller, then Seller shall promptly report it to Engineer (or if the Procurement Contract is assigned, then directly to Contractor/Assignee) in writing. Seller shall not proceed with the Goods and Special Services affected thereby until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer (or if the Procurement Contract is assigned, then by Contractor/Assignee) or by an amendment or supplement to the Procurement Contract Documents issued pursuant to Article 11.

2. Seller shall not be liable to Buyer or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Procurement Contract Documents unless Seller had actual knowledge thereof.

B. *Resolving Discrepancies*: Except as may be otherwise specifically stated in the Procurement Contract Documents, the provisions of the Procurement Contract Documents will take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Procurement Contract Documents and:

1. the provisions of any standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Procurement Contract Documents); or

2. the provisions of any Laws or Regulations applicable to the furnishing of the Goods and Special Services (unless such an interpretation of the provisions of the Procurement Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Procurement Drawings and Procurement Specifications*

A. During the performance of Seller's obligations and until final payment, Seller and Buyer shall submit to the Engineer all matters in question concerning the requirements of the Procurement Drawings and Procurement Specifications (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Goods and Special Services, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Procurement Drawings and Procurement Specifications, and judge of the acceptability of the Goods and Special Services thereunder.

1. After assignment (if any) Seller shall submit such matters directly to Contractor/Assignee for response or administration, and the Procurement Contract provisions in Paragraphs 3.04.B and C will not apply.

B. Engineer will issue with reasonable promptness a written clarification, interpretation, or decision on the issue submitted, and if necessary, initiate an amendment or supplement to the Procurement Drawings or Procurement Specifications. Engineer's written clarification, interpretation, or decision will be consistent with the overall intent of the Procurement Contract Documents, and will be final and binding on Seller and Buyer. If either Buyer or Seller believes that a written clarification or interpretation justifies an adjustment in the

Procurement Contract Price or Procurement Contract Times, either may make a Claim for such adjustment as provided in Article 12.

C. If a submitted matter in question concerns terms and conditions of the Procurement Contract Documents that do not involve (1) the performance or acceptability of the Goods and Services, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Buyer and Seller that Engineer is unable to provide a decision or interpretation.

3.05 *Reuse of Documents*

A. Seller and its subcontractors and suppliers shall not:

1. have or acquire any title to or ownership rights in any of the Procurement Drawings, Procurement Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media editions, or reuse any such Procurement Drawings, Procurement Specifications, other documents, or copies thereof, on extensions of the Project or any other project, without written consent of Buyer and Engineer and specific written verification or adaptation by Engineer; or

2. have or acquire any title or ownership rights in any other Procurement Contract Documents, reuse any such Procurement Contract Documents for any purpose without Buyer's express written consent, or violate any copyrights pertaining to such Procurement Contract Documents.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Procurement Contract. Nothing herein precludes Seller from retaining copies of the Procurement Contract Documents for record purposes.

ARTICLE 4—COMMENCEMENT AND SCHEDULE

4.01 *Commencement of Procurement Contract Times*

A. The Procurement Contract Times will commence to run on the Effective Date of the Procurement Contract.

4.02 *Continuing Performance*

A. Seller shall adhere to the progress schedule established in accordance with Paragraph 2.04.A., as duly adjusted, and the Goods will be delivered and the Special Services furnished within the Procurement Contract Times.

B. Seller shall carry on furnishing of the Goods and Special Services and adhere to the progress schedule during all disputes or disagreements with Buyer. No furnishing of Goods and Special Services will be delayed or postponed pending resolution of any disputes or disagreements, except as expressly permitted herein, or as Buyer and Seller may otherwise agree in writing.

4.03 *Adjustments to Progress Schedule*

A. The progress schedule established in accordance with Paragraph 2.04 may be adjusted from time to time as provided below.

1. Seller shall submit to Buyer for acceptance (to the extent indicated in Paragraph 2.04) proposed adjustments in the progress schedule that will not result in changing the Procurement Contract Times. Such adjustments will comply with any applicable provisions of the Procurement Specifications.

2. Proposed adjustments in the progress schedule that will change the Procurement Contract Times must be submitted in accordance with the requirements of Article 11. Adjustments in Procurement Contract Times may only be made by a Change Order.

4.04 *Delays*

A. If Buyer, Engineer, or anyone for whom Buyer is responsible, delays, disrupts, or interferes with Seller's performance or progress, then Seller shall be entitled to an equitable adjustment in Procurement Contract Price or Procurement Contract Times.

B. Seller shall not be entitled to an adjustment in Procurement Contract Price or Procurement Contract Times for delay, disruption, or interference caused by or within the control of Seller or anyone for whom Seller is responsible.

C. If Seller's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Buyer, Seller, and those for which they are responsible, then Seller shall be entitled to an equitable adjustment in Procurement Contract Times. Such an adjustment will be Seller's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Procurement Contract Times under this paragraph include but are not limited to the following:

1. severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;

2. abnormal weather conditions;

3. inspection delays by governmental authorities, and custom delays;

4. international shipping delays;

5. acts or failures to act of third-party entities; and

6. acts of war or terrorism.

D. *Adjustments of Procurement Contract Times or Procurement Contract Price—General Provisions*: Seller's entitlement to an adjustment of Procurement Contract Times or Procurement Contract Price is limited as follows:

1. Seller's entitlement to an adjustment of the Procurement Contract Times is conditioned on the delay, disruption, or interference adversely affecting an activity on the critical path to completion of Seller's obligations, as of the time of the delay, disruption, or interference.

2. Seller shall not be entitled to an adjustment in Procurement Contract Price for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Seller. Such a concurrent delay by Seller does not preclude an adjustment of Procurement Contract Times to which Seller is otherwise entitled.

3. Adjustments of Procurement Contract Times or Procurement Contract Price are subject to the provisions of Articles 11 and 12.

E. Each Seller request seeking a delay-related increase in Procurement Contract Times or Procurement Contract Price must be supplemented by supporting data that sets forth in detail the following: (1) the circumstances that form the basis for the requested adjustment; (2) the date upon which each cause of delay, disruption, or interference began to affect Seller's progress; (3) the date upon which each cause of delay, disruption, or interference ceased to affect Seller's progress; (4) the number of days' increase in Procurement Contract Times claimed as a consequence of each such cause of delay, disruption, or interference; and (5) the impact on Procurement Contract Price. Seller shall also furnish such additional supporting documentation as Buyer or Engineer may require including, where appropriate, a revised progress schedule indicating all the activities affected by the delay, disruption, or interference, and an explanation of the effect of the delay, disruption, or interference on the critical path to completion.

ARTICLE 5—BONDS AND INSURANCE

5.01 *Performance, Payment, and Other Bonds*

A. Seller shall furnish a performance bond and a payment bond, each in an amount at least equal to the Procurement Contract Price, as security for the faithful performance and payment of Seller's obligations under the Procurement Contract. These bonds must remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 9.04, whichever is later, except as provided otherwise by Laws or Regulations, the terms of a prescribed bond form, the Supplementary Conditions, or other provisions of the Procurement Contract.

B. Seller shall also furnish such other bonds (if any) as are required by the Supplementary Conditions or other provisions of the Procurement Contract.

C. All bonds must be in the form included in the Bidding Documents or otherwise specified by Buyer prior to execution of the Procurement Contract, except as provided otherwise by Laws or Regulations, and must be issued and signed by a surety named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Department Circular 570 (as amended and supplemented) by the Bureau of the Fiscal Service, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority must show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.

D. Seller shall obtain the required bonds from surety companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue bonds in the required amounts.

E. If the surety on a bond furnished by Seller is declared bankrupt or becomes insolvent, or the surety ceases to meet the requirements above, then Seller shall promptly notify Buyer and Engineer and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which shall comply with the bond and surety requirements of this Procurement Contract.

F. If Seller has failed to obtain a required bond, Buyer may exercise Buyer's termination rights under Article 14.

G. Upon request to Buyer from any subcontractor, supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of Seller's obligations, Buyer shall provide a copy of the payment bond to such person or entity.

H. Upon request to Seller from any subcontractor, supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of Seller's obligations, Seller shall provide a copy of the payment bond to such person or entity.

5.02 *Insurance*

A. Seller shall provide insurance of the types and coverages and in the amounts stipulated in the Supplementary Conditions.

B. Failure of Buyer to demand certificates of insurance or other evidence of Seller's full compliance with these insurance requirements or failure of Buyer to identify a deficiency in compliance from the evidence provided will not be construed as a waiver of Seller's obligation to maintain such insurance.

C. Upon assignment of this Procurement Contract, Seller shall name the Contractor/Assignee as an additional insured and comply with the written request of Contractor/Assignee to provide evidence of insurance.

D. Buyer does not represent that insurance coverage and limits established in this Procurement Contract necessarily will be adequate to protect Seller.

E. The insurance and insurance limits required herein will not be deemed as a limitation on Seller's liability under the indemnities and other rights granted to Buyer in the Procurement Contract.

5.03 *Surety or Insurance Companies*

A. All bonds and insurance required by the Procurement Contract Documents to be purchased and maintained by Buyer or Seller shall be obtained from surety or insurance companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue bonds or insurance policies for the limits and coverages so required. Such surety and insurance companies must also meet such additional requirements and qualifications as may be provided in the Supplementary Conditions.

ARTICLE 6—LICENSES AND FEES

6.01 *Intellectual Property and License Fees*

A. Except to the extent stated elsewhere in the Procurement Contract Documents, Seller is not transferring any patent rights, copyrights, or other intellectual property rights for the Goods delivered.

B. To the extent Seller is manufacturing to Buyer's design, Buyer retains all patent rights, copyrights, and other intellectual property rights in such design.

C. If an invention, design, process, product, or device is specified in the Procurement Contract Documents for incorporation in the Goods or for the performance of Special Services, and if, to the actual knowledge of Buyer or Engineer, its use is subject to patent rights, copyrights,

or other intellectual property rights calling for the payment of a license fee or royalty to others, then the existence of such rights and payment obligations will be disclosed to Seller in the Procurement Contract Documents.

D. Seller shall pay all license fees and royalties and assume all costs incident to the use or the furnishing of the Goods, unless specified otherwise by the Procurement Contract Documents.

6.02 *Seller's Infringement*

A. Subject to Paragraph 6.01, to the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, damages, and judgments (including but not limited to all reasonable fees and charges of engineers, architects, attorneys and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement or alleged infringement of any patent, copyright, or other intellectual property right by any of the Goods as delivered or Special Services as performed.

B. Buyer will promptly notify Seller in writing of any claim, suit, or threat of suit by a third party for any infringement or alleged infringement of any patent, copyright, or other intellectual property right with respect to the Goods as delivered or Special Services as performed.

C. Seller shall promptly defend or settle the claim or suit. Seller shall have control over such claim or suit, bear all expenses, and satisfy any adverse judgment.

1. If Seller fails to defend such suit or claim after written notice by Buyer, Seller will be bound, in any subsequent suit or claim against Seller by Buyer, by any factual determination in the prior suit or claim.

2. If Buyer fails to provide Seller the opportunity to defend such suit or claim, Buyer shall be barred from any remedy against Seller for such suit or claim.

D. If a determination is made that Seller has infringed upon the intellectual property rights of another, Seller may, at Seller's own expense, obtain the necessary licenses for Buyer's benefit, or replace the Goods and provide related design and construction, consistent with the requirements of the Procurement Contract Documents, to avoid the infringement.

6.03 *Buyer's Infringement*

A. Subject to Paragraph 6.01, and to the fullest extent permitted by Laws and Regulations, Buyer shall be responsible to Seller for any infringement or alleged infringement of any patent, copyright, or other intellectual property right caused by Seller's compliance with the Procurement Drawings or Procurement Specifications, and will reimburse Seller for any license fee or royalties paid by Seller to others if such payment resulted from any invention, design, process, product, or device specified to be furnished or performed in the Procurement Drawings or Procurement Specifications, but not identified as being subject to payment of such license fee or royalty.

B. Seller will promptly notify Buyer in writing of any claim, suit, or threat of suit by a third party for intellectual property infringement arising from Seller's compliance with the Procurement Drawings or Procurement Specifications.

C. Buyer shall defend or settle the claim or suit. Buyer shall have control over such claim or suit, bear all expenses, and satisfy any adverse judgment.

1. If Buyer fails to defend such suit or claim after written notice by Seller, Buyer will be bound, in any subsequent suit or claim against Buyer by Seller, by any factual determination in the prior suit or claim.

2. If Seller fails to provide Buyer the opportunity to defend such suit or claim, Seller shall be barred from any remedy against Buyer for such suit or claim.

ARTICLE 7—SELLER'S RESPONSIBILITIES

7.01 *Performance of Obligations*

A. Seller shall be solely responsible for the means, methods, techniques, sequences, and procedures necessary to perform its obligations in accordance with the Procurement Contract Documents.

B. Seller shall supervise, inspect, and direct the furnishing of the Goods and Special Services competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform its obligations in accordance with the Procurement Contract Documents.

C. Seller shall coordinate the provision of Special Services to avoid or limit interference or disruption of other activities at the location where the Special Services are to occur, including but not limited to ongoing facility operations and construction activities.

7.02 *Labor, Materials and Equipment*

A. Seller shall provide competent, qualified and trained personnel in all aspects of its performance of the Procurement Contract.

B. All Goods, and all equipment and material incorporated into the Goods, must be as specified, and unless specified otherwise in the Procurement Contract Documents, must be:

1. new, and of good quality;

2. protected, assembled, connected, cleaned, and conditioned in accordance with the original manufacturer's instructions; and

3. shop-assembled to the greatest extent practicable.

7.03 *Laws and Regulations*

A. Seller shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of its obligations in accordance with the Procurement Contract Documents. Except where otherwise expressly required by such Laws and Regulations, neither Buyer nor Engineer shall be responsible for monitoring Seller's compliance with any Laws or Regulations.

B. If Seller furnishes Goods and Special Services knowing or having reason to know that such furnishing is contrary to Laws or Regulations, Seller shall bear all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such performance. It will not be Seller's responsibility to make certain

that the Procurement Specifications and Procurement Drawings are in accordance with Laws and Regulations, but this provision will not relieve Seller of Seller's obligations under Paragraph 3.03.

C. Changes in Laws or Regulations not known at the time of opening of Bids (or, on the Effective Date of the Procurement Contract if there were no Bids) that have a direct effect on the cost or time of Seller's performance will be the subject of an adjustment in Procurement Contract Price or Procurement Contract Times. If Buyer and Seller are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in Article 12.

7.04 *"Or Equals"*

A. Whenever an item of material or equipment to be incorporated into the Goods is specified or described in the Procurement Contract Documents by using the names of one or more proprietary items or specific suppliers or manufacturers, the specification or description is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, other items of material or equipment or material or equipment of other suppliers or manufacturers may be submitted to Buyer for Engineer's review.

1. If in Engineer's sole discretion, such an item of material or equipment proposed by Seller is functionally equal to that named and sufficiently similar so that no change in related work will be required, it may be considered by Engineer as an "or equal" item.

2. For the purposes of this paragraph, a proposed item of material or equipment may be considered functionally equal to an item so named only if in the exercise of reasonable judgment, Engineer determines that: 1) it is at least equal in quality, durability, appearance, strength, and design characteristics; 2) it will reliably perform at least equally well the function imposed by the design concept of the completed Project as a functioning whole; 3) it has an acceptable record of performance and availability of responsive service; and (4) Seller certifies that if approved: a) there will be no increase in any cost, including capital, installation or operating costs, to Buyer; and b) the proposed item will conform substantially to the detailed requirements of the item named in the Procurement Contract Documents.

B. *Engineer's Evaluation*: Engineer will be allowed a reasonable time within which to evaluate each proposal or Submittal made pursuant to Paragraph 7.04.A. Engineer will be the sole judge of whether to accept or reject such a proposal or Submittal. No "or equal" will be ordered, manufactured or utilized until Engineer's review is complete, which will be evidenced by an approved Shop Drawing. Engineer will advise Buyer and Seller in writing of any negative determination. Notwithstanding Engineer's approval of an "or-equal" item, Seller shall remain obligated to comply with the requirements of the Procurement Contract Documents.

C. *Special Guarantee*: Buyer may require Seller to furnish at Seller's expense a special performance guarantee or other surety with respect to any such proposed "or-equal."

D. *Data*: Seller shall provide all data in support of any such proposed "or equal" at Seller's expense.

7.05 *Taxes*

A. Seller shall pay all taxes and duties arising out of the sale of the Goods and the performance of Special Services. All taxes and duties are included in the Procurement Contract Price, except as noted in the Supplementary Conditions.

7.06 *Submittals*

A. *Shop Drawing and Sample Requirements*

1. Before submitting a Shop Drawing or Sample, Seller shall:

a. review and coordinate the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Procurement Contract Documents;

b. determine and verify:

1) all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect to the Submittal; and

2) the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of Seller's obligations.

c. confirm that the Submittal is complete with respect to all related data included in the Submittal.

2. Each Shop Drawing or Sample must bear a stamp or specific written certification that Seller has satisfied its obligations under the Procurement Contract Documents with respect to Seller's review of that Submittal, and that Seller approves the Submittal.

3. With each Shop Drawing or Sample, Seller shall give Engineer specific written notice of any variations that the Submittal may have from the requirements of the Procurement Contract Documents. This notice will be set forth in a written communication separate from the Submittal; and, in addition, in the case of a Shop Drawing by a specific notation made on the Shop Drawing itself.

B. *Submittal Procedures for Shop Drawings and Samples*: Seller shall label and submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals.

1. *Shop Drawings*

a. Seller shall submit the number of copies required in the Procurement Specifications.

b. Data shown on the Shop Drawings must be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Seller proposes to provide, and to enable Engineer to review the information for the limited purposes required by Paragraph 7.06.C.

2. *Samples*

a. Seller shall submit the number of Samples required in the Procurement Specifications.

b. Seller shall clearly identify each Sample as to material, supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the Submittal for the limited purposes required by Paragraph 7.06.C.

3. Where a Shop Drawing or Sample is required by the Procurement Contract Documents or the Schedule of Submittals, any related work performed by Seller prior to Engineer's review and approval of the pertinent Submittal will be at the sole expense and responsibility of Seller.

C. *Engineer's Review of Shop Drawings and Samples*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the accepted Schedule of Submittals. Engineer's review and approval will be only to determine if the items covered by the Submittals will, after installation or incorporation in the Goods, comply with the requirements of the Procurement Contract Documents, and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Procurement Contract Documents.

2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction, manufacturing, fabrication, installation, or shipping, or to safety precautions or programs incident thereto.

3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

4. Engineer's review and approval of a Shop Drawing or Sample will not relieve Seller from responsibility for any variation from the requirements of the Procurement Contract Documents unless Seller has complied with the requirements of Paragraph 7.06.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will document any such approved variation from the requirements of the Procurement Contract Documents in a Field Order or other appropriate Procurement Contract modification.

5. Engineer's review and approval of a Shop Drawing or Sample will not relieve Seller from responsibility for complying with the requirements of Paragraphs 7.06.A and B.

6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Procurement Contract Documents, will not, under any circumstances, change the Procurement Contract Times or Procurement Contract Price, unless such changes are included in a Change Order.

7. Neither Engineer's receipt, review, acceptance or approval of a Shop Drawing or Sample will result in such item becoming a Procurement Contract Document.

8. Seller shall furnish Goods that comply with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.06.C.4.

D. *Resubmittal Procedures for Shop Drawings and Samples*

1. Seller shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review

and approval. Seller shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous Submittals.

2. Seller shall furnish required Shop Drawing and Sample Submittals with sufficient information and accuracy to obtain required approval of an item with no more than two resubmittals. Engineer will record Engineer's time for reviewing a third or subsequent resubmittal of a Shop Drawing or Sample, and Seller shall be responsible for Engineer's charges to Buyer for such time. Buyer may impose a set-off against payments due Seller to secure reimbursement for such charges.

3. If Seller requests a change of a previously approved Shop Drawing or Sample, Seller shall be responsible for Engineer's charges to Buyer for its review time, and Buyer may impose a set-off against payments due Seller to secure reimbursement for such charges, unless the need for such change is beyond the control of Seller.

E. *Submittals Other than Shop Drawings and Samples*

1. The following provisions apply to all Submittals other than Shop Drawings and Samples:

a. Seller shall submit all such Submittals to the Engineer in accordance with the schedule of Submittals and pursuant to the applicable terms of the Procurement Contract Documents.

b. Engineer will provide timely review of all such Submittals in accordance with the schedule of Submittals and return such Submittals with a notation of either Accepted or Not Accepted. Any such Submittal that is not returned within the time established in the schedule of Submittals will be deemed accepted.

c. Engineer's review will be only to determine if the Submittal is acceptable under the requirements of the Procurement Contract Documents as to general form and content of the Submittal.

d. If any such Submittal is not accepted, Seller shall confer with Engineer regarding the reason for the non-acceptance, and resubmit an acceptable document.

2. Procedures for the submittal and acceptance of the Progress Schedule, the Schedule of Submittals, and the Schedule of Values are set forth in Paragraphs 2.04 and 2.05.

7.07 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, Project Owner, and any assignee of Buyer, including Contractor/Assignee, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of Seller's obligations under the Procurement Contract, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Goods themselves), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Seller, or any individual or entity directly or indirectly employed by Seller or anyone for whose acts Seller may be liable.

B. In any and all claims against Buyer, Engineer, Project Owner, or any assignee of Buyer, including Contractor/Assignee, or their officers, directors, members, partners, employees, agents, consultants, contractors, or subcontractors, by any employee (or the survivor or personal representative of such employee) of Seller, any subcontractor, any supplier, or any individual or entity directly or indirectly employed by any of them to furnish any of the Goods and Special Services, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.07.A will not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Seller or any such subcontractor, supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

7.08 *Concerning Subcontractors and Suppliers*

A. Seller may retain subcontractors and suppliers for the performance of parts of the furnishing of the Goods and Special Services. The Seller's retention of a subcontractor or supplier will not relieve Seller's obligation to Buyer to perform and complete the furnishing the Goods and Special Services in accordance with the Procurement Contract Documents.

ARTICLE 8—SHIPPING AND DELIVERY

8.01 *Shipping*

A. Seller shall select the carrier and bear all costs of packaging, transportation, insurance, special handling, and all other costs associated with shipment and delivery.

8.02 *Delivery*

A. Seller shall deliver the Goods free on board (FOB) to the Point of Destination, freight prepaid, in accordance with the Procurement Contract Times set forth in the Procurement Agreement, or other date agreed to by Buyer and Seller.

B. At least 10 days before shipment, Seller shall provide written notice to Buyer of the manner of shipment and the anticipated delivery date. The notice must also include any instructions concerning special equipment or services required at the Point of Destination to unload and care for the Goods. Seller shall also require the carrier to give Buyer at least 24 hours' notice by telephone prior to the anticipated time of delivery.

C. Buyer will be responsible and bear all costs for unloading the Goods from carrier.

D. Buyer will assure that adequate facilities are available to receive delivery of the Goods at the time established for delivery, or on another date agreed to by Buyer and Seller.

E. No partial deliveries will be allowed, unless permitted or required by the Procurement Contract Documents or agreed to in writing by Buyer.

F. Provisions governing inspection on delivery are set forth in Paragraph 9.02.

8.03 *Risk of Loss*

A. Risk of loss and insurable interests transfer from Seller to Buyer upon Buyer's receipt of the Goods.

B. Notwithstanding the provisions of Paragraph 8.03.A, if Buyer rejects the Goods as non-conforming, the risk of loss on such Goods will remain with Seller until Seller corrects the non-conformity or Buyer accepts the Goods. If rejected Goods remain at the Point of

Destination pending modification and acceptance, then Seller shall be responsible for arranging adequate protection and maintenance of the Goods at Seller's expense.

ARTICLE 9—BUYER'S RIGHTS

9.01 *Seller's Warranties and Guarantees*

A. Seller warrants and guarantees to Buyer that the title to the Goods conveyed will be proper, its transfer rightful, and free from any security interest, lien, or other encumbrance. Seller shall defend, indemnify, and hold Buyer harmless against any liens, claims, or demands contesting or affecting title of the Goods conveyed.

B. Seller warrants and guarantees to Buyer that all Goods and Special Services will conform with the Procurement Contract Documents, and with the standards established by any Samples approved by Engineer. Engineer shall be entitled to rely on Seller's warranty and guarantee. If the Procurement Contract Documents do not otherwise specify the characteristics or the quality of the Goods, the Goods must comply with the requirements of Paragraph 7.02.B.

C. Seller's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, improper modification, improper maintenance, or improper operation by persons other than Seller;

2. excessive corrosion or chemical attack, unless corrosive or chemically-damaging conditions were disclosed by Buyer in the Procurement Contract Documents and the Procurement Contract Documents required the Goods to withstand such conditions;

3. use in a manner contrary to Seller's written instructions for installation, operation, and maintenance; or

4. normal wear and tear under normal usage.

D. Seller's obligation to furnish the Goods and Special Services in accordance with the Procurement Contract Documents will be absolute. None of the following will constitute an acceptance of Goods and Special Services that are non-conforming, or a release of Seller's obligation to furnish the Goods and Special Services in accordance with the Procurement Contract Documents:

1. observations by Buyer, Engineer, or Project Owner;

2. recommendation by Engineer or payment by Buyer of any progress or final payment;

3. use of the Goods by Buyer or Project Owner;

4. any acceptance by Buyer, Engineer, or Project Owner, or any failure to do so;

5. the end of the correction period established in Paragraph 9.04;

6. the issuance of a notice of acceptance;

7. any inspection, test or approval by others; or

8. any correction of non-conforming Goods and Special Services by Buyer or Project Owner.

E. Buyer shall promptly notify Seller of any breach of Seller's warranties or guarantees.

9.02 *Inspections and Testing*

A. *General Provisions*

1. The Procurement Contract Documents specify required inspections and tests. Buyer shall have the right to perform, or cause to be performed, reasonable inspections and require reasonable tests of the Goods at Seller's facility, and at the Point of Destination. Seller shall allow Buyer a reasonable time to perform such inspections or tests.

2. Seller shall reimburse Buyer for all expenses, except for travel, lodging, and subsistence expenses of Buyer's and Engineer's representatives, for inspections and tests specified in the Procurement Contract Documents. If as the result of any such specified testing the Goods are determined to be non-conforming, then Seller shall also bear the travel, lodging, and subsistence expenses of Buyer's and Engineer's representatives, and all expenses of re-inspection or retesting.

3. Buyer shall bear all expenses of inspections and tests that are not specified in the Procurement Contract Documents (other than any re-inspection or retesting resulting from a determination of non-conformity, as set forth in Paragraph 9.03); provided, however, that if as the result of any such non-specified inspections or testing the Goods are determined to be non-conforming, then Seller shall bear all expenses of such inspections and testing, and of any necessary re-inspection and retesting.

4. Seller shall provide Buyer timely written notice of the readiness of the Goods for all inspections, tests, or approvals which the Procurement Contract Documents specify are to be observed by Buyer prior to shipment.

5. Buyer will give Seller timely notice of all specified tests, inspections, and approvals of the Goods which are to be conducted at the Point of Destination, and a representative of Seller will attend such tests, inspections, and approvals.

6. If, on the basis of inspections or testing, the Goods appear to be conforming, Buyer will give Seller prompt notice thereof. If on the basis of inspections or testing, the Goods appear to be non-conforming, Buyer will give Seller prompt notice thereof and will advise Seller of the remedy Buyer elects under the provisions of Paragraph 9.03.

7. Neither payments made by Buyer to Seller prior to any tests or inspections, nor any tests or inspections, will constitute acceptance of non-conforming Goods, or prejudice Buyer's rights under the Procurement Contract.

B. *Visual Inspection on Delivery*

1. Buyer will visually inspect the Goods upon delivery solely for purposes of identifying the Goods, general verification of quantities, and observation of apparent condition. Such visual inspection will not be construed as final or as receipt of any Goods and Special Services that, as a result of subsequent inspections and tests, are determined to be non-conforming.

2. If, on the basis of the visual inspection specified in Paragraph 9.02.B.1, the Goods appear to comply with the requirements of the Procurement Contract Documents as to quantities and condition, then within 10 days of delivery Buyer shall issue to Seller Buyer's acknowledgment of the receipt of Goods.

C. *Final Inspection*

1. After all of the Goods have been incorporated into the Project, tested in accordance with such testing requirements as are specified, and are functioning as required, and Seller has performed and completed all Special Services, Buyer will make a final inspection.

2. If, on the basis of the final inspection, Buyer determines that the Goods and Special Services are conforming, Buyer's notice thereof will constitute Buyer's acceptance of the Goods and Special Services, subject to any limitations stated in the notice.

3. If, on the basis of the final inspection, the Goods and Special Services are non-conforming, Buyer will identify the non-conformity in writing.

9.03 *Non-Conforming Goods and Special Services*

A. If, on the basis of inspections and testing prior to delivery, the Goods and Special Services are found to be non-conforming, or if at any time after Buyer has acknowledged receipt of delivery and before the expiration of the correction period described in Paragraph 9.04, Buyer determines that the Goods and Special Services are non-conforming, then Seller shall promptly, without cost to Buyer and in response to written instructions from Buyer, either correct such non-conforming Goods and Special Services, or, if Goods are rejected by Buyer, remove and replace the non-conforming Goods with conforming Goods, including all work required for reinstallation.

B. *Buyer's Rejection of Non-Conforming Goods*

1. If Buyer elects to reject the Goods in whole or in part, Buyer's notice to Seller will describe in sufficient detail the non-conforming aspect of the Goods. If Goods have been delivered to Buyer, Seller shall promptly, and within the Procurement Contract Times, remove and replace the rejected Goods.

2. Seller shall bear all costs, losses and damages attributable to the removal, replacement, reinspection, and retesting of the non-conforming Goods.

3. Upon rejection of the Goods, Buyer retains a security interest in the Goods to the extent of any payments made and expenses incurred in their testing and inspection.

C. *Buyer's Rejection of Non-Conforming Special Services*

1. If at any time Buyer elects to reject the Special Services in whole or in part, Buyer's notice to Seller will describe in sufficient detail the non-conforming aspect of the Special Services.

2. Seller shall promptly provide conforming Special Services acceptable to Buyer.

3. If Seller fails to provide conforming Special Services, Buyer may remove the Special Services from the scope of the Procurement Contract, and equitably reduce the Procurement Contract Price.

D. *Remedying Non-Conforming Goods*: If Buyer elects to permit the Seller to modify the Goods to correct the non-conformance, then Seller shall promptly provide a schedule for such modifications and shall make the Goods conforming within a reasonable time.

E. *Buyer's Acceptance of Non-Conforming Goods*: Instead of requiring correction or removal and replacement of non-conforming Goods discovered either before or after final payment,

Buyer may accept the non-conforming Goods. Seller shall bear all reasonable costs, losses, and damages attributable to Buyer's evaluation of and determination to accept such non-conforming Goods.

F. *Seller Obligations*: Seller shall pay all claims, costs, losses, and damages, including but not limited to all fees and charges for re-inspection, retesting and for any engineers, architects, attorneys and other professionals, and all court or arbitration or other dispute resolution costs arising out of or relating to the non-conforming Goods and Special Services. Seller's obligations will include the costs of the correction or removal and replacement of the non-conforming Goods and the replacement of property of Buyer and others destroyed by the correction or removal and replacement of the non-conforming Goods, and obtaining conforming Special Services from others.

G. *Buyer's Rejection of Conforming Goods*: If Buyer asserts that Goods and Special Services are non-conforming and such Goods and Special Services are determined to be conforming, or if Buyer rejects as non-conforming Goods and Special Services that are later determined to be conforming, then Seller shall be entitled to reimbursement from Buyer of costs incurred by Seller in inspecting, testing, correcting, removing, or replacing the conforming Goods and Special Services, including but not limited to fees and charges of engineers, architects, attorneys and other professionals, and all court or arbitration or other dispute resolution costs associated with the incorrect assertion of non-conformance or rejection of conforming Goods and Special Services.

9.04 *Correction Period*

A. Seller's responsibility for correcting all non-conformities in the Goods and Special Services will extend for a period of one year after the acceptance of the Goods and Special Services in accordance with Paragraph 9.02.C.2.

B. Where non-conforming Goods and Services (and damage to other work resulting therefrom) have been corrected or removed and replaced under this paragraph, the correction period hereunder with respect to such Goods and Services will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

C. Seller's obligations under this paragraph are in addition to all other obligations and warranties. The provisions of this paragraph may not be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

ARTICLE 10—ENGINEER'S STATUS

10.01 *Engineer's Role Defined*

A. Engineer will be Buyer's representative until assignment (if any) of the Procurement Contract.

B. The duties and responsibilities and the limitations of authority of Engineer prior to assignment, if any, of the Procurement Contract, are set forth in the Procurement Contract Documents.

C. Engineer's responsibilities, if any, after an assignment (if any) of the Procurement Contract, are set forth in the Procurement Agreement.

10.02 *Duties and Responsibilities; Authority; Limitations*

A. As set forth in Article 3, Engineer will be the initial interpreter of the Procurement Contract Documents and judge of the acceptability of the Goods and Special Services, and will issue clarifications, interpretations, and decisions regarding such issues.

B. Acting on behalf of Buyer under the provisions of Article 9, Engineer has the authority to disapprove or reject Goods and Special Services that Engineer believes to be non-conforming. Engineer also has the authority to require special inspection or testing of the Goods or Special Services as provided in Paragraph 9.02, whether or not the Goods are fabricated or installed, or the Special Services are completed.

C. Engineer may authorize minor deviations or variations in the Procurement Contract Documents by: 1) written approval of specific variations set forth in Shop Drawings when Seller has duly noted such variations as required in Paragraph 7.06.A.3, or 2) a Field Order.

D. As set forth in Article 12, Engineer will review Claims, and render decisions on Claims.

E. In rendering any interpretations, clarifications, reviews, decisions, disapprovals, acceptances, rejections, authorizations, and judgments, Engineer will not show partiality to Buyer or Seller. Engineer will not be liable to Buyer, Seller, or others in connection with any interpretations, clarifications, reviews, decisions, disapprovals, acceptances, rejections, authorizations, or judgments conducted or rendered by Engineer in good faith.

F. Engineer will not supervise, direct, control, or have authority over or be responsible for the means, methods, techniques, sequences, or procedures used by Seller to perform its obligations under this Procurement Contract, or the safety precautions and programs incident thereto, or for any failure of Seller to comply with Laws and Regulations applicable to the performance of its obligations. Engineer will not be responsible for Seller's failure to furnish the Goods and Special Services in accordance with the Procurement Contract Documents.

ARTICLE 11—CHANGES

11.01 *Amending and Supplementing the Procurement Contract*

A. The Procurement Contract may be amended or supplemented by a Change Order, a Change Directive, or a Field Order.

B. If an amendment or supplement to the Procurement Contract includes a change in the Procurement Contract Price or the Procurement Contract Times, such amendment or supplement must be set forth in a Change Order.

C. All changes to the Procurement Contract that involve (1) the conformance or acceptability of the Goods and Special Services, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise), or (3) other engineering or technical matters, must be supported by Engineer's recommendation. Buyer and Seller may amend other terms and conditions of the Procurement Contract without the recommendation of the Engineer.

11.02 *Change Orders*

A. Buyer and Seller shall execute appropriate Change Orders covering:

1. Changes in Procurement Contract Price or Procurement Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Goods and Special Services furnished in accordance with a Change Directive;

2. Changes in Procurement Contract Price resulting from a Buyer set-off, unless Seller has duly contested such set-off;

3. Changes in the Goods and Special Services which are: (a) ordered by Buyer pursuant to Paragraph 11.05, (b) required because of Buyer's acceptance of non-conforming Goods and Services under Paragraph 9.03 or (c) agreed to by the parties, subject to the need for Engineer's recommendation if the change in the Goods and Special Services involves the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise) or other engineering or technical matters; and

4. Changes that embody the substance of any final and binding results under: Paragraph 11.03.B, resolving the impact of a Change Directive; Article 12, Claims; and similar provisions.

B. If Buyer or Seller refuses to execute a Change Order that is required to be executed under the terms of Paragraph 11.02.A, it will be deemed to be of full force and effect, as if fully executed.

11.03 *Change Directives*

A. A Change Directive will not change the Procurement Contract Price or the Procurement Contract Times but is evidence that the parties expect that the modification ordered or documented by a Change Directive will be incorporated in a subsequently issued Change Order, following negotiations by the parties as to the Change Directive's effect, if any, on the Procurement Contract Price and Procurement Contract Times; or, if negotiations are unsuccessful, by a determination under the terms of the Procurement Contract Documents governing adjustments, expressly including Paragraph 11.08 regarding change of Procurement Contract Price.

B. If Buyer has issued a Change Directive and Buyer or Seller believes that an adjustment in Procurement Contract Times or Procurement Contract Price is necessary, then such party shall submit a Claim seeking such an adjustment no later than 30 days after the completion of the Goods and Services set out in the Change Directive.

11.04 *Field Orders*

A. Engineer may authorize minor changes in the Goods and Services if the changes do not involve an adjustment in the Procurement Contract Price or the Procurement Contract Times and are compatible with the design concept as indicated by the Procurement Contract Documents. Such changes will be accomplished by a Field Order and will be binding on Buyer and also on Seller, which shall perform the Goods and Special Services involved promptly.

B. If Seller believes that a Field Order justifies an adjustment in the Procurement Contract Price or Procurement Contract Times, then before proceeding with the Goods and Special Services at issue, Seller shall submit a Claim as provided herein.

11.05 *Buyer-Authorized Changes in the Goods and Special Services*

A. Without invalidating the Procurement Contract and without notice to any surety, Buyer may, at any time or from time to time, order additions, deletions, or revisions in the Goods and Special Services. Changes involving the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise) or other engineering or technical matters will be supported by Engineer's recommendation.

B. Such changes in the Goods and Special Services may be accomplished by a Change Order, if Buyer and Seller have agreed as to the effect, if any, of the changes on Procurement Contract Times or Procurement Contract Price; or by a Change Directive. Upon receipt of any such document, Seller shall promptly proceed with the Goods and Special Services involved; or, in the case of a deletion in the Goods and Special Services, promptly cease activities with respect to such deletion. Added or revised Goods and Special Services must be performed under the applicable conditions of the Procurement Contract Documents.

11.06 *Buyer's Contingency Allowance*

A. The Buyer's Contingency Allowance, if any such is set forth in the Procurement Agreement, is for the sole use of Buyer to cover unanticipated costs.

B. If Buyer exercises its unilateral right to use all or a portion of the Buyer's Contingency Allowance, Buyer will issue a written directive that documents the costs to which the allowance is applied, Seller's entitlement to compensation, and the consequent reduction in such allowance.

C. Prior to final payment, the Total Price, as set forth in the Procurement Agreement, will be duly adjusted to account for any unused portion of the Buyer's Contingency Allowance.

D. The Procurement Agreement, Article 5, addresses the impact on Buyer's Contingency Allowance of an assignment of the Procurement Contract.

11.07 *Unauthorized Changes in the Goods and Special Services*

A. Seller shall not be entitled to an increase in the Procurement Contract Price or an extension of the Procurement Contract Times with respect to any work performed that is not required by the Procurement Contract Documents, as amended, modified, or supplemented.

11.08 *Change of Procurement Contract Price*

A. The Procurement Contract Price may only be changed by a Change Order. Any Claim for an adjustment of Procurement Contract Price must comply with the provisions of Article 12.

B. An adjustment in the Procurement Contract Price will be determined as follows:

1. For changes in Unit Price Goods and Special Services, by application of the unit prices to the quantities of the items involved;

2. To the extent the cost of the change is not covered by unit prices, then by a mutually agreed lump sum; or

3. To the extent the cost of the change is not covered by unit prices and the parties do not reach mutual agreement to a lump sum, then on the basis of documented costs plus a Seller's fee for overhead and profit of 15%.

11.09 *Change of Procurement Contract Times*

A. The Procurement Contract Times may only be changed by a Change Order. Any Claim for an adjustment in the Procurement Contract Times must comply with the provisions of Article 12.

11.10 *Notification to Surety*

A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Goods and Special Services or the provisions of the Procurement Contract (including, but not limited to, Procurement Contract Price or Procurement Contract Times), the giving of any such notice will be Seller's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

ARTICLE 12—CLAIMS, DISPUTES, AND DISPUTE RESOLUTION

12.01 *Claims*

A. The parties agree to endeavor to avoid or resolve Claims through direct, good faith discussions and negotiations whenever practicable. Such discussions and negotiations should at the outset address whether the parties mutually agree to suspend the Claims process, including the time periods established in this Paragraph 12.01; if so, a written record of such mutual agreement should be made and jointly executed.

B. Claimant shall deliver to Engineer and the other party to the Procurement Contract written notice of each Claim within 15 days after the occurrence of the event giving rise to the Claim.

C. Claimant shall deliver written supporting data to Engineer and the other party within 45 days after such occurrence unless Engineer allows an additional period of time.

D. Engineer will review each such Claim and render a decision in writing within 30 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any.

E. If Engineer does not render a formal written decision on a Claim within the time stated in Paragraph 12.01.D., Engineer shall be deemed to have issued a decision denying the Claim in its entirety 31 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any.

F. The rendering of a decision by Engineer pursuant to this Paragraph 12.01 with respect to any such Claim, dispute, or other matter (except any which have been waived by the making or acceptance of final payment) will be a condition precedent to any exercise by Buyer or Seller of such rights or remedies as either may otherwise have under the Procurement Contract Documents or by Laws or Regulations in respect of any such Claim, dispute, or other matter. If the exercise of such rights or remedies will imminently be time-barred, a party may take actions necessary to preserve such rights and remedies notwithstanding the lack of the condition precedent referred to in this paragraph.

G. If a submitted matter in question concerns terms and conditions of the Procurement Contract Documents that do not involve (1) the performance or acceptability of Goods and Special Services under the Procurement Contract Documents, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, Addenda, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Buyer and Seller that Engineer is unable to provide a decision or interpretation. If Buyer and Seller

are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Paragraph 12.02.

H. Engineer's written decision on such Claim or a decision denying the Claim in its entirety that is deemed to have been issued pursuant to Paragraph 12.01, will be final and binding upon Buyer and Seller 30 days after it is issued unless within 30 days of issuance Buyer or Seller appeals Engineer's decision by initiating the mediation of such Claim in accordance with the dispute resolution procedures set forth in Paragraph 12.02.

I. If Article 12 has been amended to delete the mediation requirement, then Buyer or Seller may appeal Engineer's decision within 30 days of issuance by following the alternative dispute resolution process set forth in Article 12, as amended; or if no such alternative dispute resolution process has been set forth, Buyer or Seller may appeal Engineer's decision by 1) delivering to the other party within 30 days of the date of such decision a written notice of intent to submit the Claim to a court of competent jurisdiction, and 2) within 60 days after the date of such decision instituting a formal proceeding in a court of competent jurisdiction.

J. No Claim for an adjustment in Procurement Contract Price or Procurement Contract Times will be valid if not submitted in accordance with Article 12.

K. The effect on Claims of an assignment of the Procurement Contract by Buyer to a Contractor/Assignee is addressed in the Procurement Agreement, Article 5.

12.02 *Dispute Resolution Method*

A. Either Buyer or Seller may initiate the mediation of (1) any Claim decided in writing by Engineer under Paragraph 12.01 before such decision becomes final and binding, or (2) any other dispute between the parties, including but not limited to any dispute arising after final inspection of the Goods and Services. The mediation will be governed by the Construction Industry Mediation Rules of the American Arbitration Association in effect as of the Effective Date of the Procurement Contract. The request for mediation must be submitted in writing to the American Arbitration Association and the other party to the Procurement Contract. Timely submission of the request will stay Engineer's decision from becoming final and binding.

B. Mediation is a condition precedent to seeking final dispute resolution under Paragraph 12.01.C. Buyer and Seller shall participate in the mediation process in good faith. The process must be concluded within 60 days of filing of the request. The date of termination of the mediation will be determined by application of the mediation rules referenced above.

C. If the mediation process does not result in resolution of the dispute, then Engineer's written Claim decision under Paragraph 12.01.D or a Claim denial pursuant to Paragraph 12.01.E becomes final and binding, or if applicable such other dispute is deemed resolved in favor of respondent, unless, within 30 days after termination of the mediation, Buyer or Seller:

1. elects in writing to invoke any final dispute resolution process provided for in the Supplementary Conditions, or

2. agrees with the other party to submit the Claim or dispute to another final dispute resolution process, or

3. if no final dispute resolution process has been provided for in the Supplementary Conditions, delivers to the other party written notice of the intent to submit the Claim

or dispute to a court of competent jurisdiction, and within 60 days of the termination of the mediation institutes such formal proceeding.

ARTICLE 13—PAYMENT

13.01 *Applications for Progress Payments*

A. Seller shall submit to Buyer for Engineer's review Applications for Payment filled out and signed by Seller and accompanied by such supporting documentation as is required by the Procurement Contract Documents and also as Buyer or Engineer may reasonably require.

B. The timing and amounts of progress payments will be as stipulated in the Procurement Agreement.

C. Any Application for Payment that is based in whole or in part on the delivery of Goods must be accompanied by a bill of sale, invoice, or other documentation reasonably satisfactory to Buyer warranting that Buyer has rightfully received good title to the Goods from Seller and that, upon payment, the Goods will be free and clear of all liens. Such documentation will include releases and waivers from all parties with viable lien rights.

D. Buyer shall notify Seller promptly of any deficiency in the required documentation.

13.02 *Review of Applications for Progress Payments*

A. *Review of Applications*

1. Engineer will, within 10 days after receipt of each Application for Payment, including each resubmittal, either indicate in writing a recommendation of payment and present the Application to Buyer, or return the Application to Seller indicating in writing Engineer's reasons for refusing to recommend payment.

2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Buyer, based on Engineer's observations of Seller's progress, as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:

a. the Goods and Special Services or other obligations of Seller have progressed to the point indicated;

b. the quality of the Goods and Special Services or other obligations of Seller are generally in accordance with the Procurement Contract Documents; and

c. the conditions precedent to Seller being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Seller's progress.

3. By recommending any such payment Engineer will not thereby be deemed to have represented that:

a. inspections made to check the quality or the quantity of the Goods and Special Services or other obligations of Seller have been exhaustive, extended to every aspect of the Goods and Special Services or other obligations of Seller in progress, or involved detailed inspections of the Goods and Special Services or other

obligations of Seller beyond the responsibilities specifically assigned to Engineer in the Procurement Contract; or

b. there may not be other matters or issues between the parties that might entitle Seller to be paid additionally by Buyer, or entitle Buyer to withhold payment to Seller.

4. Neither Engineer's review of Seller's progress for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:

a. to supervise, direct, or control the Seller's performance or furnishing of Goods and Special Services or other obligations of Seller; or

b. for the means, methods, techniques, sequences, or procedures of construction, manufacturing, fabrication, installation, or shipping, or the safety precautions and programs incident thereto; or

c. for Seller's failure to comply with Laws and Regulations applicable to Seller's performance under the Procurement Contract; or

d. to make any examination to ascertain how or for what purposes Seller has used the money paid for the Procurement Contract Price; or

e. to determine that title to any of the Goods or component parts have passed to Buyer free and clear of any Liens.

5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Buyer stated in Paragraph 13.02.A.2.

6. Engineer will recommend reductions in payment (set-offs) necessary in Engineer's opinion to protect Buyer from loss because:

a. the Goods and Services are non-conforming, requiring correction or replacement;

b. the Procurement Contract Price has been reduced by Change Orders;

c. Buyer has been required to correct non-conforming Goods and Special Services in accordance with Paragraph 9.03.C, or has accepted non-conforming Goods and Special Services pursuant to Paragraph 9.03.E; or

d. Engineer has actual knowledge of the occurrence of any of the events that would constitute a default by Seller and therefore justify termination for cause under the Procurement Contract Documents.

13.03 *Basis and Amount of Progress Payments*

A. The basis and amounts of the progress payments will be as provided in the Procurement Agreement, subject to the provisions of this Article 13 regarding reductions in payment.

13.04 *Suspension of or Reduction in Payment*

A. Buyer may temporarily cease making progress payments, or reduce the amount of a progress payment, even though recommended for payment by Engineer, under the following circumstances:

1. Buyer has reasonable grounds to conclude that Seller will not furnish the Goods or the Special Services in accordance with the Procurement Contract Documents, and

2. Buyer has requested in writing assurances from Seller that the Goods and Special Services will be delivered or furnished in accordance with the Procurement Contract Documents, and Seller has failed to provide adequate assurances within ten days of Buyer's written request.

3. In addition to any reductions in payment (set-offs) recommended by Engineer, Buyer is entitled to impose a set-off against payment based on any of the following:

    a. claims have been made against Buyer based on Seller's conduct in the performance or furnishing of the Goods and Special Services, or has incurred costs, losses, or damages resulting from Seller's conduct in the performance or furnishing of the Goods and Special Services, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, non-compliance with Laws and Regulations, and patent infringement;

    b. Seller has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with other work at or adjacent to the Point of Destination or the worksite;

    c. Seller has failed to provide and maintain required bonds or insurance;

    d. Buyer has incurred extra charges or engineering costs related to Submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

    e. the Goods and Special Services are non-conforming, requiring correction or replacement;

    f. Buyer has been required to correct non-conforming Goods and Special Services, in accordance with Paragraph 9.03.C, or has accepted non-conforming Goods and Special Services pursuant to Paragraph 9.03.E;

    g. the Procurement Contract Price has been reduced by Change Orders;

    h. an event that would constitute a default by Seller and therefore justify a termination for cause has occurred;

    i. liquidated or other damages have accrued as a result of Seller's failure to achieve Milestones, Substantial Completion, or final completion of the Goods and Special Services; or

    j. liens have been filed in connection with the Procurement Contract, except where Seller has delivered a specific bond satisfactory to Buyer to secure the satisfaction and discharge of such liens.

B. If Buyer refuses to make payment of the full amount recommended by Engineer, Buyer will provide Seller and Engineer immediate written notice stating the reason for such action and promptly pay Seller any amount remaining after deduction of the amount withheld. Buyer shall promptly pay Seller the amount withheld when Seller corrects the reason for such action to Buyer's satisfaction.

13.05 *Final Payment*

A. After Seller has corrected all non-conformities to the reasonable satisfaction of Buyer and Engineer and furnished all Special Services, Seller may submit its final Application for Payment following the procedures for progress payments.

B. The final Application for Payment will be accompanied by all documentation called for in the Procurement Contract Documents (including but not limited to all final operations and maintenance manuals, and any special warranties), a list of all unsettled Claims, and the written consent of surety to the making of final payment.

C. If, on the basis of final inspection and the review of the final Application for Payment and accompanying documentation, Engineer is reasonably satisfied that Seller has furnished the Goods and Special Services in accordance with the Procurement Contract Documents, and that Seller has fulfilled all other obligations under the Procurement Contract Documents, then Engineer will, within 10 days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of final payment subject to the provisions of Paragraph 13.02, and present the final Application for Payment to Buyer. Such recommendation will account for any set-offs against payment that are necessary in Engineer's opinion to protect Buyer from loss for the reasons stated in Paragraph 13.02.

D. If Engineer does not recommend final payment, Engineer will return the final Application for Payment to Seller, indicating the reasons for refusing to recommend final payment, in which case Seller shall make the necessary corrections and resubmit the final Application for Payment.

E. In support of its recommendation of final payment Engineer will also give written notice to Buyer and Seller that the Goods and Special Services are acceptable, subject to stated limitations in the notice and to the provisions of Paragraph 13.06.

F. If the final Application for Payment and accompanying documentation are appropriate as to form and substance, Buyer shall, within 30 days after receipt thereof, pay Seller the amount recommended by Engineer, less any sum Buyer is entitled to set off against Engineer's recommendation, pursuant to the provisions of Paragraph 13.04.

G. Buyer will not make final payment, or return or release included retainage (if any) at any time, unless Seller submits written consent of the surety to such payment, return, or release.

13.06 *Waiver of Claims*

A. By making final payment, Buyer waives its claim or right to liquidated damages or other damages for late completion by Seller, except as set forth in an outstanding Claim, appeal, set-off, or express reservation of rights by Buyer. Buyer reserves all other claims or rights after final payment.

B. The acceptance of final payment by Seller will constitute a waiver by Seller of all claims and rights against Buyer other than those pending matters that have been duly submitted or appealed under the provisions of Article 12.

ARTICLE 14—CANCELLATION, SUSPENSION, AND TERMINATION

14.01 *Cancellation*

A. Buyer has the right to cancel the Procurement Contract, without cause, at any time prior to delivery of the Goods by written notice. Cancellation pursuant to the terms of this paragraph will not constitute a breach of contract by Buyer. Upon cancellation:

1. Buyer shall pay Seller for the direct costs incurred in producing any Goods that Seller has specially manufactured for the Project, plus a fair and reasonable amount for overhead and profit.

2. For Goods that are not specially manufactured for the Project, Seller shall be entitled to a restocking charge of 10 percent of the unpaid Procurement Contract Price of such Goods.

14.02 *Suspension of Performance by Buyer*

A. Buyer has the right to suspend performance of the Procurement Contract for up to 90 days, without cause, by written notice. Upon suspension under this paragraph, Seller shall be entitled to an increase in the Procurement Contract Times and Procurement Contract Price caused by the suspension, provided that performance would not have been suspended or delayed for causes attributable to Seller.

14.03 *Suspension of Performance by Seller*

A. Seller may suspend the furnishing of the Goods and Special Services only under the following circumstance:

1. Seller has reasonable grounds to conclude that Buyer will not perform its future payment obligations under the Procurement Contract; and

2. Seller has requested in writing assurances from Buyer that future payments will be made in accordance with the Procurement Contract, and Buyer has failed to provide such assurances within ten days of Seller's written request.

14.04 *Breach and Termination*

A. *Buyer's Breach*

1. Seller shall have the right to terminate the Procurement Contract for cause by declaring a breach if Buyer fails to comply with any material provision of the Procurement Contract. Upon termination, Seller shall be entitled to all remedies provided by Laws and Regulations.

2. If Seller believes Buyer is in breach of its obligations under the Procurement Contract, Seller shall provide Buyer with reasonably prompt written notice setting forth in sufficient detail the reasons for declaring that it believes a breach has occurred. Buyer shall have 7 days from receipt of the written notice declaring the breach (or such longer period of time as Seller may grant in writing) within which to cure or to proceed diligently to cure such alleged breach.

B. *Seller's Breach*

1. Buyer may terminate Seller's right to perform the Procurement Contract for cause by declaring a breach should Seller fail to comply with any material provision of the

Procurement Contract Documents. Upon termination, Buyer shall be entitled to all remedies provided by Laws and Regulations.

2. In the event Buyer believes Seller is in breach of its obligations under the Procurement Contract, Buyer shall provide Seller with reasonably prompt written notice setting forth in sufficient detail the reasons for declaring that it believes a breach has occurred. Seller shall have 7 days from receipt of the written notice declaring the breach (or such longer period of time as Buyer may grant in writing) within which to cure or to proceed diligently to cure such alleged breach.

3. If and to the extent that Seller has provided a performance bond under the provisions of Paragraph 5.01, the notice and cure procedures of that bond, if any, will supersede the notice and cure procedures of Paragraph 14.04.B.2.

ARTICLE 15—MISCELLANEOUS

15.01 *Giving Notice*

A. Whenever any provision of the Procurement Contract requires the giving of written notice to Buyer, Seller, or Engineer, it will be deemed to have been validly given if delivered:

1. in person, by a commercial courier service or otherwise, to the recipient's place of business;

2. by registered or certified mail, postage prepaid, to the recipient's place of business; or

3. by e-mail to the recipient, with the words "Formal Notice" or similar in the e-mail's subject line.

15.02 *Controlling Law*

A. This Procurement Contract is to be governed by the law of the state in which the Goods are to be installed.

B. In the case of any conflict between the express terms of this Procurement Contract and the Uniform Commercial Code, as adopted in the state whose law governs, it is the intent of the parties that the express terms of this Procurement Contract will apply.

15.03 *Computation of Time*

A. When any period of time is referred to in the Procurement Contract by number of days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

15.04 *Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Procurement Contract, and the provisions of this paragraph will be as effective as if repeated specifically in the Procurement Contract in connection with each particular duty, obligation, right, and remedy to which they apply.

15.05 *Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Procurement Contract, as well as all continuing obligations indicated in the Procurement Contract, will survive final payment, completion, and acceptance of the Goods and Special Services or termination or completion of the Procurement Contract or of the services of Seller.

15.06 *Entire Agreement*

A. Buyer and Seller agree that this Procurement Contract is the complete and final agreement between them, and supersedes all prior negotiations, representations, or agreements, either written or oral. This Procurement Contract may not be altered, modified, or amended except in writing signed by an authorized representative of both parties.

15.07 *No Waiver*

A. A party's non-enforcement of any provision will not constitute a waiver of that provision, nor will it affect the enforceability of that provision or of the remainder of this Procurement Contract.

15.08 *Headings*

A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

15.09 *Successors and Assigns*

A. Buyer and Seller each binds itself, its partners, successors, assigns, and legal representatives to the other party hereto, its partners, successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Procurement Contract.

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 01 1100

SUMMARY OF WORK

PART 1 GENERAL

1.1 REFERENCE

A. The requirements of Division 01 apply to the work of all other Sections.

1.2 PROJECT DESCRIPTION

A. This project consists of the procurement of membrane softening equipment for two (2) water treatment plants in Warren County Ohio—the Richard A. Renneker WTP (RARWTP) and the Franklin Area WTP (FAWTP).
   1. The RARWTP membrane softening addition is designed to treat 13.7 MGD (expandable to 22.0 MGD) of groundwater. Equipment includes six (6) nanofiltration membrane softening skids and all associated controls and appurentences as identified on the drawings and the specifications.
   2. The FAWTP membrane softening addition is designed to treat 9.6 MGD (expandable to 15 MGD) of groundwater. Equipment includes three (3) nanofiltration membrane softening skids and all associated controls and appurentences as identified on the drawings and the specifications.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 01 1100

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 01 3300

SUBMITTAL PROCEDURES

PART 1 GENERAL

1.1 GENERAL

A. All submittals shall be made to the Engineer unless specifically noted otherwise or unless instructed in writing by the Owner.

B. Submit a complete list of required submittals.

C. Receive, check, approve as required, and submit all items listed herein by the time indicated, accompanied by a transmittal letter using the form attached at the end of this Section.

D. Keep an accurate record of the date of submittal and the date received on the Project.

E. Contractor shall supply all AIA forms. (One source of supply is the local AIA Chapter office.) The Engineer will supply a copy of all other forms.

F. Following is a general list of required submittals and the time frame for submittal.
   1. Within 30 Days after Contract Signing
      a. Progress schedule.
      b. Submittal schedule.
   2. Prior to First Progress Payment
      a. Progress Schedule.
      b. Submittal Schedule.
      c. Application and Certificate for Payment.
      d. Schedule of Values.
      e. Subcontractor and Material Lists.
   3. With Each Progress Payment.
      a. Affidavit and Waiver of Lien (see attached form) from each Contractor and sub-contractor.
      b. Submittal Schedule.
      c. Schedule of Values.
   4. As Work Progresses
      a. Monthly updated Progress Schedule.
      b. Wage Rate and Payroll Certificates.
      c. Notice of Furnishings.
      d. Materials Certifications.
      e. Test Reports.
      f. Shop Drawings.
      g. Maintenance Instructions.
      h. Operating Instructions.
      i. Product Data.
      j. Samples.
      k. Reference Submittals.
      l. Progress Photographs.

m. Special Guaranties and Warranties.
n. Updated Subcontractor List.

5. With Request for Final Payment
   a. As-Built Drawings.
   b. Final Affidavits and Waivers of Lien (see attached form).
   c. Complete package of Shop Drawings and Product Data conforming reproducibles.
   d. Final Photographs.
   e. Keys and Keying Schedule.
   f. Certificate of Inspection.
   g. Certificate of Occupancy.

1.2 PROGRESS SCHEDULES

A. Preliminary Construction Schedule

1. At fourteen calendar days following written Notice to Proceed, a Contract Milestone date has been established which is the Contractor's submittal to the Engineer for review and approval of an electronic PDF of a bar-chart schedule covering the first 45 calendar days of work to be performed, while the Detailed Construction Network is being prepared. A copy will be returned to the Owner, Field Representative, and each Contractor.
2. The Contractor shall submit to the Engineer for review and approval, with the Preliminary Construction Schedule, a detailed breakdown of the costs for all work activities identified in the schedule. The cost for each work Activity shall include mobilization, materials, labor, equipment, overhead, and profit. The Contractor will include the cost projections as part of the CPM Schedule or as a separate document that corresponds to the CPM Schedule. Cost breakdown must be consistent with the Pay Items of the base bid schedule. After review, any necessary revision, and approval, this cost breakdown will be utilized as the basis for review of progress payment estimates during the initial 45 days of the Contract prior to use of the approved Schedule of Values.
3. The Contractor shall revise the schedule and cost breakdown according to the comments received from the Engineer and submit an electronic PDF of the revised schedule and cost breakdown to the Engineer within ten calendar days after receipt. The reviewed schedule will then be considered the "Approved 45 Day Preliminary Construction Schedule."

B. Detailed Construction Network

1. The Detailed Construction Network in precedence format shall be a computer-generated and computer-drawn schedule analysis.
2. A Detailed Construction Network represents the Contractor's best judgment of how it shall prosecute and complete the work in compliance with the Contract Milestone Dates and any other Specific Dates stipulated in the Contract Documents.
3. The identity and duration of all Activities to be included in this Construction Plan. Activities shall meet the following criteria:
   a. Activities shall be numbered, and their descriptions shall be clear and concise. Where applicable, descriptions shall include quantities of work.
   b. Activities shall be coded with sufficient detail to allow identification of the Activity as to type of work, work responsibility, interfacing of the activity with other contracts, and any other coding necessary to accurately describe the work Activity. All Activities associated with the preparation, submittal and approval of

information required by the Engineer shall be coded so they may be readily identified.

c. Resource requirements (manhours by craft, material, equipment, services, etc.) shall be described for each Activity, in the resources dialog box.

d. The quantity and cost component for each Activity shall be provided. The sum of the Activity cost components shall equal the Contract Price. If the Contract calls for pay items, the Activity shall also be coded to allow identification with its respective pay item(s). Fabrication of materials and/or equipment shall be described in a separate Activity. The cost component of any fabrication Activity shall be zero.

4. The identity of long lead items and delivery dates of all major pieces of equipment or materials.

5. The identity of any potential problems or constraints related to the implementation of the overall construction plan.

6. All Activities included in the Preliminary Construction Network shall be included in the Detailed Construction Network.

7. The plot of the Detailed Construction Network shall:

   a. Show the interdependencies of the work Activities and the major points of interface or interrelation with the activities of others, including Specific Dates for completion.

   b. Indicate conformance with the specific interim Milestone Dates specified in the Contract Documents.

   c. Include the description and quantity of work, by Activity.

   d. Allow for the time required for engineering, preparation, submission, and approval of submittals (including O & M Instructions), manufacturing, delivery, and installation of Contractor-furnished permanent plant materials.

   e. Indicate required dates of delivery of Owner-furnished material and equipment. (If applicable).

   f. Delineate the critical Path (or Paths).

   g. Indicate all erection and installation Activities.

   h. Indicate all testing of equipment and materials.

   i. Indicate startup, operational demonstration, and commissioning Activities.

   j. Be furnished in color, with necessary legend sheets, and on electronic 22-inch x 34-inch sheets.

8. The Detailed Construction Network shall indicate late completion date for the project that is no later than the Project's required date for final completion. All Activity durations shall be given in working days. The Network shall also indicate each of the following:

   a. Interfaces with the work of outside entities, e.g., utilities, power, any separate contractors.

   b. Description of Activity, including Activity numbers.

   c. Estimated duration for each Activity.

   d. Early start date for each Activity.

   e. Late start date for each Activity.

   f. Early finish date for each Activity.

   g. Late finish date for each Activity.

   h. Float available for each path of Activities.

   i. Actual start date for each Activity begun.

   j. Actual finish date for each Activity completed.

k. The Critical Path for the project, with said path of Activities being clearly and easily recognizable on the time-scaled network diagram. The relationship between all non-critical Activities and Activities on the Critical Path shall be clearly shown on the plot of Detailed Construction Network by symbol.
l. The dollar value and quantity of work for each Activity, corresponding with the Schedule of Values.
m. The responsibility, by Contractor, Subcontractor, or Supplier, for each Activity or portion thereof.
n. The percentage complete for each Activity in progress or completed.

C. The Contractor shall submit with the Detailed Construction Network, an electronic PDF a narrative description indicating anticipated allocation of the following resources and work shifts to be utilized on the project:
1. Labor resources by each craft, representatives of the equipment manufacturers, and all other personnel that have been retained by the Contractor.
2. Equipment resources.
3. Whether work will be performed on a one, two, or three-shift basis.
4. The Contractors specific understanding of the effects of seasonal weather conditions on the scheduled work, and the anticipated measures the Contractor and all sub-contractors will exercise to accommodate the known local weather conditions.

D. It is to be expressly understood and agreed to by the Contractor that the schedule is an estimate to be revised from time-to-time as progress proceeds. The Owner does not guarantee that the Contractor can start work activities on the "early start" or "late start" dates, nor complete work activities on the "early finish" or "late finish" date as shown in the schedule, or as same may be updated or revised. The Owner or Engineer does not guarantee that Contractor can proceed at all times in the sequence established by said schedule.

E. Within 21 calendar days following Notice to Proceed, the Contractor shall also submit an electronic PDF of its proposed Schedule of Values (using the breakdown of the computer listing of Activities) to the Engineer. The Schedule of Values shall allocate a dollar value (cost) for each Activity of the Detailed Construction Network. Each Activity cost allocation shall include labor, equipment, and material costs, including a pro rata contribution for overhead and profit. The sum of all Activity costs shall be equal to the total Contract Sum. Each Activity cost shall be coded by the Contractor, to show which subcontractor is responsible for performing the work so that subtotals for each coded activity of the work can be prepared. The Contract Pay Item for each Activity shall be indicated. The sum of costs for each Pay Item shall equal the value submitted with the Contractor's proposal.

F. The Engineer will review the Contractor's Detailed Construction Network and Schedule of Values. The review of the Detailed Construction Network, including logic diagrams and computer generated mathematical analysis will be for compatibility with the required Project Construction and Commissioning Schedule. The review of the Schedule of Values will verify that the Schedule of Values shall, in the best judgement of the Contractor, and the Engineer, represent a fair, and equitable dollar value for each Activity on the Detailed Construction Network. The Contractor shall revise its Detailed Construction Network and Schedule of Values as required to support the Project Construction and shall resubmit them to the Engineer within ten calendar days for re-review. The Contractor's resubmittal shall include the following:
1. Plot of the Detailed Construction Network (electronic PDF).

2. Computer disks of the Detailed Construction Network (1 set).
3. Schedule of Values (electronic PDF).
4. Computer listings/supporting data (electronic PDF).

G. Within 10 calendar days following submission of an acceptable Detailed Construction Network and Schedule of Values, the Engineer will return an electronic PDF to the Contractor. The Contractor shall review these returned items and within five calendar days following the receipt from the Engineer signify its agreement by signing one copy of each document and returning it to the Engineer. Approval shall be signified by the Engineer also signing the copies of the documents which were signed and returned by the Contractor. The Contractor's approved Detailed Construction Network and Schedule of Values shall then be the documents which the Contractor shall use in planning, coordinating, and executing the work (including all activities of Subcontractors, equipment vendors and suppliers) and shall be the basis for evaluating the progress of the work and supporting requests for payment, subject to such revisions made in such schedule as are provided for in the Contract Documents.

H. Approval by the Engineer of the Contractor's Detailed Construction Network is advisory only and shall not relieve the Contractor of the responsibility for accomplishing the work within each and every Contract-required Milestone and Completion date. Omissions and errors in the approved Detailed Construction Network shall not excuse performance which is not in compliance with the Contract. Approval by the Engineer in no way makes the Owner, Engineer an insurer of the Detailed Construction Network's success or liable for resultant time or cost overruns attributable to its shortcomings. The Owner hereby disclaims any obligation or liability by reason of the Owner, or Engineer's approval of or acquiescence to the Detailed Construction Network.

I. Recovery Schedule
   1. If certain activities shown on the Contractor's Detailed Construction Network fall behind schedule, to the extent that any of the mandatory specific or milestone or completion dates are in jeopardy, the Contractor shall prepare and submit to the Engineer a Supplementary Recovery Schedule, in a form and detail appropriate to the need, which explains and displays how the Contractor intends to reschedule those activities, in order to regain compliance with the Detailed Construction Network during the immediate subsequent pay period. Both the preparation of the Recovery Schedule, and all necessary acts under that Recovery Schedule required to recover compliance with the mandatory dates, shall be at no additional cost to the Owner.
   2. The Contractor shall do the following after determination of the requirement for a Recovery Schedule:
      a. Within three calendar days, the Contractor shall prepare and complete the Recovery Schedule. The Contractor and major Subcontractors shall provide the Engineer with such information as is required to assist in review of the Recovery Schedule. The Recovery Schedule shall represent the Contractor's best judgment as to how it shall reorganize its work so that it may return to the Detailed Construction Network within the immediate subsequent pay period. The Recovery Schedule shall be prepared to a similar level of detail as the Detailed Construction Network and shall have a maximum duration of one month which shall coincide with the pay period.
      b. Within five calendar days, the Contractor shall participate in a conference with the Engineer to review and evaluate the Recovery Schedule. Any revisions necessary as a result of this review shall be resubmitted by the Contractor for approval

within two calendar days of the conference. The approved Recovery Schedule shall then become the Schedule which the Contractor shall use in planning, coordinating, and executing the work (including all activities of subcontractors, equipment vendors, and suppliers) for its one month duration, to regain compliance with the Detailed Construction Network.

c. Five calendar days prior to the expiration of the Recovery Schedule, the Engineer and the Contractor will meet at the job site for the monthly update and to evaluate the effectiveness of the Recovery Schedule, and shall determine whether the Contractor has regained compliance with the Detailed Construction Network. At the direction of the Engineer, one of the following will occur:
   1) If, in the opinion of the Engineer, the Contractor is still behind schedule, the Contractor shall prepare another Recovery Schedule, at the Contractor's expense, pursuant with this Paragraph, which will take effect during the immediate subsequent pay period. This schedule shall be prepared under the immediate review of the Engineer.
   2) If, in the opinion of the Engineer, the Contractor has sufficiently regained compliance with the Detailed Construction Network, the use of the Detailed Construction Network will be resumed.

J. Requested Time Adjustment Schedule

1. The updated Detailed Construction Network and accompanying reports submitted by the Contractor shall not show a completion date later than the stipulated completion date, subject to any time extensions approved by the Owner. If the Contractor believes it is entitled to an extension of the Contract Time under the provisions of the Contract Documents, the Contractor shall submit to the Engineer, with each progress payment update, a separate schedule analysis (entitled "Requested Time Adjustment Schedule") indicating suggested adjustments in the Contract Time which should, in the opinion of the Contractor, be made in accordance with the Contract Documents for time adjustments, which are due to changes, delays, or conditions occurring during the past month or previously, or which are expected or contemplated by the Contractor (whether such conditions are excusable under the Contract or are alleged to be due to Contractor or Owner fault). This separate schedule, if submitted, shall be a computer-generated and computer-drawn schedule analysis, and shall be accompanied by a formal time extension request, as required by the Contract and a detailed narrative justifying the time extension requested.
2. The time extension request shall include forecasts of the actual Project Completion Date, completion of any sequences of Activities required by the Owner, and a forecast of the resultant actual achievement of Milestones listed in the Contract.
3. To the extent any time extension requests are pending at the time of any update of the Construction Schedule, the "Requested Time Adjustment Schedule" shall also be updated to reflect any adjustments made by Contractor in the logic, sequence, or duration of any Activities, any time extensions previously granted by the Owner, and to reflect actual or expected progress, in order that the "Requested Time Adjustment Schedule" shall clearly and accurately reflect the Contractor's actual intention and proposed time adjustments.
4. Neither the Engineer or the Owner have any obligation to consider any time extension request unless the requirements of the Contract Documents are complied with. The Owner shall not be responsible or liable to the Contractor for any constructive acceleration due to failure of the Owner to grant time extensions. The Contractor's failure to perform in accordance with the approved Detailed Construction Network shall

not be excused, nor be chargeable to the Owner, simply because the Contractor has submitted time extension requests or the "Requested Time Adjustment Schedule."

K. Each request for payment submitted to Engineer for approval shall be accompanied by the individual Contractor's Progress Schedule. The Progress Schedule shall be that schedule required above. The schedule accompanying the request for payment shall indicate actual progress compared to that anticipated on each approved Contractor's Progress Schedule. If actual performance does not meet the performance as shown on the approved schedule in total or on individual line items, revise and submit evidence as to what efforts the individual Contractor will take to meet the approved schedule. Failure to submit the Progress Schedule with each request for payment shall be cause for not processing the request for payment until receipt of schedule as required above.

1.3 PROGRESS REPORTS

A. Each Prime Contractor shall provide the Engineer with a detailed progress report showing work completed the last month. Provide at each monthly progress meeting.

1.4 SHOP DRAWINGS, PRODUCT DATA, SAMPLES AND REFERENCE SUBMITTALS

A. Definitions
1. Shop Drawings are drawings, diagrams, schedules and other data specially prepared for the work by the Contractor or any Subcontractor to illustrate some portion of the work.
2. Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams, and other information furnished by the Contractor to illustrate a material, product or system for some portion of the work.
3. Samples are physical examples which illustrate materials, equipment or workmanship and establish standards by which the work will be judged.
4. Reference Submittals are any technical data or submittals listed in the technical sections of the Specifications, under Reference Submittals including but not limited to test reports, surveys, special guaranties and warranties, maintenance and operating instructions, extra stock, installers' certification, material certification, and calculations.
5. Shop Drawings, Product Data, Samples, and Reference Submittals are not to be construed as Contract Documents, they are to be used by the Contractor for his convenience only.

B. General Requirements
1. There shall be no substitutions for specified products, equipment, or systems except as allowed in Division 01 Section “Product Requirements”.
2. Shop Drawings and Product Data are solely the responsibility of the Contractor, and shall be checked by him. Engineer and Owner take no responsibility whatsoever for such documents submitted for review.

C. Shop Drawings

1. Prepare project specific information, drawn accurately and to scale. Do not base shop drawings on reproductions of the contract documents or standard printed data, unless otherwise permitted.
2. Only those Shop Drawings and Product Data will be reviewed:
    a. Where details of fabrication, installation or attachment are required to supplement the Contract Documents.
    b. Where there are deviations from the Contract Documents for any reason. (This procedure is not for the purpose of reviewing substitutions.)
    c. Where further documentation is required to show the proposed product or system is in conformance to every requirement of a performance Specification.
    d. Where listed under Submittals in each technical section.
3. Shop Drawings and Product Data shall be submitted in sufficient detail to permit the Reviewer to review:
    a. That product or system is as specified or shown.
    b. Details of fabrication, installation or attachment.
    c. For complete conformance to each requirement of performance Specifications, line item by line item.
4. Shop drawings shall fully illustrate all requirements in the contract documents. Include the following information, as applicable:
    a. General arrangement of each product or assembly by necessary plans, elevations and sections.
    b. Dimensions, finishes, part numbers, location in the building and details of fabrication and installation.
    c. Any equipment with electric motors or wiring must show wiring diagram and schematics. Lack of either will be cause for automatic rejection of the submittal.
    d. Identification of products.
    e. Schedules.
    f. Compliance with specified standards.
    g. Notation of coordination requirements.
    h. Notation of dimensions established by field measurement.
    i. Relationship and attachment to adjoining construction clearly indicated.
    j. Seal and signature of professional engineer, if specified.
5. Sheet Size: Except for templates, patters, and similar full-size drawings, submit shop drawings on electronic sheets at least 8-1/2 by 11 inches, but no larger than 22 by 34 inches.
6. Format: Submit shop drawings in PDF electronic format. At the Engineer's request, submit up to 3 hard copies.

D. Product Data
1. Product Data shall include the following information, as applicable:
    a. Manufacturer's catalog cut sheets
    b. Manufactuerer's product specifications and details
    c. Performance characteristics
    d. Wiring diagrams
    e. Test data
    f. Installation instructions
    g. Standard color charts
    h. Statement of compliance with specified reference standards
    i. Testing by recognized testing agency
    j. Application of testing agency labels and seals

k. Notation of coordination requirements
l. Availablilty and delivery time information

2. Product Data shall be submitted with a cover letter stating exact product by name and number and how it complies with the Contract Documents.
3. Format: Submit product data in PDF electronic format. At the Engineer's request, submit up to 3 hard copies.

E. Samples
1. Submit 3 identical sets for each material, finish and color required.
   a. For unit materials (such as brick, floor or ceiling tile), provide standard size units in sufficient quantity to show the full range.
   b. For finishes applied over large areas (such as wall covering, carpet, ceramic tile, plywood), provide 12-inch x 12-inch minimum size samples or larger, as required, to show full range or repeat pattern.
   c. For linear products, such as door and window frames or trim pieces, submit 12-inch minimum lengths of the actual product.
2. Full-Size Samples: Where required, submit a full-size unit of a specified product as a sample. Such sample may be used in the finished work if:
   a. It is approved for such use by Engineer.
   b. It is protected and in first-class condition.
   c. It matches the balance of the product used on the Project.

F. Reference Submittals
1. All calculations shall have the Professional Engineer's seal affixed, and shall be submitted prior to starting fabrication or installation. Engineer shall not be responsible for calculations of such other Professional Engineers. The Professional Engineer shall be registered in the State of Ohio.
2. Calculations, where required for the preparation of Shop Drawings, shall be submitted with those Shop Drawings and not as a separate submittal. Shop Drawings submitted without calculation backup sheets will be returned unreviewed.

G. Submittal Process
1. As soon as practical after executing the Contract, or as required by other Contract Documents, request from each Subcontractor and submit properly processed and identified items as required in the Specifications.
   a. Late or untimely submittal of information shall not be cause to reduce Engineer's review time, to accept lower quality, or to delay the project completion.
2. Contractor shall be solely responsible for scheduling and coordinating of submittals among Subcontractors.
3. Allow a minimum of 14 working days for processing (from the date the Reviewer receives submittal until the date he sends it back) and sufficient time for proper handling, review, fabrication and delivery. If many items are submitted simultaneously, substantially more time for processing shall be required if Engineer so determines.
4. Send a separate Transmittal Letter with each submittal by specification number, using the form provided by the Engineer. List and identify each item on the Transmittal Letter. Include Engineer's project identification number and other requested information on the transmittal letter or on the submittal being sent.
5. When Shop Drawings are revised and resubmitted, all the revised, added and/or deleted items since the previous submittal must be circled by the submitter.

6. The entire submittal of Shop Drawings will be returned unreviewed when revised, added and/or deleted items have not been circled.
7. Shop Drawings that are submitted for reference as an aid to review another portion of the work will not be reviewed.

H. Form of Submittal
1. Shop Drawings shall be submitted in PDF electronic format. The sheet size of the electronic PDF shall generally be 22-inch x 34-inch or 11-inch x 17-inch and shall be filled completely to minimize the number of sheets.
2. Submittals for Product Data shall be submitted in PDF electronic format. The sheet size of the electronic PDF shall generally be 8-1/2-inch x 11-inch.
    a. Provide minimum blank space of 3-inch x 8-1/2-inch on each submittal for review stamps of Contractor and Engineer.
    b. When submitting product data, submit only catalog pages showing the item to be furnished and identify the item on the page and on a separate cover letter stating how it complies with the Contract Documents.
3. Where Samples are requested, submit three complete sets of the sizes indicated.
4. Mark each item with the same identifying number used on the Transmittal Letter and include the following information:
    a. Project name and number
    b. Contractor's name, address and telephone number
    c. Subcontractor's name, address and telephone number
    d. Supplier's name, address and telephone number
    e. Date of submittal
    f. Specification section number or Drawing number
    g. Status (new or prior submittal date and number)

I. Contractor's Check
1. Upon receipt of submittals, check each item for:
    a. Conformance to submittal requirements
    b. Conformance of materials and details to the Contract Documents
    c. Accuracy of all measurements
    d. Field construction criteria related thereto
2. Reject items which do not conform to these requirements and return them to the originator with an explanation for the rejection. Do not submit rejected items to Engineer.
    a. Do not submit Shop Drawings, Product Data, or Samples that are not requested in the Technical Sections.
3. For items approved by the Contractor, stamp each item "APPROVED" to warrant and represent approval.
4. Contractor is totally responsible for the following items which will not be reviewed by the Engineer or by Owner:
    a. Deviations from Contract Documents.
    b. Dimensions to be confirmed and correlated at the Site.
    c. Fabrication process information
    d. Means, methods, techniques, sequences, procedures of construction and construction safety.
    e. Coordination of the work of all trades.
    f. Reference Submittals

J. Engineer's Review
   1. Deliver or send each item, shipping charges prepaid, to Engineer.
   2. Engineer immediately will reject any item without further review if it is not:
      a. Accompanied by a Transmittal Letter containing the required information
      b. Submitted as a reproducible
      c. Stamped "APPROVED" by the Contractor
   3. If the submittal has been previously submitted and was marked "CONFORMS" or "CONFORMS AS NOTED" and the transmittal letter does not state that additional corrections or additions to the submittal have been made, then such submittal shall not be reviewed again.
   4. Review will be for conformance to the design concept and compliance with information given in the Contract Documents. Engineer will make notations directly on the electronic PDF copy.
   5. Review is intended to foresee unacceptable products and to minimize the possibility of their rejection at the Site. The review shall not be construed as:
      a. Permitting a departure from the Contract Documents, unless specifically so noted.
      b. Relieving the Contractor of responsibility for errors or omissions.
      c. Acceptance of an assembly of which an approved item is a part.
      d. Approval of variations from previously approved items.
      e. Approval of dimensions.
   6. Engineer will review all Samples. Such review will be for appearance only. Compliance with all other requirements of the Contract Documents is the responsibility of the Contractor.
   7. Product Data: Only the cover letter will be stamped with the Shop Drawing stamp, and not the product data sheets.
   8. Reference Submittals shall be sent to Engineer for informational purposes only.
      a. Refer to Technical Sections under Reference Submittals for required information to be submitted.
      b. The contents of such submittals and compliance with all other requirements of the Contract Documents shall be the responsibility of the Contractor.

K. Variations from Contract Documents
   1. If Engineer determines a variation from the Contract Documents is in the best interest of the Owner, and it does not involve a change in the Contract price or time, he may permit such variation and stamp the item "CONFORMS".
   2. Unless Engineer receives immediate written notification, he will assume the Contractor approves any variation shown.
   3. If Contractor fails to mention variations from the Contract Documents, he will not be relieved of responsibility for executing the work in accordance with the Contract Documents.
   4. When a variation from the Contract Documents is permitted and such variation involves corresponding adjustment in an adjacent or related item, responsibility for making and paying all costs for such adjustment rests with the Contractor requesting the original variation. Additional services required of Engineer, shall be paid for by Contractor. Payment for such additional services shall be made as follows:
      a. Owner shall compensate Engineer for such additional services and Owner shall deduct amount of such compensation from payments due to the Contractor.

L. Reviewer's Stamp and Letter of Acknowledgement

1. Each Shop Drawing, Product Data cover letter or Sample processed by Engineer (except reference submittals).
2. If the item conforms to all requirements of the Contract Documents or if the item contains permitted variations, it will be stamped "CONFORMS".
3. If the item is marked-up by the Contractor or Engineer to make it conform and such mark-ups are not extensive, it will be stamped "CONFORMS AS NOTED".
4. If the item does not conform to the Contract Documents and the variation is not permitted, or if the item is extensively marked-up, it will be stamped "DOES NOT CONFORM".
5. Except for field test reports, receipt of Reference Submittals will be acknowledged by Letter of Acknowledgement and no stamp will be placed on such submittals. Sample attached at the end of this Section.

M. Rejection and Resubmittal
1. Items which do not meet the requirements of this Section, or are stamped "DOES NOT CONFORM", will be returned for correction and resubmittal by the same process. Engineer will indicate reasons for the rejection and will retain one print or sample to check against resubmittal.
2. Any item not prepared as required by the Contract Documents or not prepared in a professional or workmanlike manner requiring excessive review time, including items that require more than 2 submittals, shall be assessed a back charge by Owner for such extra time. Payments for such additional services shall be made as follows:
    a. Owner shall compensate Engineer for such additional services and Owner shall deduct amount of such compensation from payments due to the Contractor.
3. Make the indicated changes only, unless further change is required for conformance to the Contract Documents.
4. Direct attention on the item to all revisions. Explain all revisions, other than those requested, in detail on the transmittal form.
    a. All revised and/or added items since the previous submittal must be circled.
    b. The entire submittal will be returned unreviewed when revised or added items have not been circled.
5. Contractor shall be completely responsible for changes not indicated or specifically noted as revised.

N. Acceptance and Use
1. Items stamped "CONFORMS AS IS" or "CONFORMS AS NOTED" will be returned to Contractor.
2. Distribute electronic copies as required to transmit the information to all parties involved.
3. Engineer will retain conforming Shop Drawings and Product Data as well as one sample, for comparison with work installed.
4. Keep copies of each approved item on the job Site at all times for reference.
5. Retain the original electronic submittal until Final Completion of the work and turn them over to Engineer for the Owner's file.
6. Do not commence work requiring Shop Drawings, Product Data, Samples, and Reference Submittals until submittal has been processed by Engineer. Perform all work in accordance with such submittal.
7. No work shall be performed without a required submittal having the proper Engineer stamp stating "CONFORMS" or "CONFORMS AS NOTED".

1.5 QUALITY CONTROL SUBMITTALS

A. Certificates
   1. Installer Qualification is required for all installers of product systems listed as requiring such in the "Submittals" paragraphs of the technical specifications. Installer Certification shall consist of written certification from the manufacturer of the product system listed certifying that the Installer is approved by the manufacturer for installing the specified product system. Submit an electronic PDF copy of certification with the Subcontractor and Material List prior to Contract signing.
   2. Material Certification is required for all materials listed as requiring such in the "Submittals" paragraphs of the technical specifications. Material Certification shall consist of written certification from the manufacturer of the material listed certifying that all such material used in the work meets the requirements specified in the Contract Documents and is being utilized in conformance with the manufacturer's recommendations. Submit electronic PDF copy of certification as work progresses.
   3. Surveyor's Certification
      a. A certification shall be a written statement certifying the correctness of the data reported and sealed by a surveyor registered in the state where the project is located. A report shall consist of reduced field notes, sketches, or dimensions marked on copies of the Construction Drawings.
      b. Contractor shall submit certifications during the construction of the Project from a registered surveyor that the critical locations and elevations of the construction are in accordance with the Contract Documents.
         1) Items for certification shall include, but not be limited to, all structures, pipes, utilities, and other underground and aboveground construction, such as bottom of footings, top of footings, floor elevations, elevations of pipe centerline.
         2) Report all deviations from the Contract Documents both critical and those that are not critical.
      c. Report horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
      d. Report location of internal utilities and appurtenances concealed in the construction, referenced to visible and accessible features of the structure.
      e. Reports shall be submitted timely before and after construction. For example report and certify footing locations before and immediately after construction of the footings.

B. Manufacturer's Instructions
   1. When Contract Documents require that installation of work shall comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation, including a PDF electronic copy to the Engineer.
      a. Maintain 1 set of complete instructions at the jobsite during installation and until completion.
   2. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.
      a. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.
      b. Do not proceed with work without clear instructions.

3. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by Contract Documents.

1.6 INFORMATION REQUESTS, AND PROPOSED DEVIATIONS

A. General: Questions which arise during construction concerning the Contract Documents and the interpretation thereof, shall be submitted in writing to Engineer for his comments. Questions that can be answered by review of the Contract Documents shall not be submitted to Engineer.

B. Proposed Deviation
   1. Questions concerning proposed deviations from the Contract Documents to accommodate construction shall be documented and submitted to the Engineer for his review.
      a. Such documentation shall include a proposed solution with detailed drawings and written substantiation for the proposed deviation.
      b. This shall not be construed as a means of submitting substitutions of manufacturers, products, materials, equipment, or systems. Substitutions shall not be submitted except as permitted in Division 1 Section “Material and Equipment”.
   2. Do not proceed with such deviations until written notice to proceed has been received from Engineer.
      a. Such written notice shall not relieve Contractor from conformance to the Contract Documents.
   3. All reviews by Engineer of proposed deviations submitted by Contractor which would provide any benefit to Contractor and all reviews by Engineer of requests for deviations which are, in fact, requests for substitutions shall be paid by Contractor, even though the request may be denied, as follows:
      a. Owner will compensate Engineer.
      b. Owner will deduct the amount of such compensation from payments to Contractor.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 01 3300

SECTION 01 4500

QUALITY CONTROL

PART 1 GENERAL

1.1 REFERENCE

A. The requirements of Division 01 apply to the work of all other sections.

1.2 QUALITY ASSURANCE

A. General: The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work. The Contract Documents are complementary, and what is required by any one shall be as binding as if required by all. Work not covered in the Contract Documents will be required if it is consistent therewith and is reasonably inferable therefrom as being necessary to produce the intended results. In case of a discrepancy between the Drawings and Specifications or among Drawings, the strongest, the larger quantity or better quality, as determined by the Interpreter shall govern. If an item is shown on the Drawings, but not specified, the Contactor shall provide the item of a quality similar to other items specified, as determined by the Interpreter. If an item is specified, but not shown on the Drawings, it shall be located as required by the Interpreter.

B. Wind Load: Provide products designed to withstand the indicated wind load; when requested, submit substantiating data.

C. Fire Resistance Rating: Provide materials and assemblies which have been tested and listed by UL, FM, IRI, OIA, or other recognized authority, for the assembly shown or specified; where specified, attach label of testing authority. For oversized assemblies or assemblies similar to those tested, provide Manufacturer's certification that the assembly has been constructed of materials and methods equivalent to the tested construction.

D. Flame Spread Rating: Provide products with the indicated flame spread rating or less; when requested, submit substantiating data. Provide materials with flame spread ratings required by code, unless a more strict requirements is specified.

E. Proprietary Products: Where systems or assemblies of materials or equipment are indicated, obtain all primary components from the same Manufacturer, unless specifically noted otherwise.

1.3 TESTING LABORATORY

A. The Owner shall coordinate and provide all testing services, including soil testing and concrete testing, except that which may be specifically specified otherwise in the technical sections.

1.4 INSPECTION SERVICES

A. Perform or arrange for all inspections, tests, and approvals required in each Technical Section or by governing authority.

B. Pay all costs unless specifically stated otherwise in the Technical Sections.

C. Notify each inspecting authority, Engineer, and Owner 24 hours in advance of each test, inspection and approval.

D. Keep records of each test, inspection and approval. Include the time, weather conditions, name of inspecting, testing, or approving authority, results of the test, and all other pertinent data.

E. Submit official reports showing dates performed, test methods, results, interpretations of results, and recommended actions. Submit required copies to governing authorities, Engineer, and Owner.

F. Provide required certificates to Engineer and Owner for the Owner's file.

G. If Engineer determines that any work requires special inspection, testing, or approval he will, upon written authorization from Owner, instruct Contractor to order such special inspection, testing, or approval. If such special inspection or testing reveals a failure of the work to comply with requirements of the Contract Documents, Contractor shall bear all costs thereof, including compensation for additional services of Engineer; otherwise, Owner shall bear such costs, and an appropriate Change Order shall be issued.

1.5 CONTRACTOR'S QUALITY CONTROL

A. Temperature and Humidity
   1. Maintain a daily log of outdoor and indoor high/low temperatures and general weather conditions. Such log shall be readily accessible to Engineer.
   2. Provide accurate outdoor and indoor thermometers at the Site.
   3. Do not install products in or on structures in temperatures or moisture conditions outside the recommended ranges.
   4. Maintain proper ambient and material temperatures and moisture conditions as required by product Manufacturers and other standards, by use of temporary heat, ventilation, construction of temporary structures, or by other approved means.
   5. If low temperatures make it impossible to continue operations safely, in spite of cold weather precautions, cease Work and notify Engineer.
   6. Where a substrate or product is recommended to be dry or a moisture content is listed for installation procedures, conform to the requirements. If actual conditions do not meet the standards, reduce moisture in products or substrate by approved artificial methods when natural processes would delay the progress of the Work.

B. Power Characteristics
   1. Refer to Division 26 for project power characteristics.
   2. Motors, starters, safety switches, pushbuttons, pull cords, internal wiring and operating devices, and low voltage wiring are the responsibility of each Contractor providing a product requiring electrical service.
   3. All conduit, wiring, and interlocking required to complete the installation are the

responsibility of the Electrical Contractor.

1.6 MANUFACTURER'S FIELD SERVICES

A. General
   1. When indicated in the technical specifications, provide a qualified technical representative at the Site to advise on the proper installation of the product.
   2. Representative shall check the installation of the equipment, supervise its initial operation and initial testing and instruct operating personnel in its operation and maintenance.
   3. Representative shall supervise necessary adjustments to insure satisfactory operation.
   4. Some of the technical sections require a minimum number of hours or days for the Representative to remain on the Site. This time must fall within the normal construction day. If a longer time or overtime is required it shall be provided at no increase in cost to the Owner.
   5. Representative shall remain on the Site or make as many return visits as necessary to insure the equipment is operating properly.
   6. If the service includes coordination, calibration, etc. with another Manufacturer's connecting equipment, the Contractor shall arrange for those Representatives involved to be on the Site at the same time.
   7. Where the supervision of a Representative is not called for in the technical specifications, this shall in no way relieve the Contractor of his responsibility to properly construct or install equipment or material in accordance with the Contract Documents.
   8. Contractor shall make arrangements with the Representative and notify Engineer at least five days in advance of each visit.
   9. Report Form: Where a Report Form is required in the Technical Specifications, the Representative shall complete and submit a "Manufacturer's Service Representative's Report" using the form attached at the end of this Section. A separate Report shall be required for each piece of equipment and each visit. Contractor shall submit 3 copies of the signed Report Form within 5 days of the visit. Contractor shall furnish all necessary copies of the attached form.

B. Training
   1. For major pieces of equipment and SCADA systems, there shall be training session(s) provided by the manufacturer or Contractor.
   2. An outline shall be provided showing, as a minimum, basic function, start-up procedures, normal operating procedures, and normal maintenance.
   3. The Contractor shall record video, with audio, each session. There shall be a separate DVD or other electronic video media for each piece of equipment, unless otherwise noted or approved.

1.7 CONTRACTOR DESIGN RESPONSIBILITIES

A. The design of all pre-engineered elements, assemblies, components and connections of all types not designed by the Engineer shall be the total responsibility of the Contractor. Such shall include, but shall not be limited to, structural steel, precast concrete, wall panels, windows, architectural items, mechanical items, and electrical items. Engineering required for such for which all or a portion of the necessary engineering services are performed by the Manufacturer shall be the total responsibility of the Contractor. Where the Contract Documents require the design of architectural, structural, mechanical, or electrical items by a supplier, or where a

Contractor initiates a change in the design of a system or component thereof, such design shall be the total responsibility of the Contractor.

B. All Contractor design responsibilities shall be performed by a Registered Professional Engineer. Submit all calculations to Engineer for his records as a Reference Submittal prior to starting fabrication or installation of the Work. Engineer shall not review, check, or approve such submittals. Engineer will not be responsible for designs of others, including those of the Contractor, Subcontractors, and suppliers.

1.8 JOB CONDITIONS

A. Existing Conditions
   1. Condition of existing Structure and Site will be maintained as far as possible by the Owner up to the time the Work commences. However, variations may occur after inspection of the premises by the Bidder, due to Owner's removal and salvage operations. Owner assumes no responsibility for actual conditions at the time Work commences.
   2. Execute Work in connection with the existing building, as indicated. Report any marked discrepancy between the Drawings and actual conditions at the Building to Engineer or adjustment.
   3. All material removed by the Contractor unless otherwise specified, becomes his property and shall be removed from the premises promptly.

1.9 FAULTY AND NON-CONFORMING WORK

A. Faulty work or work not in conformance with the Contract Documents shall not be permitted.

B. Remove such work or propose a remedy by means of detailed drawings and written documentation and submit such documentation to the Engineer for his comments.

C. All costs for removal and reconstruction of such work, and additional services of the Engineer shall be paid by the Contractor. Payments for such additional services of the Engineer shall be made as follows:
   1. Owner will compensate Engineer.
   2. Owner will deduct the amount of such compensation from payments to the Contractor.

END OF SECTION 01 4500

SECTION 01 6000

PRODUCT REQUIREMENTS

PART 1 GENERAL

1.1 REFERENCE

A. The requirements of Division 01 apply to the work of all other sections.

1.2 FABRICATION

A. Fabricate all items in the shop insofar as possible. Where items cannot be completely shop-fabricated and assembled for shipment, assemble and fit in shop, disassemble and ship. Identify parts for field assembly. Fabricate items to be straight, square, in proper alignment, and with hairline joints where joints are necessary. Pre-plan field joints to be as inconspicuous as possible.

1.3 SHOP PRIMING

A. Shop prime or seal surfaces of all products to receive paint materials in accordance with requirements of the Contract Documents. Apply a primer or sealer compatible with the specified paint materials. If such primer is determined to be incompatible with the specified paint materials, provide a barrier coat or remove the primer and prime again as required.

1.4 DELIVERY, STORAGE AND HANDLING

A. Packing: Deliver products in properly identified original packages or other containers with unbroken seals and manufacturer's labels, grade marks and other means of identification in place.

B. Shipping/Delivery
   1. Protect products during shipment to maintain the product's original characteristics.
   2. Deliver materials and equipment which will require controlled storage conditions on Site after the controlled storage provisions have been made on Site.
   3. Deliver materials, supplies, or equipment to Project site during working hours.
   4. Deliveries made during other than normal working hours must be received by an authorized agent of Contractor involved or be received by other means which shall be the sole responsibility of that Contractor.
   5. No employee of the Owner or Engineer is authorized to receive any shipment designated for this Project.
   6. The Owner or Engineer assumes no responsibility for receiving any shipment designated for this Project.
   7. Any materials delivered in the presence of Owner's or Engineer's representative shall be accounted for by the respective Contractor.
   8. Under no circumstances may shipments be directed to, or in care of, the Owner.
   9. Each Contractor, Subcontractor, manufacturer, or supplier furnishing materials to the site shall identify, ship, address, consign, etc. all such materials to the Contractor who may

be charged therewith by giving the name of the Contractor, the name and address of the Project.

C. Unloading and Acceptance
   1. Deliver products in properly identified original packages or other containers with unbroken seals and manufacturer's labels, grade marks and other means of identification in place.
   2. Check each item for completeness of order, physical condition and conformance to the Contract Documents. Reject products which do not conform to these requirements, or which have been damaged beyond repair or restoration to original condition as approved by Engineer.

D. Protection
   1. Protect products during shipment and on Site to maintain the original product characteristics.
   2. Protect all finished surfaces from damage during installation. Provide protective devices as required and as recommended by the manufacturer. Cover work subject to damage at the end of each day's work.
   3. Coat concealed surfaces of metal products with a bituminous or other approved coating to prevent contact between dissimilar metals or other material which can cause deterioration.
   4. Correct damage by repairing or replacing as required by Engineer. Repairing will be permitted only where the repair is undetectable and does not cause structural damage or interfere with proper functioning of the part.
   5. Protect finish of installed products until Substantial Completion of the Project by use of wrappings, covers, or other approved protective devices. Remove such protection immediately prior to final cleaning.

E. On-Site Storage
   1. Store hazardous products, such as paint materials, in well ventilated areas in accordance with applicable standards and governing laws.
   2. Store materials off the ground and in a manner to prevent damage or intrusion of moisture or other foreign matter.
   3. Cover materials which may be damaged by weather, allowing for proper circulation of air.
   4. When possible, store materials inside the building or in sheds.
   5. When storing materials in the building, stockpile materials in a manner which will not overload the structure.
   6. Store all materials in a manner immediately accessible for inspection.
   7. Store small items, such as finish hardware and other items easily stolen or vandalized, in a security area. Where possible, do not deliver such items until immediately prior to installation.

1.5 INSTALLATION STANDARDS

A. Examination of Substrate: Examine the substrate or structure to which a product is to be applied or installed. Check the substrate or structure for proper clearances and tolerances. Tolerances are listed in each Section. Do not proceed until unsatisfactory conditions have been corrected. Starting the work indicates acceptance of conditions and the installer assumes full responsibility for results.

B. Preparation
   1. Substrate: Where products are applied to a substrate, prepare the substrate as recommended by the product manufacturer, generally as follows:
      a. Bring substrate to a uniform surface by smoothing uneven surfaces and filling holes, cracks and low places with recommended filler or parent material.
      b. Remove substances, such as dust, oils and other foreign matter, not compatible with the product.
      c. Surfaces shall be dry, unless a moisture content or wetting is specified.
   2. Inserts and Anchorages
      a. Installer shall furnish built-in fastening devices for his product to the proper trade for installation as the work proceeds.
      b. If such devices are not furnished in time to be built in, installer shall provide alternate methods for attaching his product. Submit Drawings and other required data as Reference Submittals.
   3. Templates: Provide templates, diagrams and other coordinating documents to the proper Contractor, manufacturer, or supplier of related items affecting the work.
   4. Dimensions
      a. If the exact location of an item is not indicated by dimension on the Drawings or noted in the Specifications, Engineer reserves the right to determine such location in the field prior to roughing in.
      b. If the exact dimensions of a product are not indicated, Engineer reserves the right to determine dimensions prior to ordering or fabricating the product.
      c. Such dimensional changes shall not be a basis for changes in the Contract Sum.
      d. Where miscellaneous devices, such as thermostats, switches, controls, grilles, pipes, or outlets of any nature are not exactly located by the Contract Documents, request such location or obtain approval of the location prior to installation. If approval has not been obtained, Engineer may require the relocation of such devices at the expense of the installer.

C. Installation
   1. Install products in accordance with the manufacturer's recommendations or the requirements of trade associations, listed standards, conforming Shop Drawings, and Contract Documents. Where a conflict exists between these references, the most strict requirements govern. If printed instructions are not available, consult with the manufacturer's field representative.
   2. Provide hangers, auxiliary framing, and other means for installing ceiling suspension systems, lighting fixtures, diffusers, and other equipment in ceilings to avoid ducts, piping, etc.
      a. Suspend from structural members, such as joists or beams, and not from ducts or piping.
   3. Install work in a manner which will not interfere with the proper installation of the work of other trades and to facilitate operating, servicing, and repairing.
   4. Install products straight, plumb, level, and in line. Securely attach items to the substrate, using recommended adhesives, mechanical fasteners or other devices. Where holes are provided for attachment, do not field drill or cut new holes without approval of Engineer.
   5. Match all finished work to the submitted Samples or Sample panels.
   6. Conceal fasteners wherever possible, unless exposed fasteners are permitted or specified.
   7. Weld in accordance with AWS standards for qualifications of operators and for workmanship.

1.6 PRODUCT OPTIONS AND SUBSTITUTIONS

A. Refer to Instructions to Bidders for requirements and approval process of substitute materials, products, and systems.

B. Manufacturers, Products, Materials, Equipment and Systems
   1. General: Where more than one manufacturer, product, material, equipment item, or system is indicated as acceptable, provide any one named. No substitutions will be permitted after signing the Contract.
   2. Contractor's Option
      a. In many instances this Project has been designed around a specific manufacturer with other manufacturers listed as acceptable.
         1) Products from such other listed manufacturers will be accepted contingent upon meeting the design, appearance and functional standards established by the specified items.
      b. If any changes to the Contract Documents or work are required to accommodate an acceptable product of one such other listed manufacturer, the Contractor whose product requires such changes shall pay all additional costs involved with no additional cost to the Owner or Engineer. Such additional costs to be paid by such Contractor shall include, but not be limited to, all additional costs required for changes in the work of such Contractor and of all other Contractors as well as all costs for additional services of the Reviewer to review such changes.
      c. Payments for such additional services of the Reviewer shall be made as follows:
         1) Owner will compensate Engineer.
         2) Owner will deduct the amount of such compensation from payments to the Contractor.
   3. Unavailability of Product: When all of the products listed in the Contract Documents for a specified item are no longer being manufactured, or when products are not listed and all of the conforming products of manufacturers listed in the Contract Documents for a specified item are no longer being manufactured, then submit, through the Change Order process, the name of another product and manufacturer for review and approval by the Reviewer. Submit all documentation required elsewhere in the Contract Documents and as required by the Reviewer to show proof that the submittal is an equal in every respect to the item specified.
   4. Performance Specification: Where a performance is specified and no manufacturer is listed, submit through the Shop Drawing procedure the name of the manufacturer, the product proposed, and detailed information showing its characteristics.
   5. Color, Pattern, Texture: Where a choice of color, pattern, or texture is available for a specified product or item of equipment, the Reviewer will make a selection from the manufacturer's highest or best standards, unless noted otherwise in the technical sections of the Project Manual.

END OF SECTION 01 6000

SECTION 01 7823

OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 REFERENCES

A. The requirements of Division 01 apply to the work of all other Sections.

1.2 GENERAL

A. Submittal of operation and maintenance data shall be made to the Engineer on specified product items as outlined herein.

1.3 OPERATION AND MAINTENANCE MANUALS

A. Required where specified in technical sections.

B. Submit written instructions for operating each piece of equipment and for maintaining equipment. At the time of inspection for substantial completion, Engineer will notify Contractor of any revisions, corrections or incomplete data required for the satisfactory completion of the Operation and Maintenance Data Reference Manual. Engineer will not recommend final acceptance of the work until the Operation and Maintenance Data Reference Manual is complete and satisfactory to him.

C. Submit Operations and Maintenance Manuals when the equipment is delivered to the Job Site. Failure to deliver manuals may be cause to withhold payment for equipment.

D. The Operation and Maintenance Data Reference Manual shall contain, but is not limited to, the following information on all equipment and accessories furnished and installed under these Specifications:
   1. Equipment function, normal operating characteristics and limiting conditions for all equipment furnished.
   2. Detailed assembly, installation, alignment, adjustment and checking instructions for all equipment furnished.
   3. Detailed operating instructions for start-up, calibration, routine and normal operations, regulation and control, shutdown and emergency conditions for all equipment furnished.
   4. Detailed lubrication instructions and schedules for all equipment furnished including identification of lubricant (description, specification and trade name of at least two manufacturers), and diagrams illustrating lubrication points.
   5. Detailed guide to "troubleshooting" for all equipment furnished.
   6. Detailed parts lists identified by generic title, materials of construction and part number (actual manufacturer's number, not supplier's), list of recommended spare parts identified as specified above, predicted life of parts subject to wear and an exploded view of each equipment assembly for all equipment furnished.
   7. Electrical and instrumentation schematics for all equipment furnished including motor control centers, control panels, instrument panels and analyzer panels.
   8. List of all special tools required and description of their use for all equipment furnished. Special tools include any tool not normally available in an industrial hardware store.

9. Detailed preventive maintenance procedures and schedules for all equipment furnished.
10. Detailed list of settings for relays, pressure switches, temperature switches, level switches, thermostats, alarms, relieve valves, rupture discs, etc.
11. List of names and addresses of nearest service centers for parts, overhaul service.
12. One copy of any instructions and parts lists attached to equipment when delivered.
13. Procedures for storing, handling and disposing of any chemicals or products used with the equipment or system.

E. Assembly of Operation and Maintenance Data Reference Manual
1. Submit 1 preliminary copy of each manual in electronic PDF format to Engineer prior to date of shipment of the equipment
2. Three (3) final copies of each O&M manual shall be submitted, directly to the Owner, using loose-leaf binders. Binders shall be three-ring, hardback type, with a transparent vinyl pocket on the spine for label.
3. Each copy of the data reference manual shall be assembled in one or more loose-leaf binders, each with title page, typed table of contents, typed list of tables, typed list of figures and heavy section dividers with copper or mylar reinforced holes and numbered plastic index tabs. All data shall be punched for binding and composition and printing shall be arranged so that punching does not obliterate any data. The binding edge of each manual shall have the project number and title, specification division number and title and manual title printed thereon, all as approved by the Engineer.
4. List for each product, the name, address, and telephone number of the Subcontractor, Maintenance Contractor and source of supply.
5. Products not installed shall be removed from the Manual.
6. Provide manufacturer's recommended cleaning materials and methods.
7. All copies of Shop Drawings, figures and diagrams shall be reduced to either 8 1/2 by 11 inches or to 11 inches in the vertical dimension and as near as practicable to 17 inches in the horizontal dimensions. Fold such sheets to 8 1/2 by 11 inches. Print the manual and other data on first quality paper, 8 1/2 by 11 inch size with standard three-hole punching. Reduce drawings and diagrams to 8 1/2 by 11 inches or 11 by 17 inches. Label binders Vol. 1, Vol. 2, etc., where more than one is required. The table of contents for the entire set, identified by volume number, shall appear in each binder. Text, figures and drawings shall be clearly legible and suitable for dry process reproductions.

F. Electronic Format
1. The Contractor shall provide a USB drive(s) containing all the elements of each approved O&M Manual.
2. The contents of the electronic format shall be the same as the approved O&M Manual.
3. All text based documentation (i.e., specs, O&M, MSDS sheets, data sheets, etc.) shall be delivered on the USB drive in PDF format.
4. All pictures, graphs, or anything that is not a drawing shall be delivered on the USB drive in either a TIFF, JPEG, or GIF format.
5. All CAD drawings shall be delivered on the USB in AutoCAD 2016 or higher format.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 01 7823

SECTION 26 0505

BASIC ELECTRICAL REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to implement the following general administrative and procedural requirements in accordance with the plans and as specified herein.

B. Extent of Work: Work under this contract consists of furnishing, installing, testing, placing into operation, and guaranteeing complete electrical systems, as shown on the drawings and as specified in Division 26. The Contractor shall connect and place all wired equipment in proper working order. Refer to the plans and specifications for work included in this Contract. Some general guidelines to coordinating work between Division 26 and other Divisions are as follows:

1. Division 26 includes all power wiring and raceways for equipment furnished under other Divisions. Motor starters and disconnect switches for Division 23 equipment shall be provided under Division 26 unless otherwise noted. Remote two-wire control logic will be extended to the motor starters as work of Division 23. Where combined line voltage power/control is used for Division 23 equipment, the wiring and raceways are treated as power wiring and are work of Division 26.
2. Division 26 is responsible for providing appropriate wire and conduit between all distribution equipment and all electrical devices and utilization equipment shown on plans. It is also the responsibility of Division 26 to provide all wire, conduit, and devices necessary to accomplish all control functions as indicated by the control diagrams which are not specifically shown as work of another division.
3. Division 26 provides all power wiring and raceways for plant equipment provided under Division 40. Division 26 provides all control, signal, and communication wiring and conduit for the instrumentation and control equipment provided under Division 40

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1. All work shall be installed in full accordance with the latest edition of the National Electrical Code (NEC) as prepared and published by the National Fire Protection Association (NFPA) and any applicable local or state codes. All electrical equipment shall be listed and labeled by Underwriters' Laboratories, Inc. (UL) or any approved independent nationally recognized electrical testing laboratory where such standards exist. Optionally, in lieu of such listing and labeling, equipment pre-approved by the Electrical Inspector may be supplied. Wherever UL compliance is mentioned in the

specifications, the above alternatives shall be understood to apply to all listing and labeling requirements. This does not preempt or replace the specifications or replace the approval process. All service switches/circuit breakers shall be listed and labeled as outlined above for service entrance duty.

2. Comply with the requirements of NFPA Code 241 "Building Construction and Demolition Operations," the American National Standards Institute (ANSI) A10 Series standards for "Safety Requirements for Construction and Demolition," and the National Electrical Contractors Association (NECA) National Joint Guideline NJG-6 "Temporary Job Utilities and Services."
3. In addition to the requirements outlined under other sections of the Contract Documents, all Work, material, and equipment shall comply with all requirements of the latest editions and interim amendments of the National Electrical Safety Code, National Fire Protection Association, OSHA, the building Owner's insurance company, and all applicable federal, state, and local laws and ordinances. All materials shall be listed and labeled by UL and installed as required by the listing.
4. Should any changes in the Drawings or the Project Manual be required to conform to the above regulations, the Contractor shall notify the Engineer at the time of submitting his bid. After entering into the Owner-Contractor Agreement, the Contractor shall be held to complete all Work necessary to meet these requirements without additional expense to the Owner.

B. Permits and Regulations

1. The Contractor shall obtain all permits and inspections required by laws, ordinances, rules, regulations, and public authority having jurisdiction and shall obtain certificates of such inspections and shall submit same to the Engineer and shall pay all fees, charges, and expenses in connection therewith. The Contractor shall furnish to the Owner a certificate of final inspection from the proper authority prior to final payment. Obtain and pay for easements required to bring temporary utilities to the site, where the Owner's easement cannot be utilized for that purpose.
2. The Contractor shall not allow or cause any of the Work to be covered up or enclosed until the Engineer or Owner has been notified and given reasonable opportunity (2 working days) to review the Work. When required by law or regulations, the governmental agency having jurisdiction for inspections shall be given reasonable notice and opportunity to inspect the Work. Any Work that is enclosed or covered up before such inspection and test shall be uncovered at the Contractor's expense; after it has been inspected, the Contractor shall restore the Work to its original condition at his own expense.

C. Interpretation of Drawings and Project Manual

1. Any discrepancies among Drawings, Project Manual, Drawings and Project Manual, or between Drawings and Project Manual shall be promptly brought to the attention of the Engineer for clarification during the bidding period. No allowance shall subsequently be made to the Contractor by reason of his failure to have brought said discrepancies to the attention of the Engineer during the bidding period or of any error on the Contractor's part.
2. The locations of switch, receptacle, light, motor, etc., outlets shown on Drawings are approximate. The Contractor shall use good judgment in placing the preceding to eliminate all interference with ducts, piping, etc. Where any doubt exists, the exact location shall be determined by the Engineer.

3. Check all door swings so that light switches are not located behind doors. Relocate switches as required, with Engineer's review.
4. All general trades and mechanical Drawings shall be checked by the Contractor before installing any outlets, power wiring, etc.
5. Equipment sizes and locations shown on the Drawings are estimated. Before installing any wire or conduit, the Contractor shall obtain the exact equipment requirements, including wire and conduit entrance locations, and install wire, conduit, disconnect switches, motor starters, overload heaters, circuit breakers, or other items of the correct size and locations for the equipment actually installed. However, wire and conduit sizes shown on the Drawings shall be taken as a minimum and shall not be reduced without written approval from the Engineer.
6. The Contractor shall provide all wiring, including disconnect switches and starters for all electrically operated equipment shown on Drawings, specified or required, except that starters and/or disconnect switches need not be furnished where it is specifically noted that they are furnished with the equipment.
7. The Drawings show the general arrangement required for installation of equipment and materials. The Contractor shall follow these Drawings as closely as possible. Should conditions necessitate other arrangements, the Contractor shall prepare and submit drawings showing the changes to the Engineer for review before proceeding with the Work.
8. The Engineer reserves the right to make minor changes in the location of the installation of equipment and materials up to the time of roughing in at no extra cost to the Owner.
9. The Drawings do not show all offsets and do not detail every point at which unusual conditions of construction may require special attention. All additional fittings, conduits or specialties and other appurtenances necessary due to field conditions shall be provided by the Contractor.
10. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many such devices as are required to complete the installations.
11. Wherever in this Division 26 a Manufacturer is specified with the notation “or approved equal," the decision as to the material or equipment being "equal" shall be made by the Engineer, without exception, and this decision shall be accepted by the Contractor as final. Where the Contractor proposes to furnish equipment or material in accordance with the "or approved equal" notation, said equipment or materials shall be submitted to the Engineer for review in accordance with the requirements set forth in the "Substitutions" paragraph of the "Submittals" paragraph of this Section.

1.4 SUBMITTALS

A. Transmittal: Furnish manufacturer's product data, test reports, and materials certifications as required.
   1. Follow the procedures specified in Division 01 Section "Submittal Procedures" and in addition, the Contractor shall prepare and submit a complete submittal list to the Engineer. The submittal list shall include all submittal items covered in the Division 26 specification sections. In addition, the submittal list shall contain dates for all items to be submitted and shall accompany the first submittal. The submittal list shall be coordinated with the construction schedule and shall clearly show such coordination.
   2. Shop Drawings: Shop drawings shall be submitted to the Engineer for approval. Shop drawings shall identify the specific equipment and material being supplied, and all accessories, dimensions, descriptions, mounting and connection details, wiring diagrams,

elementary control diagrams, equipment interface diagrams, and any other information necessary to determine compliance with the plans and specifications. Fabrication and installation shall be in accordance with the approved shop drawings.

3. Permits and Easements: Submit copies of reports, permits, and easements necessary for installation, use, and operation.
4. Test Reports: Submit copies of reports of tests, inspections, and meter readings as specified. Tests, inspections, and meter readings shall be performed using the Contractor's temporary power source unless otherwise specified.

B. Additional copies may be required by individual sections of these specifications.

C. Coordination Drawings

1. Prepare coordination drawings in accordance with Division 01 section "Project Coordination; Bid Package Contracts" to a scale of 1/4 inch = 1 foot–0 inches or larger, detailing major elements, components, and systems of electrical equipment and materials in relationship with other systems, installations, and building components. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the work, including (but not necessarily limited to) the following:
    a. Submit conduit layout drawings showing all conduit sizes, the number and size of each conductor installed in each conduit, and the intended use for each conduit. Drawings should clearly delineate method of conduit installation and should include details of any special conduit support or mounting method. All wiring devices, lighting fixtures, and equipment supplying or requiring electrical power shall be located on the layout drawings. In addition, include the following:
        1) Clearances for servicing equipment, including space for equipment disassembly required for periodic maintenance.
        2) Exterior wall and foundation penetrations.
        3) Fire-rated wall and floor penetrations.
        4) Equipment connections and support details. Demonstrate evidence of dimensional coordination.
        5) Sizes and location of required concrete pads and bases.
    b. Prepare and submit point-to-point interconnection wiring diagrams. The diagrams shall identify all external interconnecting wiring associated with all new and modified existing equipment. The diagrams shall be developed for performance of the Work and to document terminations.
        1) The point-to-point interconnection wiring diagrams shall include:
            a) Wiring and conduit numbers
            b) Terminal strip numbers for each wire termination
            c) Color coding
            d) Raceway and boxes in which wiring is to be located
            e) Location and functional name of items to which wiring is connected.
        2) Use information obtained from approved submittals, record drawings, and field inspections as necessary to complete the diagrams.
    c. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
    d. Prepare floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.

e. Prepare reflected ceiling plans to coordinate and integrate installations, air outlets and inlets, light fixtures, communications systems components, sprinklers, and other ceiling-mounted devices.

D. Record Documents: Prepare record documents in accordance with the requirements in Division 01 Section "Closeout Procedures". In addition to the requirements specified in Division 1, indicate installed conditions for:
1. Raceway systems, size, contents, and location, for both exterior and interior; locations of control devices; distribution and branch electrical circuitry; and fuse and circuit breaker size and arrangements.
2. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
3. Approved substitutions, Contract Modifications, and actual equipment and materials installed.

E. Operations and Maintenance Manuals
1. Prepare maintenance manuals in accordance with Division 01 Section "Closeout Procedures". Compile and assemble the operation and maintenance data of equipment specified in Division 26 into a separate set of vinyl-covered three-ring binders, tabulated and indexed for easy reference. Data shall clearly indicate all options and accessories.
2. In addition to the requirements specified in Division 1, include the following information for equipment items:
a. Manual index.
b. Manufacturers' descriptive literature.
c. Final signed submittal copy of shop drawings.
d. As-built drawings.
e. Spare parts and replacement parts lists.
f. Manufacturers' maintenance and service manuals.
g. Project-specific description of operation.
h. Wiring diagrams.
i. Manufacturers' guarantee and warranty.
j. Test results.
k. Motor list, including motor description, motor horsepower, motor voltage, fuse size, fuse type, and overload size.
l. Fuse list including fuse location, fuse size, fuse type, and load description.
m. Fixture ballast schedule.
n. Lamp schedule.
3. Materials for more than one item shall clearly indicate which item or items are included on the Project.
4. Shop Drawings which are folded and punched for insertion in the Manual shall be such that the Drawings can be unfolded without removing them from the Manual, and all information shall be legible.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to the project identified with names, model numbers, types, grades, compliance labels, and other information needed for identification.

1.6 SPECIAL WARRANTY

A. Compile and assemble the warranties specified in Division 26 into a separate set of vinyl-covered three-ring binders, tabulated and indexed for easy reference.

B. Provide complete warranty information for each item. Information to include:
   1. Product or equipment list.
   2. Date of beginning of warranty or bond.
   3. Duration of warranty or bond.
   4. Names, addresses, and telephone numbers and procedures for filing a claim and obtaining warranty services.

1.7 DEFINITIONS

A. Finished locations. The following are defined as finished locations:
   1. Areas with carpet or tile floors.
   2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
   3. Areas with tiled, plastered, or paneled walls.

B. Interior locations. The following are defined as interior locations:
   1. Any location within the boundaries of the foundation of any building.
   2. Any location within the superstructure of other structures not classified as buildings.

C. Wet locations. The following are defined as wet locations:
   1. All exterior locations.
   2. All interior locations below grade.
   3. All interior locations where wet materials are processed, pumped, transported, or stored.

D. Corrosive locations. The following are defined as corrosive locations.
   1. All locations with chemical feed/transfer equipment
   2. All locations with chemical storage tanks
   3. All locations where chemical storage drums are located.

E. Hazardous (classified) locations. The following are defined as hazardous (classified) locations.
   1. All hazardous (classified) locations and their hazard classification are shown.

1.8 FAULT CURRENT, COORDINATION, AND SELECTIVITY STUDY

A. The Contractor shall provide to the Engineer three copies of a written, detailed, documented selective power distribution system report showing fault currents available using log-log graphical representation. The report shall be stamped by a professional Electrical engineer registered in Ohio. The report shall be based upon data compiled by the Contractor from the actual equipment installed. The report must be submitted and approved prior to project closeout. At a minimum, the report shall contain the following:
   1. Overall system description and diagrams.
   2. System selectivity under fault and other overload conditions.
   3. Ground fault system operation and selectivity.
   4. Tabularized ratings and settings of protection devices verified by electrical testing to ensure coordination and selectivity. They shall include all:
      a. Momentary and interrupting ratings.
      b. Relays and shunt trip devices.
      c. Fuses.

d. Circuit breakers.

5. Conclusions and recommendations.

B. Calculated fault currents shall be provided at the secondary of each transformer, at each piece of service equipment, between service equipment and each motor control center, switchboard or switchgear and for at least one feeder/branch circuit for each motor control center, switchboard, or switchgear. They shall include:
1. Equipment and conductor damage curves.
2. Pick-up and time current characteristics.
3. Short circuit data.
4. Detailed description of test procedures.
5. Design calculations.

1.9 SCHEDULING

A. General: It is mandatory that the facility be maintained in operation during construction and that periods of shut-down due to "line changeovers, etc. are held to a minimum. These outages must be scheduled with and have the concurrence of the Engineer and the Owner. Further, it is mandatory that the completion of various stages of the electrical work coincide with the other phases of construction to maintain and permit operation of new installations as construction progresses.

1.10 COORDINATION WITH WORK OF OTHER TRADE CONTRACTORS

A. General
1. Coordinate all requirements of the Work of this Division with other Trade Contractors. Such requirements include, but are not limited to, locations, sizes, anchors, and similar items.
2. Provide all necessary information to other Trade Contractors for such coordination. Such information shall include conforming Shop Drawings, conforming Product Data, and all other required data.
3. This Contractor shall bear all costs for providing affected Work of related Trade Contractor(s) with no change to the Contract Sum or Date of Substantial Completion.

B. Foundations, Bases, Curbs, and Supports
1. Provide and coordinate all requirements for foundations, bases, curbs, and supports with the related Trade Contractor(s).
2. Provide required dimensions, templates, and all required information on anchors, sleeves, and cast-in-place accessories, including dimensions, to the related Trade Contractor(s).

C. Openings, Recesses, and Chases: Coordinate all requirements and locations for openings, recesses, and chases with the related Trade Contractor(s).

D. Final Connections: Coordinate with the related Trade Contractor(s) all requirements for roughing-in and final connections for equipment installed under this Division.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Rough-In
   1. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.
   2. Refer to equipment specifications in Divisions 02 through 40 for rough-in requirements.

B. Electrical Installations: Sequence, coordinate, and integrate the various elements of electrical systems, materials, and equipment. Comply with the following requirements:
   1. Coordinate electrical systems, equipment, and materials installation with other building components.
   2. Verify all dimensions by taking field measurements.
   3. Coordinate and provide chases, slots, and openings in other building components during progress of construction, to allow for electrical installations.
   4. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete or supported from or on other structural components, as they are constructed.
   5. Sequence, coordinate, and integrate installations of electrical materials and equipment for efficient flow of the work. Give particular attention to large equipment requiring positioning prior to closing in the building and equipment which must be placed in service before further construction can take place.
   6. Where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible.
   7. Coordinate connection of electrical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service and place each in proper operating order.
   8. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that the work is shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Engineer before final placement.
   9. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components, where installed exposed in finished spaces.
   10. Install electrical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations.
   11. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.
   12. Wiring for equipment furnished by other Contractors shall be provided as specified under the Electrical Contract based on the equipment rating and motor horsepower as specified in the Contract Documents. If the equipment provided by the General, and Mechanical Contractors has different rating or horsepower, the General and Mechanical Contractors shall provide for any necessary electrical changes to accommodate the equipment furnished at no change in contract price. This Contractor shall verify actual equipment nameplate electrical ratings (voltage, horsepower, amps, etc.) match the specified electrical system being supplied to the equipment. Any discrepancies shall be brought to the attention of the Engineer prior to equipment being connected.

3.2 LOAD BALANCING

A. It shall be the responsibility of the Contractor to balance the loads on the service system, all distribution systems, and all power equipment, so that the variation in amperes per phase readings shall not exceed 5% under normal operating conditions.

B. Special care shall be taken during load balancing to prevent reverse rotation of motors.

C. If, during load balancing, a load is shifted from one phase to another in a color-coded system, the Contractor shall paint or tape the ends of the wire at all outlet points with the proper color code for that phase. Failure to do so shall constitute justifiable grounds to require the Contractor to replace the entire circuit with the proper coded wire at no expense to the Owner or Engineer.

3.3 CUTTING AND PATCHING

A. General: Perform cutting and patching in accordance with the following requirements:
   1. Perform cutting, fitting, and patching of electrical equipment and materials required to:
      a. Uncover work to provide for installation of ill timed work.
      b. Remove and replace defective work.
      c. Remove and replace work not conforming to requirements of the Contract Documents.
      d. Remove samples of installed work as specified for testing.
      e. Install equipment and materials in existing structures.
      f. Upon written instructions from the Engineer, uncover and restore work to provide for the Engineer observation of concealed work.
   2. Cut, remove, and legally dispose of selected electrical equipment, components, and materials as indicated, including, but not limited to, removal of electrical items indicated to be removed and items made obsolete by the new work. Existing electrical items not indicated to be reused are to be removed.
   3. Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.
   4. Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.
   5. Protection of Installed work. During cutting and patching operations, protect adjacent installations.
   6. Patch finished surfaces and building components using new materials specified for the original installation and experienced Installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.
      a. Refer to Division 1 section "References" for definition of experienced "Installer."
   7. The Contractor shall install his work in such a manner and at such times as shall require a minimum of cutting and patching of the building structure.
   8. Certain areas require this Contractor to remove, add to, or relocate portions of existing Work. It shall be this Contractor's responsibility to remove ceilings, portions of walls, etc., in a manner so that he may install new Work. This Contractor shall then patch, repair and/or replace ceilings, walls etc., to match existing conditions. The above applies to all areas not specifically indicated on Architectural Drawings as Work to be performed by General Trades Contractor(s).
   9. If the Contractor fails to do any required patching or repair any damage resulting from the installation of the electrical Work, such patching or repairing shall be done by the Owner and the cost shall be paid by the Contractor.

3.4 ELECTRICAL DEMOLITION

A. General

1. In general, the notation to remove a piece of equipment as indicated on the Drawings shall be interpreted to also include the removal of all electrical equipment, conduit, wires and appurtenances associated with the equipment. This includes, but is not limited to: all wires and conduit from the motor control center starter to the equipment; and all disconnects, remote switches and starters; all controls, alarms, conduit and instrumentation, both local and remote, and all supports, braces and hangers.
2. Electrical removals also consist of the removal of existing transformers, distribution switchboards, control panels, motors, conduits and wires, poles and overhead wiring, panel boards, lighting fixtures, and miscellaneous electrical equipment all as shown, specified, or required to perform the Work.
3. All removals of electrical equipment and appurtenances shall be in complete conformance with the requirements of Division 26.
4. It is the Contractor's responsibility as part of this work to maintain all existing electrical systems including power, lighting, intercommunication and instrumentation in continuous, acceptable operation. It is possible that during the period of construction some wiring may be cut or damaged either accidentally or otherwise. The Contractor shall install and maintain any and all temporary wiring (as approved by the Owner) required to keep all electrical apparatus in acceptable operating condition.
5. As soon as possible, the Contractor shall reinstall cut or damaged circuits in their permanent locations.
6. Where any electrical system component is damaged during work on this project and replaced in accordance with this section, the replaced work shall meet all requirements specified in Division 26 even though the damaged components may not have met the requirements of Division 26 prior to being damaged.
7. Where existing electrically operated equipment is relocated, the power and control wiring and appurtenant devices shall be relocated to accommodate same. Installations and materials shall conform to requirements specified in Division 26.
8. Electrical equipment, conduit, wire, and fixtures shall be relocated as necessary to accommodate installation of new and relocated electrically operated equipment and to accommodate structural alterations to existing facilities such as floors, walls, entrance ways, ducting, process equipment, and piping.
9. All equipment and major lengths of wiring retired and removed shall remain the property of the Owner unless shown or directed otherwise and shall be placed in storage on the site by the Contractor where ordered.
10. Existing Conduit Location
    a. In existing structures at this project, there is electrical conduit embedded in concrete. It shall be the responsibility of the Contractor, under this section, to attempt to locate and mark the existence of any conduit embedded in areas where, as part of this Contract, the concrete is to be drilled or cut into for any purpose.
    b. Contractor shall use every available means possible to attempt to locate existing conduit. Whenever a hole is to be cut into an existing slab, wall, or other structural concrete, that area shall be X-rayed prior to drilling to show the locations of conduits and resteel.

B. Electrical Equipment and Fixtures

1. Remove existing electrical equipment and fixtures where shown or required with such care as may be required to prevent unnecessary damage, to keep existing systems in operation and to keep the integrity of the grounding systems.

C. Switchboards
   1. Remove and modify distribution switchboards as shown.
   2. Disconnect and dismantle switchboards that are to be removed and dispose of all components off the site.
   3. Remove circuit breakers and other control equipment that will no longer be used from modified switchboards unless otherwise shown or specified.
   4. Cut square all new openings into the modified switchboard panels and dress smooth to the dimensions required for the installation of the new equipment.

D. Motors
   1. Disconnect and remove motors where shown or specified.
   2. Remove from the site motors not designated to remain the property of the Owner.
   3. Store in an enclosed, heated storage area motors or other electrical gear designated for reuse.

E. Conduit and Wire
   1. Remove conduits and wires where shown, or associated with equipment being removed.
   2. Cut abandoned conduits in floor or ceiling slabs, or in walls, flush with the slab or wall at the point of entrance. Plug the conduit suitably and repair the area in a flush, smooth, approved manner.
   3. Disassemble and remove from the site exposed conduits and their supports.
   4. Repair all areas of work to prevent rust spots on exposed surfaces.
   5. Dispose of all removed wire, conduits, supports, and appurtenances.

F. Underground Ducts
   1. Remove wiring in the underground duct system where shown or otherwise required.
   2. Verify the function of all wiring before disconnecting and removing it.
   3. Plug ducts which are not to be reused, where they enter buildings and make watertight.

G. Direct-Burial Cable
   1. Abandon direct-burial cable where shown.
   2. Disconnect such cable at both ends of the run.
   3. Cut back the cable to the point of entrance of a building or structure.
   4. Patch and make watertight all openings in buildings for entrance of abandoned direct-burial cable.

H. Overhead Wiring
   1. Abandon poles and overhead wiring as shown and specified.
   2. Existing substation and poles owned by the local electric utility company will be removed by the local electric utility company.
   3. Remove completely from the site abandoned poles not owned by the local electric utility company.
   4. Perform this work after the new service has been completed and energized, and in accordance with the approved schedule.

5. Make all the necessary arrangements with the local electric utility company for the removal of their transformers and metering equipment after the new electrical system has been installed and energized.

I. Lighting Fixtures
   1. Carefully remove and relocate lighting fixtures as shown on the Drawings.
   2. Remove fixtures from the project site that are not shown to be relocated.

J. Panelboards
   1. Remove panelboards where shown and dispose of off the project site.
   2. Perform all cutting and patching necessary for the removal and replacement of panelboards.

K. Miscellaneous Electrical Equipment
   1. Remove wall switches, receptacles, starters, and other miscellaneous electrical equipment as required and dispose of off the project site.
   2. Remove all equipment with care so as to minimize damage to architectural and structural members. Repair any damage incurred as herein specified.

3.5 CLEANING

A. General: When all work is completed and has been tested and accepted by the Engineer, the Contractor shall clean all light fixtures, equipment, and exposed surfaces that have been directly affected by this work. The Contractor, insofar as the work is concerned, shall at all times keep the premises in a neat and orderly condition and at the completion of the work shall properly clean up and remove any excess materials from the site.

END OF SECTION 26 0505

SECTION 26 0510

BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to provide basic electrical materials in accordance with the plans and as specified herein.

B. This section includes limited scope general construction materials and methods for application with electrical installations as follows:
   1. Excavation for underground utilities and services, including underground raceways, vaults, and equipment.
   2. Miscellaneous metals for support of electrical materials and equipment.
   3. Nailers, blocking, fasteners, and anchorage for support of electrical materials and equipment.
   4. Joint sealers for sealing around electrical materials and equipment, and for sealing penetrations in fire and smoke barriers, floors, and foundation walls.
   5. Concrete used for the following:
      a. Housekeeping pads.
      b. Pipe supports.
      c. Filling in boxouts in floor slabs, after conduit installation.
      d. Pole foundations.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work associated with basic electrical materials in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein. Where provisions of the pertinent codes and standards conflict with this specification, the more stringent provision shall govern.
   1. American Institute of Steel Construction (AISC) "Specifications for the Design, Fabrication, and Erection of Structural Steel for Buildings."
   2. American Welding Society (AWS) D1.1 "Structural Welding Code - Steel."
   3. National Electrical Code (NEC).

B. Qualifications
   1. Installer Qualifications. Engage an experienced Installer for the installation and application of joint sealers.
   2. Qualify welding processes and welding operators in accordance with American Welding Society (AWS) D1.1 "Structural Welding Code -Steel."
      a. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

B. Submit the following in accordance with Conditions of Contract and Division 01 specification sections.
   1. Product data for joint sealers.
   2. Shop drawings detailing fabrication and installation for metal fabrications and wood supports and anchorage for electrical materials and equipment.
   3. Samples of joint sealer, consisting of strips of actual products showing full range of colors available for each product.
   4. Welder certificates, signed by Contractor, certifying that welders comply with requirements specified under "Quality Assurance" article of this section.

1.5 JOB CONDITIONS

A. Apply joint sealers under temperature and humidity conditions within the limits permitted by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver joint sealer materials in original unopened containers or bundles with labels informing about manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.

B. Store and handle joint sealer materials in compliance with the manufacturer's recommendations to prevent their deterioration and damage.

1.7 DEFINITIONS

A. Additional Excavation: Where excavation has reached required subgrade elevations, if unsuitable bearing materials are encountered, continue excavation at the direction of the Engineer until suitable bearing materials are reached. The Contract Sum may be adjusted by an appropriate Contract Modification.

B. Subbase as used in this section refers to the compacted soil layer used in pavement systems between the subgrade and the pavement base course material.

C. Subgrade as used in this section refers to the compacted soil immediately below the slab or pavement system.

D. Unauthorized excavation as used in this section consists of removal of materials beyond indicated subgrade elevations or dimensions without specific direction from the Engineer.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Soil Materials: Provide soil materials as specified in Division 31 - Earthwork.

B. Miscellaneous Metals and Reinforcing Materials
   1. Provide steel plates, shapes, bars, and bar grating conforming to ASTM A 36.
   2. Provide cold-formed steel tubing conforming to ASTM A 500.
   3. Provide hot-rolled steel tubing conforming to ASTM A 501.
   4. Provide steel pipe conforming to ASTM A 53, Schedule 40, welded.
   5. Provide non-shrink, non-metallic grout which is pre-mixed, factory-packaged, non-staining, non-corrosive, non-gaseous grout, recommended for interior and exterior applications.
   6. Provide fasteners which are zinc-coated, type, grade, and class as required.
   7. Provide deformed reinforcing bars conforming to ASTM A615, Grade 40 or 60, unless otherwise indicated.
   8. Provide reinforcing materials with size and placement as shown on the plans.
   9. Provide welded wire fabric conforming to ASTM A185.

C. Miscellaneous Lumber
   1. Provide framing materials that are Standard Grade, light framing size lumber of any species. Number 3 Common or Standard Grade boards complying with West Coast Lumber Inspection Bureau (WCLIB) or American Wood Preservers Association (AWPA) rules, or Number 3 boards complying with Southern Pine Inspection Bureau (SPIB) rules. Lumber shall be preservative treated in accordance with AWPA LP-2, and kiln dried to a moisture content of not more than 19 percent.
   2. Provide construction panels which are plywood panels; American Plywood Association (APA) C-D PLUGGED INT, with exterior glue; thickness as indicated, or if not indicated, not less than 15/32 inch.

D. Joint Sealers
   1. Provide joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.
   2. Provide colors as selected by the Engineer from manufacturer's standard colors.
   3. Provide the following types of elastomeric joint sealers:
      a. One-part, mildew-resistant, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for glass, aluminum, and nonporous joint substrates, formulated with fungicide, intended for sealing interior joints with non-porous substrates; and subject to in-service exposure to conditions of high humidity and temperature extremes.
   4. Provide fire-resistant watertight joint sealers which are two-part, foamed-in-place, silicone sealant formulated for use in through-penetration firestopping around cables, conduit, pipes, and duct penetrations through fire-rated walls and floors. Sealants and accessories shall have fire resistance ratings indicated, as established by testing identical assemblies in accordance with ASTM E 814, by UL, or other testing and inspection agency acceptable to authorities having jurisdiction. Material shall be a closed-cell, non-adhering material.

E. Concrete: Provide concrete as specified in Division 03 - Concrete.

2.2 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
   1. One Part, Mildew-Resistant, Silicone Sealant
      a. "Dow Corning 786," Dow Corning Corp.

b. "SCS 1702 Sanitary," General Electric Co.
c. "863 #345 White," Pecora Corp.
d. "Proglaze White," Tremco Corp.
e. "OmniPlus," Sonneborn Building Products Div.

2. Fire Resistant Joint Sealers
   a. "Dow Corning Fire Stop Foam," Dow Corning Corp.
   b. "Pensil 851," General Electric Co.

PART 3 - EXECUTION

3.1 COORDINATION

A. Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.

B. Field-verify all locations and dimensions to ensure that the equipment will be properly located, readily accessible, and installed in accordance with all pertinent codes and regulations, the contract documents, and the referenced standards.

C. The work shall be carefully laid out in advance, and where cutting, drilling, etc., of floors, walls, ceilings, or other surfaces is necessary for proper installation, this work shall be carefully done, and any drainage to building, piping, or equipment shall be repaired by skilled mechanics of the trades involved at no additional cost to the Owner.

D. In the event any discrepancies are discovered, immediately notify the Engineer in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.2 PREPARATION

A. Preparation for Joint Sealers
   1. Clean surfaces of joints immediately before applying joint sealers to comply with recommendations of joint sealer manufacturer.
   2. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.

3.3 EXCAVATION

A. Comply with the applicable requirements of Division 31 - Sitework.

B. For the excavation of underground vaults and electrical structures conform to elevations and dimensions shown within a tolerance of +0.10 foot and extending a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.
   1. Excavate, by hand, area within drip line or large trees. Protect the root system from drainage and drying out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of 1 inch in diameter and larger with emulsified asphalt tree paint.
   2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement or precast concrete is placed.

C. Excavate trenches for electrical installation as follows:
   1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of 6 to 9 inches clearance on both sides of raceways and equipment.
   2. Excavate trenches to depth indicated or required.
   3. Limit the length of open trench to that in which installations can be made and the trench backfilled within the same day.
   4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of raceways and equipment. Provide a minimum of 6 inches of stone or gravel cushion between rock bearing surface and electrical installations.

D. Backfill excavations as promptly as work permits, but not until completion of the following:
   1. Inspection, testing, approval, and locations of underground utilities have been recorded.
   2. Removal of concrete formwork.
   3. Removal of shoring and bracing, and backfilling of voids.
   4. Removal of trash and debris.

E. Where subsidence occurs at electrical installation excavation during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.

3.4 INSTALLATION

A. Erection of Metal Supports and Anchorage
   1. Cut, fit, and place miscellaneous metal fabrications accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
   2. Provide field welding which complies with AWS "Structural Welding Code."

B. Erection of Wood Supports and Anchorage
   1. Cut, fit, and place nailers, blocking, and anchorage accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
   2. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
   3. Attach to substrates as required to support applied loads.

C. Application of Joint Sealers
   1. Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.
   2. Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.
   3. Immediately after sealant application and prior to time shinning or curing begins, tool sealants to form smooth, uniform beads, to eliminate air pockets, and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.
   4. Install firestopping sealant, including forming, packing, and other accessory materials, to fill openings around electrical services penetrating floors and walls, to provide fire stops with fire resistance ratings indicated for floor or wall assembly in which penetration occurs. Comply with installation requirements established by testing and inspecting agency. Use dams to obtain proper sealing.

D. Installation of Housekeeping Pads

1. Strength, spacing, and placement of equipment housekeeping pads. Provide a housekeeping pad for all floor-mounted equipment, unless noted otherwise. Fabricate pad as follows:
    a. Coordinate size of housekeeping pad with actual equipment provided. Fabricate base 4 inches larger in both directions than the overall dimensions of the supported equipment.
    b. Form concrete pads with framing lumber treated with form release compounds. Provide 1 inch chamfer on top edge and corners of pad.
    c. Install reinforcing bars and place anchor bolts and sleeves to facilitate securing equipment.

END OF SECTION 26 0510

SECTION 26 0519

WIRES, CABLES, AND CONNECTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install wires, cables, and connectors in accordance with the plans and as specified herein.

B. Miscellaneous: This section includes wires, cables, and connectors for power, lighting, signal, control, and related systems rated 600 volts and less.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work associated with wires, cables, and connectors in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
   1. National Fire Protection Association (NFPA) 70, National Electrical Code (NEC).
   2. Underwriters' Laboratories, Inc. (UL) Compliance. Provide components which are listed and labeled by UL under the following standards.
      a. UL Standard 83Thermoplastic Insulated Wires and Cables.
      b. UL Standard 486AWire Connectors and Soldering Lugs for Use with Copper Conductors.
      c. UL Standard 854 Service Entrance Cable.
   3. National Electrical Manufacturers Association/lnsulated Cable Engineers Association (NEMA/ICEA) Compliance. Provide components which comply with the following standards:
      a. WC-5 Thermoplastic Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.
      b. WC-7 Cross-Linked Polyethylene-Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.
      c. WC-8 Ethylene Propylene Rubber-Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.
   4. Institute of Electrical and Electronic Engineers (IEEE) Compliance. Provide components which comply with the following standards:
      a. Standard 82 Test Procedure for Impulse Voltage Tests on Insulated Conductors.

B. Regulatory Requirements: Comply with provisions of the following code and conform to applicable codes and regulations regarding toxicity of combustion products of insulating materials.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

B. Submittals: Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
   1. Product data for electrical wires, cables, and connectors.
   2. Product data for Megger insulation testing instrument.
   3. Report sheets for Megger testing.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver wire and cable properly packaged in factory-fabricated-type containers, or wound on NEMA specified type wire and cable reels.

B. Store wire and cable in clean, dry space in original containers. Protect products from weather, damaging fumes, construction debris, and traffic.

C. Handle wire and cable carefully to avoid abrading, puncturing, and tearing wire and cable insulation and sheathing. Ensure that dielectric resistance integrity of wires/cables is maintained.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Wires and Cables
   1. Provide electrical wires and cables of manufacturer's standard materials as indicated by published product information designed and constructed as recommended by manufacturer for a complete installation, and for application indicated. Except as otherwise indicated, provide copper conductors with conductivity of not less than 98% at 20 deg C (68 deg F).
   2. Provide factory-fabricated wires of sizes, ampacity ratings, and materials for applications and services indicated. Where not indicated, provide proper wire selection as determined by Installer to comply with project's installation requirements, NEC and NEMA standards. Select from the following UL types those wires with construction features which fulfill project requirements:
      a. Provide Type RHW for dry and wet locations, maximum operating temperature 75 deg C (167 deg F). Insulation, moisture and heat-resistant cross-linked polyethylene; outer covering, moisture-resistant, flame-retardant, non-metallic covering; conductor, annealed copper, Class B stranding.
      b. Provide Type XHHW for dry locations, maximum operating temperature 90 deg C (194 deg F). Insulation, flame-retardant, cross-linked polyethylene; conductor, annealed copper, Class B stranding.
      c. Provide Type THW for dry and wet locations; maximum operating temperature 75 deg C (167 deg F). Insulation, moisture and heat-resistant, flame-retardant thermoplastic; conductor, annealed copper, Class B stranding.

d. Provide Type THWN/THHN for dry and wet locations; maximum operating temperature 75 deg C (167 deg F). Insulation, moisture and heat-resistant, flame-retardant thermoplastic; conductor, annealed copper, Class C stranding.
e. Provide Type MTW for dry locations, maximum operating temperature 90 deg C (167 deg F). Insulation, flame-retardant, moisture, heat and oil-resistant thermoplastic, Class C stranding.

3. VFD Cable
   a. General
      1) UL 1277, UL 1581.
      2) Flexible multi-conductor motor supply cable.
      3) 100% Overall foil or tape shield, drain wire, and PVC jacket.
      4) Bare uncoated copper ground conductor.
      5) Rated 1000VAC / 2000VAC Peak.
   b. Conductors
      1) ASTM B8/B33.
      2) Tinned copper conductors.
      3) Class C stranding.
   c. Insulation: Flame-retardant, moisture-resistant thermoset (XLP) insulation.
   d. Conductor Types: Type XHHW conductors, 1000-Volt, 90 deg C, wet or dry locations, UL 44.
4. Provide color coding for phase identification in accordance with requirements in Division 26 Section "Electrical Identification".

B. Connectors and Terminals
1. General: Provide UL-type factory-fabricated metal connectors and terminals of sizes, ampacity ratings, materials, types, and classes indicated.
2. Twist-on Connectors: Conforming to UL 486 C, consisting of a tapered spring with insulated outer covering.
3. Compression Connectors: Tin-plated copper. Configuration shall be tee, in-line, etc., as required.
4. Terminals: Tin-plated copper, compression locking fork tongue with insulated barrel.
5. Compression Lugs: Tin-plated copper, standard barrel, one-hole or two-hole as required.
6. Heat-Shrink Insulation: Heat-shrinkable polyolefin with an internally applied adhesive watertight sealant.
7. Motor Connection Kit: Consisting of compression lugs bolted together, cloth tape cover, and heat-shrink insulation.
8. Splice Kit: Consisting of compression connector and heat-shrink insulation.

C. Wire and Cable Accessories
1. Tapes and Insulating Materials
   a. Designed for use as electrical insulating tape.
   b. Plastic Tape: Vinyl, 7 mil, 3/4-inch wide, -15 to 100 deg C, UL 510.
   c. Rubber Tapes: Self-fusing, corona-resistant, compatible with specified insulations, minimum dielectric strength of 800 V per mil, 0 to 90 ^{0}C.
   d. Arc-Proofing: Thirty mil, up to 3-inches wide, rated for a 200-amp arc for 30 seconds.
   e. Heat Shrink Insulation: Heat shrinkable polyolefin, internal adhesive sealant, UL 486D.
2. Hardware
   a. General: Carbon steel, cadmium plated.
   b. Bolts: ASTM 449, hex-head, SAE Grade 5, UNC, Class 2B threads.

c. Nuts: ASME B18.2.2, hexagon, SAE Grade 5, UNC, Class 2B threads.
d. Flat Washers: ASME B18.22.1; type A plain, wide-series.
e. Compression (Belleville) Washers: Conical type washer, 0.0005-in.-thick.

3. Wire-Pulling Lubricant
a. Listed by Underwriters Laboratories.
b. Biodegradable, non-flammable, and non-toxic.
c. Solid residue of not more than 1.5 percent and a viscosity of at least 50,000 C.P.S.
d. Compatible with conductor insulation per IEEE 1210.

2.2 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the work include, but are not limited to, the following:

1. Wire and Cable
a. American Insulated Wire Corp.
b. Brintec Corp.
c. Carol Cable Co., Inc.
d. Senator Wire and Cable Co.
e. Southwire Company.

2. Connectors and Terminals for Wires and Cable Conductors
a. AMP.
b. Burndy Corporation.
c. Ideal Industries, Inc.
d. 3M Company.
e. O-Z/Gedney Co.
f. Raychem.
g. Thomas and Betts Corp.

3. Tapes and Insulating Materials
a. Okonite Company
b. Plymouth Rubber Company
c. Raychem
d. 3M Company
e. Tyco Corporation, AMP products

4. Wire-Pulling Lubricant
a. Polywater J.
b. High Performance Cable Lubricant.
c. Ideal.
d. Aqua-Jel 2.

PART 3 - EXECUTION

3.1 WIRE AND CABLE INSTALLATION

A. Uses Permitted

1. Install UL Type USE cable for all conductors provided between utility transformers and service entrance rated equipment.
2. Install UL Type RHW or XHHW cable for power feeders, motor branch circuits, panelboard feeder circuits, and below grade or exterior control and metering circuits.
3. Install UL Type THWN/THHN, THW, or XHHW wiring in conduit, for branch circuits for lighting, receptacles, and interior control and metering circuits.

4. Install UL Type MTW wiring interior to instrument and control panels. Conductors shall be stranded with at least 19 strands in the conductor.
5. Install VFD Cable for all branch circuits of VFD controlled equipment.

B. Install electrical cables, wires, and connectors in compliance with NEC.

C. Coordinate cable installation with other work.

D. Pull conductors simultaneously where more than one is being installed in same raceway. Use UL-listed pulling compound or lubricant, where necessary.

E. Use pulling means, including fish tape, cable, rope, and basketweave wire/cable grips which will not damage cables or raceways. Do not use rope hitches for pulling attachment to wire or cable.

F. Conceal all cable in finished spaces.

G. Install exposed cable parallel and perpendicular to surfaces or exposed structural members, and follow surface contours, where possible.

H. Power conductors shall be No. 12 AWG minimum. Control conductors may be No. 14 AWG where circuit amperes and the NEC allow and when length does not pose a voltage drop problem.

I. Conductors shall be sized such that voltage drop does not exceed 3% for branch circuits or 5% for feeder/branch circuit combination.

J. Provide adequate length of conductors within electrical enclosures and train the conductors to terminal points with no excess. Bundle multiple conductors, with conductors larger than No. 10 AWG cabled in individual circuits. Make terminations so there is no bare conductor at the terminal.

K. Provide connectors, splices, or lugs as required for all oversized conductors due to voltage drop.

3.2 CONNECTOR, TERMINAL, AND SPLICE INSTALLATION

A. Uses Permitted
1. Install twist-on connectors for lighting, communication, and receptacle branch circuits and utilization equipment only in size No. 8 AWG and smaller and only in finished areas.
2. Install forked-tongue terminals on control and metering conductors which connect to terminal blocks.
3. Install motor connection kits on all polyphase induction motors.
4. Install compression connectors and lugs for all other connections.

B. Use splice and tap connectors which are compatible with conductor material.

C. Install all compression connectors, splices, and lugs with a racheting tool which will not release until proper compression is achieved.

D. Install splices which possess equivalent-or-better mechanical strength and insulation ratings than conductors being spliced.

E. Service entrance conductors shall be installed without splices. Electrical equipment feeders shall be spliced only where shown or specifically approved. Control and metering conductors shall be installed without splices.

F. All splices shall be made only by specific permission of the A/E, and then only in manholes or pullboxes, and shall be sealed watertight with a heat-shrink insulation.

G. Tighten electrical connectors and terminals in accordance with manufacturer's published torque tightening values. Where manufacturer's torquing requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Standards 486A and 486B.

3.3 FIELD QUALITY CONTROL

A. The Contractor shall test each electrical circuit after permanent cables are in place with terminators installed, but before cable or wire is connected to equipment or devices to demonstrate that each circuit is free from improper grounds and short circuits.

B. The Contractor shall test by Megger Test, the insulation resistance between phases and from each phase to ground for each of the following feeder and motor branch circuits:
1. Motor Control Center.
2. Panelboard.
3. Switchboards.
4. Switchgear.
5. Motors.

C. The Megger Testing shall be witnessed by the A/E. The A/E shall be notified at least 48 hours in advance of testing.

D. Measure the insulation resistance at 500 volts dc with a hand-cranked or motor-driven "Megger" insulation testing instrument. Battery-operated test instruments are not permitted. All test instruments are to be provided by the Contractor.

E. If any insulation resistance measures less than 50 megohms, the cable shall be considered faulty with the cable failing the insulation test. In moist environments, bag the ends of the cable to prevent a faulty Megger test.

F. Any cable which fails the insulation tests or which fails when tested under full load conditions shall be replaced with new cable for the full length and retested. Corrective action and repeated tests shall be accomplished at the Contractor's own expense.

G. Maintain testing report sheets identifying each cable tested, what each feeder or motor branch circuit will be connected to, and the level of insulation resistance measured. Test reports shall be signed by the tester, initialed by the A/E and sent to the A/E within 48 hours.

END OF SECTION 26 0519

SECTION 26 0523

SIGNAL AND COMMUNICATION CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

B. Related Sections: The following sections contain requirements that relate to this section:
   1. Division 26 Section “Basic Electrical Requirements”.
   2. Division 26 Section “Basic Electrical Materials and Methods”.
   3. Division 26 Section “Wires and Cables”.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install communication and signal cables in accordance with the plans and as specified herein.

B. Cables and Accessories: This section includes cables and connectors designed for and used in communication, control, data, and signal circuits.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. Connected Equipment Manufacturer Approval: Where cables specified in this section are used to provide signal paths for systems specified in other sections of these specifications or for systems furnished under other contracts, obtain review of the cable characteristics and approval for use with the connected system equipment by the connected equipment manufacturers.

C. Electrical Component Standard: Provide work complying with applicable requirements of National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."

D. Toxicity: Comply with applicable codes and regulations regarding toxicity of combustion products of materials used in communication and signal cables.

E. National Electrical Manufacturer's Association/Insulated Cable Engineers Association (NEMA/ICEA) Compliance: Comply with NEMA/ICEA Standard Publication WC 5, "Thermoplastic Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy"; WC 30, "Color Coding of Wires and Cables," pertaining to signal transmission cable; and WC 41, "Coaxial Communication Cable."

F. American Society for Testing and Materials (ASTM) Compliance: Comply with applicable requirements of ASTM B 1, B 2, B 3, B 8, B 33, D 2219, and D 2220. Provide copper conductors with conductivity of not less than 98 percent at 20 deg C (68 deg F).

G. Underwriters' Laboratories, Inc. (UL) Compliance: Comply with applicable requirements of UL Standard 83, "Thermoplastic Wires and Cables"; UL 486 A, "Wire Connectors and Soldering Lugs for Use with Copper Conductors"; and UL 910, "Test Method for Fire and Smoke Characteristics of Cables Used in Air Handling Spaces." Provide products that are UL listed and labeled.

H. Electronic Industries Association (EIA) Compliance: Comply with EIA Standards EIA-230, "Color Marking of Thermoplastic Wire," EIA-258, "Semi-Flexible Air Dielectric Coaxial Cables and Connectors, 50 Ohms," and TIA/EIA-568A, "Commercial Building Telecommunications Cabling Standard."

I. MIL-SPEC Compliance: Comply with MIL-C-3093, "Telephone Cable; Inside Distribution Wiring," MIL-C-55021, "Twisted-Pair and Triplet Cables; Hookups General Specifications," MIL-C-17/28, "Radio Frequency Flexible Coaxial Cables, 50 Ohms," and MIL-C-17/29, "Radio Frequency Flexible Coaxial Cables, 75 Ohms."

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and material certifications as required.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver wire and cable properly packaged in factory fabricated type containers, or wound on NEMA specified type wire and cable reels.

B. Store wire and cable in clean dry space in original containers. Protect products from weather, damaging fumes, construction debris, and traffic.

C. Handle wire and cable carefully to avoid abrading, puncturing, and tearing wire, cable insulation, and sheathing. Ensure that dielectric resistance and characteristic impedance integrity of the cable are maintained.

PART 2 - PRODUCTS

2.1 SHIELDED TWISTED PAIR CABLES

A. 600 Volt Rated Shielded Twisted Pair or Triplet Cables: Shielded twisted pair or triplet cable, 16 AWG stranded tinned copper conductors, polyethylene insulation, aluminum tape shield, 18 AWG tinned copper drain wire, UV stabilized PVC jacket, 100 percent shield coverage. Suitable for direct burial. Multiple pair cables shall have an overall shield and an overall PVC jacket.

2.2 CONTROL NETWORK CABLES

A. Ethernet: Four pair, unshielded, Category 6, 24 AWG, stranded copper with PVC insulation and PVC jacket. Cable shall be UL listed.

B. Fiber-Optic:

1. Multimode graded index, tight-buffered, optical glass fiber cores cable:
    a. Compatible with LED-based transmission system and suitable for fiber optic Ethernet LAN standards including point-to-point Fiber Optic Inter-Repeater Link (FOIRL) network, and ANSI standard Fiber Distribution Data Interface (FDDI) networks.
    b. Do not use cable with plastic fiber core construction.
    c. The number of cables and the number of fibers in each cable shall be as specified herein and as shown on the Drawings.
    d. Splitter Kits: The cable shall be provided with the necessary number of splitter kits to accommodate the number of terminations shown for each interconnection box on the Drawings.
    e. Cable shall be assembled with inner strength members, polyester core separator tape, Aramid yarn or similar strength members.
    f. Jackets: Inner PVC jacket with rip cord, and polyethylene outer jacket rip cord. Provide a cable outer jacket that is UV inhibited, fungus resistant and flame retardant.
    g. Attenuation losses: Shall be 3.5 dB/km or less at a wavelength of 850 nm and 1.0 dB/km or less at a wavelength of 1300 nm.
    h. Bandwidth: Minimum bandwidth shall be 160 MHz-km at 850 nm and 500 MHz-km at 1300 nm.
    i. Provide cable unaffected by continuous or intermittent submergence in water, damage from lightning strikes. Shall be resistant to fuel, petro-chemicals and other caustic or noxious materials.
    j. Cable shall be suitable for indoor and outdoor use conduit installation.
    k. Provide continuous inter- and intra- building installation, closet to closet, suitable for passing through inside conduit locations directly from outside conduit.
    l. Cable shall be UL listed as type OFN per NEC 770-51 and NEC 770-53.
    m. Cable specifications are as follows:
        1) Fiber Size: 62.5 micron/125 micron (core/cladding)
        2) Fiber Count: 12 fibers
        3) Nominal Cable Diameter: 0.256 inches
        4) Nominal Cable Weight: 33 pounds per 1000 ft
        5) Crush Resistance: 500 pounds per inch
        6) Maximum Tensile Load: 600 pounds (installation)
        7) Maximum Tensile Load: 135 pounds (in-service)
        8) Minimum Bend Radius: 5.1 inches (installation)
        9) Minimum Bend Radius: 2.6 inches (in-service)
        10) Operating Temperature: -40 to 80degC (core/cadding)
        11) Guaranteed to achieve 300/550 meters at 850/1300 nm for Gigabit Ethernet (IEEE 802.3z) standard-compliant links.
2. Single mode, tight-buffered, optical glass fiber cores cable:
    a. Compatible with laser-based transmission system and suitable for fiber optic Ethernet LAN standards including point-to-point Fiber Optic Inter-Repeater Link (FOIRL) network, and ANSI standard Fiber Distribution Data Interface (FDDI) networks.
    b. Do not use cable with plastic fiber core construction.
    c. The number of cables and the number of fibers in each cable shall be as specified herein and as shown on the Drawings.

d. Splitter Kits: The cable shall be provided with the necessary number of splitter kits to accommodate the number of terminations shown for each interconnection box on the Drawings.
e. Cable shall be assembled with inner strength members, polyester core separator tape, Aramid yarn or similar strength members.
f. Jackets: Inner PVC jacket with rip cord, and polyethylene outer jacket rip cord. Provide a cable outer jacket that is UV inhibited, fungus resistant and flame retardant.
g. Attenuation losses: Shall be 0.5 dB/km or less at a wavelength of 1310 nm and 0.4 dB/km or less at a wavelength of 1550 nm.
h. Provide cable unaffected by continuous or intermittent submergence in water, damage from lightning strikes.
i. Cable shall be suitable for indoor and outdoor use conduit installation.
j. Cable shall be UL listed as type OFN per NEC 770-51 and NEC 770-53.
k. Cable specifications are as follows:
    1) Fiber Size: 8.3 micron/125 micron (core/cladding)
    2) Fiber Count: 12 fibers
    3) Nominal Cable Diameter: 0.256 inches
    4) Nominal Cable Weight: 33 pounds per 1000 ft
    5) Crush Resistance: 500 pounds per inch
    6) Maximum Tensile Load: 600 pounds (installation)
    7) Maximum Tensile Load: 135 pounds (in-service)
    8) Minimum Bend Radius: 5.1 inches (installation)
    9) Minimum Bend Radius: 2.6 inches (in-service)
    10) Operating Temperature: -40 to 80degC (core/cadding)

2.3 CONNECTORS AND TERMINALS

A. Shielded Twisted Pair:
1. Provide terminals as specified in Division 26 Section "Wires, Cables, and Connectors."

B. Ethernet Cable:
1. Provide RJ45 plug at each end.

C. Fiber-Optic Cable:
1. Furnish connect micron core/claddings and components and use specific tools and methods as recommended by the connector manufacturer to form a complete connector system.
2. Provide fiber optic SC simplex connectors; multimode and single mode versions to match cable type. Connectors shall be polymer body with a precision zirconia ferrules.
    a. Connector Specifications
        1) Insertion Loss: 0.15/0.30 dB (typical/maximum)
        2) Durability Delta: 0.1 dB (1000 matings)
        3) Operating Temperature: -40 to +80°C
        4) Cable Retention: 40 pounds
3. Splicing/Splitting
    a. Contractor shall field splice each fiber to a pigtail cable at the termination enclosures. All splices shall be made by the fusion process and shall have a splice loss no greater than 0.35 dB. Loss measurement shall be performed at the time of splicing and documentation shall be furnished for each splice. Splice testing shall

be witnessed by the Owner's project representative. Prior to stripping the cable, Contractor shall record the cable length from the cable jacket. This length shall be documented and included in the test documentation.

2.4 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering control/signal cabling products that may be incorporated in the work include but are not limited to the following:

B. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
   1. Cables.
      a. Alpha Communications.
      b. American Insulated Wire Corp.
      c. AT&T Network Systems.
      d. Belden Div; Cooper Industries.
      e. Berk-Tek Company.
      f. Cable Continental Cables Co.
      g. Furon Dekoron Division.
      h. Guardian Products Division, General Cable Corporation.
      i. Mohawk Wire & Cable Corp.
      j. Phelps Dodge Cable and Wire Co.
      k. Pirelli Cable Corp.
   2. Connectors.
      a. Thomas & Betts Corporation.
      b. 3M Company.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine areas and conditions under which communication and signal cables are to be installed. Notify Engineer/Architect in writing of conditions detrimental to proper completion of the work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to the Engineer/Architect.

3.2 COORDINATION

A. Coordinate with other work, including wires/cables, boxes, and raceways, as necessary to interface installations of communication and signal cables with other work.

3.3 APPLICATIONS

A. Use 300 volt rated single or multiple pair signal cables for all analog dc signals (4-20 mA, 1-5 volt, etc.).

B. Use Ethernet cable for all telephone lines.

C. Use Ethernet cable for all control network connections, unless noted otherwise on the Drawings.

3.4 INSTALLATION

A. General: Install communication and signal cables in accordance with manufacturer's written instructions, in compliance with NEC, and in accordance with standard industry practice.

B. Coordinate installation with other work.

C. Install communication and signal cables without damaging conductors, shield, or jacket. Do not either in handling or installation bend cable to smaller radii than minimum recommended by manufacturer. Ensure that medium manufacturer's recommended pulling tensions are not exceeded. Pull conductors simultaneously where more than one is being installed in same raceway. Use pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Use pulling means, including fish tape, cable, rope, and basket weave wire/cable grips that will not damage cable or raceway.

D. Install all cables in conduit.

E. Splices are allowed only at indicated splice points. Where splices are indicated, use splice and tap connectors that are compatible with media material.

F. Tighten connectors and terminals, including screws and bolts, in accordance with manufacturer's published instructions for torque tightening values.

G. Cable Terminations: Terminate cables on numbered terminal blocks where cable terminations are made on backboards and in cabinets and outlet boxes.

H. Wiring at Backboards and Cabinets: Install conductors parallel to and at right angles to walls. Bundle, lace, and train the conductors to terminal points with no excess. Use wire distribution spools at points where cables are fanned or conductors turned. Label each terminal.

I. Conductor Terminations: Terminate conductors of cables on terminal blocks using tools recommended by terminal block manufacturer.

3.5 GROUNDING

A. Provide equipment grounding connections for telephone systems as indicated. Tighten connections to comply with tightening torque specified in UL Standard 486A to ensure permanent and effective grounding.

3.6 FIELD QUALITY CONTROL

A. Copper Cabling.
   1. Provide at least 10-days notice in writing when the cabling network is ready for final acceptance testing.
   2. All testing shall be in the presence of the Owner’s project representative.
   3. Test each UTP cable in accordance with EIA/TIA-568B guidelines to Category 6 performance testing parameters.

4. Factory test results for patch cables will be acceptable where the factory testing parameters clearly meet or exceed the EIA/TIA-568B guidelines.
5. Electronic test results shall be provided to the Owner's project representative for review.
6. Any cable that fails to meet its specified performance characteristics shall be replaced with a new cable and retested.

B. Fiber-Optic Cabling.
1. Test each fiber strand in accordance with manufacturer's published test procedures.
2. Test each fiber strand at dual wavelengths.
   a. 850 nm and 1300 nm for multimode.
3. Cable performance shall meet or exceed the following performance criteria: multimode - 3.75 dB/km at 850 nm and 1.5 dB/km at 1310 nm.
4. Test each fiber strand with an optical time domain reflectometer (OTDR).
5. The OTDR anomaly resolution shall be within one foot in runs up to 1,000 feet in length.
6. Test all cable segments and patch cords for faulty connectors, splices, and terminations and for the integrity of the cable and its component parts at 850 and 1300 nm multimode.
7. Each connector shall test to a maximum of .1 dB loss.
8. Replace connectors on cables that exceed the .1dB limit and retest.
9. Replace connectors and retest new materials until satisfactory performance is achieved.
10. Use a time domain reflectometer to record transmission characteristics, waveform, and performance of all fiber strands.
11. Use an optical loss test set (OLTS) to measure the optical transmission loss (attenuation) on each optical fiber strand in the system.
12. Electronic test results shall be provided to the Owner's project representative for review.

END OF SECTION 26 0523

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0526

GROUNDING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install grounding materials in accordance with the plans and as specified herein.

B. Grounding: This section includes solid grounding of electrical systems and equipment. It includes basic requirements for grounding for protection of life, equipment, circuits, and systems. Grounding requirements specified in this section may be supplemented in other sections of these Specifications.

C. Applications of electrical grounding and bonding work in this section include the following:
1. Underground metal piping.
2. Underground metal and steel reinforced concrete structures.
3. Electrical power systems.
4. Grounding electrodes.
5. Counterpoise loops.
6. Separately derived systems.
7. Raceways.
8. Service equipment.
9. Enclosures.
10. Equipment.
11. Lighting standards.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work to furnish and install grounding in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
1. Electrical Code Compliance: Comply with applicable local electrical code requirements of the authority having jurisdiction, and National Electrical Code (NEC) as applicable to electrical grounding and bonding, pertaining to systems, circuits and equipment. Use of conduit system for ground conductor shall not be allowed.
2. Underwriters' Laboratories, Inc. (UL) Compliance: Comply with applicable requirements of UL Standards Nos. 467, "Grounding and Bonding Equipment", and 869 "Reference Standard for Service Equipment", pertaining to grounding and bonding of systems, circuits and equipment. In addition, comply with UL Standard 486A, "Wire Connectors and Soldering Lugs for Use with Copper Conductors". Provide grounding and bonding products which are UL listed and labeled for their intended usage.

3. Institute of Electrical and Electronic Engineers (IEEE) Compliance: Comply with applicable requirements and recommended installation practices of IEEE Standards 80, 81, 141 and 142 pertaining to grounding and bonding of systems, circuits and equipment.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

B. Submittals: Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
   1. Product data for ground rods, connectors and connection materials, and grounding fittings. Field testing organization certificate, signed by the Contractor, certifying that the organization performing field tests complies with the requirements specified in Quality Assurance below.
   2. Report of field tests and observations certified by the testing organization.

1.5 DELIVERY, HANDLING, AND STORAGE

A. Deliver ground wire properly packaged in factory fabricated type containers, or wound on NEMA specified type wire reels.

B. Handle grounding wire carefully to avoid abrading, puncturing and tearing wire insulation. Ensure that dielectric resistance of the cable is maintained

C. Store grounding materials and ground wire in clean dry space in original containers. Protect products from weather damaging fumes, construction debris, and traffic.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Grounding and Bonding Products
   1. Products: Of types indicated and of sizes and ratings to comply with NEC. Where types, sizes, ratings, and quantities indicated are in excess of NEC requirements, the more stringent requirements and the greater size, rating, and quantity indications govern.
   2. Conductor Materials: Copper

B. Wire and Cable Conductors
   1. General: Comply with Division 26 Section “Wires, Cables and Connectors”.
   2. Equipment Grounding Conductor
      a. Minimum ground wire size for power circuits shall be No. 12 AWG, except where otherwise noted. Wire size No. 8 AWG and larger shall be stranded, and all smaller wires shall be solid, except where otherwise noted.
      b. Minimum ground wire size for control circuits shall be No. 14 AWG, except where otherwise noted.
      c. All wire sizes shown on Plan Drawings, Details, and Sketches are based on insulated copper wire based on 60 deg C for circuits 125 amperes and less, and the use of 75 deg C for higher ampere rated circuits.
      d. Conductors for grounding system shall be soft or medium hard drawn, stranded, bare copper, except where otherwise noted.

3. All conductors buried in ground shall be bare.
4. Grounding Electrode Conductor: Stranded cable
5. Bare Copper Conductors: Conform to the following:
    a. Solid Conductors: ASTM B-3.
    b. Assembly of Stranded Conductors: ASTM B-8.
    c. Tinned Conductors: ASTM B-33.

C. Identification of Ground Conductors
1. Ground conductors shall have conductor identification.
2. Ground conductor identification shall be as called for in the National Electric Code, where covered.
3. Ground conductors larger than No. 6 AWG may be identified by taped color coding at all splices and terminations.
4. Ground conductors No. 6 AWG and smaller shall be color coded.
5. Ground conductor color coding shall be green throughout.
6. Wire markers made of paper tape shall not be used.

D. Miscellaneous Conductors
1. Ground Bus: Bare annealed copper bars of rectangular cross section with 98 percent conductivity, rigidly attach to structure.
2. Braided Bonding Jumpers: Copper tape, braided No. 30 gauge bare copper wire, terminated with copper ferrules.
3. Bonding Strap Conductor/Connectors: Soft copper, 0.05 inch thick and 2 inches wide, except as indicated.

E. Connector Products
1. General: Listed and labeled as grounding connectors for the materials used.
2. Pressure Connectors: High conductivity plated units.
3. Bolted Clamps: Heavy duty units listed for the application.
4. Exothermic Welded Connections: Provided in kit form and selected for the specific types, sizes, and combinations of conductors and other items to be connected.

F. Grounding Electrodes
1. Ground Rods: Copper clad steel with high strength steel core and electrolytic grade copper outer sheath, molten welded to core.
    a. Size: 3/4 inch by 20 feet.

2.2 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include the following:
1. Anixter Bros., Inc.
2. Bashlin Industries, Inc.
3. Buckingham Mfg. Co.
4. A.B. Chance Co.
5. Dossert Corp.
6. Engineered Products Co.
7. Erico Products, Inc.
8. Galvan Industries, Inc.
9. GB Electrical, Inc.
10. General Machine Products Co., Inc.

11. Hastings Fiber Glass Products, Inc.
12. Ideal Industries, Inc.
13. Kearney-National.
14. McGill Mfg.
15. O-Z/Gedney Co.
16. Raco, Inc.
17. Thomas & Betts Corp.
18. W.H. Salisbury & Co.
19. Utilco Co.

B. Exothermic Weld Connections
1. Cadweld.
2. Therm-O-Weld.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General
1. Ground electrical systems and equipment in accordance with NEC requirements except where the Drawings or Specifications exceed NEC requirements.
2. Ground Rods: Locate a minimum of one rod length from each other and at least the same distance from any other grounding electrode. Interconnect all ground rods with bare conductors buried at least 24 inches below grade. Connect bare cable ground conductors to ground rods by means of exothermic welds. Make these connections without damaging the copper coating or exposing the steel. Drive rods until tops are 2'-6" below finished floor or final grade except as otherwise indicated.
3. Metallic Water Service Pipe: Provide insulated copper ground conductors, sized as indicated, in conduit from the building main service equipment, or the ground bus, to main metallic water service entrances to the building. Connect ground conductors to the main metallic water service pipes by means of ground clamps. Where a dielectric main water fitting is installed, connect the ground conductor to the street side of the fitting. Do not install a grounding jumper around dielectric fittings. Bond the ground conductor conduit to the conductor at each end.
4. Braided Type Bonding Jumpers: Install to connect ground clamps on meter piping to bypass meters electrically. Use elsewhere for flexible bonding and grounding connections.
5. Route grounding conductors along the shortest and straightest paths possible without obstructing access or placing conductors where they may be subjected to strain, impact, or damage, except as indicated.
6. Provide ground rods and ground grid at service entrance equipment as required.
7. Bond the neutral of each transformer to building steel.
8. All underground grounding conductors shall be a minimum of 2'-6" below grade.
9. Provide a ground wire in all feeder circuits.
10. Provide a ground wire in all branch circuit conduits.
11. Where grounding conductors are subject to mechanical injury, they shall be protected by encasement in concrete or installed in a rigid schedule 80 PVC raceway.
12. All connection of ground conductors to ground rods, bus bars, structural members, pipes, or fences and splices of ground conductors shall be made by exothermic welds, except where otherwise noted.
    a. All connections to bar lugs shall be exothermic weld or compression type.

b. Bolted type connection of ground conductors may only be made where terminal lugs or blocks have been furnished and installed in equipment by the Manufacturer.
c. Prior to the installation of any exothermic weld on connector, all connecting surfaces shall be thoroughly cleaned in accordance with the Manufacturer's recommendations.
d. Failure to thoroughly clean connecting surfaces shall constitute justifiable ground to require the Contractor to remove and re-install all similar connections at no expense to the Owner or Engineer.

13. The Contractor shall not allow or cause any connection or splice for the grounding system to be covered up or enclosed until it has been inspected and approved by the Inspecting Authority.
    a. Any connection or splice that is covered up or enclosed before such inspection and approval shall be uncovered at the Contractor's expense.
    b. After it has been inspected and approved, the Contractor shall cover up or enclose the connection or splice it at his own expense.
14. The resistance to ground for the entire grounding system shall not exceed 25 ohms under normal dry conditions. Tests of grounding resistance shall not be made within 24 hr after a rainfall. If, after testing the system, it is found that the resistance exceeds the specified value, the Contractor shall install the necessary number of ground rods to reduce the resistance to less than the specified value.

B. Connections
1. General: Make connections in such a manner as to minimize possibility of galvanic action or electrolysis. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.
    a. Use electroplated or hot tin coated materials to assure high conductivity and make contact points closer in order of galvanic series.
    b. Make connections with clean bare metal at points of contact.
    c. Coat and seal connections involving dissimilar metals with inert material such as red lead paint to prevent future penetration of moisture to contact surfaces.
2. Exothermic Welded Connections: Use for connections to structural steel, connections to ground rods, and for all underground connections. Install at connections to ground rods. Comply with manufacturer's written recommendations. Welds that are puffed up or that show convex surfaces indicating improper cleaning are not acceptable.
3. Terminate insulated equipment grounding conductors for feeders and branch circuits with pressure type grounding lugs. Where metallic raceways terminate at metallic housings without mechanical and electrical connection to the housing, terminate each conduit with a grounding bushing. Connect grounding bushings with a bare grounding conductor to the ground bus in the housing. Bond electrically non-continuous conduits at both entrances and exits with grounding bushings and bare grounding conductors.
4. Tighten grounding and bonding connectors and terminals, including screws and bolts, in accordance with manufacturer's published torque tightening values for connectors and bolts. Where manufacturer's torquing requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A and UL 486B.
5. Compression Type Connections: Use hydraulic compression tools to provide the correct circumferential pressure for compression connectors. Use tools and dies recommended by the manufacturer of the connectors. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on the ground conductor.

6. Moisture Protection: Where insulated ground conductors are connected to ground rods or ground buses, insulate the entire area of the connection and seal against moisture penetration of the insulation and cable.

C. Underground Distribution System Grounding
1. Manholes, Handholes, and Underground Pullboxes: Install a driven ground rod close to the wall and set the rod depth such that 4 inches will extend above the finished floor. Where necessary, install ground rod before the manhole is placed and provide a No. 1 AWG bare tinned copper conductor from the ground rod into the manhole through a waterproof sleeve in the manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure sensitive tape or heat shrunk insulating sleeve from 2 inches above to 6 inches below the concrete. Seal floor opening with waterproof nonshrink grout.
2. Connections at Manholes, Handholes, and Underground Pullboxes: Connect exposed metal parts, such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole to the ground rod or ground conductor. Connect circuit ground wire to ground rod. Make connections with minimum No. 4 AWG stranded hard drawn copper wire. Train conductors plumb or level around corners and fasten to manhole or handhole walls. Connect to cable armor and cable shields by means of tinned terminals soldered to the armor or shield, or as recommended by manufacturer of splicing and termination kits.
3. Grounding System: Ground noncurrent carrying metallic items associated with manholes, substations, and pad mounted equipment by connecting them to bare underground cable and grounding electrodes arranged as indicated.

3.2 APPLICATION

A. Equipment Grounding Conductor Application: Comply with NEC Article 250 for sizes and quantities of equipment grounding conductors, except where larger sizes or more conductors are indicated. Use of conduit system for ground conductor shall not be allowed.
1. Install separate insulated equipment grounding conductors with circuit conductors for the following in addition to those locations where required by code:
a. Feeders and branch circuits.
2. Nonmetallic Raceways: Install an insulated equipment ground conductor in nonmetallic raceways unless they are designated for telephone or data cables.

B. Underground Conductors: Bare, tinned, stranded copper except as otherwise indicated.

C. Separately derived systems required by NEC to be grounded shall be grounded in accordance with NEC paragraph 250-30.

D. Metal Poles Supporting Outdoor Lighting Fixtures: Ground pole to a grounding electrode as indicated in addition to separate equipment grounding conductor run with supply branch circuit.

3.3 FIELD QUALITY CONTROL

A. Independent Testing Organization: Arrange and pay for the services of a qualified independent electrical testing organization to perform tests described below.

B. Test the complete station ground system for continuity and for resistance to ground using an electrical ground resistance tester.

C. Ground test shall be performed only after two days of dry weather. Dry weather is defined as 0.0-inch of precipitation in a 48 hour period.

D. Use a hand-cranked or motor-driven ground test set by Biddle, or approved equal.

E. Resistance to ground shall be 5 ohms or less. Drive additional ground rods as required to meet the 5 ohm maximum resistance.

F. All tests are to be witnessed by the Owner's Representative. Notify the Owner's Representative at least 24 hours in advance of testing.

END OF SECTION 26 0526

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0529

SUPPORTING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to work of this Section.

B. This section is a Division 26 section and is a part of each Division 26 section making reference to electrical supporting devices specified herein.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install supporting devices in accordance with the plans and as specified herein.

B. Supports: Types of supports, anchors, sleeves and seals specified in this section include the following:
1. Clevis hangers.
2. Riser clamps.
3. C-clamps.
4. I-beam clamps.
5. One hole conduit straps.
6. Two hole conduit straps.
7. Round steel rods.
8. Lead expansion anchors.
9. Toggle bolts.
10. Wall and floor seals.
11. U-channel strut system.

C. Supports, anchors, sleeves and seals furnished as part of factory fabricated equipment, are specified as part of that equipment assembly in other divisions and Division 26 sections.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
1. National Electrical Code (NEC) Compliance: Comply with NEC requirements as applicable to construction and installation of electrical supporting devices.
2. Manufacturer's Standardization Society (MSS) Compliance: Comply with applicable MSS standard requirements pertaining to fabrication and installation practices for pipe hangers and supports.
3. National Electrical Contractors Association (NECA) Compliance: Comply with NECA's "Standard of Installation" pertaining to anchors, fasteners, hangers, supports, and equipment mounting.

4. Underwriters' Laboratories, Inc. (UL) Compliance: Provide electrical components which are UL listed and labeled.
5. Federal Specification (FS) Compliance: Comply with FS FF-S-760 pertaining to retaining straps for conduit, pipe and cable.

1.4 DEFINITIONS

A. Abbreviations
1. PVC: Polyvinyl chloride.

B. Finished Locations: The following are defined as finished locations:
1. Areas with carpet or tile floors.
2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
3. Areas with tiled, plastered, or paneled walls.

C. Interior Locations: The following are defined as interior locations:
1. Any location within the boundaries of the foundation of any building.
2. Any location within the superstructure of other structures not classified as buildings.

D. Wet Locations: The following are defined as wet locations:
1. All exterior locations.
2. All interior locations below grade.
3. All interior locations where wet materials are processed, pumped, transported, or stored.

E. Corrosive Locations: The following are defined as corrosive locations.
1. All locations with chemical feed/transfer equipment
2. All locations with chemical storage tanks
3. All locations where chemical storage drums are located.

F. Hazardous (classified) Locations: The following are defined as hazardous (classified) locations.
1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

B. Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
1. Product data for the U-channel strut system.

1.6 DELIVERY, HANDLING, AND STORAGE

A. Deliver supporting devices properly packaged in factory fabricated type container.

B. Store supporting devices in clean dry space in original containers. Protect products from weather damaging fumes, construction debris and traffic.

C. Handle supporting devices carefully to avoid damage.

PART 2 - PRODUCTS

2.1 MANUFACTURED SUPPORTING DEVICES

A. Raceway Supports: Products shall include but are not limited to the following:
   1. Materials
      a. Corrosive locations. Type 316 stainless steel or PVC coated galvanized steel.
      b. Exterior locations. Type 316 stainless steel.
      c. All other locations. Steel or malleable iron, electro-galvanized.
   2. Clevis Hangers: For supporting rigid metal conduit.
      a. 3/8-inch rod for 2 inch and smaller conduit.
      b. 1/2-inch rod for 2 1/2 inch and larger conduit.
   3. Threaded Rod: 1/2-inch minimum size except as stated in 1 above with hexagon nuts.
   4. Beam Clamp: With 1/4-inch tapped side and back holes for attachment of conduit clamps.
   5. Swivel Beam Clamp: Swivel eye hook, closed in the installed position, swivel eye tapped for the threaded rod, and jamb nut.
   6. One-Hole Conduit Straps: One hole.
   7. Clamp Backs: For use with one hole conduit strap to support conduit away from wall or ceiling surface.
   8. Conduit Hangers: For hanging conduit from beam clamps, 1/4-20 closure bolt and square nut, hole for 1/2-13 threaded rod.
   9. Conduit Spacers: Nonmetallic spacers to support conduit and maintain spacing during concrete pours.
   10. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
      a. Appleton.
      b. Cal Conduit Products.
      c. Cantex, Inc.
      d. Carlon.
      e. Cooper B-line
      f. Crouse-Hinds.
      g. Gibson Stainless and Specialty, Inc.
      h. Killark.
      i. Occidental Coating Co.
      j. Raco, Inc.
      k. Robroy.
      l. Thomas & Betts Corp.

B. Cable and Cord Supports
   1. External Cable Grips
      a. For flexible cords and cables longer than 6 feet and steel support wire.
      b. Lace type split wire mesh.
      c. Single or double weave as required to support the load with a safety factor of 10 times the supported load.
      d. Type 302/304 stainless steel
   2. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
      a. B-Line Systems.
      b. Condux International, Inc.
      c. Kellems, Division of Hubbell, Inc.

d. O-Z/Gedney.
e. Pass & Seymour/Legrand.
f. Red Seal Electric Co.

2.2 U-CHANNEL STRUT SYSTEMS

A. General
1. Provide equipment that is listed and labeled.
2. U-channel
3. Materials
a. Corrosive locations: Type 316 stainless steel.
b. Exterior locations: Type 316 stainless steel.
c. All other locations: Cold rolled steel, ASTM A570, grade 33, 12 gauge, hot dip galvanized after fabrication.
4. Outside dimensions of 1-5/8 inch x 1-5/8 inch, unless otherwise noted.
5. Holes, 9/16 inch diameter at 1-7/8 inch on center, unless otherwise noted.
6. Provide spring nuts, clamps, hangers, and hardware made of the same materials at the U-channel.

B. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
1. Cooper/B-Line.
2. Gibson Stainless and Speciality, Inc.
3. Kindorf/Thomas & Betts.
4. Seasafe, Inc.
5. Unistrut Corporation.

2.3 FABRICATED SUPPORTS

A. General.
1. Constructed of individual structural shapes or assemblies of structural shapes welded together to form a complete, secure, and durable assembly.
2. Structural tubing, angles, channels, or W-shapes as shown on the drawings or required to support equipment or systems.
3. Size support members to perform their support functions without deflection of more than one half percent of total height for vertical members and 1 percent of total span for other than vertical members.
4. Materials
a. Corrosive locations: Type 316 stainless steel.
b. Exterior locations: Type 316 stainless steel.
c. All other locations: Cold rolled steel, ASTM A 36 hot dip galvanized after fabrication.

B. Fabrication
1. Steel: Assemble fabricated supports by full penetration welded connections.
2. Ground welds smooth and flush.
3. Wire brush areas around welds to remove slag and spall.

2.4 WALL AND FLOOR SEALS

A. General: Provide seals around conduits that penetrate below grade or water-bearing concrete walls and floors.

B. Wall Opening
   1. New Walls: Molded non-metallic high density polyethylene sleeves with integral water stop and end caps to prevent deformation during concrete pour.
   2. Existing Walls: Core drilled hole, size as recommended by seal manufacturer.

C. Modular seal.
   1. Inter-locking synthetic rubber links shaped to fill the annular space between the conduit and the wall opening.
   2. Glass reinforced nylon polymer pressure plates.
   3. Type 316 stainless steel bolts and flange hex nuts.

D. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
   1. PSI-Thunderline/Link-Seal.
   2. Or approved equal.

2.5 FIRE-STOPS

A. General
   1. Provide fire-stops around any electrical work penetrating fire rated walls, floors, or ceilings.
   2. Provide fire-stops that conform to the following:
      a. UL Standard 1479, "Penetration Fire-stop Systems."
      b. UL Standard 263, "Fire Tests of Building Construction and Materials."

B. Busway, Cable Tray, Armored Cable, and Conduit Penetration Fire-Stopping
   1. Provide expanding foam or elastomeric putty or pillows to fire-stop penetrations in fire rated assemblies.
      a. RTV Foam
         1) Dow Corning 3-6548 Silicone RTV Foam.
         2) 3M Fire Barrier 2001 Silicone RTV Foam.
      b. Elastomeric Putty
         1) 3M Fire Barrier 2000 (nonslump).
         2) 3M Fire Barrier 2003 (self-leveling).
         3) Nelson CLK N/S (nonsag).
         4) Nelson CLK S/L (self-leveling).
   2. Provide fire resistive panels on both sides of the fire barrier penetration if required to obtain the necessary fire resistance rating or to provide a cofferdam to restrain the sealant material during the installation and curing process.
      a. 3M Fire Barrier CS-195+.
      b. Nelson CPS.
      c. Or approved equal.

2.6 ANCHORS AND FASTENERS

A. General
   1. Provide anchors and fasteners, including bolts, nuts, washers of types, sizes and materials indicated.
   2. Materials
      a. Corrosive locations: Stainless steel.
      b. Exterior locations: Stainless steel.
      c. All other locations: Galvanized steel.
   3. Anchors for securing 3/4 or 1 inch conduit straps and device boxes to sound concrete walls and ceilings shall be self-tapping anchors, similar and equal to Hilti Kwik-Con II or ITW Buildex Blue Max, 3/16 inch by minimum 1 1/4 inches long, in areas not requiring stainless steel.
   4. For anchors for use in securing conduit larger than 1 inch, heavier equipment than device boxes, and all fasteners to be used in areas enumerated above as requiring stainless steel fasteners, provide stud type expansion anchors, drop-in two-piece expansion anchors, or adhesive stud anchors, similar and equal to Hilti Kwik-Bolt II, Hilti HDI Drop-in, or Hilti HVA Adhesive Anchor System.
   5. Lead Expansion Anchors: 1/2 inch.
   6. Toggle Bolts: Springhead, 3/16 inch x 4 inch.

B. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
   1. Ackerman Johnson Fastening Systems Inc.
   2. Ideal Industries, Inc.
   3. Hilti.
   4. Joslyn Manufacturing and Supply Co.
   5. ITW Buildex.
   6. Ideal Industries, Inc.
   7. Rawlplug Co.
   8. Star Expansion Co.
   9. U.S. Expansion Bolt Co.

PART 3 - EXECUTION

3.1 INSTALLATION OF SUPPORTING DEVICES

A. Install hangers, anchors, sleeves and seals as indicated, in accordance with manufacturer's written instructions and with recognized industry practices to insure supporting devices comply with requirements. Comply with requirements of NECA and NEC for installation of supporting devices.

B. Coordinate with other electrical work, including raceway and wiring work, as necessary to interface installation of supporting devices with other work.

C. Install hangers, supports, clamps and attachments to support piping properly from building structure. Arrange for grouping of parallel runs of horizontal conduits to be supported together on trapeze type hangers where possible. Install supports with spacings indicated and in compliance with NEC requirements.

D. Install conduit seals for conduit penetrations of slabs on grade and exterior walls below grade and where indicated. Tighten sleeve seal screws until sealing grommets have expanded to form watertight seal. Provide seals for the interior of conduits which penetrate exterior or water bearing walls, consisting of gland type sealing bushings or RTV closed cell silicone foam.

END OF SECTION 26 0529

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0533

RACEWAY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes
1. Flexible metal conduit (FMC).
2. Intermediate metal conduit (IMC).
3. Liquid-tight flexible metal conduit (LFMC).
4. Liquid-tight flexible non-metallic conduit (LFNC).
5. PVC coated rigid metal conduit.
6. Rigid aluminum conduit (RAC).
7. Rigid non-metallic conduit (RNC).
8. Surface raceway.
9. Wireway.

B. Related Sections
1. Division 01 section "Submittal Procedures."
2. Division 26 section "Basic Electrical Requirements."
3. Division 26 section "Basic Electrical Materials and Methods."
4. Division 26 section "Grounding."
5. Division 26 section "Supporting Devices."
6. Division 26 section "Electrical Identification."
7. Division 31 section "Excavation and Fill."

1.3 REFERENCES

A. Unless otherwise stated, references are to the latest edition of the standard.

B. American National Standards Institute (ANSI)
1. C80.1 Standard for Electrical Rigid Steel Conduit (ERSC).
2. C80.3 Standard for Steel Electrical Metallic Tubing (EMT).

1.4 DEFINITIONS

A. Abbreviations
1. AHJ: Authority having jurisdiction.
2. NRTL: Nationally recognized testing laboratory.
3. PVC: Polyvinyl chloride.

B. Finished Locations: The following are defined as finished locations:
1. Areas with carpet or tile floors.
2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
3. Areas with tiled, plastered, or paneled walls.

C. Interior Locations: The following are defined as interior locations:
1. Any location within the boundaries of the foundation of any building.
2. Any location within the superstructure of other structures not classified as buildings.

D. Wet Locations: The following are defined as wet locations:
1. All exterior locations.
2. All interior locations below grade.
3. All interior locations where wet materials are processed, pumped, transported, or stored.

E. Corrosive Locations: The following are defined as corrosive locations.
1. All locations with chemical feed/transfer equipment
2. All locations with chemical storage tanks
3. All locations where chemical storage drums are located.

F. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

A. General
   1. Comply with the requirements of Division 01 Section “Submittal Procedures”.
   2. Submit information as described below.
   3. Provide all information necessary to determine compliance with the plans and specifications.
   4. Identify all products submitted as substitutions.

B. Product Data
   1. Manufacturer’s technical product data sheets for all products specified in this section.
   2. Delete or cross out all inappropriate or non-applicable information.

C. Shop Drawings
   1. Materials list. Submit a list with quantities, manufacturer’s name, and catalog numbers.
   2. Dimensional drawings. Submit dimensional drawings for all products.
   3. Mounting details.
   4. Wiring diagrams: Submit wiring diagrams for all products.
      a. Show all components and features specified.
      b. Differentiate between factory and field installed wiring and components.

D. Samples

E. Quality Control Submittals
   1. Test Reports
      a. Field test report. Submit certified copies of the field test reports.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with the following:
   1. All applicable federal, state, and local codes and regulatory requirements.
   2. National Electrical Code (NEC).

1.7 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with Division 1 Product Requirements Sections.

B. Packing and shipping
   1. Package equipment as required to prevent damage during shipment.
   2. Mount heavy items on pallets or skids to facilitate handling.

C. Storage and protection
   1. Store the products until they can be installed.
   2. Meet the storage requirements of the manufacturer.

1.8 PROJECT/SITE CONDITIONS

A. Field Measurements: Field verify all locations and dimensions.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General
   1. Provide new and unused products of current manufacture.
   2. Provide products free from defects affecting performance.

B. Listing and Labeling
   1. Provide UL listed and labeled products.
   2. Provide products listed and labeled by an approved independent NRTL.
   3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 CONDUITS

A. Minimum Conduit Size
   1. For Connection to Recessed Lighting Fixtures: 1/2 inch.
   2. For Connection to Field Instruments with Only 1/2 Inch Openings or Hubs: 1/2 inch.
   3. Duct Banks: 1 inch.
   4. All Other Uses: 3/4 inch.

B. Metal Conduit and Tubing
   1. Rigid Aluminum Conduit: Rigid aluminum conduit, threaded type, ANSI C80.5, UL6A.
   2. Intermediate Steel Conduit. Intermediate grade, hot dip galvanized, ANSI C80.1, UL 1242.
   3. Flexible Metal Conduit. Continuous, spirally wound, interlocked aluminum, UL 1
   4. Liquid-tight Flexible Metal Conduit: Continuous, spirally wound, interlocked aluminum, flexible liquid-tight PVC jacket, UL 360.
   5. Available Manufacturers: Subject to compliance, metal conduit manufacturers include, but are not limited to:
      a. AFC.
      b. Alflex Corp.
      c. Allied Tube and Conduit.
      d. Alumax.
      e. Electri-Flex Company.
      f. LTV Steel Tubular Products Co.
      g. Occidental Coating Co.
      h. Perma-Cote Industries.
      i. Robroy Industries, Inc.
      j. Shamrock Conduit Products.
      k. Tiften Aluminum Co.
      l. Triangle PWC, Inc.
      m. VAW of America Inc.
      n. Wheatland Tube Co.

C. Nonmetallic Conduit
   1. Rigid Nonmetallic Conduit: PVC, Schedule 40, NEMA TC-2, UL 651.
   2. Rigid Nonmetallic Conduit (Heavy Wall): PVC, Schedule 80, NEMA TC-2, UL 651.
   3. Liquid-tight Flexible Nonmetallic Conduit: Continuous hard PVC spiral encapsulated with flexible PVC, UL 1660.
   4. Available Manufacturers: Subject to compliance, non-metallic conduit manufacturers include, but are not limited to:
      a. Alflex.
      b. Cantex Industries.
      c. Carlon.

d. Certainteed.
e. Cole Flex-Corp.
f. Electric-Flex.

2.3 CONDUIT FITTINGS AND ACCESSORIES

A. Conduit Bodies
1. Provide covers and gaskets secured with corrosion resistant screws.
2. Rigid Metal: Threaded aluminum, UL 514B.
3. Hazardous locations. Threaded aluminum approved for hazardous locations as identified on plans.
4. Nonmetallic: PVC, molded solvent weld connector, UL 514B.

B. Locknuts: Galvanized steel, bonding type with sharp edge for digging into metal, UL 514B, NEMA FB-1. Set screw type grounding terminal where required.

C. Bushings: Malleable iron, galvanized, integrally molded insulation, UL 514B, NEMA FB-1. Set screw type grounding terminal where required.

D. Conduit Hub Assemblies: Cast metal, ribbed body with female threads, o-ring gasket, integral conduit nipple with insulated throat, grounding type locknut, UL 514B.

E. Expansion Fittings
1. Rigid Aluminum Conduit: Aluminum body and sleeve, threaded ends, grounding type, rated for location where required.
2. Rigid Non-Metallic Conduit: PVC body and sleeve, two o-rings, socket connector each end.

F. Other Fittings
1. Rigid Metal: Threaded aluminum.
2. Liquid-Tight Flexible Metal: Compression type, galvanized steel or malleable iron body, steel ferrule, sealing gland and gasket, insulated throat.
3. Rigid Nonmetallic: PVC, molded solvent weld connector, NEMA TC 3.
4. Liquid-Tight Flexible Nonmetallic: PVC, one piece body, compression ferrule, sealing gland and gasket.

G. Explosion-Proof Seals: Rated use in Class I, Division 1, Group D atmosphere.

H. Explosion-proof couplings. Braided wire outer jacket, insulating inner liner, threaded ends, liquid-tight, length as required. Rated for use in Class I, Division 1, Group D hazardous locations.

I. Conduit Seals
1. Duct Sealing Putty
a. Gray pliable mastic.
b. Non-shrink, non-hardening and UV resistant.
c. Compatible with wire insulation.
d. Listed for use with conduit sealing fitting.
2. Mechanical Seals
a. Internal sealing bushing.
b. Two stainless steel pressure discs

c. Three stainless steel socket head cap screws
d. Neoprene gasket.
e. Pressure discs and gasket factory predrilled to match size/quantity of cables.
f. Rated to withstand 50 pounds per square inch gauge (psig) water or gas pressure.

3. Expanding foam sealant
   a. Two part foam that expands in place to fill voids between cables and conduits.
   b. Compatible with wire/cable insulation.
   c. Withstands 15 feet of water head.
4. Expanding Foam Fire Stop Sealant
   a. Two part silicone foam that expands to fill voids between cables and conduits.
   b. Compatible with wire/cable insulation.
   c. Intumescent, listed as a fire barrier.

J. Available Manufacturers: Subject to compliance, conduit fitting manufacturers include, but are not limited to:

1. Fittings
   a. Adalet/PLM.
   b. Appleton Electric.
   c. Carlon.
   d. Condux International, Inc.
   e. Crouse-Hinds.
   f. Delta Industrial Products.
   g. Electri-Flex Company.
   h. Killark Electric Mfg. Co.
   i. Kraloy Products Co.
   j. O.Z. Gedney.
   k. Perma-Cote Industries.
   l. Raco.
   m. Robroy Industries.
   n. Spring City Electrical Mfg. Co.
   o. Steel City.
2. Sealants
   a. 3M.
   b. Dow.
   c. Gardner Bender Electrical.
   d. Panduit.

2.4 WIREWAYS

A. General Purpose Wireways. NEMA 1 steel, front accessible, totally enclosed with bolted covers. Finished with rust-inhibiting primer and gray baked enamel finish.

B. Oil-tight Wireways. NEMA 12, oil-tight and dust-tight steel with hinged cover and gasket, external latches, and flanged joints with gaskets. Finished with gray baked enamel inside and outside.

C. Watertight Wireways. NEMA 4X, watertight, corrosion resistant stainless steel with hinged cover and gasket, screw clamps, and flanged joints with gaskets.

D. Available Manufacturers. Subject to compliance, wireway manufacturers include, but are not limited to:

1. American Electric.
2. Anchor Electric Co.
3. B-Line Systems, Inc.
4. Circle AW Products.
5. Cross Brothers, Inc.
6. Erickson Electric Equipment Co.
7. GS Metals Corp.
8. Hoffman Engineering Co.
9. Square D Company.
10. Wadsworth Electric Manufacturing Co., Inc.

2.5 SURFACE RACEWAYS

A. Metal Raceways. [Aluminum] [Galvanized steel] with snap-on covers. 1/8-inch mounting screw, knockouts in base approximately 8 inches on center. Finished with rust-inhibiting primer suitable for painting.

B. Nonmetallic Raceways. Two piece construction, rigid PVC with matte texture conforming to UL 94.

C. Available Manufacturers. Subject to compliance, surface raceway manufacturers include, but are not limited to:
1. Surface Metal Raceway.
   a. Alrey-Thompson Co., Inc.
   b. Allied Tube & Conduit.
   c. American Electric.
   d. B-Line Systems, Inc.
   e. Butler Mfg. Co.
   f. Erickson Electrical Equipment Co.
   g. GS Metals Corp.
   h. Haydon Corp.
   i. Hoffman Engineering Co.
   j. Isoduct Energy Systems.
   k. Isotrol Systems.
   l. Keystone/Rees, Inc.
   m. SL Industries, Inc.
   n. Square D Co.
   o. The Wiremold Co.
2. Surface Nonmetallic Raceway.
   a. Anixter Brothers, Inc.
   b. Hoffman Engineering Co.
   c. Hubbell, Inc.
   d. JBC Enterprises, Inc.
   e. Panduit Corp.
   f. Premier Telecom Products, Inc.
   g. Thermotools Co.
   h. The Wiremold Co.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:
   1. Inspect installed work prior to performing the work of this section.
   2. Verify that the project has progressed to a point where this installation may begin.

B. Material Inspection.

C. Discrepancies:
   1. Immediately notify the Engineer in writing of conditions detrimental to proper completion of the work.
   2. Correct all unsatisfactory conditions before proceeding with installation.
   3. Resolution must be acceptable to the Engineer.

3.2 RACEWAY APPLICATIONS

A. Conduit
   1. Connections to Motors or Vibrating Equipment
      a. Hazardous locations: Flexible coupling rated for the area.
      b. Corrosive locations: Liquid-tight flexible non-metallic conduit, 18 inch maximum length.
      c. Wet locations: Liquid-tight flexible metal conduit, 18 inch maximum length.
      d. All other locations: Liquid-tight flexible metal conduit, 18 inch maximum length.
   2. Concealed in Walls and Fixed Ceilings
      a. Hazardous locations: Do not conceal conduits.
      b. Corrosive locations: Do not conceal conduits.
      c. Wet locations: Do not conceal conduits.
      d. Finished locations: Rigid aluminum conduit.
      e. All other locations: Do not conceal conduits.
   3. Concealed in Accessible Floors and Ceilings
      a. Finished locations: Rigid aluminum conduit.
      b. Connections to lighting fixtures: Flexible metal conduit, 6 feet maximum length.
      c. All other locations: Rigid aluminum conduit.
   4. Concealed in Concrete
      a. Hazardous locations: Schedule 40 PVC conduit.
      b. Corrosive locations: Schedule 40 PVC conduit.
      c. Wet locations: Schedule 40 PVC conduit.
      d. Transitions from concealed in concrete to exposed: Schedule 80 PVC conduit.
      e. All other locations: Schedule 40 PVC conduit.
   5. Exposed
      a. Hazardous locations: Rigid aluminum conduit.
      b. Corrosive locations: Schedule 80 PVC conduit.
      c. Wet locations: Rigid aluminum conduit.
      d. Finished locations: Do not expose conduits in finished areas.
      e. All other locations: Rigid aluminum conduit.
   6. Underground
      a. Direct buried: Schedule 80 PVC conduit
      b. Concrete encased: Schedule 40 PVC conduit.
      c. Transitions from underground to exposed: PVC coated RMC.

B. Fittings
   1. Use threaded fittings and conduit bodies for rigid aluminum conduit.
   2. Use reducing couplings or bushings for transitions between conduit sizes.

C. Conduit Seals
1. Use hazardous location sealing fitting where required by the NEC.
2. Use expanding foam fire stop sealant in fire rated wall, floor, and ceilings.
3. Use mechanical seals in exterior below grade walls, floors, and ceilings.
4. Use expanding foam sealant for all other conduit seals.

D. Wireways
1. Finished locations: Do not use wireways in finished locations.
2. All other locations: Use NEMA 4X wireways.

E. Surface raceway:
1. Use only where shown.

3.3 PREPARATION

A. Surface Preparation
1. Carefully lay out the work in advance.
2. Perform all cutting, drilling, etc. without damaging the building surfaces or equipment.

B. Rough-in
1. Refer to equipment submittals for rough-in requirements.
2. Verify rough-in locations by field measurements.
3. Maintain all manufacturer recommended clearances.

3.4 CONDUIT INSTALLATION

A. General
1. Install raceways in accordance with the following:
   a. Manufacturer's written installation instructions
   b. NECA 1, NEC, and UL
2. Remove and replace the damaged raceways with new undamaged material.
3. Install plumb and level.
4. Install complete runs before pulling in cables or wires.
5. Cap all conduits after installation with factory made closures.
6. Install pull rope in all spare or empty conduits.
7. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength.
8. Make pull-line continuous from outlet to outlet, with two feet of slack at each outlet.
9. Embed the ends in duct sealing compound.
10. Provide enough slack in flexible conduits to facilitate maintenance of equipment.
11. Limits bends between pull points to no more than 4 bends totaling 360 degrees.

B. Field fabrication and assembly
1. General
   a. Make all bends with standard conduit bending tools and machines.
   b. Do not to distort or vary the internal diameter when field bending.
   c. Keep legs of bends in the same plane.
   d. Keep straight legs of offsets parallel, unless otherwise indicated.
   e. Make couplings and connections watertight.
   f. Remove and replace dented or deformed conduit with new undamaged material.
   g. Cut conduits straight
   h. Ream cut ends to remove burrs.

2. Rigid Aluminum Conduit
    a. Ream cut ends before threading.
    b. Do not use running threads at conduit joints and terminations.
    c. Clean the threads and conduit interior with a degreasing spray.
3. PVC Coated RMC
    a. General
        1) Follow general conduit installation requirements except as modified below.
        2) Follow the manufacturer's recommended installation procedures.
        3) Protect PVC coating on conduit and fittings from damage prior to and during the Work.
    b. Cutting and threading.
        1) Cut conduit using only roller cutters.
        2) Replace pipe vise jaws with jaws designed for use with PVC coated conduit.
        3) Use power drive unit inserts designed for use with PVC coated conduit.
        4) Use half shell conduit clamps in chain vises.
        5) Machine threading tool stationary guide to accommodate the PVC coating.
        6) Make longitudinal release cuts in the PVC coating before threading.
        7) Clean the threads and conduit interior with a degreasing spray.
        8) Apply touchup compound to any unprotected metal.
    c. Bending
        1) Use bending shoes specifically designed for PVC coated conduit in mechanical bending equipment.
        2) Use shoes one size larger than the size of the conduit when hand bending.
        3) Use bending hickeys that have a PVC coating.
    d. Assembly
        1) Use strap wrenches or wide jaw pliers designed for PVC coated conduit.
        2) Use nut drivers for encapsulated fasteners on conduit body and enclosure covers.
    e. Repair and replacement
        1) If PVC coating of conduit or fittings is damage during installation, remove and replace with new undamaged materials.
        2) Repair minor scratches or damage in PVC coating with touchup compound where allowed by the Owner's representative.
4. Rigid Nonmetallic Conduit
    a. Solvent weld all joints in PVC conduit to provide a watertight seal.
    b. Provide a seal that maintains pressure of 25 pounds per square inch for 1 hour.

C. Routing
1. General.
    a. Locations are approximate unless dimensioned.
    b. Install exposed conduits parallel or perpendicular to walls, ceilings, or structural members.
    c. Run parallel or banked raceways together on common supports where practical.
    d. Make bends in parallel or banked runs from same center line.
    e. Use factory elbows only where elbows can be installed parallel; otherwise, provide field bends for parallel raceways.
    f. Avoid conflicts with equipment and building components.
    g. Do not run through structural members.
    h. Avoid horizontal runs within partitions or walls.
    i. Align raceways to enter boxes and cabinets squarely.
    j. Avoid ceiling inserts, lights, or ventilation ducts or outlets.

k. Do not run across pipe shafts or ventilation duct openings
l. Maintain 6 inches of separation to parallel runs of flues and other heat sources.
m. Install horizontal runs above water and steam piping wherever possible.
n. Install horizontal runs close to ceilings or beams.
o. Do not encroach into the head room of walkways and doors.
p. Do not install within fume/vent hoods except where serving the fume/vent hood.
q. Provide a low point in conduit runs before entering boxes/enclosures.
r. Install a tee conduit fitting and drain/breather at the low point.
s. Enter the bottom of boxes/enclosures located in wet, hazardous, or corrosive areas.

2. Finished Areas
   a. Conceal in walls, slabs, or ceilings.
   b. In existing areas, conceal in walls of stud construction and above suspended ceilings.
3. Installed in Concrete
   a. Install in concrete only where specifically shown or specified.
   b. Do not install in waterproofed or water-bearing walls.
   c. Do not install through concrete beams.
   d. Do not install in concrete that is less than 3 inches thick.
   e. Do not install in concrete with a thickness less than 3 times the conduit diameter.
   f. Do not install between the reinforcing steel and the surface of the concrete.
   g. Space parallel runs at twice the diameter of the largest conduit, center to center.
   h. Do not cross conduits in slabs unless reviewed by the Engineer/Architect for proper cover.
   i. Make transitions from embedded to exposed with a metal conduit extending 1 inch into concrete.
4. Other Interior Areas
   a. Where equipment is more than 3 feet from walls, run in or under the floor and stub up.
   b. Run all other interior conduits exposed.
5. Exposed Exterior
   a. Do not run exposed on the exterior surface of buildings.
   b. Do not run across access openings in handrail.
   c. Do not run on the inside walls of tanks.
6. Underground Conduits
   a. Encase all underground conduits in concrete unless otherwise noted.
   b. Where noted as direct buried, provide 6 inches of sand above and below conduits.
   c. Depth below finished grade to top of underground conduits.
      1) Circuits less than or equal to 600 Volts. 24 inches.
      2) Circuits greater than 600 Volts. 36 inches.
   d. Provide excavation and backfill as specified in Division 31 Section, “Excavation and Fill”.
   e. Make all changes of direction with bends of 30 inch radius minimum.
   f. Space conduits 7.5 inches center to center both horizontally and vertically.
   g. Slope away from buildings with a minimum pitch of 3 inches per 100 feet.
   h. Mark underground conduit runs as specified in Section 260553, Electrical Identification.
   i. Provide reinforcing steel for 5 feet beyond excavation where conduits cross back-filled areas.
   j. Run parallel to plant coordinate axes when outside of structures and underground, unless otherwise shown.

D. Supports
   1. Support all conduits as specified in Section 260529, Supporting Devices.
   2. Support all conduits entering structures as shown on the Drawings.
   3. Use only products listed as conduit supports.
   4. Do not attach any parts of the conduit system to ventilation ducts.
   5. Attached conduit supports to the building.
   6. Support conduits on each side of bends.
   7. Support conduits at a spacing not to exceed the following:
      a. Six feet for conduits smaller than 1-1/4 inches
      b. Eight feet for conduits 1-1/4 inches and larger.
   8. Use waterproof cement to set conduit anchors in water bearing or waterproofed walls.
   9. Securely anchor underground conduits to prevent movement during placement of concrete or backfill.
   10. Secure embedded raceways to reinforcing rods to prevent sagging or shifting during concrete placement.
   11. Use precast separators and heavy gauge wire ties or other approved fasteners.
   12. Support conduits independently of suspended ceilings, lighting fixtures.
   13. Unless otherwise shown or specified, support conduit independently of process piping, mechanical piping, or mechanical ducts.
   14. Support within 1 foot of changes of direction, and entries to boxes or enclosures.

E. Sealing and Penetrations
   1. Seal the interior of the following conduits to prevent migration of moisture and gases:
      a. Conduits passing from warm to cold locations.
      b. Conduits passing between areas where air pressure differential must be maintained.
      c. Conduits subject to condensation.
      d. Conduits passing from the interior to the exterior of a building.
      e. Conduits penetrating exterior below grade walls, floors, and ceilings.
      f. Conduits entering any panelboard, switchboard, switchgear, or motor control center.
      g. Conduits entering any control panel.
      h. Conduits entering all exterior manholes, handholes, and boxes.
      i. Empty or spare conduits.
   2. Seal the interior of all conduits penetrating fire rated walls, floors, and ceilings.
      a. Seal penetrations with a fire rated sealant.
      b. Install fire rated sealants in accordance with manufacturer's instructions.
      c. Provide a foam depth of at least one conduit trade size.
   3. Conduit Stub-Ups
      a. Protect stub-ups from damage where conduits rise through floor slabs.
      b. Arrange stub-ups so curved portion of bends are not visible above the finished slab.
      c. Terminate stub-ups that are more that 6 inches from a wall with a threaded metal coupling and plug installed flush with the floor.
      d. Terminate all other stub-ups with a threaded cap or a bushing and penny.
   4. Provide wall and floor seals at conduit penetrations as specified in Section 260529, Supporting Devices.
   5. Roofs:
      a. Penetrate roofs only where specifically shown in the Contract Documents.
      b. Provide penetrations that meet the requirements of Division 07, Thermal and Moisture Protection.

F. Grounding
1. Mechanically assemble metal raceways to form a continuous effective grounding path.
2. Ensure that terminations at boxes and enclosures provide an effective ground connection.
3. Provide grounding bushings for the following metallic conduit connections:
   a. Circuits of more than 100 amperes.
   b. Connections through concentric, eccentric or oversize knockouts.
   c. Flexible conduit connections
   d. Any enclosure entry without an effective electrical connection.
4. Locknut and Bushing Grounding Lugs
   a. Bond together all lugs within the same box or enclosure with bonding jumpers.
   b. Bond lugs to the enclosure ground bus where provided.
   c. If a ground bus is not provided, bond lugs to an enclosure grounding stud or screw.
   d. For conduit transitions to cable tray, bond bushing ground lug to tray ground clamp.
5. Size bonding jumpers in accordance with NEC table 250.102.
6. Apply approved conductive joint compound to mating surfaces of all grounding connections.

G. Painting and Coating
1. Coat all field cuts and threads with brush applied cold process galvanizing, ASTM A 780.
2. Coat aluminum conduits with a dielectric isolating compound where installed in contact with reinforced concrete.

H. Identification: Identify conduits as required in Division 26 Section “Electrical Identification”.

3.5 CONDUIT FITTING INSTALLATION

A. General
1. Join with fittings designed and approved for that purpose.
2. Make-up couplings, fittings, and locknuts wrench-tight.
3. Install locknuts with dished side against box.
4. Use approved conductive thread compounds on all threaded connections.
5. Install a bushing on all conduit ends.
6. Provide a tee fitting with drain/breather at all low points.
7. Terminate Rigid Aluminum Conduit at NEMA 1 and NEMA 12 boxes and enclosures with two locknuts, one inside and one outside, and a bushing.
8. Terminate Rigid Aluminum Conduit at NEMA 3R, NEMA 4, NEMA 4X boxes and enclosures with conduit hub assemblies or in integral hubs where available.

B. Hazardous Locations
1. Provide sealing fittings where required by the NEC.
2. Follow the installation instructions of the manufacturer.

C. Expansion Fittings
1. Provide expansion fittings wherever structural expansion joints are crossed.
2. Provide expansion fittings for every 200 feet of linear run.
3. Provide expansion and deflection couplings wherever shown.
4. Install expansion fittings within one foot to five feet of structural expansion joint.
5. Do not use expansion fittings to compensate for misalignment of conduits.
6. Seismic Areas:
   a. Provide a rigidly attached junction box on each side of structural expansion joints.

b. Connect junction boxes with flexible conduit and provide 15 inches of slack.

3.6 WIREWAY AND SURFACE RACEWAY INSTALLATION

A. General:
1. Install in accordance with the following:
   a. Manufacturer's written installation instructions
   b. NECA 1, NEC, and UL.
2. Install only where shown.
3. Install plumb and level.
4. Install parallel or perpendicular to wall, floors, ceilings, or structural members.
5. Mechanically assemble to form continuous electrical conductor.
6. Support as specified in Division 26 section "Supporting Devices."

B. Rough-in dimensions:
1. Use dimensions for utilization equipment that are provided in the submittals.
2. Maintain all manufacturer recommended clearances.
3. Install only after the locations clear with other trades.

C. Supporting: Support as specified in Division 26 section "Supporting Devices.".

3.7 FIELD QUALITY CONTROL

A. Check alignment and condition of conduits:
1. Pull a mandrel and swab through every completed conduit run.
2. Use an iron shot mandrel:
   a. Mandrel diameter: 1/4 inch less than nominal conduit size
   b. Mandrel length: Equal to the conduit diameter.
   c. Gasket diameter: Slightly larger than the conduit opening.
3. Draw mandrel through without mechanical assistance.
4. If obstructions are encountered that cannot be removed, correct or replace conduit.

B. Test Nonmetallic Conduits for Leaks
1. Test conduits after conduit run is complete and cemented joints are set.
2. Conduct test as recommended by manufacturer.
3. Exercise caution, low-pressure air can cause high thrust loads.

C. Notify the Engineer for inspection and sign-off of the following installations:
1. Conduits to be direct buried: Notify the Engineer prior to covering.
2. Conduits to be embedded in concrete: Notify the Engineer prior to pouring concrete.
3. Document when each conduit is tested and cleaned and submit test report.

3.8 CLEANING

A. Conduits
1. Pull a stiff brush through each conduit until it is clear of foreign materials.
2. Clean existing ducts used for new cable in the same manner as noted above.

B. Wireways: Remove any dirt or debris from wireways before installing wiring.

END OF SECTION 26 0533

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0553

ELECTRICAL IDENTIFICATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to perform the work in accordance with the plans and as specified herein.

B. This section includes identification of electrical materials, equipment, and installations. It includes requirements for electrical identification components including, but not limited to, the following:
   1. Buried electrical line warnings.
   2. Identification labeling for raceways, cables, and conductors.
   3. Operational instruction signs.
   4. Warning and caution signs.
   5. Equipment labels and signs.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work associated with electrical identification in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. Electrical Component Standard: Components and installation shall comply with National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."

C. American National Standards Institute (ANSI) Compliance: Comply with requirements of ANSI Standard A13.1, "Scheme for the Identification of Piping Systems," with regard to type and size of lettering for raceway and cable labels.

1.4 DEFINITIONS

A. Abbreviations
   1. AHJ: Authority having jurisdiction.

1.5 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required

B. Provide submittal for approval of format, descriptions, and contents prior to fabrication.

C. Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
   1. Product data for each type of product specified.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Box, Conduit, and Raceway Identification
   1. Adhesive Labels: Preprinted, flexible, self-adhesive orange vinyl labels with black legend. Legend covered with clear weather and chemical resistant coating.
   2. Plastic Sleeves: Preprinted, pretensioned, snap-on, flexible, wraparound plastic sleeves with black legend. Sized to fit conduit diameter.
   3. Plasticized Card Stock Tags: Vinyl cloth with preprinted and field printed legends. Orange background, except as otherwise indicated, with eyelet for fastener.
   4. Buried Line Warning Tape: Permanent, bright colored, continuous printed, plastic warning tape not less than 6 inches wide by 4 mils thick with continuous metallic strip or core. Printed legend indicative of general type of underground line below.

B. Wire and Cable Identification
   1. Colored Marking Tape: Self-adhesive vinyl tape not less than 7 mils thick and 3/4 inch wide.
   2. Wire Labels: Self-adhesive wraparound labels with clear heat shrinkable jacket or permanent plastic heat shrinkable labels. Preprinted legends.

C. Nameplates and Signs
   1. Laminated Plastic: Engraving stock plastic laminate, 1/16 inch minimum thick for signs up to 20 square inches, or 8 inches in length; 1/8 inch thick for larger sizes. Engrave legend in black letters on white face unless otherwise noted and punched for mechanical fasteners.
   2. Metal Backed Butyrate: Weather resistant, nonfading, preprinted cellulose acetate butyrate signs with 20 gauge, galvanized steel backing, with colors, legend, and size appropriate to the location. Provide 1/4 inch grommets in corners for mounting.
   3. Brass or Aluminum Tags: Metal tags with stamped legend, punched for fasteners. Dimensions: 2 inches by 2 inches by 19 gauge.

D. Accessories
   1. Fasteners: Self-tapping stainless steel screws or number 10/32 stainless steel machine screws with nuts and flat and lock washers.
   2. Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking nylon cable ties, 0.18 inch minimum width, 50 pound minimum tensile strength, and suitable for a temperature range from minus 40 degrees Fahrenheit (° F.) to 185° F. Provide ties in specified colors when used for color coding.

2.2 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:
   1. American Labelmark Co.; Labelmaster Subsidiary
   2. Brady USA, Inc.; Industrial Products Div.
   3. Calpico, Inc.

4. Carlton Industries, Inc.
5. Champion American, Inc.
6. Cole-Flex Corp.
7. D&G Sign and Label.
8. Emed Co., Inc.
9. George-Ingraham Corp. (The)
10. Grimco, Inc.
11. Ideal Industries, Inc.
12. Kraftbilt.
13. LEM Products, Inc.
14. Markal Corp.
15. National Band and Tag Co.
16. Panduit Corp.
17. Radar Engineers.
18. Ready Made Sign Co.; Cornerstone Direct Corp. Div.
19. Seton Name Plate Co.
20. Standard Signs, Inc.
21. W. H. Brady, Co.

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Conduits
1. Underground Lines: Identify with warning tape in trench above conduits.

B. Boxes
1. Code Required Caution Signs: Self-adhesive labels indicating system voltage. Install on outside of box cover.
2. Circuit Identification: Self-adhesive labels indicating contained circuits.

C. Wires and Cables
1. Color Coding
a. Color code service, feeder, and branch circuit conductors as follows:

208/120 Volts	**Phase**	**480/277 Volts**
Black	A	Brown
Red	B	Orange*
Blue	C	Yellow
White	Neutral	White
Green	Ground	Green

*Where not permitted by inspecting authority, use purple.

b. Use conductors with color factory applied for sizes No. 8 AWG and smaller.
c. Use colored marking tape for sizes larger than No. 8 AWG. Apply for a distance of 6 inches from terminal points and in boxes where splices or taps are made.

2. Circuit Identification: Use aluminum wraparound marker bands to identify feeders and branch circuits in manholes, handholes, and pull boxes.
3. Conductor Labeling: Use wire labels to identify conductors as follows:
   a. Conductors indicated to be for future connection or connection under another contract with identification indicating source and circuit numbers.
   b. Where multiple branch circuits or control wiring or communications/signal conductors are present in the same box or enclosure (except for three circuit, four wire home runs), label each conductor or cable. Provide legend indicating source, voltage, circuit number, and phase for branch circuit wiring. Phase and voltage of branch circuit wiring may be indicated by means of coded color of conductor insulation.
   c. Label all control, communication, signal, and metering conductors with wire numbers matching the numbers on the approved shop drawings from the system integrator.
   d. Match identification markings with designations used in panelboards, shop drawings, Contract Documents, and similar previously established identification schemes for the facility's electrical installations.
   e. Provide securely attached nameplates identifying all ground buses. Provide securely attached nametags to each accessible termination, attachment, or bonding location for each equipment grounding conductor, grounding electrode conductor, and bonding conductor.

D. Signs
1. Install warning, caution, or instruction signs where required by NEC, where indicated, or where reasonably required to ensure safe operation and maintenance of electrical systems and of the items to which they connect. Install engraved plastic laminated instruction signs with approved legend where instructions or explanations are needed for system or equipment operation. Install butyrate signs with metal backing for outdoor items.
2. For emergency operating signs, install engraved laminate signs with white legend on red background with minimum 3/8 inch high lettering for emergency instructions on power transfer, load shedding, or other emergency operations.
3. Provide code required signs for multiple main switches, for standby power systems, and, where required, for generator ground connection.

E. Nameplates
1. General: Provide equipment identification nameplates for each major unit of electrical equipment, including central or master units of each electrical system. This includes communication/signal/alarm systems unless unit is specified with its own self-explanatory identification. Text shall match terminology and numbering of the contract documents and shop drawings.
2. Provide 1-1/2 inch high engraved plastic laminated nameplates (2 inches high where two lines of text are required) with 1/2 inch lettering for the following:
   a. Panelboards, electrical cabinets, and enclosures.
   b. Switchboards.
   c. Motor control centers.
   d. Motor starters.
   e. Power transfer equipment.
   f. Contactors.

g. Transformers.
h. Enclosed circuit breakers.
i. Disconnect switches.
j. Control panels.

3. Provide 5/8 inch high engraved plastic laminated nameplates (1 inch high where two lines of text are required) with 1/4 inch high lettering for individual compartments of the following:
   a. Switchboards.
   b. Motor control centers.
4. Provide 5/8 inch high engraved plastic laminated nameplates (1 inch high where two lines of text are required) with 1/4 inch high lettering for the following:
   a. Control stations.
   b. Control devices.
   c. Light switches.
5. Install labels at locations indicated and at locations for best convenience of viewing without interference with operation and maintenance of equipment. All code requirements for signage shall be met.

3.2 INSTALLATION

A. General
   1. Lettering and Graphics: Coordinate names, abbreviations, colors, and other designations used for electrical identification with corresponding designations specified or indicated. Install numbers, lettering, and colors as approved in submittals and as required by code.
   2. Install identification devices in accordance with manufacturer's written instructions and requirements of NEC. Clean surfaces of dust, loose material, and oily films before applying.
   3. Sequence of Work: Where identification is to be applied to surfaces that require finish, install identification after completion of finish work.
   4. Install labels where indicated or at locations for best viewing without interference with operation and maintenance of equipment.

B. Buried Line Warning Tape: During trench backfilling, for exterior underground power, control, signal, and communications cables and conduits, install continuous underground plastic line marker, located directly above line at 6 to 8 inches below finished grade. Where multiple lines are installed in a common trench or concrete envelope, do not exceed an overall width of 16 inches; install a single line marker.

C. Tape: Apply colored, pressure sensitive plastic tape in half-lapped turns. Apply the last two turns of tape with no tension to prevent possible unwinding. Do not obliterate cable identification markings by taping. Tape locations may be adjusted slightly to prevent such obliteration.

D. Metal Tags: Attach metal tags with one piece self-locking nylon cable ties.

E. Cable Ties: Apply cable ties with a special tool or pliers; tighten for snug fit and cut off excess length.

END OF SECTION 26 0553

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0900

CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes
   1. Pilot devices (push buttons, pilot lights, etc.).
   2. Elapsed time meters.
   3. Relays and timers.
   4. Intrinsically Safe Relays.
   5. Zener Barriers.
   6. Sensing devices (limit switches, proximity switches, etc.).
   7. Alarms and signals.

B. Related Sections
   1. Division 01 section, "Submittal Procedures."
   2. Division 01 section, "Operation and Maintenance Data."
   3. Division 26 Section “Electrical Identification”.

1.3 REFERENCES

A. Unless otherwise stated, references are to the latest edition of the standard.

B. Underwriter's Laboratory (UL)

C. National Electrical Manufacturers Association (NEMA)

D. National Fire Protection Association (NFPA)

E. American National Standards Institute (ANSI)

F. Institute for Electrical and Electronics Engineers (IEEE)

G. The Instrumentation, Systems, and Automation Society (ISA)

H. American Society for Testing and Materials (ASTM)

1.4 DEFINITIONS

A. Abbreviations
   1. AHJ: Authority having jurisdiction.
   2. DPDT: Double pole double throw.
   3. NRTL: Nationally recognized testing laboratory.

4. SPST: Single pole single throw.
5. SPDT: Single pole double throw.

B. Finished Locations: For the purposes of this specification, the following are finished locations:
1. Areas with carpet or tile floors.
2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
3. Areas with tiled, plastered, or paneled walls.

C. Interior Locations: For the purposes of this specification, the following are interior locations:
1. Any location within the boundaries of the foundation of any building.
2. Any location within the superstructure of other structures not classified as buildings.

D. Wet Locations: For the purposes of this specification, the following are wet locations:
1. All exterior locations.
2. All interior locations below grade.
3. All interior locations where wet materials are processed, pumped, transported, or stored.

E. Corrosive Locations: For the purposes of this specification, the following are corrosive locations.
1. All locations with chemical feed/transfer equipment, chemical storage tanks, or chemical storage drums are located.

F. Hazardous (Classified) Locations
1. Hazardous (classified) locations as defined by the NEC.
2. Hazardous locations and their classification are shown.

1.5 SUBMITTALS

A. General
1. Comply with the requirements of Division 01 Section “Submittal Procedures”.
2. Provide all information necessary to determine compliance with the plans and specifications.

B. Product Data
1. Manufacturer’s technical product data sheets for all products specified in this section.
2. Delete or cross out all inappropriate or non-applicable information.

C. Shop Drawings
1. Wiring Diagrams: Submit wiring diagrams for all products.
a. Show all components and features specified.
b. Differentiate between factory and field installed wiring and components.

D. Contract Closeout Submittals: Operation and maintenance (O&M) data.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with the following:
1. All applicable federal, state, and local codes and regulatory requirements.
2. National Electrical Code (NEC).

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General
   1. Provide new and unused products of current manufacture.
   2. Provide products free from defects affecting performance.
   3. All units of the same type must be from the same manufacturer.

B. Listing and Labeling
   1. Provide UL listed and labeled products.
   2. Provide products listed and labeled by an approved independent NRTL.
   3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 PILOT DEVICES

A. General
   1. Round, heavy-duty, 30.5 mm.
   2. NEMA rated equal to enclosure.
   3. 5 amp NEMA B600 sealed contacts.
   4. Type and quantity of contacts as shown on drawings.

B. Push Buttons
   1. Momentary contact.
   2. Extended head
   3. Color as shown on drawings or specified in other specification sections.

C. Emergency Stop Push Buttons
   1. Maintained contact
   2. Push/pull operator
   3. 2-1/4 inch diameter mushroom head
   4. Red.

D. Selector Switches
   1. Maintained contact, unless otherwise shown.
   2. Number of positions as shown on drawings.

E. Cylinder Lock Operator
   1. Push button or selector switch type as shown on drawings.
   2. Operable only with key in lock.
   3. Provide two keys.

F. Pilot Lights
   1. Push-to-test LED type.
   2. Lens and lamp color as shown on drawings.

G. Legend Plates
   1. Extra large size
   2. Engraved laminated plastic
   3. Color
      a. Normal: Black legend on white background
      b. Emergency stop: Black legend on red background.

H. Accessories: Provide the following accessories where shown on the drawings.
   1. Padlocking Cover. Pad-lockable cover to prevent operation of pilot device.
   2. Protective Boot. Flexible plastic designed to prevent entrance of foreign materials.

I. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
   1. Allen Bradley Company.
   2. Cutler Hammer.
   3. Square D Company.

2.3 ELAPSED TIME METERS

A. General: 120 volt, synchronous motor driven, mechanical register indicating up to 99,999.9 hours.

B. Window Kit: Type 304 stainless steel frame, brushed finish, polycarbonate window, oil resistant gasket, NEMA 4X rated.

C. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
   1. Cramer Company.
   2. Hobbs.
   3. Industrial Timer Company.
   4. Redington Counters, Inc.
   5. Syrelec/Crouset Corporation.
   6. Weschler.

2.4 RELAYS AND TIMERS

A. General Purpose Relays: General purpose, plug in, tube base, transparent polycarbonate housing, 3PDT, 10 amp contact rating, coil voltage as shown on drawings.

B. General Purpose Timing Relays: General purpose, plug in, tube base, solid state, DPDT, 10 amp contacts, switch selectable timing mode (on delay, off delay, repeat cycle), switch selectable timing range (up to 10 hours). Voltage rating as shown on drawings.

C. Power Relays: DPDT, 30 amp, 1-1/2 horsepower rated contacts, coil voltage as shown on drawings.

D. Alternators: Two load alternator, plug in, tube base, 10 amp contact rating, DPDT cross connected, solid state alternating circuit, load 1-alternate-load 2 selector switch, voltage rating as shown on drawings.

E. Mounting Sockets: Surface mounted, tube base, screw terminals, with retaining strap.

F. Shall include a LED and mechanical visual indicator to indicate relay is energized.

G. Shall include push-to-test-pull-to-lock button manual operator.

H. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:

1. Allen Bradley Company.
2. Cutler Hammer.
3. Furnas Electric Company.
4. General Electric Company.
5. Potter and Brumfield, Inc.
6. Releco.
7. Square D Company.
8. SSAC, Inc.
9. Time Mark Corporation.

2.5 INTRINSICALLY SAFE RELAYS

A. Type: Dual or single channel transformer type intrinsic safety barrier with built-in amplifier.

B. Power: 120VAC, 50-60Hz.

C. Power Consumption: 10VA maximum.

D. Input: Isolated from output and supply.

E. Output: Relay type SPST 2A/250V.

F. Mounting: DIN rail.

G. Operation Temperature: -45 deg F to + 131 deg F.

H. State Mode of Operation: Switch selectable each channel.

I. Fault Monitoring: LED indicator each channel (lead breakage).

J. Output Status Monitoring: LED indicator each channel.

K. Approvals:
1. UL Listed or recognized component.
2. Approved for providing intrinsically safe circuits for use in Class I, Div. 1 Hazardous Locations.

L. Manufacturers:
1. Pepperl and Fuchs.
2. Phoenix Contact.
3. Or approved equal.

2.6 ZENER BARRIERS

A. Type: Dual channel zener barriers which accept 24Vdc field transmitter inputs and limit hazardous area energy to levels below that which could ignite a specific gas/air mixture.

B. Working Voltage: 27Vdc.

C. Maximum Voltage: 28Vdc.

D. Mounting: DIN rail.

E. Approvals: FM approved for Class I, Div. 1, Group D areas.

F. Operation Temperature: -45 deg F to + 131 deg F.

G. Manufacturers:
1. Pepperl and Fuchs.
2. Phoenix Contact.
3. Or approved equal.

2.7 SENSING DEVICES

A. Limit Switches.
1. NEMA 4X.
2. Four operating head mounting positions.
3. DPDT contacts, momentary.
4. Operating head style: As required per installation location.
5. Stainless steel operating lever.

B. Proximity Sensors.
1. Inductive, shielded type.
2. Stainless steel housing, 30 mm cylindrical.
3. NEMA 4X, unless otherwise noted.
4. Normally open contact.
5. Voltage rating as shown on drawings.

C. Door Switches.
1. Two piece, surface mount.
2. Magnet assembly for mounting on the door.
3. Magnetically actuated reed switch assembly for mounting on the door jamb.
4. Normally open contact, 24 VDC.

D. Manufacturers. Subject to compliance, provide products manufactured by one of the following:

E. Available Manufacturers. Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
1. Allen Bradley Company.
2. Cutler Hammer.
3. Edwards.
4. Furnas Electric Company.
5. General Electric.
6. Simplex.
7. Square D Company.

2.8 ALARMS AND SIGNALS

A. Horns.
1. Vibrating diaphragm type.
2. Minimum sound output of 100 decibels (dB) at 10 feet.
3. Enclosure. NEMA 4X, with matching mounting box.
4. Voltage rating. 120 VAC, unless otherwise shown.

B. Warning Lights.
   1. Rotating sealed beam type.
   2. Incandescent lamp, 100 watt.
   3. NEMA 4X cast aluminum housing.
   4. Lexan dome color as shown on plans.
   5. Voltage rating. 120 VAC, unless otherwise shown.

C. Strobe Lights.
   1. High intensity strobe, 100,000 candlepower minimum.
   2. Self-contained power supply.
   3. NEMA 4X cast aluminum housing.
   4. Lexan dome color as shown on plans
   5. Voltage rating. 120 VAC, unless otherwise shown.

D. Manufacturers. Subject to compliance, provide products manufactured by one of the following:

E. Available Manufacturers. Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
   1. Benjamin Division, Thomas Industries.
   2. Federal Signal Corporation.
   3. Maxi Signal Products, Division of MV Specialties.

2.9 TERMINAL BLOCKS

A. General: NEMA style, rail mounted, tin-plated copper, screw type with pressure plate, 600 volt rated, wire range No. 22 to No. 8 American Wire Gauge (AWG).

B. Fuse Blocks: Integral fuse puller and blown fuse indicator.

C. Isolating Blocks: Knife style.

D. Accessories
   1. Mounting rail.
   2. End barriers and end anchors.

E. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
   1. Allen Bradley Company.
   2. Buchanan.
   3. Cutler-Hammer Products.
   4. Phoenix Contact.
   5. Square D Company.

2.10 CONTROL POWER TRANSFORMERS

A. General: Copper windings, vacuum impregnated, open type, 480 volt primary and 120 volt secondary unless otherwise shown, with top mounted fuse block.

B. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
   1. Allen Bradley Company.

2. Cutler-Hammer Products.
3. Heavy Duty.
4. Square D Company.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions
1. Inspect installed work prior to performing the work of this section.
2. Verify that the project has progressed to a point where this installation may begin.

B. Discrepancies
1. Immediately notify the Engineer in writing if any discrepancies are found.
2. Resolve all discrepancies before proceeding with installation.
3. Resolution must be acceptable to the Engineer.

3.2 PREPARATION

A. Surface Preparation
1. Carefully lay out the work in advance.
2. Perform any cutting , drilling, etc. without damaging the building surfaces or equipment.

B. Rough-In
1. Refer to equipment submittals for rough-in requirements.
2. Verify rough-in locations by field measurements.

3.3 INSTALLATION OF CONTROL DEVICES

A. General.
1. Install in accordance with manufacturer's written instructions.
2. Follow applicable requirements of National Electrical Contractors Association's (NECA) "Standard of Installation."
3. Coordinate with other work, including painting.
4. Install control devices only in boxes that are clean and free from dirt and debris.
5. Install control and indicating devices after wiring work is completed.
6. Install control devices in enclosures as required under other sections and as shown.
7. Tighten connectors and terminals to manufacturer's published torque tightening values.
8. Where manufacturer's torque requirements are not indicated, comply with UL 486A.

B. Grounding
1. Provide equipment grounding connections for control and indicating devices.
2. Tighten connection to comply with tightening torque specified in UL Standard 486A.

3.4 TESTING

A. General.
1. Prior to energizing circuitry, test control stations for electrical continuity.
2. After completion, demonstrate capability and compliance with project requirements.

END OF SECTION 26 0900

SECTION 26 2200

TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install transformers in accordance with the plans and as specified herein.

B. Work of this Section includes, but is not limited to:
   1. Dry-type distribution transformers.
   2. Individual K-rated dry type transformers.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work to furnish and install transformers in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
   1. Electrical Component Standard: Components and installation shall comply with National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."
   2. American National Standards Institute/Institute of Electrical and Electronic Engineers (ANSI/IEEE) Compliance: Comply with applicable requirements of ANSI/IEEE Standards including C2, "National Electrical Safety Code," and C57.12.80, "Terminology for Power and Distribution Transformers."
   3. Nationally Recognized Testing Laboratory Compliance (NRTL): Items provided under this section shall be NRTL listed and labeled. The term "NRTL" shall be as defined in Occupational Safety and Health Administration (OSHA) Regulation 1910.7.

B. Qualifications
   1. Manufacturer Qualifications: Member firm of National Electrical Manufacturers Association (NEMA) who is regularly engaged in manufacturing components that comply with the requirements of these specifications and that have been used on at least five projects of similar size and scope as this project.
   2. Testing: Manufacturer's standard shop test shall be performed in accordance with the latest version of ANSI and NEMA standards and shall include as a minimum the following. Provide certified factory test reports.
      a. Ratio tests at the rated voltage connection and at all tap connections.
      b. Polarity and phase relation tests on the rated voltage connection.
      c. Applied potential tests.
      d. Induced potential tests.
      e. No-load and excitation current at rated voltage on the rated voltage connection.
   3. Field Testing Organization Qualifications: To qualify for acceptance, an independent testing organization must demonstrate, based on evaluation of organization submitted

criteria conforming to American Society for Testing and Materials (ASTM) E 699, that it has the experience and capability to conduct satisfactorily the testing indicated.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

B. Wiring diagrams from manufacturer differentiating between manufacturer installed and field installed wiring.

C. Product certificates, signed by manufacturer of transformers certifying that their products comply with the specified requirements.

PART 2 - PRODUCTS

2.1 TRANSFORMERS, GENERAL

A. Transformers: Factory assembled and tested, air cooled units of types specified, having characteristics and ratings as indicated. Units shall be designed for 60 Hertz (Hz) service.
1. Cores: Grain oriented, non-aging silicon steel.
2. Coils: Continuous copper windings without splices except for taps.
3. Internal Coil Connections: Brazed or pressure type.

B. General Purpose, Dry Type Transformers
1. Comply with NEMA Standard ST 20 "Dry Type Transformers for General Applications."
2. Windings: Two winding type. Three phase transformers shall use one coil per phase in primary and secondary.
3. Enclosures: Indoor ventilated, unless noted otherwise.
4. Insulation Class: 185 deg C or 220 deg C class for transformers 15 kilovolt amperes (kVA) or smaller; 220 deg C class for transformers larger than 15 kVA.
5. Insulation Temperature Rise: 115 deg C maximum rise above 40 deg C.
6. Taps: For transformers 3 kVA and larger, full capacity taps in high voltage winding as follows:
   a. 15 - 500 kVA: Six 2.5% taps, two above and four below rated high voltage.
7. Accessories: The following accessory items are required where indicated:
   a. Wall Mounting Brackets. Manufacturer’s standard brackets for transformers sized up to 75 kVA where wall mounting is indicated.
8. Transformer sound levels shall not exceed ANSI standards.
9. Transformers installed in an area which has sprinklers shall have a weathershield.

C. K-Rated Transformers: K-rated transformers shall be as specified above, and in addition shall have the following features:
1. K-rating of not less than 13.
2. Secondary neutral terminal shall be sized for 200% of the secondary phase current.
3. Full width electrostatic shielding between primary and secondary winding and ground to the transformer core.

2.2 MANUFACTURERS

A. Subject to compliance with requirements, provide products by the following:
   1. Transformers
      a. Eaton Corporation.
      b. General Electric Company.
      c. Square D Company.
      d. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Arrange equipment with a minimum clearance of 6 inches from any wall, to provide adequate spacing for cooling air circulation.

B. Identify transformers in accordance with Division 26 Section “Electrical Identification”.

C. Tighten electrical connectors and terminals in accordance with manufacturer's published torque tightening values. Where manufacturer's torque values are not indicated, use those specified in UL Standards 486A and 486B.

D. Install units on vibration mounts as shown; comply with manufacturer's indicated installation method, if any.

E. Provide a housekeeping pad under all floor mounted transformers.

F. Install bracket for wall mounted transformers using anchors and fasteners suitable for the weight of the transformer and all accessories.

3.2 GROUNDING

A. Ground transformers and tighten connections to comply with tightening torques specified in UL Standard 486A.

B. Transformer secondary neutral shall be grounded to building structural steel in conformance with the NEC.

3.3 ADJUSTING AND CLEANING

A. Upon completion of installation, inspect interiors and exteriors of accessible components. Remove paint splatters and other spots, dirt, and construction debris. Touch up scratches and mars of finish to match original finish.

B. Adjust transformer taps to provide optimum voltage conditions at utilization equipment.

3.4 PROTECTION

A. Temporary Heating: Apply temporary heat in accordance with manufacturer's recommendations within enclosure of each transformer throughout periods during which equipment is not in a space that is continuously under normal control of temperature and humidity.

END OF SECTION 26 2200

SECTION 26 2716

CABINETS, BOXES, AND FITTINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to work of this Section.

B. This section is a Division 26 section, and is a part of each Division 26 section making reference to electrical wiring boxes and fittings specified herein.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install electrical boxes and fittings in accordance with the plans and as specified herein.

B. Types of electrical boxes and fittings specified in this section include the following:
1. Outlet boxes.
2. Junction boxes.
3. Pull boxes.
4. Floor boxes.
5. Bushings.
6. Locknuts.
7. Knockout closures.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
1. National Electrical Code (NEC) Compliance. Comply with NEC as applicable to construction and installation of electrical wiring boxes and fittings.
2. Underwriters' Laboratories (UL) Compliance. Comply with applicable requirements of UL 50, UL 514 Series, and UL 886 pertaining to electrical boxes and fittings. Provide electrical boxes, fittings and enclosures which are UL listed and labeled.
3. National Electrical Manufacturer's Association (NEMA) Compliance. Comply with applicable requirements of NEMA Standard Publication Nos. OS1, OS2, and 250 pertaining to outlet and device boxes, covers, and box supports.
4. Federal Specification (FS) Compliance. Comply with applicable requirements of FS W-C-586, "Electrical Cast Metal Conduit Outlet Boxes, Bodies and Entrance Caps."

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

B. Shop Drawings for Electrical Boxes and Fittings: For shop-fabricated junction and pullboxes, show accurately scaled views and spatial relationships to adjacent equipment. Show box types, dimensions, and finishes.

1.5 DEFINITIONS

A. Finished locations. The following are defined as finished locations:
1. Areas with carpet or tile floors.
2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
3. Areas with tiled, plastered, or paneled walls.

B. Interior locations. The following are defined as interior locations:
1. Any location within the boundaries of the foundation of any building.
2. Any location within the superstructure of other structures not classified as buildings.

C. Wet locations. The following are defined as wet locations:
1. All exterior locations.
2. All interior locations below grade.
3. All interior locations where wet materials are processed, pumped, transported, or stored.

D. Corrosive locations. The following are defined as corrosive locations.
1. All locations with chemical feed/transfer equipment
2. All locations with chemical storage tanks
3. All locations where chemical storage drums are located.

E. Hazardous (classified) locations. The following are defined as hazardous (classified) locations.
1. All hazardous (classified) locations and their hazard classification are shown.

1.6 DELIVERY, HANDLING, AND STORAGE

A. Store cabinets, boxes and fittings in clean, dry space; protect products from weather, damaging fumes, construction debris and traffic.

PART 2 - PRODUCTS

2.1 ELECTRICAL BOXES AND FITTINGS

A. Electrical cabinets, boxes and fittings of indicated types, sizes, and NEMA enclosure classes. Where not indicated, provide units of types, sizes, and classes appropriate for the use and location. Provide all items complete with covers and accessories required for the intended use. Provide gaskets for units in damp or wet locations. Provide corrosion-resistant box knockout closures to suit respective installation requirements and applications.

2.2 METALLIC OUTLET, DEVICE AND WIRING BOXES

A. General: Conform to UL 514A, "Metallic Outlet Boxes, Electrical" and UL 514B, "Fittings for Conduit and Outlet Boxes." Boxes shall be of type, shape, size, and depth to suit each location and application.

B. Steel Boxes: Conform to NEMA OS 1, "Sheet Steel Outlet Boxes, Device Boxes Covers, and Box Supports." Boxes shall be sheet steel with stamped knockouts, threaded screw holes, and

accessories suitable for each location, including mounting brackets and straps, cable clamps, exterior rings, and fixture studs.

C. Cast Aluminum Boxes: Copper-free aluminum threaded raceway entries and features and accessories suitable for each location including mounting ears, threaded screw holes for devices, and closure plugs.

2.3 NON-METALLIC OUTLET, DEVICE, AND WIRING BOXES

A. General: Conform to NEMA OS 2, "Non-Metallic Outlet Boxes, Device Boxes, Covers, and Box Supports," and UL 514C, "Non-Metallic Outlet Boxes, Flush Device Boxes, and Covers." Boxes shall be molded PVC units of type, shape, size, and depth to suit location and application.

B. Non-Metallic Boxes: Ultraviolet stabilized, non-conductive, high-impact-resistant boxes with integrally molded raceway entrance hubs and removable mounting flanges. Boxes shall be equipped with threaded screw holes for device and cover plate mounting. Each box shall have molded cover of matching polyvinyl chloride (PVC) material suitable for the application.

2.4 PULL AND JUNCTION BOXES

A. General: Comply with UL 50, "Electrical Cabinets and Boxes," for boxes over 100 cubic inches volume. Boxes shall have screwed or bolted-on covers of same material as box and shall be of size and shape to suit application. All boxes 6-inch x 6-inch or larger shall have hinged doors. All boxes used for distribution of emergency power shall be painted red.

B. Hot-Dipped Galvanized Steel Boxes: Sheet steel with welded seams. Where necessary to provide a rigid assembly, construct with internal structural steel bracing. Hot-dip galvanize after fabrication. Cover shall be gasketed.

C. Stainless Steel Boxes: Fabricate of stainless steel conforming to Type 302 of American Society for Testing and Materials (ASTM) A 167, "Specification for Stainless and Heat Resisting Chromium Nickel Steel Plate, Sheet, and Strip." Where necessary to provide a rigid assembly, construct with internal structural stainless steel bracing. Cover shall be gasketed.

D. Cast Aluminum Boxes: Molded of copper-free aluminum, with gasketed cover and integral threaded conduit entrances.

E. Cast Nonmetallic Boxes: Ultraviolet stabilized, non-conductive, high-impact-resistant PVC boxes with gasketed cover and integral mounting flanges.

2.5 STEEL ENCLOSURES WITH HINGED DOORS

A. General: Comply with UL 50, "Cabinets and Enclosures," and NEMA ICS6 "Enclosures for Industrial Control and Systems."

B. Construction: Sheet steel, 16-gauge, minimum, with continuous welded seams. NEMA class as indicated; arranged for surface-mounting.

C. Doors: Hinged directly to cabinet and removable with approximately 3/4-inch flange around all edges, shaped to cover edge of box. Provide handle-operated, key-locking latch. Individual door width shall be no greater than 24 inches. Provide multiple doors where required.

D. Mounting Panel: Provide painted removable internal mounting panel for component installation.

E. Enclosure: NEMA 12, unless noted otherwise. Where door gasketing is required, provide neoprene gasket attached with oil-resistant adhesive, and held in place with steel retaining strips.

2.6 CAST METALLIC ENCLOSURES WITH HINGED DOORS

A. General: Copper-free aluminum with bolted, hinged doors. Where used at hazardous (classified) locations, enclosures shall conform to UL and shall be listed and labeled for the classification of hazard involved.

2.7 MOLDED NONMETALLIC ENCLOSURES WITH HINGED DOOR

A. General: Molded, glass-fiber-reinforced high-impact-strength polyester with bolt or screw-secured doors and solid neoprene gaskets.

2.8 CORROSION INHIBITORS

A. General: All enclosures containing equipment, terminals, or splices shall have a vapor phase corrosion inhibitor. Provide two spares for each one installed.

2.9 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:
1. Adalet-PLM Div.; Scott Fetzer Co.
2. American Electric.
3. Arrow-Hart Div.; Crouse-Hinds, Co.
4. Appleton Electric Co.; Emerson Electric Co.
5. Harvey Hubbell, Inc.
6. OZ/Gedney Co.; General Signal Co.
7. Pass and Seymour, Inc.
8. Thomas & Betts Co., Inc.
9. Walker; Wire Mold Company.
10. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION OF ELECTRICAL BOXES AND FITTINGS

A. Install electrical boxes and fittings as indicated, in accordance with manufacturer's written instructions, applicable requirements of NEC and National Electrical Contractor's Association (NECA) "Standard of Installation," and in accordance with recognized industry practices to fulfill project requirements.

B. Install items where indicated and where required to suit code requirements and installation conditions. Cap unused knockout hole where blanks have been removed and plug unused conduit hubs so as to maintain the NEMA rating of the box. Install boxes in locations which ensure ready accessibility to enclosed electrical wiring and avoid installing boxes back-to-back

in walls where there would be less than 6 inches (150 mm) separation. Fasten boxes firmly and rigidly to substrates or structural surfaces to which attached, or solidly embed electrical boxes in concrete or masonry. Do not install aluminum products in concrete.

C. Outlet and device boxes for flush-mounted installation shall be a minimum of 4-inch square or octagonal and positioned accurately to allow for surface finish thickness.

D. Junction boxes, pullboxes, and enclosures with hinged doors which are surface-mounted shall utilize spacers to maintain 1/4-inch clearance from the wall.

E. Floor boxes shall be installed level and flush with finish flooring material.

F. Avoid using round boxes where conduit must enter box through side of box, which would result in difficult and secure connections when fastened with locknut or bushing on rounded surfaces.

G. Provide electrical connections for installed boxes.

3.2 COORDINATION

A. Coordinate installation of electrical cabinets, boxes, and fittings with wire/cable, wiring devices, and raceway installation work.

3.3 APPLICATIONS

A. Outlet Boxes and Fittings: Install outlet and device boxes and associated covers and fittings of materials and NEMA types suitable for each location and in conformance with the following requirements:
   1. Use galvanized flat rolled sheet steel boxes only in finished areas.
   2. Use PVC coated steel boxes in corrosive non-hazardous areas as designated on the plans.
   3. Use boxes suitable for the classification in hazardous area as shown on the plans.
   4. Use cast metal boxes in all other locations.

B. Pull and Junction Boxes: Install pull and junction boxes of materials and NEMA types suitable for each location and in conformance with the following:
   1. Use hot-dipped galvanized steel boxes only in finished areas.
   2. Use stainless steel boxes in corrosive non-hazardous areas and as designated on the plans.
   3. Use boxes suitable for the classification in hazardous area as shown on the plans.
   4. Use NEMA 4X stainless steel or cast metal boxes in all other locations.

C. Enclosures with Hinged Doors: Install enclosures and associated materials and NEMA types suitable for each location and in conformance with the drawings.

D. Floor Boxes: Install cast iron floor boxes at each location indicated.

3.4 GROUNDING

A. General: Upon completion of installation work, properly ground electrical boxes and demonstrate compliance with requirements.

3.5 CLEANING AND FINISH REPAIR

A. General: Upon completion of installation, inspect components, remove burrs, dirt, and construction debris, and repair damaged finish including chips, scratches, abrasions, and weld marks.

END OF SECTION 26 2716

SECTION 26 2726

WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes
1. Receptacles.
2. Heavy-duty receptacles.
3. Hazardous location receptacles.
4. Snap switches.
5. Hazardous location snap switches.
6. Wallbox dimming controls.
7. Occupancy sensing light switches.
8. Communications outlets.
9. Covers and wall plates.

B. Related Sections
1. Division 01 Section “Submittal Procedures”.
2. Division 26 Section “Grounding”.
3. Division 26 Section “Electrical Identification”.

1.3 REFERENCES

A. Unless otherwise stated, references are to the latest edition of the standard.

B. American National Standards Institute (ANSI)
1. ANSI/IEEE C62.41, IEEE Recommended Practice for Surge Voltages in Low-Voltage AC Power Circuits.
2. ANSI/NEMA WD 6, Wiring Devices—Dimensional Requirements.

C. ASTM International (ASTM)

10. UL 1686, Standard for Pin and Sleeve Configurations.
11. UL 1863, Standard for Communications-Circuit Accessories.

1.4 DEFINITIONS

A. Abbreviations
1. AHJ: Authority Having Jurisdiction.
2. NRTL: Nationally Recognized Testing Laboratory.
3. GFCI: Ground-fault circuit interrupting.

B. Finished Locations: The following are defined as finished locations:
1. Areas with carpet or tile floors.
2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
3. Areas with tiled, plastered, or paneled walls.

C. Interior Locations: The following are defined as interior locations:
1. Any location within the boundaries of the foundation of any building.
2. Any location within the superstructure of other structures not classified as buildings.

D. Wet Locations: The following are defined as wet locations:
1. All exterior locations.
2. All interior locations below grade.
3. All interior locations where wet materials are processed, pumped, transported, or stored.

E. Corrosive Locations: The following are defined as corrosive locations.
1. All locations with chemical feed/transfer equipment
2. All locations with chemical storage tanks
3. All locations where chemical storage drums are located.

F. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

A. General
1. Comply with the requirements of Division 01 section, "Submittal Procedures".
2. Submit information as described below.
3. Provide all information necessary to determine compliance.

B. Product Data
   1. Manufacturer's technical product data sheets for all products specified in this section.
   2. Delete or cross out all inappropriate or non-applicable information.

C. Samples: Submit sample of each type and color of wiring device and wall plate.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements
   1. All applicable federal, state, and local codes and regulatory requirements.
   2. National Electrical Code (NEC).

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General
   1. Provide new and unused products of current manufacture.
   2. Provide products free from defects affecting performance.
   3. All units of the same type must be from the same manufacturer.
   4. Provide nameplates conforming to Division 26 section, "Electrical Identification."

B. Listing and Labeling
   1. Provide UL listed and labeled products.
   2. Provide products listed and labeled by an approved independent NRTL.
   3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 RECEPTACLES

A. General
   1. Brass alloy power contacts and terminal screws.
   2. Side and back wired terminals.
   3. Self-grounding clip on mounting screw.
   4. Thermoplastic back cover.
   5. Nylon face.
   6. Suitable for solid or stranded copper wire.

B. General-Purpose Receptacles
   1. Industrial specification grade.
   2. NEMA WD 1, NEMA WD 6, UL 498.
   3. Straight blade NEMA WD6, 5-20R.
   4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
   5. Single or duplex as shown.

C. GFCI Receptacles
   1. Industrial specification grade.
   2. NEMA WD 1, NEMA WD 6, UL 498, UL 943.
   3. Straight blade NEMA WD6, 5-20R.
   4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
   5. Single or duplex as shown.
   6. Feed-through type.

7. Suitable for mounting in 2-3/4 inch box without adapter.

D. Isolated ground receptacles.
   1. Industrial specification grade.
   2. NEMA WD 1, NEMA WD 6, UL498.
   3. Straight blade NEMA WD6, 5-20R.
   4. Brass alloy mounting strap.
   5. Brass allow Isolated ground terminal, and ground contacts.
   6. Identified with orange triangle on face.

E. TVSS Receptacles
   1. Industrial specification grade.
   2. NEMA WD 1, NEMA WD 6, UL498, UL 1449, ANSI/IEEE C62.41 Category A and B.
   3. Straight blade NEMA WD6, 5-20R.
   4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
   5. Integral TVSS in line to ground, line to neutral, and neutral to ground
      a. Multiple metal-oxide varistors.
      b. Nominal clamp level rating of 500 volts.
      c. Minimum single transient pulse energy dissipation of 140 J line to neutral, and 70 J line to ground and neutral to ground.
   6. Condition indicator light and audible alert.
   7. Distinctive marking on face of device to denote TVSS-type unit.

F. Hospital grade receptacles.
   1. Hospital grade.
   2. NEMA WD 1, NEMA WD 6, UL498.
   3. Straight blade NEMA WD6, 5-20R.
   4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
   5. Identified with green dot on face.

G. Tamper-resistant receptacles.
   1. [Industrial specification grade][Hospital grade].
   2. NEMA WD 1, NEMA WD 6, UL498.
   3. Straight blade NEMA WD6, 5-20R.
   4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
   5. UL listed as tamper-resistant.
   6. Internal shutter mechanism to limit access to energized components.
   7. Prevents object insertion unless both contacts are engaged.
   8. Identified with green dot on face.
   9. Identified on face as tamper-resistant.

H. Weather-resistant receptacles
   1. Industrial specification grade.
   2. UL listed as weather-resistant.
   3. NEMA WD 1, NEMA WD 6, UL 498.
   4. Ultraviolet light exposure, cold impact, and accelerated aging tests.
   5. Straight blade NEMA WD6, 5-20R.
   6. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
   7. Single or duplex as shown.
   8. Identified on face as weather-resistant.

I. Corrosion-Resistant Receptacles
   1. Industrial specification grade.
   2. NEMA WD 1, NEMA WD 6, UL 498.
   3. Pass ASTM B117, 500-hour salt spray test.
   4. Straight blade NEMA WD6, 5-20R.
   5. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
   6. All metal parts nickel-plated.
   7. Nickel-plated mounting screws.
   8. Single or duplex as shown.

J. Receptacle Colors
   1. Normal Power: Ivory.
   2. Emergency Power: Red.
   3. TVSS Protected: Blue.
   4. Corrosion-resistant: Yellow.

K. Available Manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
   1. Hubbell Incorporated.
   2. Leviton Manufacturing Company Incorporated.
   3. Pass & Seymour/Legrand; Wiring Devices Division.

2.3 HEAVY-DUTY RECEPTACLES

A. General
   1. UL 498, UL 1682, UL 1686.
   2. Pin and sleeve type.
   3. Brass contacts.
   4. Cast aluminum body.
   5. Ampere rating as shown.
   6. Attached screw cap.
   7. Suitable for wet locations.
   8. Color coded and configured to a specific circuit voltage and current rating.
   9. Circuit breaking type, arc from disconnecting under load contained with an arc chamber.

B. Accessories
   1. Cast aluminum back box suitable for installed location.
   2. Matching plug for each receptacle.

C. Manufacturers: Subject to compliance, provide products by one of the following.
   1. Appleton.
   2. Arrow-Hart.
   3. Crouse-Hinds.

2.4 RECEPTACLES IN HAZARDOUS (CLASSIFIED) LOCATIONS

A. General
   1. Receptacles rated for specific hazardous locations shown.

B. General purpose receptacle
   1. UL 1010, NEMA WD 6, NEMA 250.

2. NEMA WD6 5-20R.
3. Cast aluminum body.
4. Brass contacts.
5. Factory sealed.
6. Attached cover with hinge and gasket.
7. Suitable for wet locations.
8. Circuit breaking type, plug cannot be removed until disconnecting mechanism rotated.

C. GFCI receptacle
1. UL 943, UL 1010, UL 1203, NEMA WD 6, NEMA 250.
2. NEMA WD6 5-20R.
3. Cast aluminum body.
4. Brass contacts.
5. Factory sealed receptacle.
6. Separate factory sealed GFCI unit.
7. Feed-thru type.
8. Attached receptacle cover with hinge and gasket.
9. Circuit breaking type, plug cannot be removed until disconnecting mechanism rotated.

D. Heavy-duty receptacle
1. UL 1010, UL 1686, NEMA FB 11, NEMA 250.
2. Pin and sleeve type.
3. Brass contacts.
4. Cast aluminum body.
5. Ampere rating as shown.
6. Attached receptacle cover with hinge and gasket.
7. Suitable for wet locations.
8. Color coded and configured to a specific circuit voltage and current rating.
9. Circuit breaking type, arc from disconnecting under load contained with an arc chamber.

E. Accessories
1. Cast aluminum back box suitable for installed location.
2. Matching plug for each receptacle.

F. Available manufacturers. Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
1. Appleton.
2. Crouse-Hinds.

2.5 SNAP SWITCHES

A. General
1. Single-pole, 2-pole, 3-way, 4-way and illuminated handle snap switches as shown.
2. NEMA WD 1, UL 20.

B. Construction
1. Quiet-type alternating current (ac) switches, 20 ampere, 120-277 volt.
2. Side and back wired, screw pressure terminal.
3. Brass alloy terminal screws.
4. Yoke grounding screw.
5. Thermoplastic back cover.

6. Suitable for solid or stranded copper wire.
7. Switch handle color: Ivory.

C. Available Manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
1. Hubbell Incorporated.
2. Leviton Manufacturing Company Incorporated.
3. Pass & Seymour/Legrand; Wiring Devices Division.

2.6 SNAP SWITCHES IN HAZARDOUS (CLASSIFIED) LOCATIONS

A. General
1. UL 20, UL 894, NEMA WD 1, NEMA 250.
2. Rated 20 ampere, 120-277 volt AC.
3. Quiet-type alternating current (ac) switches, 20 ampere, 120-277 volt.
4. Side and back wired, screw pressure terminal.
5. Brass alloy terminal screws.
6. Yoke grounding screw.
7. Thermoplastic back cover.
8. Suitable for solid or stranded copper wire.
9. Cast metal enclosure and cover rated for specific hazardous locations shown.

B. Available manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
1. Appleton.
2. Crouse-Hinds.

2.7 WALLBOX DIMMING CONTROLS

A. General
1. UL 1472.
2. Solid-state full-wave dimmer.
3. Integral, quiet on/off switch, with audible frequency and EMI/RFI suppression filters.
4. Single-pole, 3-way, and 4-way switching.
5. Continuously adjustable slider control.
6. Illuminated when off.

B. Incandescent lamp dimming controls
1. 120 V.
2. Follow square-law dimming curve.
3. Bypass dimmer module with on/off switch positions.
4. Rated wattage: 600 with no de-rating when ganged with other devices.

C. Fluorescent lamp dimming controls
1. Modular; compatible with dimming ballasts.
2. Trim potentiometer to adjust low-end dimming.
3. Dimmer-ballast combination low end dimming down to 20 percent of full brightness.

D. Available manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
1. Lutron.

2. Or approved equal.

2.8 OCCUPANCY SENSING LIGHT SWITCHES

A. Wall-Switch Sensors
   1. Wall box mounted.
   2. Dual voltage (120 and 277 volts).
   3. Dual technology passive-infrared and ultrasonic.
   4. One hundred eighty degree field of view.
   5. Adjustable time delay up to 30 minutes.
   6. Adjustable sensitivity.
   7. Suitable for electronic ballast inrush currents.
   8. Minimum coverage area of 900 square feet.

B. Long-Range Wall-Switch Sensors
   1. Wall box mounted.
   2. Dual voltage (120 and 277 volts).
   3. Passive infrared type.
   4. One hundred ten degree field of view.
   5. Adjustable time delay up to 30 minutes.
   6. Adjustable sensitivity.
   7. Suitable for electronic ballast inrush currents.
   8. Minimum coverage area of 1200 square feet.

C. Wide-Range Wall-Switch Sensors
   1. Wall box mounted.
   2. Dual voltage (120 and 277 volts).
   3. Passive infrared type.
   4. One hundred fifty degree field of view.
   5. Adjustable time delay up to 30 minutes.
   6. Adjustable sensitivity.
   7. Suitable for electronic ballast inrush currents.
   8. Minimum coverage area of 1200 square feet.

D. Exterior Occupancy Sensors
   1. Weatherproof.
   2. Dual voltage (120 and 277 volts).
   3. Passive infrared type.
   4. One hundred eighty degree field of view.
   5. Adjustable time delay up to 15 minutes.
   6. One hundred ten foot detection range.
   7. Suitable for electronic ballast inrush currents.

E. Manufacturers: Subject to compliance, provide products by one of the following:
   1. Hubbell.
   2. Leviton.
   3. Pass & Seymour.
   4. Watt Stopper.

2.9 COMMUNICATIONS OUTLETS

A. Telephone Outlet
   1. UL 1863, TIA/EIA-568-B.1 Category 5e.
   2. One RJ-45 jack.

B. Combination TV and Telephone Outlet
   1. UL 1863, TIA/EIA-568-B.1 Category 5e.
   2. One RJ-45 jack.
   3. One Type F coaxial cable connector.

C. Available manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
   1. Cooper.
   2. Leviton.

2.10 COVERS AND WALL PLATES

A. General
   1. UL 514D.
   2. Single and combination type with ganging and cut-outs as required.
   3. Metal plate-securing screws to match plate finish.

B. Finished Locations
   1. Minimum 0.05 inch thick.
   2. Type 302 satin stainless steel.

C. Other Interior Locations: Galvanized steel.

D. Weatherproof Covers
   1. Rain-proof while in use in compliance with NEC Article 410-57.
   2. Cast aluminum plate with neoprene gasket.
   3. Hinged, self-closing, cast aluminum device cover.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions
   1. Verify outlet boxes are installed at proper locations and heights.
   2. Verify wall openings are neatly cut and will be completely covered by wall plates.
   3. Verify branch circuit wiring is completed, tested, and ready for connection to wiring devices.

B. Discrepancies
   1. Immediately notify the Engineer in writing of conditions detrimental to proper completion of the work.
   2. Correct all unsatisfactory conditions before proceeding with installation.
   3. Resolution must be acceptable to the Engineer.

C. Clean debris from outlet boxes before installing devices.

3.2 INSTALLATION

A. General
1. Install products following manufacturer's instructions.
2. Coordinate with other work, including painting, electrical boxes and wiring installations.
3. Install devices plumb, level, and secure.
4. Mount receptacles in finished areas at 1’-6” above the finished floor.
5. Mount receptacles in all other areas at 4’-0” above the finished floor.
6. Mount all wall switches at 4'-0" above finished floor.
7. Install wiring devices after wiring work is completed.
8. Install wall plates after painting work is completed.
9. Unless otherwise shown, mount devices flush, with long dimension vertical.
10. Group adjacent switches and receptacles under a single, multi-gang wall plate.
11. Do not use the duplex/split-wire break-off tabs in receptacles as circuit conductors for connecting downstream devices.
12. Install receptacles for electric water coolers (EWC) within the cabinet.

B. Dual-Level Lighting Control
1. Provide dual-level lighting control in spaces 100 square feet and larger.
2. Provide controls to reduce the lighting load by at least 50 percent.
3. Coordinate controls to reduce lighting in a reasonably uniform lighting pattern.
4. Coordinate dual-level lighting controls with day lighting apertures, such as windows.

C. Grounding
1. Ground wiring devices as specified in Division 26 section, "Grounding".
2. Connect grounding terminal to branch circuit equipment grounding conductor.

D. Identification: Identify wiring devices as required in Division 26 section, "Electrical Identification”.

3.3 FIELD QUALITY CONTROL

A. Inspections
1. Inspect each wiring device for defects before installing.
2. Have a qualified manufacturer’s representative inspect the installation.

B. Operate each operable device at least six times with circuit energized.

C. Receptacles
1. Test each 20-ampere receptacles for proper polarity and ground continuity.
2. Use a UL listed test device.

D. GFCI Receptacles
1. Test operation according to manufacturer recommendations.
2. Verify that GFCI will trip at 5 ±1 mA current.
3. Verify that GFCI does not trip at less than 1.8 mA current.

E. Replace damaged or defective wiring devices

3.4 ADJUSTING

A. Adjust each occupancy sensor.

B. Occupancy Sensor Time-Out Controls
   1. Utility, lunch/break, storage, and copier rooms: 5-minute time-out setting.
   2. Conference rooms: 10-minute time-out setting.
   3. Corridors and lobbies: 15-minute time-out setting.
   4. All other locations: longest time out setting, but not more than 30 minutes.

C. Ambient Light Sensor: Set to turn off lights when daylighting exceeds 80% of the design illuminance.

3.5 CLEANING

A. General
   1. Clean devices and wall plates.
   2. Replace stained or improperly painted wall plates or devices.
   3. Adjust devices and wall plates to be flush and level.

END OF SECTION 26 2726

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 2813

OVERCURRENT PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install overcurrent protective devices (OCPDs) in accordance with the plans and as specified herein.

B. Work of this Section includes, but is not limited to:
   1. Fuses
      a. Fuses rated 600A and less.
      b. Fuses rated above 600A.
   2. Circuit breakers.

1.3 QUALITY ASSURANCE

A. Codes and Standards: Perform all work associated with overcurrent protective devices in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
   1. Electrical Component Standard: Components and installation shall comply with National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."
   2. Listing and Labeling: Provide products specified in this section that are listed and labeled (as defined as they are in the NEC, Article 100).
   3. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in Occupational Safety and Health Administration (OSHA) Regulation 1910.7.

B. Single Source Responsibility: Obtain similar OCPDs from a single manufacturer.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

B. Submittals: Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
   1. Product data for fuses, circuit breakers, and OCPD accessories specified in this section, including descriptive data and time-current curves for all protective devices and let-through current curves for those with current limiting characteristics. Include coordination charts and tables and related data.

C. Reference Submittals
   1. Manufacturer's descriptive literature.
   2. Operating and maintenance instructions.
   3. Spare parts list.

1.5 DELIVERY, HANDLING, AND STORAGE

A. Deliver OCPDs and components in factory fabricated type containers or wrappings, which properly protect devices from damage.

B. Handle OCPDs carefully to prevent physical damage to OCPDs and components. Do not install damaged OCPDs; remove from site and replace damaged devices with new.

C. Store OCPDs in original packaging and protect from weather and construction traffic. Wherever possible, store indoors; where necessary to store outdoors, store above grade and enclose with watertight wrapping.

1.6 DEFINITIONS

A. OCPD: A device operative on excessive current that causes and maintains the interruption of power in the circuit it protects.

B. Ampere Squared Seconds: An expression of available thermal energy resulting from current flow. With regard to current limiting fuses and circuit breakers, the ampere squared seconds during fault current interruption represents the energy allowed to flow before the fuse or breaker interrupts the fault current within its current limiting range.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General
   1. Provide OCPDs in indicated types, as integral components of panelboards, switchboards, and motor control centers; and also as individually enclosed and mounted single units.
   2. Enclosures: National Electrical Manufacturers Association (NEMA) 250 "Enclosures for Electrical Equipment (1,000 volts Maximum)."

B. Cartridge Fuses
   1. NEMA Standard FU1, "Low Voltage Cartridge Fuses": Unless indicated otherwise, provide nonrenewable cartridge fuses of indicated types, classes, and current ratings that have voltage ratings consistent with the circuits on which used.
   2. Class J Fuses: Underwriters' Laboratories, Inc. (UL) 198C, "High Interrupting Capacity Fuses, Current Limiting Type".
   3. Class L Fuses: UL 198C, "High Interrupting Capacity Fuses, Current Limiting Type".
   4. Class RK1 and RK5 Dual Element Time Delay Fuses: UL 198E, "Class R Fuses".
   5. Provide a complete set of fuses for all fusible equipment on the job.
   6. All fuses shall be of the same manufacturer and shall have an interrupting rating of 200,000 A, RMS symmetrical, except where otherwise noted.
   7. All fuses shall bear UL label and class designation.
   8. Place fuse identification labels showing size and type of fuse installed inside the cover of each switch or piece of equipment.

9. Fuse voltage shall be as required for the service.
10. Fuses Rated 600A and Less
    a. Fuses which protect motor circuits and transformers shall be time delay type, UL Listed, Class RK-1, except where otherwise noted.
    b. Fuses which are protecting circuit breakers, circuit breaker panels, and resistive heating circuits shall be fast-acting, current limiting type, UL listed, Class J, except where otherwise noted.
11. Fuses Rated Above 600 A
    a. Fuses which protect motor circuits shall be time delay, current limiting type, UL listed, NEMA Class L, except where otherwise noted.
    b. Fuses which are protecting circuit breakers, circuit breaker panels, and resistive heating circuits shall be fast-acting, current-limiting type, UL listed, class L.

C. Circuit Breakers
1. Molded case type, with ampere rating, frame size and number of poles as shown.
2. Comply with the following:
    a. UL 489 "Molded Case Circuit Breakers and Circuit Breaker Enclosures."
    b. NEMA AB 1 "Molded Case Circuit Breakers."
    c. Federal Specification W-C-375.
3. Bolt in type, except breakers 225 ampere frame size and larger may be plug in type if held in place by positive locking device requiring mechanical release for removal.
4. Minimum RMS symmetrical short circuit interrupting capacity rating.
    a. 10,000 Amperes at 120/240V.
    b. 18,000 amperes at 277V.
    c. 35,000 amperes at 480V.
5. Quick make, quick break toggle mechanism.
6. Inverse time-current characteristic overload protection for each pole.
7. Instantaneous magnetic trip element short circuit protection for each pole.
8. Solid state trip device for circuit breaker frame sizes over 250 Amperes.
    a. Independently adjustable long time, short time, and instantaneous trip settings.
    b. Ground fault trip unit where shown, adjustable for pick up and time delay.
    c. Settings adjustable from front of breaker controls and/or plug-in element change.
    d. Indicator for cause of trip.
9. Provide circuit breakers appropriate for applications, including Type SWD for switching fluorescent lighting loads, and Type HACR for heating, air-conditioning, and refrigeration equipment.

D. OCPD Accessories
1. Provide key interlocks where shown.
    a. Arrange interlocking so keys are held captive at devices indicated.
    b. Where future key interlocking provisions are indicated, provide necessary mountings and hardware as required for the future installation.
2. Labels: Install label inside enclosure identifying the type of OCPD installed, its overcurrent rating, its interrupt rating and UL class. Where applicable, trip settings and time delays should be provided on permanent labels.

E. Extra Materials: For types and ratings required, furnish spare fuses, amounting to one fuse for every five installed fuses, but not less than one set of three of each type of fuse.

2.2 MANUFACTURERS

A. Subject to compliance with requirements, provide products by the following:
   1. Cartridge Fuses
      a. General Electric Co.
      b. Littelfuse Inc., Tracor, Inc.
   2. Molded Case Circuit Breakers
      a. Eaton Corporation.
      b. General Electric Company.
      c. Square D Company.
      d. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General
   1. Install fuses and circuit breakers as indicated, in accordance manufacturer's written instructions and with recognized industry practices to ensure that protective devices comply with requirements. Comply with the NEC, and NEMA Standards.
   2. Inspect each circuit breaker and fuse visually.
   3. Perform several mechanical ON-OFF operations on each circuit breaker and switch.
   4. Verify circuit continuity on each pole in closed position.

B. Independently Mounted OCPDs: Locate as indicated and install in accordance with manufacturer's written installation instructions.

C. OCPDs in distribution equipment shall be factory installed.

3.2 IDENTIFICATION

A. Identify components in accordance with Division 26, Section “Electrical Identification”.

3.3 CONNECTIONS

A. Check connectors, terminals, bus joints, and mountings for tightness. Tighten field connected connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque tightening values. Where manufacturer's torque requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Standards 486A and UL 486B.

3.4 GROUNDING

A. Provide equipment grounding connections for individually mounted OCPD units as indicated and as required by NEC. Tighten connectors to comply with tightening torques specified in UL Standard 486A to assure permanent and effective grounding.

3.5 FIELD QUALITY CONTROL

A. Visual and Mechanical Inspection: Include the following inspections and related work.
   1. Overcurrent Protective Device Ratings and Settings: Verify indicated ratings and settings to be appropriate for final system arrangement and parameters. Where discrepancies are found, test organization shall recommend final protective device ratings and settings. Use accepted revised ratings or settings to make the final system adjustments.
   2. Inspect for defects and physical damage, NRTL labeling, and nameplate compliance with current single line diagram.
   3. Exercise and perform operational tests of all mechanical components and other operable devices in accordance with manufacturer's instruction manual.
   4. Check tightness of electrical connections of OCPDs with calibrated torque wrench. Refer to manufacturer's instructions for proper torque values.
   5. Clean OCPDs using manufacturer's approved methods and materials.
   6. Verify installation of proper fuse types and ratings in fusible OCPDs.

3.6 CLEANING

A. Upon completion of installation, inspect OCPDs. Remove paint splatters and other spots, dirt, and debris. Touch up scratches and mars of finish to match original finish.

3.7 DEMONSTRATION

A. Training: Arrange and pay for the services of factory authorized service representatives to demonstrate OCPDs and train Owner's maintenance personnel.

B. Conduct a minimum of one half day of training in operation and maintenance as specified under "Instructions to Owner Employees" in the "Project Closeout" section of these specifications. Include both classroom training and hands-on equipment operation and maintenance procedures.

C. Schedule training with at least 7 days' advance notification.

END OF SECTION 26 2813

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 2816

ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes
   1. Service disconnecting means.
   2. Feeder and branch-circuit protection.
   3. Equipment disconnecting means.
   4. Motor circuit disconnecting means.

B. Related Sections
   1. Division 01 Section “Submittal Procedures”.
   2. Division 01 Section “Operation and Maintenance Data”.
   3. Division 26 Section “Electrical Identification”.
   4. Division 26 Section “Overcurrent Protective Devices”.

1.3 REFERENCES

A. Unless otherwise stated, references are to the latest edition of the standard.

B. Underwriter's Laboratory, Inc. (UL)
   1. UL 98, Enclosed and Dead Front Switches.
   2. UL 486A-486B, Wire Connectors.

C. InterNational Electrical Testing Association (NETA)
   1. ATS, Acceptance Testing Specifications for Electric Power Distribution Equipment and Systems.

D. National Electrical Manufacturers Association (NEMA)
   1. NEMA KS 1, Enclosed Switches.
   2. NEMA 250, Enclosures for Electrical Equipment (1,000 Volts Maximum).
   3. NEMA AB1, Molded Case Circuit Breakers.

E. National Fire Protection Association (NFPA)
   1. NFPA 70, National Electrical Code (NEC).

1.4 DEFINITIONS

A. Abbreviations
   1. AHJ: Authority having jurisdiction.
   2. NRTL: Nationally recognized testing laboratory.

B. Interior Locations: The following are defined as interior locations:
   1. Any location within the boundaries of the foundation of any building.
   2. Any location within the superstructure of other structures not classified as buildings.

C. Wet Locations: The following are defined as wet locations:
   1. All exterior locations.
   2. All interior locations below grade.
   3. All interior locations where wet materials are processed, pumped, transported, or stored.

D. Corrosive Locations: The following are defined as corrosive locations.
   1. All locations with chemical feed/transfer equipment
   2. All locations with chemical storage tanks
   3. All locations where chemical storage drums are located.

E. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
   1. All hazardous (classified) locations and their hazard classification are shown.

F. Seismic Withstand: When subjected to the specified seismic forces, seismic withstand means:
   1. The unit will remain in place.
   2. No parts will separate from the unit.
   3. The unit will be fully operational after the seismic event.

1.5 SUBMITTALS

A. General
   1. Comply with the requirements of Division 01 Section “Submittal Procedures”.
   2. Submit information as described below.
   3. Provide all information needed to determine compliance.

B. Product Data
   1. Manufacturer’s technical product data sheets.
   2. Delete or cross out all inappropriate or non-applicable information.

C. Shop Drawings
   1. Dimensional drawings for enclosures.
   2. Time-current curves, including selectable ranges for each type of circuit breaker.
   3. Wiring Diagrams: Submit wiring diagrams for all products.
      a. Show all components and features specified.
      b. Differentiate between factory installed and field installed wiring and components.

D. Quality Control Submittals
   1. Manufacturer Seismic Qualification Certification
      a. Submit certification that products will withstand seismic forces defined in Division 26 section, "Seismic Controls for Electrical Work."
      b. Indicate whether certification is based on actual testing calculation.
      c. Identify center of gravity and locate and describe mounting and anchorage provisions on a dimensioned outline drawing.
      d. Provide description of equipment anchorage devices on which certification is based and their installation requirements.
   2. Qualification Data: Submit compliance data for testing agencies.

3. Manufacturer’s Instructions. Submit manufacturer's current installation instructions.

E. Contract Closeout Submittals
1. Project record documents.
2. Operation and Maintenance (O&M) Data
a. Comply with Division 01 section, "Operation and Maintenance Data."
b. Include instructions on start-up, operation, and maintenance.
c. Manufacturer's instructions for testing and adjusting switches and circuit breakers.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements: Perform all work in compliance with the following:
1. All applicable federal, state, and local codes and regulatory requirements.
2. National Electrical Code (NEC).

B. Testing Agency Qualifications
1. Member of NETA.
2. Acceptable to authorities having jurisdiction.
3. Field Supervisor currently certified by the NETA.

C. Product Selection for Restricted Space
1. Drawings indicate maximum dimensions for enclosed switches and circuit breakers.
2. Comply with indicated maximum dimensions.

1.7 MAINTENANCE

A. Extra Materials: Provide extra materials described below:
1. Match products installed.
2. Packaged with protective covering for storage.
3. Identified with labels describing contents.
4. Fuses: Provide 3 fuses of each size used on project.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General
1. Provide new and unused products of current manufacture.
2. Provide products free from defects affecting performance.
3. All units of the same type must be from the same manufacturer.

B. Listing and Labeling
1. Provide UL listed and labeled products.
2. Provide products listed and labeled by an approved independent NRTL.
3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.
4. Provide a service equipment label on all switches and circuit breakers used as a service disconnecting means.

2.2 MANUFACTURERS

A. Subject to compliance, provide products by one of the following:

1. Cutler-Hammer.
2. Square D Company.
3. Or approved equal.

2.3 ENCLOSED SWITCHES

A. General
1. NEMA KS 1, UL-98.
2. Heavy duty safety switch.
3. Quick make, quick break mechanism.
4. Switch blades visible in OFF position with door open.
5. High conductivity copper current carrying parts and silver tungsten switch contacts.
6. Rated for 60 and 75 degree Celsius wire.

B. Operating Handle
1. Handle down in the off position.
2. Pad-lockable in off position with up to three padlocks.
3. Interlocked with cover to prevent opening cover with switch in closed position.
4. Inconspicuous interlock defeat mechanism.

C. Fusible Switches
1. Positive-pressure reinforced fuse clips.
2. Class R rejection type.
3. Fuses as shown and as specified in Division 26 Section “Overcurrent Protective Devices”.

D. Accessories
1. Neutral lug kit.
2. Ground lug.
3. Auxiliary contact.

2.4 ENCLOSED CIRCUIT BREAKERS

A. General
1. Molded case circuit breaker as shown and as specified in Division 26 Section “Overcurrent Protective Devices”.
2. NEMA AB 1.
3. Mechanical lugs sized for quantity, size, and type of conductors shown on the drawings.
4. Shunt trip coil
    a. Where shown on the drawings.
    b. 120 V energized from separate circuit.
    c. Set to trip at 75 percent of rated voltage.

B. Operating Handle
1. Handle down in the off position.
2. Pad-lockable in off position with up to three padlocks.
3. Interlocked with cover to prevent opening cover with switch in closed position.
4. Inconspicuous interlock defeat mechanism.

C. Accessories
1. Neutral lug kit.

2. Ground lug.
3. Auxiliary contact.

2.5 ENCLOSURES

A. General
1. Wet Locations: NEMA 250, Type 4X stainless steel.
2. Corrosive Areas: NEMA 250, Type 4X non-metallic.
3. Class 1 Hazardous Locations: NEMA 250 Type 7 cast aluminum.
4. All Other Locations: NEMA 250, Type 12 painted steel.

B. Finish: Manufacturer's standard paint factory applied before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions
1. Examine surfaces that will receive the enclosed switches and circuit breakers.
2. Verify that the project has progressed to a point where this installation may begin.

B. Discrepancies
1. Immediately notify the Engineer in writing is any discrepancies are found.
2. Resolve all discrepancies before proceeding with installation.
3. Resolution must be acceptable to the Engineer.

3.2 PREPARATION

A. Surface Preparation
1. Carefully lay out the work in advance.
2. Perform any cutting, drilling, etc. without damaging the building surfaces or equipment.

B. Rough-in
1. Refer to equipment submittals for rough-in requirements.
2. Verify rough-in locations by field measurements.

3.3 INSTALLATION

A. General
1. Comply with the manufacturer's installation instructions.
2. Install enclosed switches and circuit breakers where shown.
3. Locations shown are approximate unless dimensioned.
4. Coordinate layout and installation with other construction, including conduit.
5. Maintain required workspace clearance.
6. Install motor disconnecting means within sight of the motor.
7. Provide suitable means for mounting enclosed switches and circuit breakers.
8. Remove temporary lifting means and blocking of moving parts.
9. Comply with mounting and anchoring requirements of in Division 26 section, "Seismic Controls for Electrical Work."

B. Connections

1. Tighten connectors and terminals according to manufacturer published torque values.
2. Where manufacturer torque values are not indicated, follow UL 486A-486B.
3. Provide effective and permanent grounding connections.

C. Identification
1. Identify field-installed conductors, interconnecting wiring, and components.
2. Provide warning signs as specified in Division 26 section, "Electrical Identification."
3. Label each enclosure as specified in Division 26 section, "Electrical Identification."

3.4 FIELD QUALITY CONTROL

A. Prepare for Acceptance Tests
1. Test insulation resistance for each enclosed switch and circuit breaker.
2. Test continuity of each line- and load-side circuit.

B. Testing
1. Do not start testing until enclosed switches and circuit breakers are installed and electrical circuitry has been energized.
2. Demonstrate product capability and compliance with requirements.
3. Perform visual and mechanical inspection and electrical test indicated in:
   a. NETA ATS, Section 7.5 for switches.
   b. NETA ATS, Section 7.6 for molded-case circuit breakers.
4. Certify compliance with test parameters.
5. Correct malfunctioning units on-site, where possible.
6. Retest to demonstrate compliance; otherwise, replace with new units and retest.

C. Infrared Scanning
1. Perform an infrared scan of each enclosed switch and circuit breaker.
2. Perform scans after Substantial Completion, but before Final Acceptance.
3. Open or remove doors or panels so connections are accessible to portable scanner.
4. Perform a follow-up scan of each unit 11 months after date of Substantial Completion.
5. Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
6. Provide calibration record for device.
7. Prepare certified report identifying equipment checked and describing scanning results.
8. Note deficiencies detected, remedial action taken, and observations after remedial action.

3.5 ADJUSTING

A. Set field-adjustable circuit-breaker trip ranges.

3.6 CLEANING

A. General
1. After completing installation, inspect interior and exterior of enclosures.
2. Remove paint splatters and other spots.
3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
4. Repair exposed surfaces to match original finish.

END OF SECTION 26 2816

SECTION 26 2913

MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes
1. Manual motor controllers.
2. Magnetic motor controllers.
3. Combination magnetic motor controllers.
4. Solid-state reduced voltage motor controllers.

B. Related Sections
1. Division 01 Section “Submittal Procedures”.
2. Division 01 Section “Operation and Maintenance Data”.
3. Division 26 Section “Basic Electrical Requirements”.
4. Division 26 Section "Basic Electrical Materials and Methods."
5. Division 26 Section “Grounding”.
6. Division 26 Section “Supporting Devices”.
7. Division 26 Section “Electrical Identification”.
8. Division 26 Section “Control Devices”.
9. Division 26 Section “Overcurrent Protective Devices”.
10. Division 26 Section "Motor Controllers."

1.3 REFERENCES

A. Unless otherwise stated, references are to the latest edition of the standard.

B. Underwriter's Laboratory (UL)
1. UL 508, "Standard for Industrial Control Equipment."

C. National Electrical Manufacturers Association (NEMA)
1. NEMA 250, "Enclosures for Electrical Equipment (1000 Volts Maximum)."
2. NEMA ICS 2, "Industrial Control and Systems: Controllers, Contactors, and Overload Relays Rated 600 Volts."

1.4 DEFINITIONS

A. Abbreviations
1. AHJ: Authority having jurisdiction.
2. NRTL: Nationally recognized testing laboratory.
3. SPDT: Single pole double throw.

B. Seismic Withstand: When subjected to the specified seismic forces, seismic withstand means:
   1. The unit will remain in place.
   2. No parts will separate from the unit.
   3. The unit will be fully operational after the seismic event.

C. Finished Locations: The following are defined as finished locations:
   1. Areas with carpet or tile floors.
   2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
   3. Areas with tiled, plastered, or paneled walls.

D. Interior Locations: The following are defined as interior locations:
   1. Any location within the boundaries of the foundation of any building.
   2. Any location within the superstructure of other structures not classified as buildings.

E. Wet Locations: The following are defined as wet locations:
   1. All exterior locations.
   2. All interior locations below grade.
   3. All interior locations where wet materials are processed, pumped, transported, or stored.

F. Corrosive Locations: The following are defined as corrosive locations.
   1. All locations with chemical feed/transfer equipment
   2. All locations with chemical storage tanks
   3. All locations where chemical storage drums are located.

G. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
   1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

A. General
   1. Comply with the requirements of Division 01 Section “Submittal Procedures”.
   2. Submit information as described below.
   3. Provide all information necessary to determine compliance.

B. Product Data
   1. Manufacturer’s technical product data sheets for all products specified in this section.
   2. Delete or cross out all inappropriate or non-applicable information.

C. Shop Drawings
   1. Materials List: Submit a list with quantities, manufacturer’s name, and catalog numbers.
   2. Dimensional Drawings: Submit dimensional drawings for all products.
   3. Wiring Diagrams: Submit wiring diagrams for all products.
      a. Show all components and features specified.
      b. Differentiate between factory installed and field installed wiring and components.

D. Quality Control Submittals
   1. Test Reports
      a. Factory test report: Submit results of the required factory test prior to shipment.
      b. Field test report: Submit certified copies of the field test reports.
   2. Manufacturer’s Instructions: Submit manufacturer's current installation instructions.
   3. Manufacturer’s field reports.

4. Training data.

E. Contract Closeout Submittals
1. Project record documents.
2. Operation and Maintenance (O&M) Data
a. Submit O&M manual prior to delivery of the products.
b. Comply with Division 01 Section “Operation and Maintenance Data”.
c. Include instructions on start-up, operation, and maintenance.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements
1. All applicable federal, state, and local codes and regulatory requirements.
2. National Electrical Code (NEC).

1.7 MAINTENANCE

A. Extra Materials
1. Maintenance stock of fuses amounting to one unit for every installed unit.
2. One main control board for every three solid-state reduced voltage controllers provided.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General
1. Provide new and unused products of current manufacture.
2. Provide products free from defects affecting performance.
3. Provide units of the same type all made by the same manufacturer.
4. Provide nameplates complying with Division 26 Section “Electrical Identification”.

B. Listing and Labeling
1. Provide UL listed and labeled products.
2. Provide products that have been listed and labeled by an approved independent NRTL.
3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 MANUAL CONTROLLERS

A. Manual Controllers
1. Sizes and ratings as indicated on the drawings.
2. Manually operated quick make, quick break toggle mechanism.
3. One piece melting alloy type thermal overload unit.
4. Controller inoperative when thermal unit removed.
5. Green pilot light.
6. Capable of being padlocked in the OFF position.

2.3 MAGNETIC CONTROLLERS

A. Magnetic Contactors
1. Three pole unless otherwise shown.
2. Sizes as shown.

3. NEMA ICS 2 and UL 508.
4. Integral NEMA sizes, minimum size 1.
5. Coil rated for 120 Volts unless otherwise shown.
6. Double break silver-alloy contacts.

B. Full Voltage Non-Reversing (FVNR) Magnetic Controllers
1. Magnetic contactor as specified above.
2. NEMA sizes as shown.
3. Solid-state overload relay as specified in article "ACCESSORIES" below.
4. Control power transformer as specified in article "ACCESSORIES" below.
5. Enclosure as specified in article "ACCESSORIES" below.

C. Full Voltage Reversing (FVR) Magnetic Controllers
1. Two magnetic contactors as specified above.
2. NEMA sizes as shown.
3. Contactors electrically and mechanically interlocked to prevent simultaneous closing.
4. Solid-state overload relay as specified in article "ACCESSORIES" below.
5. Control power transformer as specified in article "ACCESSORIES" below.
6. Enclosure as specified in article "ACCESSORIES" below.

D. Two-Speed Two-Winding Magnetic Controller
1. Two magnetic contactors as specified above.
2. NEMA sizes as shown.
3. Contactors electrically and mechanically interlocked to prevent simultaneous closing.
4. Two solid-state overload relays as specified in article "ACCESSORIES" below.
5. Control power transformer as specified in article "ACCESSORIES" below.
6. Enclosure as specified in article "ACCESSORIES" below.

2.4 SOLID-STATE CONTROLLERS

A. Solid-State Reduced Voltage Controllers (SSRV)
1. Provide types, ratings, and NEMA sizes as shown on the Contract Drawings.
2. Suitable for use with standard 3 phase squirrel cage induction motors.
3. Silicon controlled rectifiers (SCRs) for controlling motor voltages during acceleration.
4. On-board diagnostics with light emitting diodes (LEDs) to indicate fault conditions.
5. Isolated, convertible SPDT fault contact output for remote indication.
6. Adjustable current limit.
7. Solid-state overload relay as specified in article "ACCESSORIES" below.
8. Closed loop feedback system to maintain motor acceleration at constant rate.
9. Magnetic contactors as specified above.
    a. Bypass contactor.
    b. Input isolation contactor.
    c. Contactor for isolating power factor correction capacitors from SCRs.

2.5 COMBINATION CONTROLLERS

A. General
1. Motor controller, short-circuit protection, and disconnecting means.
2. Controller as described above (i.e., FVNR, FVR, SSRV).

B. Short-Circuit Protection

1. Fuse, molded-case circuit breaker, or motor circuit protector as shown.
2. As specified in Division 26 Section “Overcurrent Protective Devices”.

C. Disconnecting Means
1. External operating handle with an up-down motion and down position indicating OFF.
2. Lockable in the OFF position with up to three padlocks.

2.6 ACCESSORIES

A. General
1. Mount all accessories in the controller enclosure.
2. If an additional enclosure is required, obtain approval from the Engineer.
3. Construct any additional enclosures equal to the controller enclosure.
4. Provide all required interconnections between the enclosures.
5. Provide equipment nameplates complying with Division 26 Section “Electrical Identification”.

B. Solid-State Overload Relay
1. Current sensor in each phase.
2. Switch selectable for the specific motor full load amperes within the starter range.
3. Running overload protection with time-current characteristics closely paralleling that the motors heating damage boundary
4. Accurate to 2 percent.
5. Selectable overload trip class, 5, 10, 15, 20, and 30.
6. Phase failure protection.
7. Current unbalance trip setting adjustable from 10 to 50 percent.
8. Voltage unbalance trip setting adjustable from 5 to 20 percent.
9. Conformally coated to provide corrosion resistance.

C. Control Power Transformer
1. Provide a control power transformer for each motor controller.
2. Secondary voltage to match coil voltage specified above.
3. Provide control power transformers as specified in Section 260900, Control Devices.
4. Size transformer as required to provide adequate capacity to operate the following:
    a. Motor controller contactor coil.
    b. All other devices connected to the control circuit as shown.

D. Control Components
1. As specified in Division 26 Section “Control Devices”.
2. Type and quantity of control components as shown.
3. For spare controllers or where not shown, provide the following:
    a. Hand-Off-PLC selector switch.
    b. Elapsed time meter.
    c. Green run light.

E. Enclosures.
1. NEMA 250, Type 4X in corrosive locations.
2. NEMA 250, Type 4X in wet locations.
3. NEMA 250, Type 7 in Class I hazardous locations.
4. NEMA 250, Type 12 in all other locations.

2.7 MANUFACTURERS

A. Manufacturers: Subject to compliance, provide product manufactured by one of the following:
   1. Allen-Bradley.
   2. Cutler Hammer.
   3. Square D.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions
   1. Inspect installed work prior to performing the work of this section.
   2. Verify that the project has progressed to a point where this installation may begin.

B. Material inspection.

C. Discrepancies
   1. Immediately notify the Engineer in writing of conditions detrimental to proper completion of the work.
   2. Correct all unsatisfactory conditions before proceeding with installation.
   3. Resolution must be acceptable to the Engineer.

3.2 PREPARATION

A. Surface Preparation
   1. Carefully lay out the work in advance.
   2. Perform any cutting, drilling, etc. without damaging the building surfaces or equipment.

B. Rough-in
   1. Refer to equipment submittals for rough-in requirements.
   2. Verify rough-in locations by field measurements.

3.3 INSTALLATION

A. General
   1. Conform to submittal data.
   2. Conform to arrangements indicated.

3.4 FIELD QUALITY CONTROL

A. Inspecting and adjusting
   1. Provide a manufacturer trained technician to inspect and adjust the equipment.
   2. Adjust motor overload trip setting and class to match motor nameplate.
   3. Adjust voltage and current unbalance settings to protect motor without nuisance trips.
   4. Adjust acceleration and deceleration times to prevent pressure surges in water lines.
   5. Make other adjustments to solid state controllers as required for proper operation.

B. After completion of all inspections, perform field testing.

C. Training

1. Train the Owner's personnel in the operation and maintenance of the products.
2. Complete all testing and adjustments before starting on training.
3. Provide for the services of a manufacturer's representative to perform the training.
4. Provide for a minimum of 4 hours of training for 6 people.

END OF SECTION 26 2913

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 2923

VARIABLE FREQUENCY DRIVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General
   1. Drawings and general provisions of Contract.
   2. General and Supplementary Conditions.
   3. Division 01 Specification Sections.

B. Related Sections. The following sections contain requirements that relate to this section:
   1. Division 26 Section “Motor Control Centers”.
   2. Division 26 Section “Overcurrent Protective Devices”.
   3. Division 26 Section “Control Devices”.
   4. Division 40 Section “Instrumentation – General”.

1.2 DESCRIPTION OF WORK

A. Scope of Work.
   1. Extent of variable frequency drive work is shown on the drawings and specified herein.
   2. Provide all labor, materials, tools, and equipment necessary to perform the work.

B. Section Includes. Materials and equipment specified in this section include the following:
   1. Variable Frequency Drives (VFDs).
   2. Drive Accessories.

1.3 QUALITY ASSURANCE

A. Regulatory Requirements
   1. National Electrical Code (NEC).
   2. All applicable federal, state, and local codes and regulatory requirements.

B. Standards: Materials and workmanship shall conform to the following standards:
   1. National Fire Protection Association (NFPA).
   2. Underwriters' Laboratories, Inc. (UL).
   3. Institute of Electrical and Electronic Engineers (IEEE).
   4. National Electrical Manufacturers Association (NEMA).

C. Qualifications
   1. Manufacturer: Firms engaged in the manufacture of VFDs for not less than 5 years.

1.4 SUBMITTALS

A. Product Data
   1. Manufacturer’s technical product data sheets for the VFD and all accessories.
   2. Delete or cross out all inappropriate or non-applicable information.

B. Shop Drawings
   1. Dimensional drawings showing enclosure size and arrangement of all components.
   2. Wiring diagrams in ladder logic form with terminal and wire numbers. Differentiate between factory installed and field installed wiring and components.
   3. Indicate job name, Owner, location, and date on all shop drawings.

C. Material list giving quantities, manufacturer's name, and catalog numbers.

D. Operation and Maintenance (O&M) Manual with the following:
   1. Maintenance data.
   2. Parts list.
   3. Troubleshooting guide.
   4. Product data
   5. Wiring diagrams.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver VFDs and accessories packaged in factory fabricated containers.

B. Store VFDs and accessories in a clean dry space.

C. Handle variable frequency drives and accessories carefully to avoid damage.

D. Return damaged units to equipment manufacturer and replace with new units.

PART 2 - PRODUCTS

2.1 VARIABLE FREQUENCY DRIVES.

A. General
   1. Provide VFDs of sizes, ratings, and torque characteristics required by the driven equipment.
   2. Provide listed and labeled controllers and components.
   3. All drives on the project shall be the same manufacturer and series/class.
   4. Comply with the following:
      a. NEMA Standard ICS 2, "Industrial Control Devices, Controllers and Assemblies,"
      b. NEMA Standard ICS 3.1, "Safety standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems."
      c. NEMA Pub No.250, "Enclosures for Electrical Equipment (1000 Volts Maximum)."
      d. UL 508C
   5. Provide drives suitable for use with standard squirrel-cage induction motors having a 1.10 service factor.
   6. Construction
      a. Full wave 6-pulse rectifier section.
      b. Direct current (dc) filter section
      c. Pulse width modulated (PWM) inverter section.

B. Features
   1. Designed to shut down without damage under the following conditions:
      a. Short circuit.

b. Overcurrent.
c. Over voltage.
d. Under voltage.
e. Loss of phase.
f. Over-speed.
g. Power unit over-temperature.

2. Selectable sensor-less vector or Volts per Hertz operating modes.
3. Multiple programmable stop modes including: ramp, coast, dc brake, ramp-to-hold, and s-curve.
4. Energy saving mode to automatically reduce output voltage to a lightly loaded motor.
5. Built-in process control algorithm.
6. Electronic motor overload protection.
7. Input line fuses.
8. Output voltage regulator.
9. Status LEDs for power and communications.
10. Door mounted operator interface with the following features:
    a. Membrane keypad with keys for the following:
        1) Drive programming.
        2) Numeric.
        3) Stop and stop.
        4) Automatic/Manual.
        5) Speed increase/decrease.
    b. Back-lit seven-line, 21 character LCD display.
11. Drive parameters stored in EEPROM and re-settable through the keypad.
12. Password security.
13. Process signal inverter to allow speed of drive to vary inversely with input signal.
14. Three programmable skip frequencies.
15. Capable of picking up a load spinning in either direction without tripping drive.
16. All components factory mounted and wired.
17. User programmable inputs and outputs (I/O).
    a. Minimum of two analog inputs, 4-20 mA, isolated.
    b. Minimum of two analog outputs, 4-20 mA, isolated.
    c. Minimum of six digital inputs, and two relay outputs.
18. Ethernet/IP communications.

C. Sizes and Ratings
1. Input Voltage: 480 Volt, three-phase, ±10%.
2. Input Frequency: 60 Hertz (Hz), ±3 Hz.
3. Displacement Power Factor: Between 1.0 and 0.95 lagging.
4. Efficiency: Greater than 96 percent.
5. Output Voltage: Three phase, variable from 0 to 460V.
6. Output Frequency: Variable from 6 to 400 Hz, minimum.
7. Speed Range: 10:1, step-less.
8. Acceleration/Deceleration Rate: Adjustable from 0 to 3600 seconds.
9. Minimum Frequency: Adjustable from 6 to 30 Hz.
10. Maximum Frequency: Adjustable from 60 to 120 Hz.
11. Current Limit: Adjustable from 100 to 150 percent.
12. PWM Carrier Frequency: Adjustable from 2 to 10 kHz.
13. Ambient Temperature Range: 0 to 40 degrees Celsius.
14. Relative Humidity Limit: 95 percent non-condensing.
15. Constant Torque / Heavy Duty rated (125% of installed motor FLA)

2.2 ACCESSORIES.

A. Control Components
   1. As specified in Division 26 Section "Control Devices," and as shown on the drawings.
   2. If not otherwise shown, provide a Hand-Off-PLC selector switch, fused control power transformer, green run pilot light, and red fault light.

B. Enclosures
   1. Configured as motor control center unit compartment where shown as part of a motor control center.
   2. Mount VFDs in NEMA Type 12 enclosures where not shown as part of a motor control center.
   3. Coat the enclosures with the manufacturer's standard color finish.

C. Drive Accessories
   1. Input line reactor, 3 percent impedance.
   2. Input isolation contactor.
   3. Output dV/dt filter.

2.3 EQUIPMENT/SYSTEM IDENTIFICATION

A. Provide equipment/system identification nameplates complying with Division 26, Section “Electrical Identification”.

2.4 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide VFDs by one of the following:
   1. Allen-Bradley Company.
   2. Eaton Corporation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. General
   1. Examine areas where VFDs are to be installed.
   2. Notify the Engineer in writing of conditions detrimental to proper completion of the work.
   3. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to the Engineer.

3.2 INSTALLATION

A. General
   1. Install VFDs in accordance with the manufacturer's written instructions and recognized industry practices.
   2. Comply with requirements of NEC, UL and NEMA standards.
   3. Install fuses of sizes indicated in each fusible disconnect switch.
   4. Tighten connectors and terminals in accordance with manufacturer requirements, UL Standards 486A/486B, and the NEC.

B. Grounding
   1. Provide equipment grounding connections for VFDs and enclosure as indicated.
   2. Tighten connections to comply with tightening torque specified in UL Standard 486A/486B.

C. Start-up and Programming
   1. Upon completion of the VFD installation, provide for the services of a certified factory service technician to inspect and approve the installation and to program and start-up the drives.
   2. Program the drive command, set-up, and motor parameter settings to match the requirements of the motor, the control diagrams and control descriptions.
   3. All drive communication programming shall be provided by the System Integrator under Division 40, Section "Instrumentation – General". Provide any information necessary to allow the System Integrator to perform the required programming. Programming shall include all network addressing and the reading from or writing to of a minimum of eight registers in each drive.

D. Testing
   1. Provide all equipment required for testing, start-up and performance verification.
   2. Testing shall be witnessed by the Engineer. The Engineer shall be notified at least 48 hours in advance of testing. The current and voltage and power factor shall be monitored at the motor control center or switchboard feeding the controller being tested. Data shall be collected for each motor at rated load and speed with all motors running at rated load and speed.
   3. Prior to energizing of motor controllers, check with ground resistance tester phase-to-phase and phase-to-ground insulation resistance levels to ensure manufacturer's requirements are met. Units not acceptable shall be replaced.
   4. Harmonic Testing. Testing shall be witnessed by the Engineer. The Engineer shall be notified at least 48 hours in advance of testing. The current and voltage harmonic distortion and power factor shall be monitored at the motor control center or switchboard feeding the controller being tested with a BMI Model 3030 harmonic analyzer or equal. Data shall be collected for each motor at rated load and speed with all motors running at rated load and speed. Sufficient data shall be collected to prepare a report to compare the harmonic content of the system to the calculated values in the analysis submitted in accordance with Part 1 of this specification.

3.3 FIELD QUALITY CONTROL

A. General
   1. Prior to energizing the drives, check the phase-to-phase and phase-to-ground insulation resistance levels with ground resistance tester to ensure that requirements are fulfilled.
   2. Prior to energizing, check circuitry for electrical continuity and for short circuits.
   3. Verify that direction of rotation of each motor is correct.

B. Operational Demonstration
   1. Upon completion of installation of the VFDs, energize drive circuitry and demonstrate proper functioning of the equipment in accordance with requirements.
   2. Where possible, correct malfunctioning units at site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and retest to demonstrate compliance.

3.4 TRAINING

A. General
   1. Provide for the services of a manufacturer-trained and certified representative to train the Owner's personnel in the proper operation and maintenance of the VFDs.
   2. Provide training for a minimum of 6 people.
   3. Total training time shall be 4-hours minimum per person.

B. Topics covered shall include:
   1. Safety.
   2. Keypad/display interface.
   3. Programming, setup, and configuration.
   4. Operational indicators.
   5. Faults, diagnostic tools, troubleshooting, and preventive maintenance.

C. Provide documentation for each attendee including equipment manuals, drawings and schematics of equipment supplied for this project.

3.5 ADJUSTING AND CLEANING

A. Adjust operating mechanisms, where necessary, for free mechanical movement.

B. Touch up scratched or marred enclosure surfaces to match original finishes.

END OF SECTION 26 2923

SECTION 26 4300

SURGE PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. Summary: These specifications describe the electrical and mechanical requirements for a modular, high-energy surge protective devices (SPDs) to be located where shown on the drawings.

B. Related Sections include the following:
   1. Division 26 Section “Wiring Devices”.
   2. Division 26 Section “Switchboards”.
   3. Division 26 Section “Panelboards”.
   4. Division 26 Section “Motor Control Centers”.

C. Standards: The specified system shall be designed, manufactured, tested and installed in compliance with the following codes and standards:
   1. Underwriters Laboratories; UL 1449 3rd Edition 2009 Revision (effective 9/29/2009)
   2. Institute of Electrical and Electronic Engineers (ANSI/IEEE C62.34, C62.41, C62.45)
   3. Institute of Electrical and Electronic Engineers 1100 Emerald Book
   4. Federal Information Processing Standards Publication 94 (FIPS PUB 94)
   5. National Fire Protection Association (NFPA 20, 70, 75 and 780)

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Manufacturers shall submit independent test data from a nationally recognized testing laboratory verifying the following: life cycle testing, overcurrent protection, UL1449 3rd Edition, noise attenuation and surge current capacity. Failure to do so will result in product disapproval.

B. Equipment Manual: The manufacturer shall furnish an installation manual with installation, startup, and operating instructions for the specified system.

C. Drawings: Electrical and mechanical drawings shall be provided by the manufacturer that show unit dimensions, weights, component and connection locations, mounting provisions, connection details and wiring diagram.

1.4 QUALITY ASSURANCE

A. Codes: Perform all work in compliance with NFPA 70, National Electrical Code (NEC) and all applicable federal, state, and local codes and regulatory requirements.

B. Manufacturer: The specified interconnect assembly shall be designed and manufactured in the USA by a qualified manufacturer of SPD products. The manufacturer shall have at least 5 years experience in the design, testing, and manufacturing of surge protective devices.

C. Installer: Minimum of 3 years successful installation experience on projects utilizing equipment similar to that required for this project.

D. Source Limitations: Obtain suppression devices and accessories through one source from a single manufacturer.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.5 PROJECT CONDITIONS

A. Service Conditions: Rate surge protective devices for continuous operation under the following conditions, unless otherwise indicated:
   1. Operating Frequency: 50 or 60 Hz.
   2. Operating Temperature: -40 to 140 deg F.
   3. Humidity: 0 to 95 percent, non-condensing.
   4. Operating Altitude: 0 to 18,000 feet above sea level.

B. Warranty: The manufacturer shall provide a (5) (10)-year full parts replacement warranty

1.6 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Replaceable Protection Modules: One of each size and type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:
   1. Liebert Corp.
   2. Thor Systems, Inc.
   3. Phoenix Contact.
   4. Current Technology.
   5. DEHN.
   6. Protection Technology.

B. The SPD terminals shall accommodate the wire sizes as shown on the drawings.

2.2 REQUIREMENTS

A. Performance Ratings:
   1. Surge Current Capacity – Service Entrance and main distribution panels shall be UL Listed Type 1 SPD with a 200 kA Surge Rating per Mode.

2. Surge Current Capacity –Branch panels shall be UL Listed Type 2 SPDs with a 100 kA Surge Rating per Mode.
3. UL 1449 Nominal Discharge Current: The UL 1449 Nominal Discharge Current Rating shall be 20kA.
4. Protection Modes: The SPD shall provide protection in all modes: L-N or L-L, L-G and N-G (where applicable). Note: L = Line, G = Ground, N = Neutral
5. UL 1449 Voltage Protection Ratings: The maximum UL 1449 listed surge ratings for each and/or all of the specified protection modes shall not exceed the following:

System Voltage	UL 1449 Second Edition SVR				UL 1449 3rd Edition VPR			
	L-N	N-G	L-G	L-L	L-N	N-G	L-G	L-L
120/240	400V	400 v	400 v	800 v	800 v	700 v	900 v	1200 v
120/208	400 v	400 v	400 v	800 v	800 v	700 v	900 v	1200 v
240			800 v	800 v			1200 v	2000 v
277/480	700 v	700 v	700 v	1500 v	1200 v	1200 v	1200 v	2000 v
480			1500 v	1500 v			2000 v	2000 v

B. Life Cycle Testing: The SPD shall be life cycle tested to withstand 10kA (8x20µs), 20kV (1.2x50µs), IEEE C62.41 Category C surge current with less than 5% degradation of clamping voltage. The service entrance and main distribution panel SPDs shall withstand a minimum of 15,000 Category C 10kA Surges per Mode. Branch panel SPDs shall withstand a minimum of 6,000 Category C 10kA Surges per mode.

C. Overcurrent Protection: Fusing: All surge suppression components shall be individually fused and rated to allow maximum specified surge current capacity with an interrupting rating greater than the available short circuit current. Devices that utilize a single fuse to protect two or more suppression paths are not excepted. Replaceable fusing is unacceptable. Overcurrent protection that limits specified surge currents is not acceptable. Where the avialable short circuit current is not shown, the fusing shall be rated for 200kAIC.

2.3 SERVICE ENTRANCE SUPPRESSORS

A. Surge Protective Device Description: Modular design with field-replaceable modules and the following features and accessories:
1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.
3. Integral disconnect switch.
4. Redundant suppression circuits.
5. Redundant replaceable modules.
6. LED indicator lights for power and protection status.
7. Audible alarm, with silencing switch, to indicate when protection has failed.
8. One set of Form C contacts, for remote monitoring of protection status.
9. Surge-event operations counter.
10. NEMA 4X Enclosure.

2.4 PANELBOARD SUPPRESSORS

A. Surge Protective Device Description: Modular design with field-replaceable modules and the following features and accessories:
1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.
3. Integral disconnect switch.

4. Redundant suppression circuits.
5. Redundant replaceable modules.
6. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
7. LED indicator lights for power and protection status.
8. Audible alarm, with silencing switch, to indicate when protection has failed.
9. One set of Form C contacts for remote monitoring of protection status. Coordinate with building management system.
10. Surge-event operations counter.
11. NEMA 4X Enclosure.

PART 3 - EXECUTION

3.1 INSTALLATION OF SURGE PROTECTIVE DEVICES

A. The installing contractor shall install the SPD with as short of conductors as practically possible and twist the SPD input conductors together to reduce conductor inductance. The contractor shall follow the SPD manufacturer's recommended installation practices as found in the installation, operation and maintenance manual and comply with all applicable codes. Type 2 SPDs shall be connected to circuit breakers or fuses as required by the SPD's UL Listing.

3.2 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A/486B.

3.3 FIELD QUALITY CONTROL

A. Testing: Perform the following field quality-control testing:
   1. After installing surge protective devices, but before electrical circuitry has been energized, test for compliance with requirements.
   2. Complete startup checks according to manufacturer's written instructions.
   3. Perform each visual and mechanical inspection and electrical test stated in NETA ATS, Section 7.19. Certify compliance with test parameters.

B. Repair or replace malfunctioning units. Retest after repairs or replacements are made.

END OF SECTION 26 4300

SECTION 40 0513

PROCESS PIPING

PART 1 - GENERAL

1.1 REFERENCE

A. All applicable requirements of other portions of the Contract Documents apply to the Work of this Section, including but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

A. Exposed, buried, interior and exterior process piping.

B. Piping associated with the following processes:
   1. All Water Treatment Process Piping
   2. All Process Waste Piping
   3. Compressed and Low Pressure Air Piping
   4. Membrane Cleaning System (MCS) Piping
   5. All chemical feed piping
   6. Sample water piping

C. Process piping excludes the following:
   1. Piping associated with HVAC systems.
   2. Piping associated with plumbing and sanitary waste systems.
   3. Storm drainage piping.
   4. Gutters and downspouts.
   5. Water distribution system.

1.3 QUALITY ASSURANCE

A. General: All materials shall be free from defects impairing strength and durability and be of the best quality for the purposes specified or shown on the Drawings. It shall have structural properties sufficient to solely sustain or withstand strain and stresses to which it is normally subjected and be true to detail.

B. Manufacturer's Qualifications
   1. Provide piping and appurtenances that are the standard product in regular production by Manufacturers whose products have proven reliable in similar service for at least two years.
   2. Provide piping and appurtenances of the same type from a single manufacturer.
   3. All castings used for coupling housings, fittings, and valve bodies shall be date stamped for quality assurance and traceability.
   4. All grooved joint couplings, fittings, valves, and specialties shall be the products of a single manufacturer. Grooving tools shall be of the same manufacturer as the grooved components

C. The Contractor shall be responsible for making all field measurements prior to installation of his work. Any deviations in measurements between the field conditions and the Drawings shall be immediately reported to the Engineer.

D. Testing
   1. Manufacturer's certified test results as defined for the type of pipe shall be stamped approved by the Contractor and forwarded to the Engineer as a Reference Submittal. No pipe shall be installed which does not meet the requirements of these Specifications.
   2. All pipe, joints, and fittings shall be pressure tested as required by this Specification for the type of pipe. The Contractor shall notify the Engineer or Owner, in writing, at least 48 hours prior to performing the tests.

E. All materials furnished under this Section shall have NSF 61 approval.

1.4 SUBMITTALS

A. Provide technical submittals in accordance with Division 01 Section “Submittal Procedures”, demonstrating piping and accessories conform completely to the requirements of this Section.

B. Product Data
   1. Catalog cut sheets and description of all items.
   2. Construction materials.
   3. Standard diameters, wall thicknesses and other pertinent dimensions of all sizes of piping and accessories.
   4. Support and anchor details with manufacturer's maximum recommended loads.
   5. Design calculations indicating support spacing requirements for all size pipe.

C. Shop Drawings
   1. Complete piping layout indicating type of pipe, diameter and location. Show dimensions from adjacent structure, equipment and other piping.
   2. Location of all pipe joints, sleeves, valves, and couplings.
   3. Location of all pipe supports and anchors.
   4. Details of pipe anchors, supports, couplings, and joints.
   5. Grooved joint couplings and fittings may be shown on drawings and product submittals, and shall be specifically identified by the manufacturer’s style or series designation.

D. Testing: Copies of all field test reports.

E. Contractor shall verify chemical compatibility of piping, solvents, gaskets, seals, o-rings, etc. for each chemical feed system. Provide chemical compatibility charts and manufacturer’s written verification of compatibility for each chemical feed system.

1.5 HANDLING, DELIVERY, AND STORAGE

A. General
   1. Handling, delivery, and storage shall be in accordance with the manufacturer's recommendations.
   2. In no case shall the pipe or appurtenance be dumped, dropped, or thrown.
   3. Interiors of piping shall be completely free of dirt and foreign matter.

PART 2 - PRODUCTS

2.1 AMERICAN IRON AND STEEL REQUIREMENTS

A. This project is being funded in part with loan and loan forgiveness funds from the Ohio EPA WSRLA Program and is subject to American Iron and Steel (AIS) requirements. See Division 00, Section "OEPA WSRLA Program Requirements."

2.2 PIPING

A. General
1. The outside of all piping, valves, and fittings shall bear the Manufacturer's standard marking for type, pressure, etc.
2. All pipe and fittings shall be equal to or better than the grade specified.
3. Whenever Specifications call for close bending or coiling, use Grade B pipe.
4. All piping material shall be new and free from defects and shall be subject to standard mill test before being shipped. No salvaged or used pipe shall be used.
5. Pipe shall be labeled.
6. Fittings shall have the Manufacturer's name or trademark legibly raised or cut into each piece, and shall bear the Manufacturer's standard marking for type, pressure, etc.
7. All pipe shall be cut off even and reamed full bore. Threads shall be cut smooth, true and to full standard size. Piping shall be installed clean of chips, burrs or oil.
8. Victaulic grooved fittings and couplings and valves may be utilized in lieu of welded, threaded, or flanged joints as shown on the Drawings. Gasket selection and intended use shall be verified as suitable for the intended service as published in the manufacturer's latest literature. Installation shall be in accordance with the coupling manufacturer's latest published instructions.

B. Hardware
1. Unless indicated otherwise, provide hardware of the following materials for all piping/valve hardware (bolts, nuts, and washers).
   a. Exposed (painted): Zinc Plated.
   b. Exposed (unpainted): 304 SST.
   c. Buried: 316 SST or Cor-Blu.
   d. Submerged: 316 SST.
2. Provide a washer under each nut and under each bolthead. Washers shall be of the same material as the bolts.
3. Lubricant shall be TRX-Synlube by Ramco, Anti-Seize by Ramco, Husk-It Husky Lube O'Seal, or equal.

C. Ductile Iron Pipe (DIP or DI)
1. Pipe
   a. Standards
      1) Flanged: ANSI/AWWA C115/A21.15.
      2) Nonflanged: ANSI/AWWA C151/A21.51.
      3) Thickness Class: 53 (Unless noted otherwise on Drawings).
   b. Lining
      1) Cement-mortar lining (All piping, unless indicated otherwise in the piping schedule)
         a) ANSI/AWWA C104/A21.4.
      2) Glass Lining (where indicated in the piping schedule)
         a) Glass Lining: Vitreous material that is smooth, continuous and formulated to prevent the adherence of grease, scum and crystalline

metal salt deposits in sludge, scum and related process piping systems in wastewater and sewage treatment systems.

b) Provide lining consisting of two coats, separately applied and separately fired at a maturing temperature of approximately 1400 degrees F (760 degrees C) creating a molecular bond with the base metal and a total minimum lining thickness of 8-10 mils.

c) Lining minimum hardness: 5-6 on the MOHS scale.

d) Provide lining capable of withstanding an instantaneous thermal shock of 350 degrees F (195 degrees C) differential without crazing, blistering or spalling.

e) Provide lining capable of withstanding a strain of 0.001 inch/inch (0.025 mm/mm), the yield point of the base metal, without damage to the glass lining.

f) Provide lining resistant to corrosion of between pH of 3 to 10.

g) Fabricators: Custom-Fab or Engineer Approved Equal.

c. Grooved end pipe shall be Class 53 (min), with ends that comply with ANSI / AWWA C606.

d. Coating

1) Buried pipe: 1 mil asphalt coating, AWWA C151.

2) Exposed pipe to be painted: Factory prime coat compatible with finished coat system.

2. Joints

a. Types: As shown on the Drawings—grooved joints are acceptable at locations where flanged joints are shown on the drawings. If not designated, use grooved or flanged joints for exposed piping and mechanical joints for buried pipe. Use grooved joints upstream and downstream of flow meters.

b. Flanged

1) Ductile iron, ANSI A21.10.

2) Bolt Circles and Bolt Holes: Class 125.

3) Gaskets: 1/8 inch EPDM full faced.

c. Grooved

1) ANSI/AWWA C606

2) Grooved joint couplings shall consist of two or more ductile iron housings to ASTM A536.

3) Gaskets: FlushSeal pressure responsive gasket to ASTM D2000.

4) Housing: Ductile Iron with coal tar epoxy coating (min 3 mils).

5) Bolts and nuts: 316 SST.

6) Basis of Design: Victaulic Style 31.

d. Mechanical or Push-on

1) ANSI A21.11.

2) Gaskets: plain tipped.

e. Restrained

1) Provide restrained joints on all buried pipe joints.

2) Restraining wedges shall be made of ductile iron; conform to ASTM A536.

3) Restraint at pipe joints (≥ 24-inch):

a) TR Flex by US Pipe.

b) Super-Lock or Restrained Tyton Joint by Clow.

c) Flex-Ring or Lok-Ring by American Cast Iron Pipe Company.

4) Restraint at pipe joints (< 24-inch):

a) All products acceptable for pipe ≥ 24-inch

b) Flex-ring by US Pipe.

c) Lok-Ring by American Cast Iron Pipe Company.

3. Fittings
   a. Types: As shown on the Drawings—grooved fittings are acceptable at locations where flanged fittings are shown on the drawings. If not designated, use flanged fittings for exposed piping and mechanical fittings for buried pipe.
   b. Flanged: ANSI/AWWA C110/A21.10.
   c. Grooved
      1) Comply with ANSI A21.10 /AWWA C110 for center to end dimensions, and ANSI A21.10 /AWWA C110 or AWWA C153 for wall thickness, with ends to AWWA C606.
      2) Basis of Design: Victaulic AWWA Fittings.
   d. Mechanical joint
      1) Full body ANSI/AWWA C110/A21.10 or short body ANSI/AWWA C153/A21.53.
   e. Pressure rating: 250 psi minimum.
   f. Coating and lining: Identical to connecting piping.
   g. Base tees and bends: Drill and furnish with anchor bolts. Machine when used as pipe kicker.
   h. Restrained
      1) Provide restrained joints on all buried pipe fittings.
      2) Restraining wedges shall be made of ductile iron; conform to ASTM A536.
      3) Provide a full length of pipe on both sides of the fitting.
      4) Restraint at fittings and valves
         a) Megalug by EBAA Iron Sales.

D. Prestressed Concrete Cylinder Pipe (PCCP)
   1. Prestressed concrete cylinder pipe and fittings shall be manufactured by Thompson Pipe Group, Grand Prairie, TX or equal.
   2. Unless otherwise specified, the design materials and workmanship for pipe shall conform to the requirements of AWWA C301. Core and coating thickness for pipe shall be as specified in AWWA C301.
   3. Design Conditions
      a. Pipe shall be designed in accordance with the AWWA C304 Standard, using the following design conditions; these conditions shall also be used in designing fittings that include a Portland cement mortar interior and exterior coating of the steel cylinder:
      b. Pipe shall be designed for an external live loading, including impact, equal to AASHTO H-20 loading with earth cover as shown
      c. Service Conditions:
         1) Liquid Service: Water
         2) pH range of contents: 6.0 to 8.5
         3) Design working pressure: 40 psi.
         4) Design transient pressure: 56 psi.
         5) Field test pressure shall be 50 psi.
         6) Pipe overburden and trench bedding condition: as shown on Drawings.
   4. The pipe core shall be produced by the centrifugal method or the vertical casting method.
   5. Materials
      a. Cement shall be Type II and shall be in accordance with ASTM C150.
      b. Mortar coating shall consist of one part cement to a maximum of three parts fine aggregate by weight. Rebound not to exceed one fourth of the total mix weight may be used provided the rebound is treated as fine aggregate.

c. Wire shall be a minimum of No.6 gauge and shall meet the requirements of ASTM A648, Class III. Wire of a class strength greater than Class III will not be permitted.
d. Steel cylinders shall be No. 16 gauge minimum thickness and shall be hot rolled.

6. Fittings
   a. Steel thickness of all fittings shall be designed in accordance with Chapter 8 of the AWWA M9 Manual. Fittings shall be designed for the same conditions as the adjacent pipe.
   b. Fabrication of the fittings shall be as per AWWA M9 manual and C301.
   c. Interior and exterior concrete/mortar coating shall be as per AWWA C301.
7. Joints
   a. Bell and spigot joint rings shall be steel, self-centering type, and otherwise specified in AWWA C301. Surfaces of the joint rings that will be exposed after fabrication is complete shall receive a zinc metalized coating of 4 mils thickness (0.004").
   b. Provide restrained joints by field welding joints or by mechanically restrained joints.
   c. The rubber gaskets shall be in accordance with AWWA C301 and shall be designed and manufactured so that the completed joint will withstand an internal water pressure in excess of the highest pressure to which the pipe will be subjected without showing any leakage by the gasket or displacement of it.
   d. Bell and spigot wall fittings shall be the manufacturer's standard design. Wall fittings shall be supplied with adequate bracing to keep them round and true during transportation and installation.

E. PVC Pipe and Fittings
1. Pipe:
   a. Schedule 80.
   b. Provide standard lengths of pipe sizes 10-inch and larger, beveled at each end by the pipe manufacturer.
2. Material:
   a. Type I, Grade I (Class 12454) conforming to ASTM D 1784.
3. Nipples:
   a. Short nipples shall be the same as the PVC pipe.
4. Fittings:
   a. Fittings shall be schedule 80 and shall conform to ASTM D 2464 for threaded fittings 6-inches and smaller and ASTM D 2467 for socket-type fittings 8-inches and smaller. For threaded fittings larger than 6-inches and for solvent welded fittings larger than 8-inches the fittings shall be schedule 80 per the manufacturer's standards. All fittings shall successfully pass the required pressure test. All fittings shall be manufactured in the USA by an ISO 9002 manufacturer.
5. Flanges:
   a. PVC flanges shall be made of the same material as the pipe. Flanges shall match the bolt pattern of ANSI B16.5, Class 150. Flanges shall be flat face.
   b. Gaskets shall be full faced, low torque, molded EPDM with dual concentric, convex sealing rings (and PTFE bonded to the rubber). The dimensions shall comply with 150# ANSI B16.5 drilling.

6. Unions
    a. Unions shall have socket-type ends, EPDM o-rings (unless noted otherwise), and shall be schedule 80. Material shall be Type 1, Grade I (Class 12454) per ASTM D 1784.
    b. Provide Unions at connections to equipment, valves, and other accessories to facilitate equipment removal.
7. Joints
    a. Pipes less than 8-inch diameter:
        1) Pipe and fitting joints shall be socket welded.
        2) Screwed joints that are necessary to match up to threaded valves or fittings shall be made up with Teflon Tape only.
    b. Pipes 8-inch diameter and larger:
        1) Grooved Joints.
        2) Grooved joint couplings shall consist of two or more ductile iron housings to ASTM A536.
        3) Gaskets: EPDM (Grade E).
        4) Housing: Ductile Iron orange enamel coating.
        5) Bolts and nuts: 316 SST.
        6) Basis of Design: Victaulic Style 357 coupling with PGS-300 groove profile.
    c. Connections to valves, pumps, and equipment:
        1) Provide flanges. Flanged joints shall be made with solvent welded PVC flanges.
8. Solvent Cement:
    a. IPS Corporation Weld-On 724 without exception.
9. Threaded ends:
    a. Taper pipe threads. All threaded female fittings shall be 316 stainless steel reinforced.
10. Manufacturer
    a. Pipe: Harvel or equal.
    b. Fittings: Spears or equal.

F. Polyvinyl Chloride Pipe (PVC) C900
1. Pipe: Conform to AWWA C900.
2. Dimension Ratio: DR-14 (unless noted otherwise on Drawings).
3. Pressure Class: 300 psi (unless noted otherwise on Drawings).
4. Joints: Flexible elastomeric, conform to ASTM D3139.
5. Gaskets: Conform to ASTM F477.
6. Fittings: Fully restrained ductile iron.
7. PVC Resin: Meet or exceed cell class 12454 as defined in ASTM D1784.
8. Pipe shall be homogeneous throughout; free from voids, cracks, inclusions or other defects. Surfaces shall be free from nicks, scoring, scratches, and other blemishes.
9. Color: Green
10. Manufacturer/Product name: JM Eagle/Blue Brute or equal.

G. Polyvinyl Chloride Pipe (PVC) D3034/F679
1. Pipe: Conform to ASTM D3034/F679.
2. Dimension Ratio: DR-26 unless otherwise noted on Drawings.
3. Pressure Class: PS115 unless otherwise noted on Drawings.
4. Joints: Flexible elastomeric, conform to ASTM D3212.
5. Gaskets: Conform to ASTM F477.
6. PVC Resin: Meet or exceed cell class 12364 as defined in ASTM D1784.

7. Pipe shall be homogeneous throughout; free from voids, cracks, inclusions or other defects. Surfaces shall be free from nicks, scoring, scratches, and other blemishes.
8. Color: Green
9. Manufacturer/Product name: JM Eagle/Ring-Tite PVC Gravity Sewer or equal.

H. High Density Polyethylene (HDPE)
1. Pipe: Conform to AWWA C901/906.
2. Dimension Ratio: DR-17 (unless noted otherwise on Drawings).
3. Pressure Class: 125 psi (unless noted otherwise on Drawings).
4. Joints: Heat fusion per ASTM D2657.
5. Resin: PPI TR-4 PE 4710, per ASTM D3350 Cell Class 445574 C/E.
6. Color: Black with green stripes.
7. Manufacturer/Product name: JM Eagle or equal.

I. Dual Wall Corrugated High Density Polyethylene (DWC-HDPE)
1. Pipe: Conform to ASTM F2648.
2. Joints: Soil tight bell and spigot, conform to AASHTO M294, or ASTM F2306.
3. Gaskets: Conform to ASTM F477
4. Resin: Cell classification 435420C (ESCR Test Condition B), as defined in ASTM D3350 except carbon black content should not exceed 4%.
5. Manufacturer/Product name: Advanced Drainage Systems, Inc./N-12

J. Single Wall Corrugated High Density Polyethylene (SWC-HDPE)
1. Pipe: Conform to AASHTO M252.
2. Perforations: Conform to AASHTO M252 Class II.
3. Joints: Soil tight couplings, conform to AASHTO M252 or M294.
4. Fittings: Conform to AASHTO M252.
5. Gaskets: Conform to ASTM D1056 Grade 2A2.
6. Resin: Cell classification 424420C, as defined in ASTM D3350 except carbon black content should not exceed 4%.
7. Manufacturer/Product name: Advanced Drainage Systems, Inc./Single Wall Highway Pipe.

2.3 STAINLESS STEEL PIPE

A. All stainless steel pipe and fittings shall be fabricated from Type 304 stainless steel Schedule 10S sheet and plate.
1. Pipe
a. Pipe shall conform to ASTM A-312 and be die-formed or rolled true to dimension and round within the applicable ANSI Standard. The two edges of sheet shall be brought to line so as not to leave a shoulder on the inside of the pipe.
b. Fittings shall conform to ASTM A-403-WP in accordance with B16.9.
c. Longitudinal seams on pipe and fittings shall be welded by the GTAW, PAW, FCAW, SAW, or the SMAW methods. Filler metal, if utilized, shall be of same composition or superior to the pipe and fittings material.
d. Weld deposit at the seams shall have a slight crown on both sides of the weld and no cracks or crevices shall be allowed. Excessive weld deposits, slag, weld spatter and projections into interior of pipe shall be removed by grinding. The interior welds shall be smooth, even and shall not have an internal bead higher than 1/16 inch.

e. All pieces shall be marked indicating wall thickness/schedule, grade of stainless steel, and ASTM Standard.
f. All pieces shall be marked indicating wall thickness/schedule, grade of stainless steel, and ASTM Standard. Roll or Cut grooved as appropriate to the pipe material, wall thickness, pressure, size and method of joining.
g. For pipe sizes 2" and smaller, ASTM A312, Schedule 10S, stainless steel pipe with plain ends may be used in applicable piping systems with Vic-Press couplings and fittings.
h. Schedule 5S and 10S stainless steel pipe shall be roll grooved using a Victaulic grooving tool equipped with RX roll sets, specifically designed for stainless steel pipe.

2. Fittings
   a. Fittings shall be butt weld type per ASTM-A-403WP and manufactured in accordance with ANSI B16.9. All fittings shall be of the same pressure rating and grade material as the pipe.
   b. Fittings three inches and smaller shall be threaded conforming to ASTM-A-182 forged, Class 3000# and manufactured to ANSI B16.11.
   c. Fittings for buried or submerged pipe larger than three inches shall be butt-welded, conforming to ASTM-A-403WP, same pressure rating and material as the pipe and manufactured to ANSI B16.9.
   d. Fittings for above ground or exposed pipe larger than three inches shall be butt-welded or flanged, conforming to ASTM A 403 WP.
   e. Grooved End Fittings:
      1) Fittings shall be manufactured of stainless steel conforming to ASTM A-403, WPW, WPW/S9, or CR/S9, or shall be fabricated from stainless steel pipe conforming to ASTM A312, with factory grooved ends. Fittings shall be type 316.
      2) For NPS 2-inch and smaller, Schedule 10S stainless steel pipe may be used with precision, cold drawn, austenitic stainless steel fittings, complete with elastomer O-ring seals and suitable for working pressure of 500 psig. Basis of Design: Victaulic Vic-Press for Schedule 10S pipe.

3. Joints
   a. Joints for pipes three inches and smaller shall be threaded, grooved or socket welded, same material as the pipe, 3,000 pound WOG, conforming to ANSI B16.11.
   b. Joints for buried or submerged pipe larger than three inches shall be butt-welded.
   c. Joints for aboveground or exposed pipe larger than three inches shall be grooved or butt-welded except where flanges or grooved end joints are shown on the Drawings.
   d. Grooved
      1) Couplings shall consist of two ASTM A536 ductile iron housings or ASTM A351, Grade CF8M, stainless steel housings.
      2) Rigid Type: Housing key shall engage the bottom of the groove. Victaulic Style 89 (DI) and Style 489 (SS).
         a) AGS series two-segment couplings with lead-in chamfer on housing key and wide-width FlushSeal gasket. Victaulic Style W89.
      3) Flexible: Victaulic Style 77S.
   e. Split Sleeve Couplings
      1) Couplings shall consist of a double-arched rolled stainless steel housing, with closure plates and two elastomer O-ring seals. Couplings shall be Victaulic Style 230S Non-Restrained (Depend-O-Lok ExE); 231S

Expansion (Depend-O-Lok FxE); and Style 232S Restrained (Depend-O-Lock FxF).

4. Flanges
   a. Provide weld-neck flanges conforming to ANSI B16.5 for piping three inches and smaller to connect to flanged valves, fittings, or equipment. Provide slip-on flanges for piping larger than three inches. Provide blind flanges at dead end connections and where shown on the Drawings.
   b. Flanges shall be Class 150 per ANSI B16.5
   c. Provide full-face gaskets for flat faced flanges. Provide ring gaskets for raised face flanges. Gaskets shall be composed of asbestos with rubber binder, 1/8-inch thick, Johns-Manville No. 60, John Crane Co. "Granite", or equal for high temperature air service and shall be constructed of EPDM for ambient temperature water service.

2.4 CHEMICAL FEED TUBING

A. Braid Reinforced PVC Tubing
   1. Chemically resistant, flexible, high-dimensional stability and long-term strength.
   2. Working Pressure: 100 psi min. at 70 degree F
   3. Fittings: Barbed type, made of polypropylene, fastened with 316 SST hose clamps.
   4. Support: Tubing to be supported by schedule 80 PVC carrier piping. See details on the drawings. Carrier piping to be supported hardware and in accordance with Division 40, Section “Pipe Supports”.
   5. Manufacturer
      a. Tubing: New Age Industries Nylobrade or Engineer Approved Equal.
      b. Fittings: New Age Industries Thermobarb or Engineer Approved Equal.
   6. Spare Tubing:
      a. For each size diameter tubing provided, Contractor shall provide 1,000 LF of spare tubing.

2.5 PROCESS PIPE INSULATION

A. Process piping insulation is required at the following locations:
   1. All above grade exterior process piping.

B. Pipe Insulation, Non-flexible:
   1. Techlite 379 Series with PVC film jacket.
   2. Thermal conductivity (K value): Not greater than 0.23 at mean temperature of 75 deg F.
   3. Apply to the following piping in thickness indicated:
      a. Process piping (40 – 60 deg F):
         1) 1-1/4 inch and smaller — 1/2 inch
         2) 1-1/2 inch and larger — 1 inch
      b. Process piping (below 40 deg F):
         1) 3/4 inch and smaller — 1/2 inch
         2) 1 inch to 6 inch — 1 inch
         3) 8 inch and larger — 1-1/2 inch

2.6 PROCESS PIPE HEAT TRACING

A. Process piping shall be heat traced where indicated on the drawings. Heat tracing shall be in accordance with Division 40, Section “Process Piping Heat Tracing”.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. General
1. Piping shall be installed in a manner to permit easy removal of valves and disconnection of equipment. Unions or flanged joints shall be installed for this purpose.
2. Piping shall be installed, supported, guided, and anchored to properly provide for movement due to expansion and contraction without undue strains on the joints and in such a manner that it will not sag, buckle or sway.
3. Piping shall not be supported from other pipes, conduits, ducts or similar installations.
4. No piping shall be supported by the equipment to which it is connected. Install base elbows, hangers or other approved independent method of support for the pipe.
5. Connections to equipment shall be arranged to facilitate ease of removal and service without dismantling of the runouts of main piping, and shall be installed by the use of multiple elbows or other similar methods to minimize strain on the equipment connections.
6. No field-fabricated welding fittings shall be permitted. All welding tees, elbows, reducers, and caps shall be commercially manufactured products.
7. All open ends of pipes, including equipment connections, shall be properly sealed at all times during installation to keep dirt and all foreign material out of the piping. Plugs used shall be commercially manufactured products.
8. Pipe size reductions shall be made with factory-fabricated eccentric reducers, concentric reducers, or reducing fittings and shall be installed not to cause pocketing or inhibit the flow of the material.
9. Install shut-off valves or cocks with unions on all connections to equipment and on each side of traps and control valves as required for ease of proper servicing and maintenance.
10. Unless otherwise indicated, the discharge from pressure-and temperature-relief valves and equipment drains shall be piped to the nearest floor or hub drain, installed with an approved air gap as required, and arranged for safe discharge.
11. No pipe shall penetrate any structural member without the written approval of the Engineer. Where such penetration is allowed, the structural member shall be reinforced subject to the approval of the Engineer.
12. Flanges and Gaskets
    a. Where forged steel flanges are to be bolted to cast iron flanges, a smooth or flat-face forged steel flange with a full-face gasket shall be used.
    b. All gaskets, other than teflon envelope or full-face, shall be of the flat ring type, with the outside diameter of the gasket extending to the edge of the bolts.
    c. Gaskets for all joints shall have an inside diameter equal to the outside diameter of the pipes on which they are to be used to ensure that no portion of the gasket will project into the ports of valves, pipe, or fittings.
    d. The dimensions of all gaskets shall conform to ANSI Standard B-16.21 for nonmetallic gaskets.
13. Provide flanged coupling adapters as necessary to accommodate ease of piping installation according to Contractor's layout plan.
14. Installation shall include all rough-in and final connections to equipment and services as provided in the Contract Documents, for the services and equipment to be functional.

B. Cross Connections and Interconnections: No devices, equipment or pipe connections shall be installed that will provide a cross-connection or interconnection between a potable water supply

and any source of nonpotable water such as a drainage system, a soil pipe, a waste pipe, or where the water may be chemically treated.

3.2 PIPE EXPANSION CONTROL: INSTALLATION

A. General
1. Install expansion loops or joints as required, to limit strain and movement of the piping.
2. All loops shall be cold sprung when installed.
3. Install conforming manufactured guides for each loop and joint to maintain the proper pipe alignment and minimize undue stresses on the piping and joints.
4. All mechanical joints and guides shall be installed in accordance with the Manufacturer's recommendations.
5. Install conforming manufactured pipe anchors at the midpoint between loops and joints. Installation and design shall be subject to the approval of the Engineer or Owner.
6. Manufacturer shall be held responsible for the proper capacity of the joints, with a minimum 25% allowance beyond the anticipated expansion and contraction in the piping.

B. Polyvinyl Chloride (PVC) Pipe: Provide expansion joints in straight piping runs over 50 feet and at least every 50 feet. Shall be Proco Series 261 or equal based on Chemical compatibility.

3.3 EXPOSED PIPING: INSTALLATION

A. General
1. Do not obstruct passageways, headroom, door and window operation, and similar areas with the installation of the piping and supports.
2. Painting of piping is specified elsewhere in the Contract Documents.
3. Install straight runs true to line and elevation.
4. Install vertical pipe plumb in all directions.
5. Install piping parallel or perpendicular to building walls. Piping at angles and 45 deg runs across corners shall not be accepted unless specifically shown.

B. Joints
1. General
   a. Make joints in accordance with the pipe Manufacturer's recommendations and the requirements below.
   b. Cut piping accurate and square. Assemble without forcing or springing.
   c. Ream all pipes and tubing to full inside diameter after cutting. Remove sharp edges on end cuts.
   d. Remove all cuttings and foreign matter from the inside of pipes and tubing before installation.
   e. Thoroughly clean all pipe, fittings, valves, specials, and accessories before installing.
   f. Thoroughly wire-brush, wipe clean and dry all spigot mating surfaces immediately before pipe is installed.
2. Threaded Joints
   a. Use standard righthand tapered full depth threads on steel piping.
   b. Apply before installation an approved joint compound to the male threads only.
   c. Leave three pipe threads maximum exposed at each connection.
3. Grooved Joints:
   a. Install in accordance with the manufacturer’s latest published installation instructions. Pipe ends shall be clean and free from indentations, projections and

roll marks in the area from pipe end to (and including) groove. Gasket shall be manufactured by the coupling manufacturer and verified as suitable for the intended service. A factory trained representative (direct employee) of the coupling manufacturer shall provide on-site training for Contractor's field personnel in the use of grooving tools, application of groove, and product installation. The representative shall periodically visit the job site and review installation to ensure best practices are being followed. Contractor shall correct any deficiencies found.

4. Solder Joints
   a. Ream or file pipe to remove burrs.
   b. Clean and polish contact surfaces of joints
   c. Apply flux to both male and female ends.
   d. Insert end of tube full depth into fitting socket.
   e. Heat joint evenly.
   f. Form continuous solder bead around entire joint circumference.
5. Flanged Joints: Use hexagon head nuts and bolts. Assemble flanged joints with gaskets and gasket compounds in compliance with the applicable material specifications. Tighten flange bolts evenly.
6. Plastic Pipe Joints: Comply with Manufacturer's recommendations.

C. Unions
1. Install dielectric unions where dissimilar metals are connected except at bronze or brass valves installed in ferrous piping.
2. Provide a union downstream of each screwed end valve.
3. Provide screwed or flanged unions at each piece of equipment, where shown, and where necessary to install or dismantle piping.

D. Eccentric Reducers: Use eccentric reducers where shown and where air or water pockets would occur in mains because of reduction in pipe size.

E. Transitions between Types of Pipe: Provide all necessary adapters, specials and connector pieces when connecting different types and sizes of pipe or connecting pipe furnished by different Manufacturers.

F. Restraints, Supports and Thrust Blocks
1. Install restrained joints as shown, specified, recommended by Manufacturer, or otherwise required.
2. Provide concrete and metal cradles, collars, kickers, and blocks as indicated.

G. Expansion Coupling
1. Install expansion couplings in tension to facilitate their removal.
2. Set stretcher bolts for maximum allowable elongation of expansion coupling as recommended by the Manufacturer.

H. Adjustment: Adjust all parts and components as required to provide correct operation.

I. Hangers, Supports and Attachments: Installation: Refer to Division 40 Section "Pipe Supports".

J. Identification of Piping: Paint, identify contents of piping and flow direction, and coordinate color coding of both insulated and non-insulated piping with Division 09 Section "High Performance Coatings".

3.4 BURIED PIPING: INSTALLATION

A. Conform to the applicable requirements set forth in Division 33 Section "Buried Piping Installation".

3.5 PVC AND CPVC PIPE INSTALLATION

A. General
1. Do not install pipe when the temperature is below 40 deg F or above 90 deg F. Store loose pipes on racks with a minimum support spacing of 3 feet. Provide shade from direct sunlight for pipe stored outdoors or installed outdoors until the pipe is filled with water.
2. Store fittings indoors in their original cartons.
3. Store solvent cement indoors or, if outdoors, shade from direct sunlight. Do not use solvent cements which have exceeded the shelf life marked on the storage container.
4. Before installation, check pipe and fittings for cuts, scratches, gouges, buckling, kinking, or splitting on pipe ends. Remove any pipe section containing defects by cutting out the damaged section as a complete cylinder.

B. Installation
1. Do not drag PVC pipe over the ground, drop it onto the ground, or drop objects on it.
2. Cut pipe ends square and remove all burrs, chips, and filings before joining pipe or fittings.
3. Bevel solvent welded pipe ends as recommended by the pipe manufacturer.

C. Solvent Welded Joints
1. Prior to solvent welding, remove fittings and couplings from their cartons and expose them to the air for at least one hour to the same temperature conditions as the pipe.
2. Wipe away loose dirt and moisture from the ID and OD of the pipe end and the ID of the fittings before applying solvent cement. Do not apply solvent cement to wet surfaces.
3. Make up solvent welded joints per ASTM D 2855.
4. Allow at least eight hours of drying time before moving solvent welded joints or subjecting the joints to any internal or external loads or pressures.

D. Flanged Joints
1. Lubricate stainless steel bolt threads with specified materials before installation.
2. Tighten bolts on flanges by tightening the nuts diametrically opposite each other using a torque wrench. Complete tightening shall be accomplished in stages and the final torque values shall be as shown in the following table:

Pipe Size (inches)	Final Torque (Ft-Lb)
1/2 – 1-1/2	10-15
2-4	20-30
6-8	33-50
10	53-75
12	80-110
14-24	100

E. Threaded Joints
   1. Cut threaded ends on pipe to the dimensions of ANSI B2.1. Ends shall be square cut. Follow the pipe manufacturer's recommendations regarding pipe holddown methods, saw cutting blade size, and saw cutting speed.
   2. Pipe or tubing cutters shall be specifically designed for use on plastic pipe.
   3. If the holddown vise is used when pipe is cut, insert a rubber sheet between the vise jaws and the pipe to protect from scratching the pipe.
   4. Thread cutting dies shall be clean and sharp and shall not be used to cut materials other than plastic.
   5. Not more than three threads shall remain exposed after installation.
   6. All joints shall be wrapped with Teflon tape.

3.6 SLEEVES: INSTALLATION

A. Provide and accurately locate all sleeves required under this Section. Set sleeves true to line, grade and position, plumb or level, and maintain as such during the work under other Divisions.

B. Sufficient advance notice shall be supplied to the proper trade to enable the installation to progress.

C. Whenever improper location or insufficient notice is provided for the installation of the sleeves, such work shall be done as Work of this Section, with no change in the Contract Sum or the Date of Substantial Completion.

D. Sleeves shall not penetrate any structural member except as shown on the Drawings.

E. Provide 8-inch clear space between sleeves unless otherwise indicated on the Drawings.

F. Sleeves shall be of the full thickness, with the exposed ends flush and smooth, with the structure in which they are installed.

G. Wherever water might get into the sleeve, the sleeves shall extend 1 inch above the finished surface and be made watertight. The exposed end shall be smooth and neatly finished.

H. On all piping passing through a sleeve, the piping insulation shall be continuous through the sleeve. The sleeve shall be sized to allow a 1 inch annular space between the sleeve and the bare pipe or insulation.

I. Sealing of Sleeves and Penetrations
   1. Where sleeves are embedded through cast-in-place concrete walls or slabs on or below grade, the joints between the concrete and the sleeve shall be sealed with a polyurethane sealer.
   2. Where sleeves pass through boxed out or cored openings in concrete walls or floor slabs on or below grade, a bonding agent shall be applied to the concrete surface and a nonshrink grout shall be installed between the concrete and the sleeves. After the grout has cured, the joints between the grout and the sleeves on both sides of the wall or floor shall be sealed with a polyurethane sealer.
   3. Where sleeves pass through exterior building walls above grade, the joints between the wall and sleeve on both sides of the wall shall be sealed with silicone sealer or the opening shall be sealed with silicone foam.

J. The 1 inch annular space around pipes passing through sleeves shall be filled with silicone foam having a minimum service temperature rating at least 15 deg F higher (8.3 deg C higher) than the temperature of the pipe service passing through it.

3.7 TESTING

A. General
1. All pipe lines shall be tested to prove tightness of the final assembly. The Engineer shall be given 24 hours notice before each test.
2. All tests required by governing authorities shall be satisfactorily made.
3. Provide all necessary testing apparatus, including gages, pumps, hoses, and fittings.
4. Repair and retest pipelines which fail to hold specified test pressure or which exceed the allowable leakage rate.
5. Test pressures specified apply at the lowest elevation of the pipeline section being tested unless otherwise noted.
6. The Contractor is responsible for all testing and shall pay all costs incurred during the specified testing.

B. Hydrostatic Pressure Testing
1. General
   a. Conduct hydrostatic pressure testing on all process piping in accordance with AWWA C600.
   b. Slowly fill section to be tested with water and expel all air. Install corporation cocks as necessary to remove air.
   c. Apply test pressure for two hours.
2. Exposed Piping
   a. Allow any concrete which may be affected by the testing to reach design strength before testing.
   b. Ensure that all supports and restraint protection are securely in place.
3. Buried Piping
   a. Place and compact backfill to at least the pipe centerline before testing, unless otherwise required or acceptable to the Engineer. Backfill and compact around all blocking before testing and as required to assure restraint by harnessed joints.
   b. Allow concrete for blocking to reach design strength before testing.
4. Test Pressure
   a. Piping connected to pump suction and discharge: 150% of specified maximum operating head of pump.
   b. Gravity flow ductile iron pipe: 150% of maximum static water head of pipe section being tested.
   c. Liquid chemical feed piping: 100 psi

C. Allowable Leakage: Leakage shall not exceed:

$$L = \frac{SD(P)^{0.5}}{133{,}200}$$

Where
L = Allowable leakage, gallons per hour.
S = Length of pipe tested, feet.
D = Nominal diameter of pipe, inches.
P = Average test pressure, psig.

3.8 CLEANING AND DISINFECTION

A. General
   1. All piping systems shall be cleaned and flushed out prior to operation. If it is necessary to place the system in operation by sections, then the cleaning shall be done by sections. Notify Owner prior to start of Work.
   2. Inspect inside of piping 24-inch diameter and larger and remove all debris, dirt and foreign matter.
   3. All piping, including equipment installed in connection with the piping, conveying liquids shall be filled and flushed several times to eliminate all debris and contaminants.
   4. Where pumps are installed, install temporary strainers ahead of pumps and circulate the medium through several cycles. The system shall be flushed out and the temporary strainers removed. Strainers shall have a free area of at least 3 times the cross sectional area of the attached pipe.
   5. Prior to turning over the Work, this Contractor shall remove and clean all strainers, traps, and dirt pockets.
   6. All process piping shall be pigged and flushed.

B. Disinfection
   1. Standard: AWWA C651 unless otherwise acceptable to the Engineer or Owner.
   2. Disinfect all potable water piping.
   3. Flush piping with water at 2-1/2 feet per second minimum velocity prior to disinfection.
   4. Water for flushing, testing and chlorination will be furnished by Owner at no cost to Contractor.
   5. Chlorine shall be supplied by Contractor.
   6. All other labor, material and equipment including chlorination taps and blow-off taps shall be furnished and paid for by the Contractor.
   7. Chlorine Concentration
      a. Maintain chlorine concentration between 50 and 100 parts per million for water entering the pipe.
      b. 25 parts per million minimum residual concentration shall remain after 24 hr retention period.
      c. Repeat the operation as necessary to provide complete disinfection.
      d. Provide two safe total coliform samples taken 24 hours apart prior to placing pipe in service. Provide results to Ohio EPA and the Engineer.

3.9 INSULATION INSTALLATION

A. Do not insulate piping until satisfactory completion of required pressure tests.

B. Apply insulation to clean, dry surfaces with pipe surfaces at room temperature.

C. Butt insulation firmly together with longitudinal and end joints sealed with compatible jackets, facings and adhesives as specified.

D. Apply adhesives, mastics and coatings per manufacturer's recommendations and as specified.

E. On cold surfaces where vapor barrier jackets are used, apply insulation with a continuous, unbroken vapor seal.
   1. Adequately insulate and vapor seal hangers, supports, and anchors that are secured directly to cold surfaces to prevent condensation.

F. Continue insulation through sleeves and wall and ceiling openings except insulation shall not continue through fire-rated (2-hour or greater) partitions, walls, floor-ceiling systems.

G. Insulate all fittings, valve bodies, flanges and other pipeline accessories.

H. At hangers and bracing, install in accord with Division 40 Section “Pipe Supports”.

I. Contractors shall consult manufacturer's Technical Bulletins for detailed information on safety precautions in using all insulation products, polyurethanes, polyisocyanurates, and related materials. The data shall describe fire and other risks, safety in handling, toxicity, threshold limit values, physiological effects of inhalation and eye and skin contact, incompatibilities and other essential information regarding use. Obtain 6 copies for distribution and use at jobsite and for submittal with shop drawing submittals.

J. On piping, install with lap joint attached using outward clinching staples, 3-inch centers, 1/4 inch from edge on hot piping.
   1. On cold piping, use self-sealing lap system or adhesive applied to both surfaces per manufacturer's recommendation.
   2. Do not staple cold piping.
   3. Butt adjoining sections of insulation tightly together and continue jacket by installing self-adhering butt strips over entire circumferential joint.

K. Installation of Insulation of Fittings
   1. For pipe sizes 2 inches and smaller, finish with mineral fiber cement to thickness of adjoining pipe insulation.
   2. Over 2 inches, insulate with mitered pipe insulation segments or preformed fiberglass fittings secured with vinyl faced insulation strapping tape or 20 ga galvanized annealed wire and finished with one coat of mineral fiber cement.
   3. After cement is dry, finish with Glass Fab and seal with Foster 30-36 adhesive.
   4. Prefabricated fitting covers approved for use at pipe fittings may be used instead of finishing method outlined above.
   5. Install in accordance with manufacturer's recommendations.

L. Cover all insulated piping exposed to weather with additional jacket of 0.016-inch smooth aluminum with moisture barrier.
   1. Apply aluminum jacket with 0.020-inch x 3/8-inch aluminum bands on 9-inch centers, minimum 2-inch lap joint.
   2. Protect fittings, valves, and specialties exposed to weather in like manner.
   3. Contractor option: Use Ceel-Co 300 Series plastic jacketing applied per manufacturer's recommendations.

M. Reinforce jackets on insulated piping in mechanical rooms and central plant less than 8 ft. above floor.
   1. Cover with 0.030 inch PVC jacket conforming to 25-50 fire requirements.

END OF SECTION 40 0513

SECTION 40 0523

PROCESS VALVES, GATES, AND ACCESSORIES

PART 1 - GENERAL

1.1 REFERENCE

A. All applicable requirements of other portions of the Contract Documents apply to the Work of this Section, including, but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

A. Valves, Gates, Actuators and Accessory Process Equipment

1.3 RELATED WORK SPECIFIED ELSEWHERE

A. Valves and accessories for a specific system, as covered in other sections. Valves not included in other Sections shall conform to this Section.

B. Valves associated with plumbing, interior potable water systems and heating normally installed by a mechanical contractor.

C. Division 09 Sections.

D. Division 26 - Electrical.

1.4 QUALITY ASSURANCE

A. The equipment manufacturer shall have been engaged in the manufacture of the equipment being supplied for the past 5 years.

B. All equipment shall be rated for the specified test pressure of the piping where it is connected. Refer to Division 40 Section “Process Piping”, for test pressures.

C. Manufacturer's Representative
   1. A manufacturer-trained and certified representative shall check the installation, supervise the initial start-up and operation, and instruct the Owner's personnel in the proper operation and maintenance for the valves listed below.
      a. Pneumatic pinch valves.
      b. Electrically activated butterfly valves.
   2. The manufacturer's representative shall spend a minimum of 8 hours on site performing these services.
   3. Return visits shall be made as required to accommodate the construction schedule until each valve is started and demonstrated to be operating properly. Return visits shall be at no expense to the Owner.

1.5 SUBMITTALS

A. Provide technical submittals in accordance with Division 01 Section “Submittal Procedures”, demonstrating that all equipment provided conforms completely to the requirements of this Section.

B. Product Data
   1. Catalog cut sheets and description of all items.
   2. Specific location of each item in the Project identified with Engineer's valve schedule number.
   3. Construction materials.
   4. Electric and control data.

C. Shop Drawings
   1. Detailed dimensional drawings indicating overall dimensions and required clearances of each size item with actuators mounted.
   2. Orientation of actuator.
   3. Elevations, weights and sizes of all gates.
   4. Cross-section drawings labeling all interior parts, including bearings, seals, and other mechanical parts.
   5. Diagrams indicating lubrication compartments and anchoring and mounting details.

D. Operation and Maintenance Manuals: Provide Operation and Maintenance Manuals in accordance with Division 01 Section “Closeout Procedures”.

1.6 HANDLING, DELIVERY AND STORAGE

A. Handling and storage instructions shall accompany each pump delivered to the site. Store all equipment in accordance with the manufacturer's instructions.

B. Power actuators shall be stored indoors, protected from precipitation.

1.7 REFERENCED STANDARDS

A. American Society of Mechanical Engineers (ASME); American Society of Testing and Materials (ASTM); American Water Works Association (AWWA).

PART 2 - PRODUCTS

2.1 AMERICAN IRON AND STEEL REQUIREMENTS

A. This project is being funded in part with loan and loan forgiveness funds from the Ohio EPA WSRLA Program and is subject to American Iron and Steel (AIS) requirements. See Division 00, Section “OEPA WSRLA Program Requirements.”

B. Attempts made by suppliers and/or manufacturer’s to intentionally avoid having to comply with the AIS requirements by changing the material of valve components from those specified (or other similar measures) will result in the submittal being returned with the disposition of Does Not Conform.

2.2 GENERAL

A. Valve schedule is shown on the drawings.

B. Connections: As shown on the Drawings, grooved joints are acceptable at locations where flanged joints are shown on the drawings. If not designated, use flanged or grooved joints for exposed valves and mechanical joints for buried valves.
   1. Flanged: ANSI B16.1, Class 125
   2. Mechanical joint: ANSI 21.11
   3. Grooved: ANSI/AWWA C-606

C. Bolts and Studs
   1. Exposed (painted): Zinc Plated.
   2. Exposed (unpainted): 304 SST.
   3. Buried: 316 SST or Cor-Blu.
   4. Submerged: 316 SST.
   5. Head: Hexagon for flanged, T-head for mechanical joint.
   6. Provide a washer under each nut and under each bolthead. Washers shall be of the same material as the bolts.
   7. Lubricant shall be TRX-Synlube by Ramco, Anti-Seize by Ramco, Husk-It Husky Lube O'Seal, or equal.

D. Labeling
   1. Manufacturer's name and working pressure cost in raised letters on valve body.
   2. Valve Tags: Provide 316 SST valve tags on each valve after valve is installed, with the following information clearly labeled:
      a. Valve number
      b. Direction to open
      c. Number of turns to open
      d. Pressure rating
      e. Function

2.3 VALVES

A. Butterfly Valve (BFV-AWWA)
   1. Description:
      a. AWWA C-504 type butterfly valve.
   2. Manufacturer/Model:
      a. Dezurik/BAW.
      b. Crispin.
      c. Pratt.
      d. Val-Matic.
   3. End Connection:
      a. Flanged, ANSI Class 150.
   4. Materials of Construction:
      a. Body:
         1) Cast Iron, ASTM A126 Class B
      b. Discs
         1) Cast 316 SST, ASTM A749, Type CF8M
      c. Shaft, Seating Edge, and Pin:
         1) 316 SST, ASTM A276
      d. Packing and Seat:
         1) EPDM.
      e. Torque Screw:
         1) 316 SST, ASTM A276

f. Set Screws:
1) 18-8 SST.
g. Plug:
1) Malleable Iron, ASTM A47-52 Grade 35018
h. Lower Journal Bearing:
1) PTFE

5. Valve Orientation
a. Any butterfly valve located immediately downstream of the discharge of any centrifugal pump with a vertical drive shaft shall have its shaft in a horizontal position.
b. Any butterfly valve located immediately downstream of the discharge of any vertical lift type pump should have its shaft in a vertical position.
c. Any butterfly valve which is located immediately downstream of any elbow should have its shaft located in the same plane as the elbow.
d. The valve disc should be installed with the shaft axis oriented so nonsymmetric profiles caused by pump discharge, elbows, or other causes of irregular flow do not impinge upon the valve disc in a nonsymmetrical manner about the valve shaft axis.

B. Butterfly Valve (BFV-SST)
1. Description:
a. Double offset stem and disc, high performance butterfly valve with zero leakage bi-directional shutoff to full rated pressure.
2. Manufacturer/Model:
a. Bray/Series 40.
b. Dezurik/BHP.
c. Engineer Approved Equal.
3. End Connection:
a. Wafer or Lug, ANSI Class 150
4. Pressure Rating:
a. 275 psig at Temperatures up to 100 degrees F
5. Materials of Construction:
a. Body and Disc:
1) Cast 316 SST, ASTM A351 GR CF8M
b. Stem and Taper Pins:
1) 17-4 PH SST, ASTM A564-Type 630
c. Disc Spacers, Bearing Assembly, Gland Ring, and Stud:
1) 316 SST, ASTM 276 with TFE and glass fabric bearing assembly liner
d. Gland Retainer and Seat Retainer Plate:
1) Cast 316 SST, ASTM A351 GR CF8M
e. Lock Washers, Hex Nut, Cap Screws, and Mounting Plate:
1) 18-8 SST
f. Gasket (between bearing assembly and locator plug):
1) PTFE

C. Butterfly Valve (BFV-Coated)
1. Description:
a. Resilient seat, high strength, one piece butterfly valve with coated disc and bi-directional bubble-tight shutoff.
2. Manufacturer/Model:
a. Bray/Series 30.

b. Dezurik
c. Engineer Approved Equal.

3. End Connection:
   a. Wafer or Lug, ANSI Class 150
4. Pressure Rating:
   a. 175 psig at Temperatures up to 100 degrees F
5. Materials of Construction:
   a. Body:
      1) Cast Iron, ASTM A126 Class B with Nylon 11 Coating
   b. Seat:
      1) EPDM
   c. Stem:
      1) 416 SST, ASTM A582
   d. Disc:
      1) Nylon 11 Coated Ductile Iron

D. Swing Check Valve (CV-Cast Iron)
1. Description:
   a. AWWA C-508 type check valve.
2. General:
   a. The valve shall be tight seating when closed, and when open provide full flow area through the valve equal to the pipeline diameter.
   b. The seating shall be by a resilient field replaceable ring on the valve disc contacting a stainless seat ring in the valve body.
   c. Valve shall be capable of being installed in the vertical.
   d. Valve shall include an air cushion closure control device.
3. Manufacturer/Model:
   a. APCO/CVS.
   b. Bray.
   c. Pratt.
4. End Connection:
   a. Flanged, ANSI Class 150.
5. Materials of Construction:
   a. Body, cover, disc, and disc arm:
      1) Ductile Iron ASTM A536 or Cast Iron A126 C1B.
   b. Body Seat:
      1) 316 SST with EPDM retaining ring.
   c. Seat retaining ring:
      1) 304 SST.
   d. Disc Seat:
      1) EPDM.
   e. Pivot Shaft:
      1) Type 303 SST, ASTM 582.
   f. Studs, bolts, nuts:
      1) 304 or 316 SST.

E. Check Valve (CV-SST)
1. Description:
2. Manufacturer/Model:
   a. Bray(Rite)/210.
   b. Prince.

c. Engineer Approved Equal.

3. End Connection:
   a. Wafer or Lug, ANSI Class 150
4. Materials of Construction:
   a. Body:
      1) Cast 316 SST, ASTM A351 GR CF78M
   b. Seat:
      1) EPDM
   c. Spacers:
      1) 316 SST, ASTM A479

F. Globe Valve (GLOBE-Conc.)
1. Manufacturer:
   a. Warren Controls, 5840 Series.
2. Function:
   a. Flow Control.
3. End Connection:
   a. Flanged, ANSI Class 300.
4. Materials of Construction:
   a. Body and Bonnet:
      1) Cast 316 SST (ASTM A351 GR CF8M)
   b. Stem, cage, plug, trim, and seat ring:
      1) 316 SST
   c. Lip:
      1) EPDM with PEEK bearings
5. Enclosure Blanket:
   a. Provide an insulating blanket wrap for the valve
6. Actuator:
   a. Type:
      1) Modulating, linear, industrial electrically actuated.
   b. Fail in place.
   c. Power Supply:
      1) 24 VAC/DC.
   d. Control Signal and Feedback:
      1) 4-20 mA.
   e. Cover:
      1) Polycarbonate
   f. Gear case material:
      1) Aluminum die casting, powder-coated (60 micron thickness)
   g. Enclosure Rating:
      1) IP65

G. Globe Valve (GLOBE-Bypass)
1. Description: Motor operated flow control valve.
2. Manufacturer/Model:
   a. Ross Valve
   b. Cla-Valve
   c. GA Industries
3. End Connection:
   a. Flanged, ANSI Class 150.
4. Pressure Rating: 250 psi.

5. Materials of Construction:
    a. Body and cover:
        1) Ductile Iron, ASTM A536.
    b. Disc Retainer & Diaphragm Washer:
        1) Cast Iron
    c. Disc Guide, Seat, and Cover Bearing:
        1) Bronze, ASTM B62.
    d. Disc and Diaphragm:
        1) Buna-A (with nylon reinforcement in the diaphragm).
    e. Stem, Nut, and Spring:
        1) 304 SST.
6. Controls
    a. Provide a modulating motorized operator for control of the valve via a 4-20 mA signal.

H. V-notch Ball Valve (BA-V-Notch)
1. Manufacturer/Model
    a. Bray(Flow-tek)/V-Control
    b. Dezurik.
2. End Connection:
    a. Flanged, ANSI Class 150.
3. Materials of Construction:
    a. Body, Ball, and Stem:
        1) 316 Stainless Steel.
    b. Seals and Seats:
        1) Tek-Fil.
4. Actuator: As specified in the valve schedule.

I. Ball Valve (BA-SST)
1. Description:
    a. One piece body, quarter turn, bottom entry blowout proof stem, SST ball valve.
2. Manufacturer/Model:
    a. Bray(Flow-Tek)/S40
    b. Engineer Approved Equal
3. End Connection:
    a. NPT Threaded
4. Pressure Rating:
    a. 1,000 psi WOG
5. Materials of Construction:
    a. Body and Body Insert:
        1) Cast 316 SST, ASTM A351 GR CF8M
    b. Ball and Stem:
        1) 316 SST, ASTM A479
    c. Seat, Thrust Washer, Stem Packing
        1) RPTFE
    d. Spring Washer:
        1) 301 SST
    e. Handle, Handle Nut, Locking Device, and Gland
        1) 304 SST
    f. Handle Sleeve
        1) Vinyl

J. Check Valve (CV-Thermoplastic)
   1. Description: Solid, thermoplastic construction type wafer check valve incorporating a single disc design suitable for either horizontal or vertical installations.
   2. Manufacturer/Model
      a. Asahi/Wafer Check Valve.
      b. Engineer Approved Equal.
   3. End Connection:
      a. Wafer, ANSI Class 150.
   4. Pressure Rating:
      a. 150 psig (85 psi for valves larger than 8")
   5. Materials of Construction:
      a. Body, Disc, Stopper, Shaft, Shaft Plug, and AV Bolt:
         1) H707 PVC, ASTM D1784 1245
      b. I-bolt:
         1) SS400.
      c. Spring:
         1) SWP-B W/ETFE Coating.
      d. O-ring:
         1) EPDM

K. Butterfly Valve (BFV-Thermoplastic)
   1. Description: Thermoplastic construction type butterfly valve with full seat liner design fully molded around the body.
   2. Manufacturer/Model
      a. Asahi/Type 57P.
      b. Engineer Approved Equal.
   3. End Connection:
      a. Wafer, ANSI Class 150.
   4. Pressure Rating:
      a. 150 psig (100 psi for valves larger than 10")
   5. Materials of Construction:
      a. Body, Disc, Seat Bush:
         1) H707 PVC, ASTM D1784 1245A
      b. Seat, O-ring, and Gasket:
         1) EPDM.
      c. Stem:
         1) 316 SST.
      d. Screw and Bolt:
         1) 304 SST.

L. Ball Valve (BA-Thermoplastic)
   1. Description: Thermoplastic construction type, true union ball valve with two-way blocking capability.
   2. Manufacturer/Model
      a. Asahi/Type 21/21A.
      b. No Approved Equals.
   3. End Connection:
      a. True Union.
   4. Pressure Rating:
      a. 230 psig (150 psi for valves larger than 3") up to temperatures of 70 degrees F
   5. Vent Hole:

a. Provide valves equipped with 1/8-inch vent holes for all sodium hypochlorite (NaOCl) applications.

6. Materials of Construction:
   a. Body, Ball, Carrier, End Connector, union Nut, and Stem:
      1) H707 PVC, ASTM D1784 1245A
   b. Seat:
      1) PTFE.
   c. O-rings:
      1) EPDM (water service).
      2) PTFE (chemical service).
   d. Stop Ring:
      1) PVDF.
   e. Handle:
      1) ABS
   f. Ring:
      1) 304 SST

M. Diaphragm Valve (DV-Thermoplastic)
1. Description: Thermoplastic construction type, diaphragm valve.
2. Manufacturer/Model
   a. Asahi Type 14.
3. End Connection:
   a. True Union.
4. Pressure Rating:
   a. 150 psi up to temperatures of 105 degrees F
5. Materials of Construction:
   a. Body, Bonnet, Carrier, and Union Nut:
      1) PVC
   b. Diaphragm and Cushion:
      1) EPDM.
   c. O-rings:
      1) EPDM.
   d. Handwheel:
      1) Polypropylene
   e. Screw:
      1) 304 SST

N. Check Valve (CV-Thermoplastic)
1. Description: Thermoplastic construction type, ball check valve.
2. Manufacturer/Model
   a. Asahi Type 14.
3. End Connection:
   a. True Union.
4. Pressure Rating:
   a. 150 psi up to temperatures of 120 degrees F
5. Materials of Construction:
   a. Ball, Body, End Connector, Union Nut, and Stop Ring:
      1) PVC
   b. Diaphragm and Cushion:
      1) EPDM.
   c. Seat and O-rings:

1) EPDM (water service).
2) PTFE (chemical service).

O. Overflow Check (CV-Overflow)
1. Description: Wafer style, full face check valve.
2. Manufacturer/Model
a. Tideflex Waterflex.
3. End Connection:
a. Flanged.
4. Pressure Rating:
a. 50 psi.
5. Materials of Construction:
a. Disc:
1) 304 SST.
b. Waterflex Membrane:
1) EPDM.

2.4 AIR RELEASE VALVES

A. Combination Air Valve (CAV)
1. Description:
a. AWWA C-512 combination air/vacuum valve.
2. General:
a. The CAV shall be designed to allow large quantities of air to escape out the orifice when filling a pipeline and to close water tight when the liquid enters the valve. The Air/Vacuum Valve shall also permit large quantities of air to enter through the orifice when the pipeline is being drained to break the vacuum. The discharge orifice area shall be equal or greater than the inlet of the valve.
b. The valve shall consist of a body, cover, baffle, float and seat. The baffle will be designed to protect the float from direct contact of the rushing air and water to prevent the float from closing prematurely. The seat shall be fastened into the valve cover without distortion and shall be easily removed, if necessary. The float shall be stainless steel, and shall be center guided into the seat.
3. End Connection:
a. NPT Threaded.
4. Materials of Construction:
a. Body and Cover:
1) ASTM A126 Gr.B Cast iron or ASTM A536 Gr 65-45-12 Ductile Iron.
b. Float:
1) 304 SST.
c. Seat:
1) Buna-N.
5. Rated Pressure: 175 psi.
6. Manufacturer/Model:
a. DeZURIK (APCO)/AVV.
b. GA
c. Crispin
d. VAL-MATIC
7. All CAVs shall include a SST ball valve for isolation. Contractor shall field route drain piping for CAV to the nearest floor or trench drain. Piping from host pipe to CAV shall be SST, pipe from ARV to drain shall be SCH 80 PVC.

B. Air Release Valve (ARV)
   1. Description:
      a. AWWA C-512 combination air valve.
   2. General:
      a. Float operated and shall incorporate a simple lever mechanism to enable the valve to automatically release accumulated air from a fluid system while that system is pressurized and operating.
   3. End Connection:
      a. NPT Threaded.
   4. Materials of Construction:
      a. Body and Cover:
         1) ASTM A126 Gr.B Cast iron or ASTM A536 Gr 65-45-12 Ductile Iron.
      b. Float, seat, needle, linkage, all other internals, and hardware:
         1) 304 SST.
   5. Rated Pressure: 175 psi.
   6. Manufacturers:
      a. DeZURIK (APCO)/ARV.
      b. GA
      c. Crispin
      d. VAL-MATIC
   7. All ARVs shall include a SST ball valve for isolation. Contractor shall field route drain piping for ARV to the nearest floor or trench drain. Piping from host pipe to ARV shall be SST, pipe from ARV to drain shall be SCH 80 PVC.

2.5 ACTUATORS - MANUAL

A. Type: Hand-wheel, lever, chain-wheel, chainlever or operating nut.

B. Location
   1. Hand-wheel or Lever: Comply with Schedules
   2. Chain-wheel or Chainlever: All valves with centerline more than 6'-0" above the operating floor level.
   3. Operating Nut: 2 inch square, all buried valves unless otherwise specified in Schedules

C. Gearing
   1. Refer to individual valve specification.
   2. Location: All valves requiring operating torque in excess of that provided by maximum pull of 80 lb on hand-wheel or chain-wheel or maximum input of 150 ft lb on operating nuts.
   3. Design: Totally enclosed.

D. Chain-Wheel Operator Details
   1. Chain-Wheel: Manufacturer's standard design or sprocket wheel bolted directly to valve hand-wheel.
   2. Chain Length and Size: Provide aluminum alloy chain for all chain-wheel-operated valves. Length of chain shall be such that chain comes within 3'-6" of the floor.
   3. Chain-Hold Device: Equip each operator with 1/2-inch hook bolt located to hold chain from walking area.

E. Additional Butterfly Valve Operator Details
   1. Stop-limiting Devices: Provide for open and closed position.

2. Design: Adequate to avoid damage to all components from 200 lb pull on hand-wheel or chain-wheel operators, or 300 ft lb input torque on operating nuts.
3. Comply with all applicable AWWA standards.

2.6 ELECTRIC ACTUATORS - MODULATING

A. All electric actuators shall conform to the requirements of AWWA C-542.

B. All actuators shall be multi-turn type with gearbox, suitable for modulating service.

C. Refer to the valve schedule for service conditions.

D. Actuators shall contain motor, gearing, manual over-ride, limit switches, torque switches, drive coupling, integral motor controls, position feedback transmitter, and digital position indicator.

E. Motor
1. Designed for actuator service.
2. Induction type.
3. Insulation: Class H.
4. Protected by thermal switches imbedded in the motor windings.
5. Totally enclosed, non-ventilated.
6. Voltage: As indicated on the electrical drawings.

F. Actuator and Gearbox Enclosure:
1. Valves inside tanks, vaults, trenches, or other submersible locations: IPS 68.
2. All other locations: NEMA 4X.

G. External Fasteners
1. Stainless steel.
2. Fasteners on terminal compartments shall be captured to prevent loss while cover is removed.

H. Gearing
1. Oil-lubricated.
2. Designed to withstand full stall torque of the motor.

I. Manual Operation
1. Manual over-ride shall be by handwheel.
2. Manual operation shall be via power gearing.
3. Return from manual to electric mode of operation shall be automatic upon motor operation.
4. A seized or inoperable motor or power gearing shall not prevent manual operation.
5. Manual operation shall be possible with electric components removed.

J. Limit Switches
1. Limit switches shall be furnished at each end of travel.
2. Switch adjustment shall not be altered by manual operation.
3. Switches shall be capable of quick adjustment without removing covers.
4. Furnish two sets of normally open and two sets of normally closed contacts at each end of travel. Contacts shall be capable of reliably switching low voltage DC source from the control system.

K. Torque Switch
   1. Furnish torque switch at each end of travel.
   2. Switch shall trip when the valve load exceeds the switch setting.
   3. Switch adjustment device shall be calibrated directly in percent of torque.

L. Wiring: Wiring shall be terminated at a separately sealed terminal compartment.

M. Temperature Range: Actuator shall be capable of operating in an ambient temperature range of –20 to +160 deg F (with motor controls).

N. The required dynamic valve torque shall be no more than 60% of the electric actuator's maximum rated breakaway torque. Power gearing shall have zero backlash between the motor and actuator output.

O. All actuators shall be provided with the following:
   1. Feedback potentiometer.
   2. Reversing starter.
   3. Control transformer.
   4. Phase rotation correction.
   5. Monitor relay.
   6. Positioner capable of accepting a 4-20 mADC command signal and positioning the valve by comparing the command signal with the present valve position as indicated by the feedback potentiometer. The positioner shall be field adjustable to fail to the open, closed, or last position on loss of signal.
   7. "Open – Close" pushbuttons.
   8. "Local – Off – Remote" selector switch.
   9. Red and green indicating lights or LED's.

P. Manufacturer: AUMA.

2.7 ELECTRIC ACTUATORS – FOR ON/OFF SERVICE

A. All electric actuators shall conform to the requirements of AWWA C-542.

B. All actuators shall be multi-turn type with gearbox, suitable for modulating service.

C. Refer to the valve schedule for service conditions.

D. Actuators shall contain motor, gearing, manual over-ride, limit switches, torque switches, drive coupling, integral motor controls, and digital position indicator.

E. Motor
   1. Designed for actuator service.
   2. Induction type.
   3. Insulation: class H.
   4. Protected by thermal switches imbedded in the motor windings.
   5. Totally enclosed, non-ventilated.
   6. Voltage: As indicated on the electrical drawings.

F. Actuator and Gearbox Enclosure:
   1. Valves inside tanks, vaults, trenches, or other submersible locations: IPS 68.

2. All other locations: NEMA 4X.

G. External Fasteners
1. Stainless steel.
2. Fasteners on terminal compartments shall be captured to prevent loss while cover is removed.

H. Gearing
1. Oil-lubricated.
2. Designed to withstand full stall torque of the motor.

I. Manual Operation
1. Manual over-ride shall be by handwheel.
2. Manual operation shall be via power gearing.
3. Return from manual to electric mode of operation shall be automatic upon motor operation.
4. A seized or inoperable motor or power gearing shall not prevent manual operation.
5. Manual operation shall be possible with electric components removed.

J. Limit Switches
1. Limit switches shall be furnished at each end of travel.
2. Switch adjustment shall not be altered by manual operation.
3. Switches shall be capable of quick adjustment without removing covers.
4. Furnish two sets of normally open and two sets of normally closed contacts at each end of travel. Contacts shall be capable of reliably switching low voltage DC source from the control system.

K. Torque Switch
1. Furnish torque switch at each end of travel.
2. Switch shall trip when the valve load exceeds the switch setting.
3. Switch adjustment device shall be calibrated directly in percent of torque.

L. Wiring: Wiring shall be terminated at a separately sealed terminal compartment.

M. Temperature Range: Actuator shall be capable of operating in an ambient temperature range of –20 to +160 deg F (with motor controls).

N. The required dynamic valve torque shall be no more than 60% of the electric actuator's maximum rated breakaway torque. Power gearing shall have zero backlash between the motor and actuator output.

O. All actuators shall be provided with the following:
1. Reversing starter.
2. Control transformer.
3. Phase rotation correction.
4. Monitor relay.
5. "Open – Close" pushbuttons.
6. "Local – Off – Remote" selector switch.
7. Red and green indicating lights or LED's.

P. Manufacturer: AUMA.

2.8 PNEUMATIC ACTUATORS

A. General
1. Pneumatically operated spring return actuators of the rack and pinion design, totally enclosed in a single enclosure with no external moving parts.
2. Actuators shall travel a minimum of 95 degrees in each direction to allow for over travel adjustment.
3. Output torque shall be linear throughout travel.
4. Factory lubricated with no field lubrication required.
5. Capable of mounting in any position without loss of performance.
6. Suitable for both on/off and throttling applications.
7. Heavy duty mechanical limit switches with solid state analog position feedback.
8. Visual position indicator.
9. Dual travel stops.
10. Manual over-ride on solenoids.
11. Adjustable open/close speed control.
12. Output torque: 44,130 lb-in minimum.

B. Materials of Construction:
1. Body and Endcaps:
   a. Extruded, anodized aluminum alloy.
2. Pistons:
   a. Die cast aluminum alloy.
3. Output Shaft/Pinion:
   a. 304 SST.
4. Travel stops:
   a. Alloy steel.
5. Shaft bearings and piston guides:
   a. Acetal.
6. Fasteners:
   a. 304 SST.
7. Spring:
   a. Spring steel with protective coating.
8. O-ring seals:
   a. Buna-N.
9. Temperature Rating:
   a. -4 to 200 degrees F.
10. Pressure Rating:
   a. Up to 140 psig.

C. Manufacturer: Bray Series 93 or Engineer Approved Equal.

2.9 ACCESSORIES

A. Flow Straighteners (Inlet Flow Conditioners)
1. Provide where indicated on process drawings.
2. Provide a certified drawing including dimensions, weight, welding requirements, material designations, material thicknesses and flange details for review with pump submittal.
3. Provide flow conditioning grid design approved by a nationally recognized physical hydraulic modeling laboratory.

a. For pipe sizes larger than 18-inch provide a design based on physical hydraulic modeling by a nationally recognized physical hydraulic modeling laboratory

4. Design Criteria:
   a. Spool, Minimum Length: 1 x Pipe diameter
      1) Ends: Flanged: ANSI 150-lb standard
      2) Type: Van Stone flat face rings and back-up flanges
   b. Grid, Minimum Length: 1 x Pipe diameter
      1) Thickness: 0.125 inch (3 mm)
      2) Grid Spacing: 4 inch (100 mm) nominal
      3) Velocity: Maximum 7 ft/s (2.13 m/s).
5. Materials:
   a. Spool: Type 316L A778 welded stainless steel pipe, Schedule 10S
   b. Van Stone flat face rings and back up flanges: Type 316Lstainless steel
   c. Hardware: Type 316 stainless steel
6. Finish:
   a. Pickled and passivated
   b. Completely immerse for a minimum of 15 minutes in 10 percent nitric acid and 3 percent hydrofluoric acid at 125 degrees Fahrenheit, followed by a neutralizing rinse.
7. Manufacturers:
   a. Flow Optimizers, LLC.
   b. Or Engineer approved equal.

B. Fire Hydrants
1. Cast Iron, conform to AWWA C-502, dry-barrel type.
2. Bell Connection Size: 6-inch.
3. Pumper Connection: One 4-1/2-inch diameter NST connection.
4. Main Valve Opening: 5-inch diameter Storz fitting and cap.
5. Hydrants shall have a 5-1/4-inch bronze to bronze seat.
6. Depth of Bury:
   a. Watermain 12-inches and less in diameter: 5’-0”
   b. Watermains greater than 12-inches in diameter: 5’-6”
7. Threads on nozzles shall match those standard for local fire department.
8. All valve shall open left.
9. Manufacturers:
   a. Mueller A-423 Super Centurion
   b. Kennedy 81A
   c. Darling B62B
   d. Clow Medallion

C. Pressure Gauges and Compound Gauges
1. Dial Size:
   a. 4-inch minimum.
2. Accuracy:
   a. Not less than 1/2 of 1% of scale range.
3. Connection:
   a. 1/2-inch NPT male connection
4. Dampening:
   a. Provide dampener (Ashcroft No. 1106 or equal) for each high service discharge gage.
5. Manufacturers:

a. Ashcroft/Duragauge.
b. AMETEK/Solfront 1929.
c. McDaniels/MPB/SC.

6. Materials of Construction:
   a. Case:
      1) Phenolic, PET turret, or fiber reinforced thermoplastic.
   b. Internals and wetted parts:
      1) 316 SST.
   c. Dampening fluid:
      1) Glycerin.
7. Mounting and installation:
   a. Provide SST piping and isolation valve. Refer to detail on Drawings.
8. Gage Schedule:
   a. As shown on Drawings.

D. Y-strainer
1. Description: Sediment strainer to protect pipeline comments by removing suspended solids and impurities.
2. Manufacturer/Model
   a. Asahi/sediment strainer.
   b. Engineer approved equal.
3. End Connection:
   a. True Union.
4. Pressure Rating:
   a. 150 psig (85 psi for valves larger than 3”).
5. Screen Size:
   a. 20 mesh.
6. Materials of Construction:
   a. Body, screen support, end connection, union nut, retaining ring, and split ring:
      1) PVC with transparent body
   b. Filter screen:
      1) PVC.
   c. O-rings:
      1) EPDM (water service).
      2) PTFE (chemical service).
   d. Stop Ring:
      1) PVDF.

E. Quick Connect Coupling
1. Material: Polypropylene.
2. Ends: 150 lb. Flat face flange x female.
3. Provide polypropylene lockable cap.
4. Manufacturer: Banjo Corporation.

F. Valve Appurtenances
1. Valve Extension Stems, Stem Guides, Wrenches and Keys
   a. Extension Stem: Size at least as large as stem of operated valve.
   b. Intermediate Stem Guide(s): Install for extensions more than 8 feet long or as shown on the Drawings.
   c. Stem brackets and guides
      1) Cast iron having fully adjustable bronze bushed guide block.

2) Mounting: Comply with Division 40, Section “Pipe Supports”.
3) Stem brackets and guides located within the pre-treatment basins shall be 304 stainless steel as indicated on the drawings.

d. Operating nuts
1) Provide 2-inch square nut with each extension stem.
2) Locate in floor box or grating recess as required.

e. Number: Provide operating key or wrench of suitable length and size for each valve that is not readily accessible to direct operation.

G. Valve Floor Boxes
1. Location: Provide at all valves operated from floor above.
2. Construction
a. Material: Cast iron.
b. Depth: Metal floor slab thickness.
c. Cover: Cast iron with bronze bushing.

H. Expansion Joints
1. Expansion joint shall allow axial compression or expansion, lateral movement, and axial deflection.
2. Expansion joints shall be installed at the following locations:
a. Straight piping runs over 50 ft. and at least every 50 ft. for all interior PVC and CPVC chemical piping systems.
b. All locations as shown on the drawings.
3. Materials of Construction:
a. All Materials shall be NSF approved.
b. Elastomer:
1) EPDM.
c. Retaining rings:
1) 304 SST.
d. Control units, nuts, and washers:
1) 304 SST.
4. Install expansion joints in tension to facilitate removal.
5. Manufacturer/Model:
a. Proco/Style 231.
b. Engineer Approved Equal.

PART 3 - EXECUTION

3.1 VALVES, GATES AND ACCESSORIES: INSTALLATION

A. General
1. Install in accordance with Manufacturer's recommendations.
2. Install valves for convenient operation of hand-wheels or wrenches from the operating floor without interfering with access as acceptable to the Engineer or Owner.
3. Orientation of Valves
a. Install valves plumb and level unless otherwise approved.
b. Install valves free from distortion and strain caused by misaligned piping, equipment or other causes.

B. Fire Hydrants and Extensions
1. Fire Hydrants

a. Locate approximately as shown on the Drawings with final location and setting determined in field by Engineer.
b. Individually valve all new fire hydrant leads.
c. Use mechanical joint anchoring fittings as shown.
d. Install hydrants with suitable concrete backing and gravel fill for drainage as shown on Drawings.
e. Do not obstruct drain openings.

2. Hydrant Extensions
a. Provide complete, including barrel and stem sections, where shown on Drawings or directed by Engineer.
b. The Engineer or Owner reserves right to order extensions installed before or after hydrant setting.

C. Tapping Sleeves and Valves
1. Install where shown on the Drawings.
2. Install under pressure in strict accordance with Manufacturer's recommendations.
3. Satisfactorily test under 150 psi pressure prior to cutting operations. If leaks appear, make repairs and re-test.

D. Corporation Stops: Install at all points shown and where required to avoid air binding of piping systems.

E. Valve Appurtenances
1. Valve Boxes
a. Install plumb with the bodies centered directly over the valves.
b. Carefully tamp earth fill around each box to a distance of 4 feet on all sides.
c. Tamp earth fill to the undisturbed trench face, if less than 4 feet.

3.2 WORK AFFECTING EXISTING PIPING

A. Location of Existing Piping
1. Locations of existing piping shown shall be considered approximate.
2. Contractor is responsible for determining exact location of existing piping to which he must make connections, may disturb during earth moving operations, or may affect in any way by his work.

B. Removing Existing Pipelines from Service
1. Pipelines shall not be removed from service unless approved by the Engineer or Owner.
2. Notify the Engineer and Owner at least 48 hrs prior to taking pipeline out of service.

C. Work on Existing Pipelines
1. Cut piping as shown or required using machines designed specifically for this work.
2. Install temporary plugs to keep out all mud, dirt, water and debris.

END OF SECTION 40 0523

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 40 9000

PLANT INSTRUMENTATION AND CONTROL SYSTEM GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Provide all labor, materials, equipment, and incidentals as shown, specified, and required to furnish, install, calibrate, test, and place in satisfactory operation, instrumentation and control system equipment necessary to perform specified functions in accordance with the requirements of Sections 40 9XXX and the Drawings. The system includes, but is not necessarily limited to, the following equipment:

1. Primary sensor/transducers, field instruments, and associated mounting hardware as specified in Section 40 9100, Primary Sensors and Field Instruments.
2. Local control panels, monitoring panels, and existing panel modifications as shown on the Drawings.
3. An expansion of the existing plant-wide control system including processors, communication modules, input/output modules, operator interface stations, as specified and as shown on the Drawings.
4. Interconnecting cables, wiring, and associated components. Ethernet networking components such as switches, transceivers, fiber optic and twisted-pair patch panels and patch cables, and equipment enclosures as specified and shown in the Contract Documents and in Section 40 9553, Network Devices.

B. Configuration and programming of control system end devices such as but not limited to: instruments, device serial networks, actuator master stations, variable frequency drives, motor protection units, actuators, etc., shall be provided by the Contractor. Unit process logic residing in the process area PLC(s), OIT system and/or HMI system depicting the process monitoring and controls shall be provided by the Contractor.

C. This Section and the other Division 40 Sections illustrate and describe the overall instrumentation and control system functional and operational requirements.

D. Contractor shall conform to the requirements specified within Division 40 9000 for the selection of equipment and materials, installation methods, configuration and programming. In addition, it should be noted that Division 40 9000, Plant Instrumentation and Control System General Requirements, are not limited to work in this Division, but are also imposed for equipment and systems specified in other Divisions of the Contract Documents.

E. Related Sections:

1. Section 40 9100, Primary Sensors and Field Instruments
2. Section 40 9443, Plant Control System
3. Section 40 9513, Control Panels
4. Section 40 9553, Network Devices

1.2 REFERENCES

A. Reference Standards: The following organizations have generated standards that are to be used as guides in assuring quality and reliability of components and systems; govern nomenclature; define parameters of configuration and construction, in addition to specific details in this Specification and the Drawings.
   1. American National Standards Institute (ANSI)
   2. ANSI C1, "National Electrical Code" (NEC)
   3. Factory Mutual (FM)
   4. Institute of Electrical and Electronic Engineers (IEEE)
   5. Instrumentation, Systems, and Automation Society (ISA)
   6. Society of Automotive Engineers (SAE)
   7. National Electrical Manufacturers Association (NEMA)
   8. National Fire Protection Association (NFPA)
   9. National Institute of Standards and Technology (NIST)
   10. Scientific Apparatus Makers Association (SAMA)
   11. Underwriters Laboratories (UL)
   12. Occupational Safety and Health Administration (OSHA)

1.3 DEFINITIONS

A. Control System: The Control System shall be comprised of all the instrumentation and control system equipment throughout the Contract Documents, including but not limited to:
   1. Instrument loop components including, but not limited to: primary elements, sensors, transducers, transmitters, indicators, controllers, and recorders.
   2. Final operators or control elements including, but not limited to: control valves, solenoids, motors, adjustable frequency drives, and louver operators.
   3. Indicating and control devices including, but not limited to: operator interface terminals, pushbuttons, selector switches, pilot lights, recorders, and indicators.
   4. Ancillary components including, but not limited to: instrument power supplies, signal repeaters, signal isolators, current trips, adder/subtractor modules, relays, and timers.
   5. Instrumentation power requirements including, but not limited to: dedicated power, power conditioning, uninterruptable power supplies, and grounding systems.
   6. Cabinets, consoles, panels, and enclosures
   7. Alarm systems
   8. Boiler controls and control systems
   9. Controls for process equipment and systems including, but not limited to: service pumps, chemical systems, filtration, sample pumps, sump pumps, and treatment systems
   10. Motor controls
   11. Programmable controllers (PLCs)
   12. Distributed control systems (DCSs)
   13. Supervisory control and data acquisition systems (SCADA)
   14. Wiring and conduit
   15. Network Communication system equipment and wiring

B. Instrumentation and Control System Integrator: The instrumentation and control system integrator shall furnish a complete and integrated instrument and control system including, but not limited to: detailed design, engineering, fabrication, assembly, testing, checkout, commissioning, debugging, and training in accordance with the Contract Documents.

1.4 SYSTEM DESCRIPTION

A. General Design Requirements:

1. Power Supplies:
    a. All electrically powered equipment and devices shall be suitable for operation on 115 V +/- 10%, 60 Hz +/- 2 Hz power. If a different voltage or better regulation is required, a suitable regulator or transformer shall be provided.
    b. Appropriate 24 VDC power supplies for analog loop power shall be furnished for each two wire transmitter. Power supplies shall be mounted in control panels or enclosures.
    c. Provide power supplies sized for a minimum of 130% of the maximum simultaneous current draw of all connected load.
    d. A power on off switch or a molded case circuit breaker shall be furnished for each item requiring 120 VAC electrical power.
    e. Provide isolation transformers, transient voltage surge suppressers, line voltage regulators, and output line reactors for power distribution as required to eliminate electrical noise and/or transients entering on power lines.
2. Signal Requirements:
    a. The control system shall be designed to use 4 to 20 mA DC analog signals and/or digital communication networks as specified in Sections 40 9XXX, or as shown on Contract Drawings.
    b. Signal converters and repeaters shall be provided where required for proper interfacing. Power supplies shall be sized adequately for signal converter and repeater loads.
    c. Signals shall be isolated from ground. Shields of 4 to 20 mA and thermocouple 2-wire systems shall be grounded at a single point only. Ground 4 to 20 mA shields only at the control panel that contains the associated 2-wire loop power supply, unless shown otherwise. Ground thermocouple sensors at the thermocouple.
    d. This system will be used in a water treatment plant environment where there can be high energy AC fields, DC control pulses, and varying ground potentials between the sensors/transducers and the system components. The system design shall be adequate to provide proper protection against interferences from all such possible situations.
3. Miscellaneous:
    a. All new equipment provided shall be listed by Underwriters Laboratory or other testing agency as defined in these Specifications. Such listing requirements only apply for equipment where such listings exist.
    b. All instrumentation and control system components shall be heavy duty types, suitable for continuous service in a municipal water treatment plant environment.
    c. All similar components shall be products of a single manufacturer and shall consist of equipment which are currently in production and shall remain in production for at least 2 years.
    d. All instrumentation and control system components shall be designed to automatically return to accurate measurement within 60 seconds upon restoration of power after a power failure or when transferred to standby power supply.
    e. Surge and lightning protection shall be provided for all power supplies, field instruments, and all other control system components to protect against damage by electrical surges.
    f. All field mounted instruments and system components shall be designed for installation in high humidity and corrosive service conditions. All field mounted instrument enclosures, junction boxes, and appurtenances shall have a NEMA 4X endorsement, at a minimum. Hazardous areas require a NEMA 7 endorsement.

g. All components with interconnections to field devices shall be wired through terminal blocks. Integral terminals, such as that of a relay, are not an acceptable alternate.
h. All components furnished including field and rear of panel instruments shall be tagged with the item number and nomenclature indicated on the Contract Documents and/or approved Shop Drawings.
i. Ranges and scales specified herein shall be coordinated to suit field conditions and equipment furnished.
j. Field mounted devices, instruments and control panels/enclosures located outdoors shall be protected from exposure to freezing temperatures and from overheating due to prolonged exposure to high ambient temperatures and shall be provided with sunshields where necessary to protect the enclosure surfaces from the additional heating effects of exposure to direct sunlight.
k. Field instruments mounted in hazardous areas shall be provided as "factory sealed" units whenever available which can be installed in non-explosion proof enclosures in Division 2 areas and in explosion proof enclosures in Division 1 areas, in both cases without the need for conduit seals.

4. System Designs:
a. Range, scale, and setpoint values specified are for initial setting and configuration. Modifications to these values may be required based on actual equipment furnished and as necessary to implement proper and stable process actions which are determined as systems are placed in operation. These modifications shall be done by Contractor at no additional cost to the Owner.
b. For any items where ranges, scales, and setpoints may not have been specified, Contractor shall submit a recommendation to the Owner for review.

1.5 SUBMITTALS

A. Product Data: Control System Components Submittal Requirements:
1. Sensors/transducers and field instruments: Product data and Manufacturer's literature include the following:
a. Instrument Specification Form: SP20 Instrumentation Specification Forms were developed by the ISA Standards Committee for most commonly used instruments. Submit a completed SP20 instrument specification form for each instrument.
b. Manufacturer's product name and model number and all required accessories
c. Instrument tag number from Contract Documents
d. Manufacturer's standard catalog product data with irrelevant sections crossed out.
e. Description of construction features
f. Performance and operation data
g. Installation and mounting details, instructions, and recommendations
h. Identification of all wiring interconnections and points of connection
i. Service requirements
j. Dimensions
2. Programmable Controller (PLC) System Information:
a. System Description:
1) Detailed block diagram showing system hardware configuration and identifying manufacturers and model numbers of system components.
2) Format, protocol, and procedures for remote communications and local communications with input/output modules and peripheral devices
3) On-line and off-line capabilities for programming, system utilities and diagnostics

4) Input/output point listing with I/O module cross reference identification
5) List of repair parts and test equipment

b. Equipment Hardware:
1) Manufacturer's standard catalog product data for all system components
2) Layout drawings showing front, rear, end, and plan views to scale of all processing equipment, I/O components, power supplies, and peripheral devices.
3) Construction details, features, and procedures
4) Interconnection diagrams including termination details, cable identification lists, and cable lengths
5) Plans showing equipment layout in control panels
6) Installation requirements, instructions, and/or recommendations

c. Software Description:
1) Standard technical documentation covering all aspects of the programmable controller software functions and capabilities, including functional descriptions and programming procedures related to control, monitoring, logging, and alarming functions.
2) Documentation describing memory type, size and structure, and listing I/O and Data Table memory and size of memory available for programs.

3. Control Panel and Enclosure Information:
a. Layout Drawings shall include the following:
1) Front and plan views to scale
2) Dimensional information
3) Tag number and functional name of components mounted in and on panel or enclosure
4) Product information on all panel components:
a) Manufacturer's product name and model number
b) Instrument tag number from Contract Documents
c) Manufacturer's standard catalog product data with irrelevant information crossed out
d) Description of construction features
e) Performance and operation data
f) Installation and mounting details, instructions, and recommendations
g) Identification of all wiring interconnections and points of connection
h) Service requirements
i) Dimensions
5) Nameplate location and legend including text, letter size, and colors to be used
6) Location of anchoring connections and holes
7) Location of external wiring and/or piping connections
8) Mounting and installation details

b. Panel schematic and internal point-to-point wiring and/or piping diagrams shall include the following:
1) Name of panel or enclosure
2) Wiring sizes, types, and numbers
3) Piping sizes, types, and numbers
4) Terminal strip and block numbers for all interconnections.
5) Color coding
6) Functional name and manufacturer's designation for components to which wiring and piping are connected

c. Electrical control schematics in accordance with SAE HS-1738 standards for all circuits indicated in the specifications or on the Contract Drawings. Generic or typical wiring diagrams, not specific to equipment being provided, will not be accepted. Tables or charts to describe wire numbers will not be accepted. All wires shall be labeled and shown on the submittal drawings as shown on the sample drawings at the end of this Section.
d. Plan showing control panel and enclosure equipment layout in each area.
e. Stock lists or Bill of Materials for each panel including tag number, functional name, manufacturer's name, manufacturer's model number, and quantity for all components mounted in or on the panel or enclosure. Bill of Materials shall include the information shown on the sample drawings at the end of this Section.
f. Heat calculations for each panel or enclosure to verify that there is sufficient dissipation and/or generation of heat to maintain interior panel temperatures within the maximum and minimum operating temperature of all panel components with ambient temperatures as specified below.
g. Samples:
    1) One (1) sample nameplate for exterior panel mounting
    2) One (1) sample nameplate for interior panel device mounting
    3) One (1) sample terminal block
    4) Three (3) sample wire labels

4. Field Wiring (Riser) Diagrams:
    a. Shall include the following:
        1) Wiring and conduit sizes, types, and numbers
        2) Terminal strip numbers for each wire termination
        3) Color coding
        4) Location, functional name, and manufacturer's designation of items to which wiring and/or piping are connected
        5) Point to point wiring diagrams shall include all interconnections between field devices, panels, control stations, lighting panels, and motor starters.
5. PLC I/O Loop Wiring Diagrams:
    a. Prepare drawings on a module-by-module basis and include the following information:
        1) Rack numbers, module type and slot number, and module terminal point numbers. Also include location and identification of all intermediate panel and/or field terminal block and strip numbers to which I/O wiring and power supply wiring is connected. Identify all power supply circuit numbers and ratings.
        2) Wiring sizes, type, wire numbers and color coding
        3) Designation of conduits in which field I/O wiring is routed
        4) Location, functional name, tag numbers and manufacturer model numbers of panel and field devices and instruments to which I/O wiring is connected. For discrete I/O devices use P&ID electrical symbols tagged with designation shown on SAE HS-1738 drawings.

B. Operation and Maintenance (O&M) Manuals:
1. Operating and Maintenance Instructions, the Instrumentation and Control System O&M Manuals shall include:
    a. Name, address, and telephone number of each manufacturer's local service representative. Also include internet web site URL and email address when available.

b. Complete list of supplied system hardware parts with full model numbers referred to system part designations, including spare parts and test equipment provided.
c. Copy of all approved submittal information and system shop drawings as specified herein with corrections made to reflect all shop drawing review comments and the actual system as tested and delivered to the site for installation.
d. Manufacturer's Original Copies of Hardware, Installation, Assembly, Programming, and Operations Manuals for all control system components. Manuals shall include the following information:
    1) General descriptive information covering the basic features of the equipment
    2) Physical description covering layout and installation requirements and all environmental constraints
    3) Standard technical documentation covering the procedures for programming, operation, start-up, shutdown, and calibration of the equipment and explaining how the various control functions are performed.
    4) Principles of operation explaining the logic of operation; provide information covering operation to a component level.
    5) Maintenance procedures covering checkout, troubleshooting, and servicing; checkout procedures shall provide the means to verify the satisfactory operation of equipment, trouble-shooting procedures shall serve as a guide in determining faulty components, and servicing procedures shall cover requirements and recommended time schedule for calibration, cleaning, lubrication and other housekeeping and preventive maintenance procedures.
    6) Wiring, schematic, and logic diagrams
    7) Safety considerations relating to operation and maintenance procedures
    8) Manufacturer's recommended spare parts list with model numbers

2. After the initial Operating and Maintenance Instructions have received an acceptable disposition, the manual has been field verified and all final corrections have been made by the Contractor, submit 2 electronic versions of the approved manuals on CD to the Owner.
    a. The electronic color copy shall be an original, computer generated multi-page Portable Document Format (PDF) file. Scans or pictures of document text will not be accepted.
        1) Provide a hyperlinked and bookmarked colored index page hyperlinked and bookmarked to appropriate pages. There shall be a universal return to the index on all pages linking back to the index page.
        2) All oversized pages shall be properly sized (to original dimensions) and orientated correctly.
        3) Each PDF file shall be no larger than 100 Mb. Any additional files shall be suffixed with an underscore and a number indicating its position.
    b. Data files, such as those for drawings, source code, ladder logic, etc. shall be submitted in its native electronic format, in addition to PDF form for printing.
    c. If self-adhesive labels are provided, it must fully cover the CD and be exactly centered on the CD. The front surface of the CD shall contain the following type written information:
        1) Contract number
        2) Specification Section number
        3) Submittal number
        4) Brief submittal description
        5) Submittal date

C. Supplier's Qualifications:

1. Shall submit experience of successful instrumentation and control system equipment installations as specified in paragraph 1.6 of this Section.

D. Installation/Inspection Data:
   1. Prior to commissioning, furnish to Owner an installation inspection report certifying that all equipment has been installed correctly and is operating properly.
   2. The report shall describe the inspection and test procedure and include any repairs, modifications, or other work performed during the factory test or on-site.
   3. The report shall be signed by the Contractor and the system integrator's authorized representative.

E. Product/Material Certifications
   1. Submit to the Owner certified calibration certificates for field instruments and devices specified in Section 40 9XXX, a minimum of 3 weeks prior to commissioning.
      a. Receipt of any calibration certificate shall in no way imply acceptance of any work or instrument.
      b. The calibration certificates shall contain the information shown on the sample calibration certificate included at the end of this Section.
      c. Each calibration certificate shall be signed and dated by the authorized manufacturer's representative and Contractor.

F. Record Drawings and Documentation:
   1. All revised shop drawings and documentation shall be submitted to the Engineer to replace out dated drawings and documentation contained in the System O&M Manuals. Specific instructions for out dated drawing removal and replacement shall be provided with the record drawing submittal.
   2. Record Drawings shall include all data required to identify, locate, and trace circuits.
      a. Required data shall include, but not be limited to, equipment names, conduit numbers, boxes, conductor labels and colors, and terminals.
      b. Control Panel Layout Drawings shall include, but not be limited to, the following information:
         1) Bill of materials identifying all components
         2) Enclosure layouts (interior and exterior) including face, sides, back, and subpanels identifying all components
         3) Nameplate legend for all components
      c. Interconnect Wiring Diagrams shall include, but not be limited to, the following information:
         1) Identify all wiring components between each end device and PLC terminal(s).
         2) Conductor labels shall be consistent throughout loops.
      d. Control Diagrams shall include, but not be limited to, the following information:
         1) Index of equally spaced reference numbers along left side of Control Diagram
         2) Include terminal numbers/colors for each control component.
      e. Provide separate connection drawings for components requiring greater number of interconnects to maintain clarity of information.
         1) Information shall include terminal numbers, conductor labels, point, polarity, and function.
      f. Terminal strip drawings shall include terminal strip name, number, point, and conductor label on each side of terminal.

g. PLC rack layout drawings shall include physical module/slot configuration along with point number and description.

3. All Electrical and Instrumentation Record Drawings shall be submitted in hard copy format.

G. Commissioning Procedures and Documentation:

1. Provide the following approved and updated documentation for use before system commissioning.
   a. Complete panel schematic and detailed internal point-to-point wiring interconnect drawings
   b. Complete electrical control schematics
   c. Complete panel layout drawings
   d. Complete field wiring diagrams
   e. The drawings corrected and modified by the Contractor during commissioning shall form the basis for the "As-Built" record drawing requirement as specified in this Section.

H. Storage Requirements:

1. System Integrator shall submit to Owner the storage requirements and recommendations for the equipment prior to shipment.

1.6 QUALITY ASSURANCE

A. General:

1. The instrumentation and control system shall be furnished by a single supplier who shall assume responsibility for providing a complete and integrated system.
2. All equipment, components, and materials required shall be furnished by the single supplier who shall assume the responsibility for adequacy and performance of all items.
3. The supplier shall identify those system components which are not of his manufacture.
4. The supplier shall supply his company's quality assurance plan, and for components which are not of his manufacture, the component manufacturer's quality assurance plan. The plans shall include but not necessarily be limited to: method of testing, raw material criteria, methods of documentation, station control, "Burn In", final tests, serialization coding, and packaging.

B. Instrumentation and Control System Integrator's Qualifications:

1. Shall be a financially sound firm having at least 5 years continuous experience in designing, implementing, supplying and supporting instrumentation and control systems which are comparable to the instrumentation system in terms of hardware, software, cost, and complexity.
2. Shall have in existence at the time of bid advertisement, an experienced engineering and technical staff capable of designing, implementing, supplying, and supporting the instrumentation system and handling the submittal, testing, and training requirements.
3. Shall have an emergency response time ability of less than 4 hours to the project site.
4. Shall have a thorough working knowledge of water/wastewater treatment processes and control philosophy in accordance with standard practices of the water/wastewater treatment industry.
5. System Integrator shall be one of the following:
   a. Dublin Technical Systems, Inc. of Dublin, Ohio
   b. Dmytryka Jacobs Engineers, Inc. of Toledo, Ohio
   c. Quality Controls, Inc of Cincinnati, Ohio

C. Instrumentation and Control System Integrator's Responsibility:
   1. Contractor shall retain the system integrator to assume the responsibilities specified below. However, execution of these specified duties by the system integrator shall not relieve Contractor of the ultimate responsibility for the control equipment.
      a. Detailed design, engineering, fabrication, assembly, wiring, testing, and debugging of the instrumentation and control system in accordance with the Contract Documents, the reviewed submittal drawings, and all referenced standards and codes.
      b. Preparation, assembly, submission, and correction of all instrumentation and control system submittals in accordance with the Contract Documents.
      c. Proper integration and interfacing of the instrumentation and control system hardware, field devices, and panels including required interfacing with package control systems furnished by other equipment suppliers, with existing equipment, and with the plant electrical system.
      d. Supervision of the installation of the instrumentation and control system, instruments, panels, cabinets, wiring, and other components require.
      e. Calibration, testing, and startup of the instrumentation and control system.
      f. Training of Owner personnel in operation and maintenance of the instrumentation and control system.
      g. Handling of all warranty obligations for the control system components.

D. Coordination and Progress Meetings:
   1. Contractor and a representative of the system integrator shall be required to attend meetings applicable to this Section's scope of work.
   2. Representatives at the meetings shall have the competence and authority to make any and all necessary decisions. Decisions and statements made at the meetings shall commit the Contractor and system integrator to agreed procedures and schedules.

E. System Integrator Project Personnel:
   1. Contractor shall require the system integrator to provide the following project personnel:
      a. Project Manager:
         1) The system integrator shall appoint a project manager who shall coordinate and schedule all work and assure that the project schedule is met.
         2) The project manager shall act as the liaison with Contractor for the installation of the instrumentation and control system equipment and shall assist in all matters required for proper coordination and interfacing of the equipment and processes.
      b. Field Engineer:
         1) The system integrator shall appoint a field engineer with responsibilities as follows:
            a) Provide advice and technical consultation relative to installation techniques and procedures for equipment furnished.
            b) Provide guidance and support on-site throughout the control system installation and start-up period.
            c) Installed system checkout, calibration, adjustment, and start up including tuning of every control loop.
            d) Involvement in the onsite system training of plant personnel.
            e) Resolving of control problems encountered during initial startup and testing of all instrumentation and control equipment.

2) The field engineer shall have a minimum of 5 years experience in systems engineering and start up and shall have a thorough working knowledge of the hardware supplied for the instrumentation and control system.

c. The system integrator shall submit resumes for Field Engineer which detail their relevant experience as specified above.

1.7 DELIVERY, STORAGE AND HANDLING

A. Instrumentation and control system equipment shall be packaged at the factory prior to shipment to protect each item from damage during shipment and storage.

B. All equipment shall be handled and stored in accordance with manufacturer's instructions and relevant organization standards. Owner shall have the right to inspect stored equipment.

C. Packing and Shipping
1. Package equipment as required to protect it from damage.
2. Mount heavy items on pallets or skids to facilitate handling.

D. Acceptance at Site
1. Inspect all equipment at the time of delivery.
   a. Ensure that no damage has occurred during shipment.
   b. Verify make, model, and quantity.
2. Record the following information:
   a. Description/model of equipment.
   b. Date and time of delivery.
   c. Assessment of condition.
3. Handle equipment carefully to prevent damage.
4. Remove any damaged equipment from site and replace with new equipment.

E. Storage and Protection.
1. Store the equipment provided until it can be installed.
2. Provide a clean, dry, heated, and dust-free location for storage.
3. Such conditions must meet the requirements of the system integrator and manufacturer.

1.8 PROJECT/SITE CONDITIONS

A. Interior Locations: The following are defined as interior locations:
1. Any location within the boundaries of the foundation of any building.
2. Any location within the superstructure of other structures not classified as buildings.

B. Wet Locations: The following are defined as wet locations:
1. All exterior locations.
2. All interior locations below grade.
3. All interior locations where wet materials are processed, pumped, transported, or stored.

C. Corrosive Locations: The following are defined as corrosive locations.
1. All locations with chemical feed/transfer equipment
2. All locations with chemical storage tanks
3. All locations where chemical storage drums are located.

D. Environmental Conditions:
   1. The control system shall be designed and constructed for continuous operation without forming condensation under the following temperature and humidity conditions:
      a. Space Conditioned Areas shown on the Drawings:
         1) Ambient Temperature: normal conditions 59 to 90°F; abnormal conditions 40 to 104°F.
         2) Relative Humidity: normal conditions 20 to 80%
         3) Abnormal conditions up to 95%
      b. Indoor locations for control panels and instruments:
         1) Ambient Temperature: 40 to 120°F
         2) Relative Humidity: 0 to 100%
      c. Outdoor locations for instruments:
         1) Ambient Temperature: -30 to 120°F
         2) Relative Humidity: 0 to 100%

E. Wet and Corrosive Areas:
   1. Instruments and control system components shall be designed and constructed to provide adequate protection against corrosion from gases and chemical which are commonly found in water/wastewater treatment plant environments such as but not limited to zinc orthophosphate, ozone, oxygen, chlorine, and carbon dioxide.

F. Portions of the instrumentation and control system will be located in areas that may be subjected to excessive vibrations. The control system integrator/manufacturer shall specify any vibration limitations which are required for the equipment and provide vibration proof mountings accordingly.

G. Hazardous (Classified) Areas: Hazardous (classified) areas are defined as in accordance with the NEC, NFPA 820, and as shown on the Drawings. All equipment installed in these areas shall conform to requirements for installation in the designated hazardous area as described in Articles 500, 501, and 502 of the NEC.

PART 2 - PRODUCTS

2.1 GENERAL

A. Mounting Hardware: Provide mounting hardware meeting the requirements of Division 26.

B. Identification: Provide equipment identification meeting the requirements of Division 26.

C. Calibrators and Programmers
   1. Provide calibrators/programmers for all I&C equipment that cannot be calibrated from the controls built into the unit.
   2. Provide a minimum of one calibrator/programmer for each type of equipment supplied.

D. Adjustable Dead-Band
   1. Provide dead-band adjustment for all output contacts from all I&C equipment.
   2. Provide a minimum of ±10 percent adjustment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions
   1. Compare the site and existing facilities with the Contract Documents.
   2. With respect to the conditions of the premises, locate connections of existing facilities and any obstructions that may be encountered and conduct work to minimize disruption to existing conditions.

B. Field Measurements: Field-verify all locations and dimensions to ensure that the equipment will be properly located, readily accessible, and installed in accordance with all pertinent codes and regulations, the contract documents, and the referenced standards.

3.2 INSTALLATION - GENERAL

A. General
   1. Equipment locations as shown on the drawings are approximate unless dimensioned.
   2. Coordinate equipment locations with existing conditions and adjust locations as required.
   3. The Contractor shall furnish, fabricate, and mount all instrument stands and brackets. Mounting of stands and instruments shall be per installation detail drawings. All stands must be level, plumb, rigid, and free from vibration. Additional support shall be added where required for vibration-free mounting.
   4. Once instrumentation and control equipment has been set in place, Contractor shall maintain Space Conditioned Areas dust-free and with the following environmental conditions:
      a. Ambient Temperature: 65 to 80°F
      b. Relative Humidity: 50 to 70%
      c. Chlorine: ISA S71.04, Class G2 or better
   5. Provide temporary heating, cooling, dehumidification, humidification and air purification as necessary to provide the above conditions

B. Instrumentation wiring is shown schematically on the plan or described by narrative in the specifications. Contractor to provide type and quantity of wiring necessary to perform the function specified in Sections 40 9XXX and shown on the Drawings. See Division 26 wire and cable sections for "uses permitted." Analog signal conductors and discrete signal conductors shall always be in separate conduits or cable tray compartments. Power wiring shall be in conduits and cable tray compartments separate from all signal wiring.
   1. The Contractor shall terminate field wiring for equipment specified under this section. The system integrator shall check instrument installation and field wiring before instrument devices are electrically powered by Contractor. Wires shall be terminated at terminal blocks with crimp type, preinsulated tongue lugs. Lugs shall be of the appropriate size for the terminal block screws and for the number and size of the wires terminated. All signal shields shall have only one ground point that shall be located at the closest control panel. Seal around all conductors inside conduits as they enter equipment. Use watertight seal (closed cell RTU foam type) entering or leaving every building, box, or instrument. Install conduit water relief or "weep" on the system side of all seals to prevent intrusion of water into the equipment.
   2. Spare Wiring: Signal and interlock wiring shall contain spare conductors in every raceway. Spare conductors shall be provided in pairs and shall be clearly and distinctly marked at every access point indicated where the pairs start and stop. The minimum number of spare pairs shall be 25 percent of the number of active pairs with a minimum of one spare pair.

C. Valves

1. General Application: Use gate and ball valves for shutoff duty; globe and ball valves for throttling duty.
2. Access: Locate valves for easy access and provide separate support where necessary.
3. Unions: Install valves and unions for each fixture and item of equipment arranged to allow equipment removal without system shutdown.
4. Stems: Install valves in horizontal piping with stem at or above the center of the pipe.
5. Clearance: Install valves in a position to allow full stem movement.

D. Threaded Connections
1. Procedure
   a. Note the internal length of threads in valve ends, and proximity of valve internal seat or wall to determine how far pipe should be threaded into valve.
   b. Align threads at point of assembly.
   c. Apply appropriate tape or thread compound to the external pipe threads (except where dry seal threading is specified).
   d. Assemble joint, wrench-tight. Wrench on valve shall be on the valve end into which the pipe is being threaded.

E. Tagging
1. All instrumentation equipment shall be provided with identification tags in accordance with the plans and Division 26 Section “Electrical identification”. Each field instrument shall have a stainless steel tag.
2. The device tags shall be mounted using stainless steel screws.

3.3 ADJUSTING

A. Set Points: Alarm and control set points shall be adjusted to their operational values before the start of the field test.

B. Calibration: Calibration adjustments shall be performed before the start of the field test. Testing shall commence after calibration verification for each instrument is provided to the Engineer.

3.4 FIELD QUALITY CONTROL

A. Piping Tests: After piping systems have been put into service, inspect for leaks. Adjust pipes, valves, or fittings to stop leaks; replace equipment if leak persists.

B. Field Test
1. A technical representative of the system integrator and the Contractor shall perform a field test on the entire instrumentation and control system. All equipment provided by the system integrator and all interrelated equipment provided by other suppliers, such as pumps, blowers, valve operators, chemical feeders, motor controls, etc., shall be installed and operating properly before the test starts.
2. All test equipment and materials shall be provided by the system integrator.
3. As a minimum, the test shall consist of the following:
   a. All wiring shall be checked at each termination point for correct wire size, type, color, termination, and wire number.
   b. All instruments and devices shall be checked to verify compliance with the specifications and approved shop drawings. The calibration of analog devices shall be verified including the zero and span.

c. Analog wiring shall be checked for correct polarity and ground continuity at each termination point in the loop.
d. All digital inputs shall be activated at the field element to verify proper response on the OIT.
e. All analog inputs shall be tested at the field transmitter over a full range to verify proper response at OIT. Analog loops shall be verified at each termination point at 0, 25, 50, 75 and 100% signal levels.
f. All digital and analog outputs shall be forced, via the OIT, or PLC if necessary, to verify proper response at the final control element.
g. Communications shall be tested between all components, including existing equipment.
h. Verify proper calibration of all instruments by independent measurements, such as checking levels with a measuring rod or pole, performing drawdown tests on wells to check flow rates, performing laboratory tests on samples, etc.
i. Create temporary test conditions to simulate variations in process operation by throttling valves, controlling pump speed, shutting down process equipment, operating safety devices, etc. Where safety concerns or process limitations prohibit physical simulation and when agreed to by the Owner, simulated process signals may be used. Test conditions shall be sufficient to test the operation of every function of the instrumentation and control system including:
    1) Alarms and safety shutdowns.
    2) Equipment start/stop and speed controls.
    3) Pacing of chemical feed equipment.
    4) Recorders and indicators.
    5) Process controller operation and recovery from upsets.
    6) Programmable logic controller (PLC) or Supervisory Control and Data Acquisition (SCADA) system inputs and outputs.
    7) PLC or SCADA system programming.
j. The test shall be performed according to the test procedures submitted. As each phase of the test is completed, test data sheets shall be signed and dated. The test data sheets shall document any modifications to the control and alarm settings, process engineering unit changes, programming changes, wiring changes, problems encountered, and steps taken to solve the problems.
k. The commissioning effort shall be documented using forms similar to the sample Loop Validation/Inspection Tests form at the end of this Section.

3.5 CLEANING

A. Instrumentation System: The instrumentation system components shall be kept clean and free of dust during the storage, start-up, demonstration, and warranty period.

B. Control Panels and Consoles: Clean dust and dirt accumulation inside and outside control panels and consoles, on a monthly basis, during start-up and demonstration period.

3.6 DEMONSTRATION

A. General: The Contractor shall perform a 30-day operational demonstration of the complete instrumentation and control system. The demonstration shall conform to the following requirements. The 30-day operational demonstration shall not begin until the field test is completed and all problems and defects encountered during the field test have been corrected.

B. System Acceptance: System acceptance shall not occur until the entire instrumentation and control system has performed as a functioning unit continuously for 30 consecutive days without loss of control and monitoring function, except for periods of scheduled maintenance. Failure of any component, software function, or required function shall require a restart of the 30-day operational demonstration until 30 consecutive days of continuous operation have been completed.

C. Staffing: Provide for the services of a qualified service technician for the duration of the 30-day demonstration. The service technician shall be on call 24 hours per day, 7 days a week.

3.7 PROTECTION

A. The Contractor shall protect the instrumentation system components from water, dust, dirt, and corrosion during the start-up, demonstration, and warranty period.

3.8 INSTRUCTION OF PERSONNEL

A. Field Training: Training shall be conducted on all I&C equipment provided under the 40 9XXX series Sections, and related electrical and interfaces to equipment provided by other division sections. Training sessions shall be conducted as follows:
   1. Provide 40 hours of training by factory-authorized representative of equipment to Owner’s personnel.
   2. Training courses shall include hardware components emphasizing operation, calibration, maintenance, interface with other systems, and associated theory.
   3. Minimum Goals: Training shall incorporate operational requirements described in these specifications. Training shall provide the plant operations personnel with the following:
      a. Control set point and dead band modifications.
      b. Control system start-up and shutdown.
      c. Routine diagnostic checks and maintenance.
      d. Field instrument calibration and maintenance.
      e. Equipment diagnostic testing and replacement of failed parts.
   4. The process control system integrator shall submit a training program that provides the plant operations personnel a theoretical background and a broad range of related skills to achieve the listed goals. The instructor(s) shall be experienced in system applications similar to the equipment specified herein. The resumes of the training staff for instructing the plant operations personnel shall be available for review by the Owner. The plant operations personnel trainees shall be subjected to program testing, evaluation, and counseling. Study assignments shall be made and later reviewed by the instructors to the satisfaction of class attendees. Trainees shall be encouraged to freely ask questions during the instruction periods.
   5. The Contractor shall provide all classroom training courses and all hands-on training at the project site. Contractor shall provide tables, chairs, and all training documentation for training attendees.
   6. Provide text material for self-study and to supplement classroom lectures. The personnel attending the training courses shall be permitted to retain text materials for future reference.

B. The Contractor shall develop a training program tailored to the Owner's needs including type and quantity of treatment plant personnel, a curriculum of described courses, duration of courses, and training facilities. The Contractor shall submit for approval a detailed outline of the proposed training schedule, how the training courses are to be conducted, and estimated

dates for beginning and end of each training phase. The Contractor shall be responsible for the cost of the training program. The Owner shall be responsible for the trainee salaries and overhead costs.

PRIMARY SENSORS AND FIELD INSTRUMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Scope:
   1. Contractor shall furnish, install, calibrate, test, adjust, and place into operation the primary sensors and field instruments as shown on the Drawings and specified herein to the satisfaction of Owner.
   2. The Drawings and Specifications illustrate and specify functional and general construction requirements of the sensors and field instruments and do not necessarily show or specify all components, wiring, piping, and accessories required to make a completely integrated system. Contractor shall provide all components, piping, wiring, accessories, and labor required for a complete, workable, and integrated system.
   3. Contractor shall be responsible for installing in-line pressure and flow elements and for providing taps in the process piping systems for installation of other flow and pressure sensing instrumentation.

B. Coordination: Coordinate with other suppliers for installation of all items specified herein and required to ensure the complete and proper interfacing of all the components and systems.

C. Related Sections:
   1. Section 40 9513, Control Panels

1.2 REFERENCES

A. AMSE B40.100, Pressure Gauges and Gauge Attachments

B. ASTM A269, Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service

C. ASTM A312/A312M, Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes

D. ASTM A403/A403M, Standard Specification for Wrought Austenitic Stainless Steel Piping Fittings

E. ASTM B88, Standard Specification for Seamless Copper Water Tube

F. National Accreditation of Measurement and Sampling (NAMAS)

G. NEMA 250, Enclosures for Electrical Equipment

H. National Institute of Standards and Technology (NIST)

1.3 SUBMITTALS

A. Comply with Section 40 9000, Instrumentation and Control System General Requirements

PART 2 - PRODUCTS

2.1 IDENTIFICATION TAGS

A. Type: White engraved phenolic

B. Function: Identify specific characteristics of all sensors and field instruments. All instruments, whether field or panel mounted, shall have an identification tag.

C. Performance Requirements:
1. Tag numbers of sensors and field instruments shall be as shown on the drawings and as specified. For items not shown or specifically tagged, the item tag number shall be established by the system supplier.
2. Information to be permanently engraved onto the tag shall include the identifying tag number, manufacturer, model number, service, and range.
3. The tags shall be fastened to the device with self-tapping stainless steel screws. Where fastening with screws cannot be accomplished secure with 1/8 inch stranded stainless steel wire rope and secured with a crimp sleeve. Provide hole in end of tag for attachment of wire.
4. All sensors and field instruments mounted on or within control panels and enclosures shall have the identification tag installed so that the engravings are easily visible to service personnel. Panel mounted devices shall have the tag attached to the rear of the device.

D. Construction Features:
1. Tags shall be engraved with 3/16-inch letters and constructed as follows:
a. 1/8- inch thick laminated phenolic for engraving composed of core laminated on both sides with a matte (non-glare) finish cover sheet
b. Core to be black; cover sheet to be white
c. Mounting holes to be centered on width and 1/4 inch from each end

2.2 LEVEL INSTRUMENTATION

A. RADAR LEVEL METER
1. Type: Non-contact system using a microwave transmitter/receiver, a horn or rod antenna and a microprocessor-based signal processor. Frequency modulated continuous wave of electromagnetic energy is transmitted through the antenna towards the surface of the material to be measured and energy is reflected back in the form of echoes. The transit time of the reflected radar signal is measured and evaluated in the signal processor. The level (or volume) of the material is read out in engineering units.
2. System Performance Requirements:
a. Accuracy:
1) Less than 32 feet: +/- 0.6 inches or better
2) Greater than 32 feet: +/- 0.3 percent of span or better
b. Maximum range: 65 feet
c. Repeatability: +/- 0.1% or better
d. Frequency: 25 GHz
e. Modulation: Frequency Modulated Continuous Waveform (FMCW)
f. Power Requirements: 24 VDC loop power
g. Transmitter analog output: 4 to 20 mA, 750 ohm maximum load
h. Transmitter digital output protocol: HART

i. Ambient Temperature: +15 to 25°C

3. Required Features:
   a. Antenna:
      1) Mountings: Flange mounting
      2) Rod Antenna Material: PTFE
      3) Flange and mounting hardware material: Type 316 stainless steel
      4) Maximum transmitter power: 30 microwatts
   b. Transmitter/Processor:
      1) Enclosure: Copper-free Aluminum, epoxy coated, NEMA 6, IP67
      2) Operator Control: Illuminated LCD. Programming by keypad or non-invasive programming using handheld programmer or magnetized probe
      3) Memory: non-volatile ROM/EEPROM
   c. Accessories:
      1) Handheld programmer
4. Manufacturer and Model:
   a. Series SITRANS LR250 as manufactured by Siemens
   b. Or approved equal

B. LIQUID POINT-LEVEL SWITCH
1. Function: To sense specific level for a process fluid by means on RF admittance technology. An output relay is actuated when the sensing element comes in contact with the process fluid.
2. Features:
   a. Field selectable for low or high level detection.
   b. Sensing element material: Suitable for the process liquid.
   c. Mounting: ¾" NPT for mating to non-metallic flange.
   d. NEMA 4X/IP66 Housing
   e. Area classification: General purpose
3. Electrical Characteristics:
   a. Electronics mounted integral to sensor
   b. Single DPDT relay contacts rated at 5A @ 120VAC
   c. Relay time delay adjustable up to 60 seconds response time
   d. Input Power: 19-250VAC, 18-200VDC, auto sensing
4. Manufacturer and Model:
   a. Model ThePoint as manufactured by AMETEK Drexelbrook
   b. Or approved equal

C. FLOAT SWITCH
1. Type: Direct acting, pear shaped, eccentric weighted, displacement type liquid level sensor
2. Construction Features:
   a. Float Body: Hollow hermetically sealed, rigidly molded of polypropylene containing mechanical switch and eccentric metal weight
   b. Mechanical Switch: SPDT switch rated 10 A resistive at 120 VAC and 5 A resistive at 30 VDC
   c. Weight: Weight to cause sensor to hang straight down from cable when not immersed and only allow float to pivot when immersed in liquid of specific gravity 1.0. External weights or floats that completely rise to the surface will not be permitted.
   d. Electrical Cable:

1) Heavy duty, 3 conductor, flexible and submersible cable, sheathed in PVC or chlorinated polyethylene rubber and connected to float and switch with watertight seal
2) Manufacturer's continuous length cable furnished shall be of sufficient length to extend to junction box.

3. Manufacturer and Model:
   a. Model ENM-10 as manufactured by ITT Flygt
   b. Or approved equal

D. WET FLOOR DETECTION SWITCH
1. Type: A direct acting float that moves up and down a stationary stem or rod surrounded by a permeable shield for protection and to minimize sloshing. The float shall rise or lower with liquid level and activate a magnetic switch within the stem or rod.
2. Features:
   a. Float body: 316 Buna N with magnet in float for actuating switch in rod. Float shall rise when immersed in water.
   b. Mechanical switch inside of rod: Hermetically sealed reed switch
   c. Rod material: Type 316 stainless steel
   d. Slosh and Protection Shield: Polycarbonate Plastic
3. Manufacturer and Model:
   a. LS-270 Series as manufactured by Gems Sensors
   b. Or approved equal

E. WET FLOOR DETECTION SWITCH (CHEMICAL AREAS)
1. Function: To detect wet floors in the chemical containment areas.
2. Type: A direct acting float that moves up and down a stationary stem or rod. The float shall rise or lower with liquid level and activate a magnetic switch within the stem or rod.
3. All wetted components shall be fully compatible for continuous immersion in chemical solutions.
4. Features:
   a. Float body: CPVC with magnet in float for actuating switch in rod. Float rises when immersed in water.
   b. Mechanical switch inside of rod: Hermetically sealed reed switch.
   c. Rod material: CPVC
   d. Mounting Bracket: Provide a wall mount bracket constructed of chemically-compatible material. Bracket shall position detector as close to floor as possible and allow full adjustment of detector position.
5. Manufacturer and Model:
   a. LS-74780 Series as manufactured by Gems Sensors.
   b. Or approved equal

F. SUBMERSIBLE LEVEL TRANSMITTER
1. Type: Submersible piezoresistive element measuring the level with reference to atmospheric pressure.
2. Performance Requirements:
   a. Accuracy: +/- 0.25% full scale
   b. Range: See Schedule
   c. Power: 12-30VDC loop power
   d. Transmitter Output: 4-20mADC, 2-wire loop powered
   e. Temperature Range: 0-180°F
   f. Pressure Limit: 2x full scale

3. Required Features:
    a. Mounting: As shown on the drawings.
    b. Housing: 316SS with 1/2" NPT and ETFE Cable
    c. Electrical Protection: Lightning and Surge protection
4. Manufacturer and Model:
    a. Model PBLT2 by Dwyer Instruments
    b. Or approved equal

2.3 FLOW INSTRUMENTATION

A. MAGNETIC FLOWMETER

1. General:
    a. Flowtube: Produce low level, high impedance pulsed DC signal proportional to the rate of fluid flow using the principle of electromagnetic induction.
    b. Pulsed DC Magnetic Flow Transmitter: Drive the flowtube coils with pulsed DC power and convert the flowtube output signal into a DC current output proportional to the flow rate.
2. System (Flowtube and Transmitter) Performance Requirements:
    a. Flow Range: As specified in the Instrument Schedule
    b. System Accuracy (with Analog Output): +/- 0.55% of flow rate or better over range from 2 fps to 33 fps
    c. System Repeatability: +/- 0.15% of flow rate or +/- 0.15 fps, whichever is greater
    d. Drift: Complete 0 stability
    e. Minimum Fluid Conductivity Limit: 5 micromho per centimeter or less
    f. Transmitter Outputs:
        1) 4 to 20 mA, direct acting and isolated
        2) High accuracy, field adjustable scaled pulse output to drive local totalizer
    g. Power Consumption: Not to exceed 20 VA for flowtube and transmitter combined
    h. Operating Temperature: Suitable for operation with process fluid temperature from -23 to 140°F
    i. Pressure Rating: Greater than or equal to test pressure specified in Section 40 0513, Exposed Piping Installation, for appropriate piping system
3. Construction and Required Features:
    a. Flowtube:
        1) Type: Lined metal flowtubes
        2) Size: As specified in the Instrument Schedule
        3) Interchangeability: Ratio of flow velocity to voltage reference signals generated shall be identical for all meter sizes to permit interchangeability with transmitter without requiring circuit modifications.
        4) System accuracy specified above shall be proven by submittal of flow test curves of the actual meters being furnished.
        5) Test curves shall show a minimum of 8 equally spaced flow points. Tests shall be performed using water and a weight or volume tank, or reference meters that are traceable and calibrated to NAMAS or NIST standards.
        6) Tube Material:
            a) Meter tubes 12 inches and smaller: Type 304 stainless steel
            b) Metering tubes 14 inches and larger: Type 304 stainless steel, 0.125-inch wall thickness or greater
        7) Electrodes Material: Type 316 stainless steel, unless otherwise specified in the Instrument Schedule

8) Lining: Teflon®, Elastomer, Neoprene, or polyurethane unless otherwise specified in the Instrument Schedule
9) Enclosure:
a) Materials and Rating: Stainless steel, polyurethane coated sheet steel, or cast low-copper aluminum alloy NEMA 6P, submersible to 33 feet
b) Finish: Finish exterior, except for flange faces, with a high build epoxy paint
10) End Connections: ANSI Class 150 pounds flange suitable for mating with pipe specified
11) Electrical Connections: 1/2-inch NPT tapped holes for power conduit fitting and signal conduit fittings

b. Pulsed DC Magnetic Flow Transmitter:
1) Solid state construction
2) Pulse and analog output with superimposed HART communication protocol. Outputs shall be galvanically isolated from input and earth ground
3) Automatic zeroing feature making it unnecessary to zero the instrument before or after placing it in operation
4) Precalibrated span adjustment providing continuous span adjustment over entire range
5) Enclosure:
a) NEMA 4
b) Finish: Epoxy coating
6) Mounting:
a) All transmitter and driver electronics shall be remotely mounted from the flow tubes at locations shown on the Drawings.
b) Provide complete stainless-steel mounting hardware
c) Type of mounting (wall, support frame or pipe stand) as required
7) Local Indication:
a) 8-character minimum LCD with field selectable engineering units
8) Power Requirements: 115 VAC +/- 10%, 60 Hz, +/- 3 Hz power supply

c. Accessories:
1) Manufacturer's recommended cables of sufficient length for connection between flowtube and transmitter electronics
2) Type 316 stainless steel grounding rings for flowtubes
3) Type 316 stainless steel grounding straps
4) Provide a NEMA 4X rated 120 VAC power on-off switch.
5) Provide spool piece for replacement of each different size flow tube where no bypass piping is provided.
6) Provide 1 calibrator suitable to calibrate all flow tubes provided.

4. Manufacturer and Model:
a. Sitrans Series 5100 flow tube and 5000 Series transmitter as manufactured by Siemens
b. Or approved equal

B. CLAMP-ON FLOWMETER
1. General
a. The meter shall be a clamp-on design which mounts externally to the pipe and with no liquid contact.
b. The meter shall utilize the transit-time measurement technique and employ the use of two microprocessors.

c. The meter shall also employ an alternate Doppler measurement technique for liquids with high solid content. The meter shall automatically toggle from transit time to Doppler measurement if the signal decays due to high solids content and toggle back once the signal improves. The time delay for the toggle feature shall be programmable.
d. Transducers shall be supplied with multi-point wet flow calibration certificate and shall have an accuracy of +/- 1%.

2. Transducer Features
   a. Transducers shall have built-in RTD for measuring the transducer block temperature and automatically compensating for temperature effects including changes in fluid viscosity and density.
   b. Transducers shall be encased in stainless steel with an integral armored stainless steel jacketed TRIAX cable. The use of COAX and BNC cable is not acceptable.
   c. Transducers shall be mounted in a full sealed stainless steel mounting track and have the ability to be coupled using permanent coupling pads. Use of grease is not acceptable.
   d. Transducer markings shall be laser scribed and solvent resistant. Use of adhesive labels is not acceptable.
3. Meter features
   a. The meter shall have the ability to automatically recognize the transducers when they are connected.
   b. The meter shall not require a "zero calibration" in the field. The zero calibration shall be factory pre-set and certified prior to shipment.
   c. The meter shall have the ability to automatically calculate the Reynolds number and corresponding flow regime (laminar, turbulent, and transitional).
   d. The meter shall provide automatic liquid sonic velocity compensation, and have built in liquid tables for liquid viscosity and density settings.
   e. The meter electronics shall be housed in a NEMA4X enclosure and shall display flow rate, flow velocity, mass flow, total flow, signal strength, signal quality, liquid sonic velocity, and the flow regime.
   f. The meter shall be capable of outputting multiple 4-20ma signals, voltage 0-1 V or 0-10 V high precision frequency 0-1 kHz or 0-10 kHz galvanically isolated, RS-232, RS-484, binary output pulse of alarm for relay total and meter status.
   g. The meter shall have the ability to status alarm for conditions of fault, flow direction, sound velocity limit, and flow velocity limit.
   h. The meter shall have the ability to set the 4-20 ma signal to a settable status and alarm condition.
   i. The meter shall have RS-232 output and internal memory with a minimum storage of 100,000 data points.
4. Accessories
   a. Provide all necessary straps and anchors to affix the transducers to the pipe and meter to the wall.
   b. Provide all necessary cables for connection between the transducers and the meter.
5. Sizes and Ratings
   a. System Accuracy: ±1.0 percent of rate from 0 to 100 percent of range.
   b. Meter shall read within the prescribed accuracy with fluid velocities from 0.01 feet per second to 57 feet per second.
   c. Drift: Complete zero stability.
   d. Process Fluid Temperature: 40 to 120 deg F
6. Warranty

a. Strap on flowmeter shall include a minimum 1 year factory warranty. Field service shall be included at no additional cost during the warranty period.

7. Manufacturer: Subject to compliance with the requirements of this specification, available manufacturers of clamp-on flow meters include, but are not limited to, the following:
   a. Flexim 7407
   b. Or approved equal

C. CHEMICAL FLOWMETER

1. Provide flow sensors to assure that chemical is being delivered. Sensors shall be installed at the point of injection and shall operate from 50% to 150% of the typical service flow as show in the flow meter schedule.
2. Materials of Construction
   a. Body: 316 SST
   b. Pistons: Carbon
   c. Bearing: Rulon
   d. O-rings: Teflon
3. Minimum Accuracy:
   a. +/- 5% at flowrates of 7 to 29 mL/min
   b. +/- 10% at flowrate of 3 to 90 mL/min
4. Manufacturer:
   a. Max Machinery, Model 234, with 4-20 mA output

2.4 PRESSURE INSTRUMENTATION

A. DIGITAL PRESSURE TRANSMITTER/SWITCH

1. Type: Gauge pressure.
2. Function: Provide analog output signal directly proportional to sensed pressure.
3. Performance Specifications:
   a. Adjustable Range: See Instrument Schedule
   b. Number of Switches and Setpoints: One.
   c. Setpoint Accuracy: 0.5% of full range span.
   d. Power Supply: 10-36Vdc loop-power.
   e. Outputs:
      1) Analog: 4-20mAdc isolated.
      2) Discrete: SPST rated for 300mA @ 120VAC
4. Required Features:
   a. Repeatability: 0.1% of full range span.
   b. Programmable response time delay: 2 seconds minimum.
   c. Programmable for automatic or manual reset.
   d. Field adjustable setpoint over full range by means of external touchpad.
   e. Display: 0.5” 4-digit (minimum), LCD.
   f. Screw type terminals.
   g. ½” NPT female process connection.
   h. ½” NPT female electrical connection.
   i. Pressure sensor element shall be 316SS.
   j. NEMA 4X epoxy-coated aluminum enclosure.
   k. Programming and data shall be protected by non-volatile EEPROM.
5. Manufacturers:
   a. United Electric Controls, One Series.
   b. Or approved equal

B. PRESSURE TAPS, SENSING LINES, AND ACCESSORIES

1. Water Pressure Sensing Lines and Accessories for Flow and Pressure Transmitters:
   a. Material: Copper Water Tube, ASTM B88, Type L, drawn temper or annealed
   b. Pressure Rating: 150 psi
   c. Size: 1/2-inch outer diameter for water
   d. Connections: Brass Compression Type, "Swagelok" by Crawford, or approved equal
   e. Shut-off Valves:
      1) Type: Ball
      2) Pressure Rating: 150 psi
      3) Body, Ball and Stem: Brass
      4) Packing: High Density TFE
      5) Handle: Nylon with metal travel stops
      6) Support Rings: TFE coated brass
      7) End Connections: Removable "Swageloks"
      8) Model: Whitey Series 40 for water, or approved equal
   f. Manifolds:
      1) Type: 5-valve and 3-valve meter manifolds
      2) Materials: 316 SS Body, Bonnets and Stems; Delrin seats; Teflon Packing
      3) Manufacturer: Anderson-Greenwood, or approved equal
2. Air Pressure Sensing Lines and Accessories for Air Flow/Pressure Transmitters:
   a. Material: Type 316 Stainless Steel Tubing, ASTM A269, Medium Wall Thickness
   b. Pressure Rating: 150 psi
   c. Size: 3/8-inch outer diameter for air
   d. Connections: 316 Stainless Steel Compression Type, "Swagelok" by Crawford, or approved equal
   e. Shut-off Valves:
      1) Type: Ball
      2) Pressure Rating: 150 psi
      3) Body, Ball and Stem: Type 316 Stainless Steel
      4) Packing: High Density TFE
      5) Handle: Nylon with metal travel stops
      6) Support Rings: TFE coated Type 316 stainless steel
      7) End Connections: Removable "Swageloks"
      8) Model: Whitey Series 40 for air, or approved equal
3. Manifolds:
   a. Type: 5-valve and 3-valve meter manifolds
   b. Materials: Type 316 stainless steel Body, Bonnets and Stems; Delrin seats; Teflon Packing
   c. Manufacturer: Anderson-Greenwood, or approved equal
4. Pressure Tap Sensing Lines and Accessories for Pressure Switches and Pressure Gauges:
   a. For Process Sensing Taps in Ductile Iron, Steel and Stainless Steel Piping Systems:
      1) Material and Fittings: Type 304L Stainless Steel Pipe (ASTM A312) and threaded fittings and adapters (ASTM A403) in accordance with Section 40 0513, Process Piping.
      2) Sizes: 1/2 inch minimum for main sensing piping and 1/4-inch gauge and switch connections
      3) Pressure Rating: Equal to or greater than the applicable system test pressure as specified in the Schedule in Section 40 0513, Process Piping.
      4) Accessories:

a) For applications not requiring diaphragm seals, provide separate 1/2-inch stainless steel threaded ball valve for each gauge and switch.
b) For applications requiring diaphragm seals, provide separate 1/2-inch threaded stainless-steel ball valve for seal process side shutoff. Ball valves shall be provided in accordance with the specifications in Section 40 0523, Process Valves, Gates, and Accessories.

b. For Process Sensing Taps in Copper and Thermoplastic Piping Systems:
1) Pipe Material and Fittings: Use same type of pipe material and fittings as that used in the process piping system. PVC pipe and fittings shall be provided in accordance with the requirements of Section 40 0513, Process Piping.
2) Sizes: 1/2 inch minimum for main process sensing piping and 1/4 inch for gauge and switch connections
3) Pressure Rating: Equal to or greater than the applicable system test pressure as specified in Section 40 0513, Process Piping.
4) Accessories:
a) For copper piping system taps with or without seals, provide a separate 1/2-inch minimum threaded brass or bronze ball valve for each gauge and switch.
b) For PVC piping systems with or without diaphragm seals, provide a separate 1/2-inch threaded PVC ball valve for process sensing line shutoff. Ball valves shall be provided in accordance with the specifications in Section 40 0523, Process Valves, Gates, and Accessories.

C. DIAPHRAGM SEAL
1. General: Furnish diaphragm seals for pressure gauges and switches at locations shown and as specified.
2. Required Features:
a. Provide fill/bleed screw to permit filling of instrument and diaphragm seal
b. Instrument Connection: 1/4-inch NPT
c. Process Connection: 1/2-inch NPT
d. Working Pressure Rating: Equal to or greater than the attached gauge or switch operating pressure specified in Exposed Piping Schedule in Section 40 0513, Process Piping, whichever is greater
e. Bolting Materials: Type 316 stainless steel
f. Provide a clean-out ring which holds the diaphragm captive in the upper housing to allow the upper housing assembly to be removed for recalibration or cleaning of the process side housing without the loss of filling liquid or change in calibration.
3. Construction Features:
a. Top Housing: Type 316 stainless steel
b. Diaphragms, O-rings and Gaskets:

Process Fluid	Diaphragm	O-Ring	Gasket
Chlorine Gas	Teflon	Teflon	Teflon
Chlorine Solution	Teflon	Teflon	Teflon
Alum	Teflon	Teflon	Teflon
Lime	316 SS	Teflon	Teflon
Sodium Hypochlorite	Teflon	Teflon	Teflon
Sludge	316 SS	Buna-N	Buna-S

c. Process Side Housing Material: 316 stainless steel for metallic piping; PVC or CPVC to match non-metallic piping
d. Sensing Liquid: Use silicone except for process fluids containing chlorine. When the process fluid contains chlorine, the filling liquid shall be Halocarbon 63 or Flurolube 63.

4. Assembly and Calibration:
   a. The complete diaphragm seal assembly, including gauge, switch or transmitter, shall be factory assembled, filled and calibrated to the ranges and switch setpoints specified prior to shipment.
   b. CONTRACTOR shall be responsible for assuring that fill volumes and sensitivities of the supplied seals and diaphragms are suitable to provide the required gauge, switch or transmitter accuracy over the specified measurement range or at switch setpoints.
   c. Location and orientation of the gauges, switches and seal assemblies shall be coordinated with the actual piping and equipment installations so that gauges and indicators shall be easily read and accessed for maintenance by plant personnel.
5. Manufacturer and Model:
   a. Type 101 as manufactured by Ashcroft
   b. Or approved equal

2.5 TEMPERATURE INSTRUMENTATION

A. DIGITAL TEMPERATURE TRANSMITTER

1. Function: Provide analog output signal directly proportional to sensed temperature.
2. Performance Specifications:
   a. Adjustable Range: See Instrument Schedule
   b. Number of Switches and Setpoints: One.
   c. Setpoint Accuracy: 0.5% of full range span.
   d. Power Supply: 10-36Vdc loop-power.
   e. Outputs:
      1) Analog: 4-20mAdc isolated.
      2) Discrete: SPST solid state rated for 600mA @ 120VAC
3. Required Features:
   a. Repeatability: 0.1% of full range span.
   b. Programmable response time delay: 2 seconds minimum.
   c. Programmable for automatic or manual reset.
   d. Field adjustable setpoint over full range by means of external touchpad.
   e. Display: 0.5” 4-digit (minimum), LCD.
   f. Screw type terminals.
   g. ½” NPT female process connection.
   h. ½” NPT female electrical connection.
   i. Temperature sensor element shall be 316SS.
   j. NEMA 4X epoxy-coated aluminum enclosure.
   k. Programming and data shall be protected by non-volatile EEPROM.
4. Sensor: Provide local sensor unless shown otherwise on the Drawings.
5. Manufacturers:
   a. United Electric Controls, One Series.
   b. Or approved equal

2.6 ANALYTICAL INSTRUMENTATION

A. RESIDUAL CHLORINE ANALYZER

1. Description: Amperometric chlorine probe for reagentless free chlorine measurement.
2. Analyzer
   a. Number of Sensors: Up to four (4)
   b. Number of Analog Outputs: Up to four (4)
   c. Display: 4" minimum, color.
   d. Power: 120V
   e. Output: 4-20 mA
   f. Enclosure: NEMA 4X FRP
   g. Maximum Dimensions: 11" x 13" x 6" (W x H x D)
   h. Note: Where possible combine multiple sensors/probes on a single analyzer/transmitter.
3. Probe
   a. Type: Membrane-covered amperometric three-electrode system
   b. Measured: Free residual chlorine
   c. Probe range: 0.05 -5 mg/L
   d. Resolution: 0.01 mg/L
   e. Reproduction: ±5%
   f. Stability: -1% per month (without calibration)
   g. Working electrode: Gold catholde
   h. Counter electrode: SST anode
   i. Reference electrode: silver/silver halide
   j. Temperature range: 41 to 113 degrees F
   k. pH Range: 4-9 s.u.
   l. First polarization time: 120 minutes
   m. Re-polarization time: 30 minutes
   n. Calibration: Manual using DPD
   o. Housing Material: PVC
4. Accessories:
   a. Flow cell: Provide a polycarbonate flow cell and backplate. Provide dual flow cell in instances where two probes are required. Mount using 304 SST hardware.
5. Spare Parts:
   a. Two (2) membrane caps per chlorine sensor.
6. Product and Manufacturer:
   a. Chemtrac HydroACT HA4 analyzer, CP4 probe.
   b. Foxcraft FX-CL-F analyzer, 301254X probe.

B. pH/OXIDATION REDUCTION POTENTIAL (ORP) ANALYZERS

1. Description: Three electrode (process, reference, and ground) differential pH/ORP probe and a microprocessor-based analyzer/transmitter designed to measure pH/ORP of the sample and produce a proportional output signal linear to the pH/ORP.
2. Analyzer
   a. Number of Sensors: 4
   b. Number of Analog Outputs: 4
   c. Display: 4" minimum, color.
   d. Power: 120V
   e. Output: 4-20 mA
   f. Enclosure: NEMA 4X
   g. Maximum Dimensions: 11" x 13" x 6" (W x H x D)
   h. Note: Where possible combine multiple sensors/probes on a single analyzer/transmitter.

3. pH Probe
    a. Type: W-type rod membrane, pH electrode
    b. Measured: pH
    c. Probe range: 0 – 14 s.u.
    d. Slope: 95 – 102%
    e. Stability: < -0.01 s.u. per hour (without calibration)
    f. Reproducibility: < 0.01 s.u
    g. Working electrode: Gold catholde
    h. Counter electrode: SST anode
    i. Reference electrode: silver/silver halide
    j. Temperature range: 41 to 113 degrees F
    k. pH Range: 4-9 s.u.
    l. First polarization time: 120 minutes
    m. Re-polarization time: 30 minutes
    n. Calibration: Manual using DPD
    o. Housing Material: PVC
4. Accessories:
    a. Flow cell: Provide a polycarbonate flow cell and backplate. Provide dual flow cell in instances where two probes are required. Mount using 304 SST hardware.
5. Materials
    a. Sensor
        1) Body and salt bridge: PEEK.
        2) Junction: Kynar.
        3) Process electrode: Glass (pH), glass and platinum (ORP).
        4) Ground electrode: Titanium.
        5) O-ring seals: Viton.
    b. Analyzer/Transmitter Enclosure: NEMA 4X.
    c. Insertion Mounting Assembly: Stainless steel, type 316.
6. Ratings and Performance
    a. Sensor
        1) Range: 0 to 14 pH; -1500 to +1500 mV ORP.
        2) Sensitivity: +/- 0.01 pH; +/- 0.5 mV ORP.
        3) Stability: 0.03 pH; 2mV ORP per 24 hours, non cumulative.
        4) Operating temperature: 23 to 158 degrees F.
        5) Maximum pressure: 100 psi at 158 degrees.
        6) Maximum flow rate: 10 fps.
    b. Analyzer/Transmitter
        1) Repeatability: 0.05% of span.
        2) Stability: 0.05% of span for 24 hours, non-cumulative.
        3) Analog outputs: 4 to 20 mA isolated.
        4) Ambient temperature range: -4 to 104 deg F.
        5) Relative humidity: 0 to 95% non-condensing.
        6) Input power: 120 V a. c., 35W maximum.
        7) Output contacts: 120 V a. c., 5 Amp resistive maximum.
        8) Analog outputs: 500 Ohms maximum impedance.
7. Product and Manufacturer
    a. Hach pHD Series pH/ORP sensor and sc200 analyzer/transmitter.
    b. Rosemount 389VP sensor and 1056 analyzer/transmitter.

C. CONDUCTIVITY ANALYZERS

1. Description: Inductive conductivity sensor that induces a low current in a solution and measures the magnitude of the current to determine the conductivity.
2. Features
    a. Sensor
        1) Non-contacting inductive sensor.
        2) Internal platinum RTD for temperature compensation.
        3) Insertion mounting.
        4) Nominal 1/2-inch bore diameter.
    b. Analyzer/Transmitter
        1) Solid state, microprocessor-based.
        2) Non-volatile memory for all user settings.
        3) Capable of operating with up to two sensors.
        4) Two independent PID controllers.
        5) Plug and play operation, automatically detects sensor type.
        6) Built-in data logger, stores 6 months of data at 15-minute intervals with 2 sensors.
        7) Two analog outputs.
        8) Three SPDT alarm/control relays.
        9) LCD graphic display with LED backlighting.
3. Accessories
    a. Digital gateway.
    b. Extension cable.
    c. Insertion mounting assembly with ball valve, 2 inch NPT.
4. Materials
    a. Sensor Body: Teflon.
    b. Analyzer/Transmitter Enclosure: NEMA 4X.
    c. Insertion Mounting Assembly: Stainless steel, type 316.
5. Ratings and performance
    a. Sensor
        1) Range: 0-200 up to 0-2,000,000 microSiemens/cm.
        2) Sensitivity: +/- 0.01 pH; +/- 0.5 mV ORP.
        3) Stability: 0.03 pH; 2mV ORP per 24 hours, non cumulative.
        4) Operating temperature: 14 to 392 deg F.
        5) Maximum pressure: 200 psi.
        6) Maximum flow rate: 10 fps.
    b. Analyzer/Transmitter
        1) Repeatability: 0.05% of span.
        2) Stability: 0.05% of span for 24 hours, non-cumulative.
        3) Analog outputs: 4 to 20 mA isolated.
        4) Ambient temperature range: -4 to 104 deg F.
        5) Relative humidity: 0 to 95% non-condensing.
        6) Input power: 120 V a. c., 35W maximum.
        7) Output contacts: 120 V a. c., 5 Amp resistive maximum.
        8) Analog outputs: 500 Ohms maximum impedance.
6. Product and Manufacturer
    a. Hach 3700 sensor and sc200 analyzer/transmitter.
    b. Rosemount 400VP and 1056 analyzer/transmitter.

D. FLUORIDE ANALYZER
1. Description: Ion selective electrode to monitor fluoride ion concentration in potable water.

2. Analyzer
    a. Number of Sensors: 1
    b. Number of Analog Outputs: 1
    c. Display: 3 digit red LED.
    d. Power: 120V
    e. Output: 4-20 mA
    f. Enclosure: NEMA 4X Polycarbonate
    g. Maximum Dimensions: 11” x 8” x 5” (W x H x D)
3. Probe
    a. Type: Ion selective electrode (ISE)
    b. Measured: Fluoride
    c. Probe range: 0 - 10 mg/L
    d. Resolution: 0.01 mg/L
    e. Accuracy: ±0.2%
    f. Reference half cell: Silver/silver chloride, saturated KCl
    g. Primary Junction: Porous ceramic, statured KCl in crossed linked polymer
    h. Secondary Junction: Solid-state non-porous cross-linked conductive polymer embedded in HDPE/Kynar support matrix, excess saturated KCl salt system in cross linked polymer
    i. Temperature range: 41 to 122 degrees F
    j. pH Range: 5.5 - 9.5 s.u.
    k. Calibration: Manual (1 point offset)
    l. Material: Radel R-5000 NT
4. Accessories:
    a. Flow cell: Provide a 12” x 24” x ½” (H x W x D) PVC panel for mounting with a 0-25 psi pressure reducer, 0 – 5 gph rotometer with SST valve, brass barbed connectors for ¼” ID tubing, ½” SCH 80 PVC piping to keep sensor tip wet, 1” PVC pipe tee with twist lock sensor receptacle, and inlet and backpressure PVC ball valves.
5. Product and Manufacturer:
    a. Foxcraft FX-300-F analyzer, SF-8T-UL probe.

E. PHOSPHATE ANALYZER
1. Description: Analyzer to monitor orthophosphate concentration in potable water.
2. Analyzer/Probe
    a. Number of Sensors: 1
    b. Number of Analog Outputs: 1
    c. Power: 120V
    d. Output: 4-20 mA
    e. Serial Interface: RS-232
    f. Enclosure: NEMA 4X FRP
    g. Maximum Dimensions: 26” x 10” x 7” (H x W x D)
    h. Measured: Orthophosphate (as PO_4 or as PO_4-P)
    i. Probe range (as PO_4): 0.09 - 9 mg/L
    j. Probe range (as PO_4-P): 0.03 - 3 mg/L
    k. Cycle Time: 5 – 9999 minutes
    l. Accuracy: ±2% or 2x detection limit
    m. Temperature range: 41 to 131 degrees F
3. Accessories:

a. Reagents: Provide a sufficient amount of VMO reagent suitable for 12 months of operation at a 5 minute sample cycle. Provide reagent line priming package, reagent and cleaning solution bottle with connection lines, and reagent rack.

4. Product and Manufacturer:
   a. ChemScan mini oP

2.7 SCHEDULES

A. Schedule: See attachment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Items shall be inspected for damage upon delivery to the site.

B. Damaged components shall not be installed.

3.2 INSTALLATION

A. Contractor shall require the system supplier to furnish the services of qualified factory-trained servicemen to assist in the installation of the instrumentation and control system equipment.

B. Install each item in accordance with manufacturer's recommendations in accordance with the Contract Documents. Transmitters and instruments which require access for periodic calibration or maintenance shall be mounted so they are accessible while standing on the floor. Care shall be taken in the installation to ensure sufficient space is provided between instruments and other equipment or piping to allow for easy removal and servicing.

C. All items shall be mounted and anchored using stainless steel hardware unless otherwise noted.

D. All field instruments shall be rigidly secured to walls, stands, or brackets as required by the manufacturer and as shown on the Contract Drawings.

E. Conform to all applicable provisions of the NEMA standards, NEC, and local, State, and Federal codes when installing the equipment and interconnecting wiring.

END OF SECTION 40 9100

SECTION 40 9443

PLANT CONTROL SYSTEM (FAWTP)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section.

B. Related Sections: The following sections contain requirements that relate to this section.
1. Division 26 Section “Basic Electrical Requirements”.
2. Division 26 Section “Basic Electrical Materials”.
3. Division 26 Section “Signal and Communication Cables”.
4. Division 26 Section “Wires, Cables, and Connectors”.
5. Division 40 Section “Instrumentation – General”.
6. Division 40 Section “Control Panels”.

1.2 DESCRIPTION OF WORK

A. General: Provide all labor, tools, equipment, and materials necessary for a complete and operational Plant Control System in accordance with the plans and as specified herein.

B. Contractor shall furnish all labor, materials, and components, and shall provide all design, assembly, testing, and start-up services required to provide a complete and operational programmable controller system (referred to herein as PLC) as specified and shown on the Drawings. The system includes, but is not necessarily limited to the following:
1. Processor modules.
2. Communication equipment.
3. Input/output (I/O) modules.
4. Operator interface equipment.
5. Mounting racks.
6. Power supplies.
7. Programming equipment.
8. Software.

1.3 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.

B. Standards: Materials and workmanship shall conform to the following standards:
1. National Electrical Manufacturers Association (NEMA).
2. Institute of Electrical and Electronic Engineers (IEEE).
3. American National Standards Institute (ANSI).
4. National Fire Protection Association (NFPA).
5. Underwriters' Laboratories (UL).
6. International Society for Measurement and Control (ISA).

C. Qualifications
   1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of programmable logic controllers (PLCs) whose products have been in satisfactory use in similar service for not less than 5 years.
   2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data for all components.

B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.

C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished under this section. Wire, terminal, and component labeling shall follow established facility conventions where applicable.

D. System Hardware and Software Documents: Furnish a system block diagram, I/O drawings, and control strategy descriptions. Turn over all factory software documentation and manuals to the Engineer after completion of field testing.

E. Dimensional Drawings: Furnish dimensional drawings for each piece of equipment to be provided.

F. Program Documentation: Submit annotated printouts of all PLC and Human Machine Interface (HMI) programs. Provide copies of all PLC and HMI programs on a flash drive.

G. Manufacturer's Data Sheet: Provide manufacturer's data sheet on all equipment including model numbers, serial numbers, ranges, scales, and a detail of each component.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Storage and Protection: Store the items furnished under this section in a manner that meets the requirements of the manufacturer until they can be installed. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

1.6 DEFINITIONS

A. Training Day: A training day is defined as 8 hours of classroom instruction, including two 15-minute breaks and excluding lunchtime, Monday through Friday.

1.7 SCADA ALLOWANCE

A. The Contractor shall include in the bid an allowance for the purchase of computers, accessories, peripherals, and/or furniture for the Owner. These components shall be provided by the System Integrator. The Owner shall be able to select the computers, accessories, peripherals, and/or furniture during the shop drawing review process with technical input from the System Integrator.

PART 2 - PRODUCTS

2.1 SCADA SYSTEM

A. Programmable Logic Controller (PLC) Components:
   1. Processor Rack:
      a. Processor Module: 1769-L36ER
      b. Digital Input Module: 1769-IA16, 1769-IA8I when isolation required
      c. Digital Output Module: 1769-OA8
      d. Analog Input Module: 1769-IF4I
      e. Analog Output Module: 1769-OF4CI
      f. Power Supply: 1769-PA4
      g. DIN Rail mounted
   2. Remote I/O:
      a. Communication Adapter: 1794-AENT
      b. Digital Input Modules: 1794-IA16 with 1794-TB3 terminal base unit
      c. Digital Output Modules: 1794-OA8I with 1794-TBNF terminal base unit
      d. Analog Input: 1794-IF4I with 1794-TB3 terminal base unit
      e. Analog Output: 1794-OF4I with 1794-TB3 terminal base unit
      f. Provide fusing for field wiring per manufacturer's installation instructions.
      g. DIN Rail mounted
   3. Manufacturers:
      a. All components shall be manufactured by Allen-Bradley or an Encompass Partner.

B. Operator Interface Terminal (OIT):
   1. Features:
      a. Touch screen flat display
      b. LED backlit LCD
      c. 24-bit 16.7M colors
      d. Size: 15" diagonal nominal, unless otherwise noted
      e. Resolution: 1024x768, minimum
      f. Communications: Ethernet/IP, USB
      g. SD card slot
      h. NEMA 12
      i. Real-time battery backed clock
      j. Memory: 1 GB RAM and 1 GB user storage
      k. Input Power: 120VAC
   2. Manufacturers:
      a. Allen-Bradley, PanelView 5510

PART 3 - EXECUTION

3.1 CUSTOM PROGRAMMING

A. Custom Programming of all vendor provided control panels, including their PLCs and OITs, shall be provided by that vendor under the applicable specification section of the associated equipment.
   1. Provide database spreadsheets for peer-to-peer communication coordination between other onsite PLCs that need to share data.
   2. Provide database spreadsheets for Plant HMI/SCADA communication coordination.
   3. Provide annotated copies of all PLC programs.

4. Provide an electronic copy of all PLC and OIT programming files for the Owner on a flash drive. Format shall be as required to reload into PLC memory. Logic version shall be the final program after all equipment has been installed and commissioned and Operational Demonstration is complete and successful to the Owner's approval.

B. Custom Programming of non-vendor provided control panels, including their PLCs and OITs, will be provided by the Owner.

C. Custom Programming of plant's existing HMI/SCADA will be provided by the Owner.

D. Graphic Screens
1. Submit all graphic screens for Owner review and comment when sixty percent complete.
2. Provide navigation controls on all screens to allow movement between screens.
3. Conform to NFPA 79, Industrial Machinery on colors for indicators and controls.
4. Conform to Owner standards for colors of process equipment and piping.
5. Utilize industry standard symbols or graphically realistic drawings for process equipment.
6. Provide a separate screen for each group of process equipment.
7. At a minimum, provide the following screens:
   a. Process Overview
   b. Individual Control Graphic for each associated piece of equipment/device
   c. Alarm Summary Screens
   d. Equipment Runtimes Screen
   e. Totalizers Screen
   f. (10) Analog Signal Trending Screens – Owner Directed

E. Global Programmed Control Strategies
1. Meet with Plant Personnel before start of programming
   a. Determine time of day for resetting of daily flow totalizers.
   b. Determine the status (turn off or maintain last state) of each piece of equipment that is controlled by the PLC in the event of a PLC failure.
   c. Security Levels for all screens.
2. Display all alarms at the OIT.
3. Provide means to acknowledge all alarms at the OIT.
4. Provide alarms for PLC failure and network failure.
5. Totalize the number of starts for all process equipment and display on the OIT.
6. All process setpoints displayed on OIT screens.
7. All process setpoints adjustable from the OIT screens with correct security level.
8. Perform a runtime calculation for all process equipment and display at the OIT.
9. Display rate, total, and daily total for all flows at the OIT.

3.2 EXAMINATION

A. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.

B. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.3 PREPARATION

A. Protection
   1. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
   2. Provide blocking and cushioning materials to prevent damage during shipment.
   3. Panel mounted instruments and equipment to be installed inside enclosures, panels, or consoles shall be mounted and assembled at the panel manufacturer's facility.

3.4 INSTALLATION

A. General: Install equipment, as indicated, with manufacturer's written instructions and with recognized industry practices.

3.5 FIELD QUALITY CONTROL

A. Inspection: Provide for services of a qualified representative of the manufacturer to inspect and approve installation.

B. Tests: Upon completion of all inspections, and prior to acceptance, perform field tests outlined in Division 40 Section “Plant Instrumentation and Control System General Requirements”.

C. Operational Demonstration: After completion of the field test, perform a 30-day operational demonstration as specified in Division 40 Section “Plant Instrumentation and Control System General Requirements”.

3.6 DEMONSTRATION

A. General: When all required tests have been performed and prior to final acceptance, the Contractor shall perform a 30 day operational demonstration in accordance with the requirements of Division 40 Section “Plant Instrumentation and Control System General Requirements”.

3.7 EXTRA MATERIALS

A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.

B. Quantity: Provide spares for each type of module listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
   1. Processor Modules
   2. Power Supply
   3. Digital Input Modules
   4. Digital Output Modules
   5. Analog Input Modules
   6. Analog Output Modules
   7. Analog Input/Analog Output Modules
   8. Flex I/O Modules
   9. Flex I/O Module Terminal Blocks

C. Provide (6) OIT protective screen overlays.

D. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no cost.

3.8 PLC SYSTEM TRAINING

A. General.
   1. Provide a training course customized for the control system hardware.
   2. Provide training on the operation and maintenance of the control system hardware.
   3. Provide training manuals for each attendee plus two additional manuals in archival preservation at the project site.
   4. Include the following in each manual.
      a. An agenda
      b. Defined objectives for each lesson.
   5. Provide all equipment, materials, and supplies used in the training.
   6. For guidance in planning the required instruction, assume that attendees will have a high school education or equivalent and basic electrical maintenance knowledge.

B. Location, duration, and schedule.
   1. Teach the course at the project site.
   2. Provide one day of training for five personnel designated by the Owner.
   3. Conduct training after completion of the Contractor's field testing.

3.9 INPUT/OUTPUT SCHEDULE

A. Abbreviations
   1. AI = Analog Input
   2. AO = Analog Output
   3. CPU = Processor
   4. DI = Digital Input
   5. DO = Digital Output
   6. RIO = Remote I/O Communications

B. Installed spare inputs and outputs (I/O): In addition to the I/O listed below, provide a minimum of 10 percent installed.
   1. All SPARE I/O shall be wired to terminal blocks within the PLC enclosure.

END OF SECTION 40 9443

SECTION 40 9443

PLANT CONTROL SYSTEM (RARWTP)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section.

B. Related Sections: The following sections contain requirements that relate to this section.
1. Division 26 Section “Basic Electrical Requirements”.
2. Division 26 Section “Basic Electrical Materials”.
3. Division 26 Section “Signal and Communication Cables”.
4. Division 26 Section “Wires, Cables, and Connectors”.
5. Division 40 Section “Instrumentation – General”.
6. Division 40 Section “Control Panels”.

1.2 DESCRIPTION OF WORK

A. General: Provide all labor, tools, equipment, and materials necessary for a complete and operational Plant Control System in accordance with the plans and as specified herein.

B. Contractor shall furnish all labor, materials, and components, and shall provide all design, assembly, testing, and start-up services required to provide a complete and operational programmable controller system (referred to herein as PLC) as specified and shown on the Drawings. The system includes, but is not necessarily limited to the following:
1. Processor modules.
2. Communication equipment.
3. Input/output (I/O) modules.
4. Operator interface equipment.
5. Mounting racks.
6. Power supplies.
7. Programming equipment.
8. Software.

1.3 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.

B. Standards: Materials and workmanship shall conform to the following standards:
1. National Electrical Manufacturers Association (NEMA).
2. Institute of Electrical and Electronic Engineers (IEEE).
3. American National Standards Institute (ANSI).
4. National Fire Protection Association (NFPA).
5. Underwriters' Laboratories (UL).
6. International Society for Measurement and Control (ISA).

C. Qualifications
   1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of programmable logic controllers (PLCs) whose products have been in satisfactory use in similar service for not less than 5 years.
   2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data for all components.

B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.

C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished under this section. Wire, terminal, and component labeling shall follow established facility conventions where applicable.

D. System Hardware and Software Documents: Furnish a system block diagram, I/O drawings, and control strategy descriptions. Turn over all factory software documentation and manuals to the Engineer after completion of field testing.

E. Dimensional Drawings: Furnish dimensional drawings for each piece of equipment to be provided.

F. Program Documentation: Submit annotated printouts of all PLC and Human Machine Interface (HMI) programs. Provide copies of all PLC and HMI programs on a flash drive.

G. Manufacturer's Data Sheet: Provide manufacturer's data sheet on all equipment including model numbers, serial numbers, ranges, scales, and a detail of each component.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Storage and Protection: Store the items furnished under this section in a manner that meets the requirements of the manufacturer until they can be installed. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

1.6 DEFINITIONS

A. Training Day: A training day is defined as 8 hours of classroom and hands-on instruction, including two 15-minute breaks and excluding lunchtime, Monday through Friday.

1.7 SCADA ALLOWANCE

A. The Contractor shall include in the bid an allowance for the purchase of computers, accessories, peripherals, and/or furniture for the Owner. These components shall be provided by the System Integrator. The Owner shall be able to select the computers, accessories, peripherals, and/or furniture during the shop drawing review process with technical input from the System Integrator.

PART 2 - PRODUCTS

2.1 SCADA SYSTEM

A. Programmable Logic Controller (PLC) Components:
   1. Rack Mounted:
      a. Processor Module: 1756-L81E
      b. Digital Input Module: 1756-IA16I
      c. Digital Output Module: 1756-OW16I
      d. Analog Input Module: 1756-IF8I
      e. RTD Analog Input Module: 1756-IR12
      f. Analog Output Module: 1756-OF8I
      g. Communication Module: 1756-EN2T
      h. Power Supply: 1756-PA75/B
      i. Chassis: 1756-A17
   2. Protocol Gateway:
      a. Model as required for native protocol to Ethernet/IP conversion for quantity of connected devices.
      b. DIN Rail mounted
   3. Manufacturers:
      a. All components shall be manufactured by Allen-Bradley or an Encompass Partner.

B. Operator Interface Terminal (OIT):
   1. Features:
      a. Touch screen flat display
      b. LED backlit LCD
      c. 24-bit 16.7M colors
      d. Size: 15” diagonal nominal, unless otherwise noted
      e. Resolution: 1024x768, minimum
      f. Communications: Ethernet/IP, USB
      g. SD card slot
      h. NEMA 12
      i. Real-time battery backed clock
      j. Memory: 1 GB RAM and 1 GB user storage
      k. Input Power: 120VAC
   2. Manufacturers:
      a. Allen-Bradley, PanelView 5510

2.2 SCHEDULES

A. Schedule: See attachment.

PART 3 - EXECUTION

3.1 CUSTOM PROGRAMMING

A. Custom Programming of all vendor provided control panels, including their PLCs and OITs, shall be provided by that vendor under the applicable specification section of the associated equipment.
   1. Provide database spreadsheets for peer-to-peer communication coordination between other onsite PLCs that need to share data.
   2. Provide database spreadsheets for Plant HMI/SCADA communication coordination.

3. Provide annotated copies of all PLC programs.
4. Provide an electronic copy of all PLC and OIT programming files for the Owner on a flash drive. Format shall be as required to reload into PLC memory. Logic version shall be the final program after all equipment has been installed and commissioned and Operational Demonstration is complete and successful to the Owner's approval.

B. Custom Programming of non-vendor provided control panels, including their PLCs and OITs, will be provided by the Owner.

C. Custom Programming of plant's existing HMI/SCADA will be provided by the Owner.

D. Variable Frequency Drives
1. Provide programming for all VFDs connected to the network.
2. Read and display the contents of a minimum of eight registers in each VFD.
3. Coordinate with the Owner prior to the start of programming to select the register to be displayed.

E. Graphic Screens
1. Submit all graphic screens for Owner review and comment when sixty percent complete.
2. Provide navigation controls on all screens to allow movement between screens.
3. Conform to NFPA 79, Industrial Machinery on colors for indicators and controls.
4. Conform to Owner standards for colors of process equipment and piping.
5. Utilize industry standard symbols or graphically realistic drawings for process equipment.
6. Provide a separate screen for each group of process equipment.
7. Group related screens in a logical manner such as by building, plant flow, liquid stream/solids stream, etc.
8. At a minimum, provide the following screens:
    a. Plant Overview
    b. NF Building Overview
    c. Break Tank Pumps Overview
    d. NF Feed Pumps Overview
    e. NF Skids Overview
    f. Corrosion Inhibitor System Overview
    g. Sodium Hydroxide System Overview
    h. Sodium Bisulfite System Overview
    i. Antiscalant System Overview
    j. Break Tank Pump Control Graphics
    k. NF Feed Pump Control Graphics
    l. Corrosion Inhibitor Chemical Equipment Control Graphics
    m. Corrosion Inhibitor Chemical Feed Control Graphic
    n. Sodium Hydroxide Chemical Equipment Control Graphics
    o. Sodium Hydroxide Chemical Feed Control Graphic
    p. Sodium Bisulfite Chemical Equipment Control Graphics
    q. Sodium Bisulfite Chemical Feed Control Graphic
    r. Antiscalant Chemical Equipment Control Graphics
    s. Antiscalant Chemical Feed Control Graphic
    t. Chemical Feed Building Overview
    u. Sodium Hypochlorite System Overview
    v. Fluoride System Overview
    w. Sodium Hypochlorite Chemical Equipment Control Graphics
    x. Sodium Hypochlorite Chemical Feed Control Graphic

y. Fluoride Chemical Equipment Control Graphics
z. Fluoride Chemical Feed Control Graphic
aa. Electrical Service Overview
bb. Alarm Summary Screens
cc. Equipment Runtimes (with resets) Screen
dd. Totalizers Screen
ee. (10) Analog Signal Trending Screens – Owner Directed
ff. (10) Overview/Control Screens – Owner Directed

F. Global Programmed Control Strategies
1. Meet with Plant Personnel before start of programming to determine:
a. Time of day for resetting of daily totalizers
b. Security Levels for all screens
c. The master PCS clock and approach to sync network devices
2. Display all alarms at the HMI.
3. Provide means to acknowledge all alarms at the HMI.
4. Provide alarms for PLC failure and network failure.
5. Totalize the number of starts for all process equipment and display on the plant HMI.
6. All process setpoints displayed on HMI screens and read back for confirmation.
7. All process setpoints adjustable from the HMI screens with correct security level.
8. Perform a runtime calculation for all process equipment at PLC and display at the HMI.
9. Display rate, total, and daily total for all process flows at the HMI.
10. Display all process levels at the HMI.
11. Store average daily flow rates and peak hourly flow rates of all flow meters one year or more at SCADA.
12. One year of data shall be stored for trending with data saved every 15 minutes. Daily totals shall also be saved. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
13. All inline instrumentation shall be shown with instantaneous values on the HMI. One year of data shall be stored for trending. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
14. All data shall be automatically graphed when chosen by the operator. These trending graphs shall not reset when closed or when the operator switches between data screens or other graphs.
15. All bits/elements in PLC logic shall be commented. If not used, then comment as SPARE.
16. SCADA historical graphs shall include programming to constantly refresh to appear as a “live, historical trend“.

G. SCADA Programming Funtional Requirements
1. The Functional Descriptions below are intended to aid in defining the scope of work for PLC/OIT/HMI programming. These functional descriptions are intended to be supplemental to the requirements as shown on the Drawings. Hardwired interlocks for equipment control may not be described below. Hardwired interlocks shall be mimicked in PLC logic.
2. Where the referenced detail applies to multiple, similar equipment controls, only one is described. Control for associated equipment is similar.
3. Reference the PLC I/O schedules. The PLC I/O shall be utilized by PLC/HMI programming, as required, to allow the respective equipment to function as described by the Contract Documents.

a. All alarm and equipment status monitoring PLC I/O inputted into the Plant Control System (PCS) shall be annunciated via the HMI.

4. All references to set points as "adjustable" below shall include the capability to adjust the set point via the HMI.

5. FUNCTIONAL DESCRIPTION INDEX:
   a. "6. NF BUILDING BREAK TANK"
   b. "7. NF BUILDING SOFTENING SYSTEM"
   c. "8. CORROSION INHIBITOR CHEMICAL FEED SYSTEM"
   d. "9. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM"
   e. "10. SODIUM BISULFITE CHEMICAL FEED SYSTEM"
   f. "11. ANTISCALANT CHEMICAL FEED SYSTEM"
   g. "12. SODIUM HYPOCHLORITE CHEMICAL FEED SYSTEM"
   h. "13. FLUORIDE CHEMICAL FEED SYSTEM"
   i. "14. HIGH SERVICE PUMPS"
   j. "15. EXISTING PROCESS CONTROL MODIFICATIONS"
   k. "16. EMERGENCY POWER"
   l. "17. CRITICAL ALARMS"

6. NF BUILDING BREAK TANK
   a. Break Tank 1 Level
      1) General: Used to continuously monitor the liquid level in the Break Tank.
      2) Control:
         a) Local: None
         b) PCS: None
      3) Logic Interlocks/Permissives:
         a) Used for control of existing groundwater wells.
      4) Monitoring:
         a) Local: Instantaneous level indication
         b) PCS: Break Tank 1 Level
      5) Alarms:
         a) Local: None
         b) PCS: High-High, High, Low, Low-Low Break Tank 1 Level, Loss of Signal
   b. Break Tank 1 Low Cutoff Level
      1) General: Used to protect the Break Tank Pumps from operating when level is too low.
      2) Control:
         a) Local: None
         b) PCS: None
      3) Logic Interlocks/Permissives:
         a) None
      4) Monitoring:
         a) Local: None
         b) PCS: None
      5) Alarms:
         a) Local: None
         b) PCS: Break Tank 1 Low Level

7. NF BUILDING SOFTENING SYSTEM
   a. Break Tank Pump 1

1) General: Used to source water from the Break Tank to the NF Building process (softening and/or bypass).
2) Control:
    a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
    b) VFD: The VFD frequency can be manually adjusted utilizing the potentiometer or VFD HIM module at the VFD.
    c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of Break Tank Pump 1 via the HMI.
        (1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the frequency of Break Tank Pump 1.
        (2) AUTO: Break Tank Pump 1 shall be automatically controlled via PLC programming. Break Tank Pump 1 speed shall be varied maintain an operator entered NF Feed Pump Suction Header Pressure setpoint. Break Tank Pumps shall be assigned a Lead, Lag 1, Lag 2, or Standby role and start/stop as needed to meet the setpoint.
3) Logic Interlocks/Permissives:
    a) NF Bypass Valve must not be closed for the pump to operate.
4) Monitoring:
    a) Local: Running, Stopped
    b) VFD: Running, Stopped, Frequency, Amps, Volts
    c) PCS: Remote, Running, Stopped, Frequency, Amps, Volts, VFD LOR Switch Position
5) Alarms:
    a) Local: General Alarm
    b) VFD: VFD Fault Alarm
    c) PCS: Motor High Temperature, High Discharge Pressure, VFD Fault, Loss of Signal

b. Break Tank Pump 1 Discharge Pressure
1) General: Used to continuously monitor the discharge pressure for Break Tank Pump 1.
2) Control:
    a) Local: None
    b) PCS: None
3) Logic Interlocks/Permissives:
    a) None
4) Monitoring:
    a) Local: Instantaneous pressure indication
    b) PCS: Break Tank Pump 1 Discharge Pressure
5) Alarms:
    a) Local: None
    b) PCS: High-High, High, Low, Low-Low Break Tank Pump 1 Discharge Pressure, Loss of Signal

c. NF Bypass Flow
1) General: Used to continuously monitor the NF Bypass flow rate.
2) Control:

a) Local: None
b) PCS: None

3) Logic Interlocks/Permissives:
a) Reference the NF Bypass Flow Control Loop

4) Monitoring:
a) Local: Instantaneous flow indication
b) PCS: NF Bypass Flow

5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Bypass Flow, Loss of Signal

d. NF Bypass Flow Control Valve

1) General: Used to divert flow around the membrane skids.

2) Control:
a) Local: With the LOCAL-STOP-REMOTE selector switch at the actuator in the LOCAL position, the operator can open or close the valve by using the OPEN-CLOSE selector switch at the actuator. With the LOCAL-STOP-REMOTE selector switch at the actuator in the STOP position, the actuator will stop and maintain its current position.
b) PCS: With the LOCAL-STOP-REMOTE selector switch at the actuator in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the NF Bypass Flow Control Valve via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually set a desired position.
(2) AUTO: The NF Bypass Flow Control Valve shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED, HARDNESS, and PERCENT control modes.
(a) FIXED: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate.
(b) HARDNESS: The valve position shall vary in order to maintain an operator entered desired Blended Water Hardness.
a. If no Break Tank Pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup initial position and shall remain at that position until a Break Tank Pump starts operating.
b. Flow rate = [(BW flowrate x BW hardness) – (NFP flowrate x NFP hardness)] / NFF hardness
(c) PERCENT: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate as a percentage of Blended Water Flow.
a. If no Break Tank Pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup

initial position and shall remain at that position until a Break Tank Pump starts operating.

3) Logic Interlocks/Permissives: None
4) Monitoring:
   a) Local: Opened, Closed, Position
   b) PCS: Remote, Opened, Closed, Position
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal

e. Break Tank Pumps Discharge Header Pressure
1) General: Used to continuously monitor the pressure for Break Tank Pump Discharge Header.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: Instantaneous pressure indication
   b) PCS: Break Tank Pumps Discharge Header Pressure
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Break Tank Pumps Header Discharge Pressure, Loss of Signal

f. Cartridge Filter 1 Differential Pressure
1) General: Used to monitor if the Cartridge Filter needs cleaned.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: Instantaneous differential pressure indication
   b) PCS: Cartridge Filter 1 Differential Pressure
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Cartridge Filter 1 Differential Pressure, Loss of Signal

g. NF Feed ORP (Pre-Injection) Level
1) General: Used to continuously monitor the ORP level of the NF Feed water prior to chemical injection.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) Used for chemical feed dosing calculations.
4) Monitoring:
   a) Local: Instantaneous ORP level indication
   b) PCS: NF Feed ORP (Pre-Injection) Level
5) Alarms:

a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Feed ORP (Pre-Injection) Level, Loss of Signal

h. NF Feed Pumps Suction Header Pressure
1) General: Used to continuously monitor the pressure for NF Feed Pumps Suction Header.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Used for Break Tank Pump speed control.
4) Monitoring:
a) Local: Instantaneous pressure indication
b) PCS: NF Feed Pumps Suction Header Pressure
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Feed Pumps Suction Header Pressure, Loss of Signal

i. NF Feed ORP (Post-Injection) Level
1) General: Used to continuously monitor the ORP level of the NF Feed water after chemical injection.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous ORP level indication
b) PCS: NF Feed ORP (Post-Injection) Level
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Feed ORP (Post-Injection) Level, Loss of Signal

j. NF Feed Pump 1 Suction Pressure
1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Suction.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous pressure indication
b) PCS: NF Feed Pump 1 Suction Pressure
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Suction Pressure, Loss of Signal

k. NF Feed Pump 1
1) General: Used to source water to the membrane skids.
2) Control:

a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
b) VFD: The VFD frequency can be manually adjusted utilizing the potentiometer or VFD HIM module at the VFD.
c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of NF Feed Pump 1 via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the frequency of NF Feed Pump 1.
(2) AUTO: NF Feed Pump 1 shall be automatically controlled via PLC programming. NF Feed Pump 1 speed shall be varied as called for by the NF Skids Master PLC.

3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: Running, Stopped
b) VFD: Running, Stopped, Frequency, Amps, Volts
c) PCS: Remote, Running, Stopped, (2) Vibration Sensors, (2) Motor Bearing Temps, Frequency, Amps, Volts, VFD LOR Switch Position
5) Alarms:
a) Local: General Alarm
b) VFD: VFD Fault Alarm
c) PCS: Motor High Temperature, (2) High Vibration Alarms, (2) High Bearing Temp Alarm, Low Suction Pressure, High Discharge Pressure, VFD Fault, Loss of Signal

l. NF Feed Pump 1 Discharge Pressure
1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Discharge.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous pressure indication
b) PCS: NF Feed Pump 1 Discharge Pressure
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Discharge Pressure, Loss of Signal

m. Degasifier 1
1) General: Used to remove gases from the water before entering the clearwell.
2) Control:
a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the blower via the START/STOP pushbuttons.

b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of Degasifier 1 via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop Degasifier 1.
(2) AUTO: Degasifier 1 shall be automatically controlled via PLC programming. Degasifier 1 shall operate whenever the plant is running.

3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote
5) Alarms:
a) Local: Alarm
b) PCS: Motor High Temperature, Motor Overload

n. Degasifier 1 Inlet Screen Differential Pressure
1) General: Used to monitor if Degasifier 1 Screen needs cleaned.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous differential pressure indication
b) PCS: Degasifier 1 Screen Differential Pressure
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Degasifier 1 Inlet Screen Differential Pressure, Loss of Signal

o. Blended Water Flow
1) General: Used to continuously monitor the Blended Water flow rate.
2) Control:
a) Local: None
b) PCS: Operator shall have the ability to select MAINTENANCE, FLOWMETER, or SUM TOTAL as the BW Flow signal source via the HMI.
(1) MAINTENANCE: The operator shall have the ability to enter in a flow value during flowmeter maintenance to reduce impact on chemical feed systems.
(2) FLOWMETER: The signal from this flowmeter is used.
(3) SUM TOTAL: The sum of all Skid Discharge Flows plus the NF Bypass Flow signal is used.
3) Logic Interlocks/Permissives:
a) Used for the chemical feed dosing calculations.
4) Monitoring:
a) Local: Instantaneous flow indication
b) PCS: Blended Water Flow
5) Alarms:
a) Local: None

b) PCS: High-High, High, Low, Low-Low Blended Water Flow, Loss of Signal

p. Blended Water pH
1) General: Used to continuously monitor the pH level of the Blended Water.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Used for chemical feed dosing calculations.
4) Monitoring:
a) Local: Instantaneous pH indication
b) PCS: Blended Water pH
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water pH, Loss of Signal

q. Blended Water Chlorine Residual
1) General: Used to continuously monitor the chlorine residual of the Blended Water.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous Chlorine Residual indication
b) PCS: Blended Water Chlorine Residual
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water Chlorine Residual, Loss of Signal

r. Blended Water Fluoride Residual
1) General: Used to continuously monitor the fluoride residual of the Blended Water.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous Fluoride Residual indication
b) PCS: Blended Water Fluoride Residual
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water Fluoride Residual, Loss of Signal

s. Blended Water Phosphate Residual
1) General: Used to continuously monitor the phosphate residual of the Blended Water.
2) Control:
a) Local: None

b) PCS: None

3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: Instantaneous Phosphate Residual indication
   b) PCS: Blended Water Phosphate Residual
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Blended Water Phosphate Residual, Loss of Signal

t. NF Concentrate Conductivity
1) General: Used to continuously monitor the conductivity of the skid concentrate.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: Instantaneous conductivity indication
   b) PCS: NF Concentrate Conductivity
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low NF Concentrate Conductivity, Loss of Signal

u. NF Concentrate pH
1) General: Used to continuously monitor the pH level of the NF Concentrate.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: Instantaneous pH indication
   b) PCS: NF Concentrate pH
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low NF Concentrate pH, Loss of Signal

v. NF Skid Control Interface
1) General: All control of individual NF Skids, Membrane Cleaning System, and associated equipment is performed by the NF Skids Master PLC. Custom programming requirements for that vendored system are specified under Section 466340. Programming requirements described below are provided under this Section for NF Building ACP PLC/OIT and SCADA.
2) Operator shall have the ability to enter the following water quality parameters for NF Feed and NF Permeate. These values will be used to determine the NF Bypass flowrate when operated in HARDNESS mode.
   a) Total Hardness in NF Feed (THNFF = 366 mg/L as $CaCO_3$
   b) Total Hardness in NF Permeate (THNFP = 10.8 mg/L as $CaCO_3$
3) PLC shall calculate and SCADA shall indicate and trend the following:

a) Total NF Feed flow rate (Total NFF = NFP + NFC)
b) NF Bypass Flow (NFB = NFP x %NFB).
c) Indicate Raw Water Flow Rate (RW = NFF + NFB).
d) Actual %NFB (%NFB = NFB / BLW)
(1) NFB from flow meter
(2) BLW = NFP flow meters from skids + NFB flow meter
(3) THBLW = [(NFB x THNFF) + (NFP x THNFP)] / BW

4) All Skid OIT and MCS screen information and operator entry shall be duplicated at SCADA.

w. NF Process Start/Stop

1) Control: Operator shall have the ability to place the softening process on automated Start/Stop control. If enabled, the plant shall start if the existing clearwell level drops below an operator adjustable setpoint. The plant shall shutdown if the clearwell level rises above an operator adjustable setpoint. Operator shall have the ability to select which clearwell level to use as the primary control signal.

2) When the plant startup is auto initiated:
a) Open NF Bypass Valve to initial setpoint.
b) Start Chemical Feed Systems.
c) Start Break Tank Pump.
d) Start UV System.
e) Start NF Feed Pumps and NF Skids (in multiples of two). The quantity of skids needed shall be based on NF Skid Call Level setpoints.

3) When the plant shutdown is auto initiated:
a) NF Skids and NF Feed Pumps shall perform a permeate flush or forward flush before stopping.
b) Break Tank Pumps shall continue to operate until all NF Skids and NF Feed Pumps have stopped.
c) Stop UV System.
d) Close NF Bypass Valve.
e) Stop Chemical Feed Systems.

8. CORROSION INHIBITOR CHEMICAL FEED SYSTEM

a. Corrosion Inhibitor Storage Tank 1 Level

1) General: Used to continuously monitor the liquid level in Corrosion Inhibitor Storage Tank 1.

2) Control:
a) Local: None
b) PCS: None

3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.

4) Monitoring:
a) Local: Instantaneous level indication
b) PCS: Corrosion Inhibitor Storage Tank 1 Level

5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Storage Tank 1 Level, Loss of Signal

b. Corrosion Inhibitor Storage Tank 1 Outlet Valve

1) General: Used to isolate Corrosion Inhibitor Storage Tank 1 from the outlet header.
2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (4) PC MANUAL: The operator shall have the ability to open or close the valve.
      (5) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
   a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

c. Corrosion Inhibitor Storage Tank 1 Recirc Valve
1) General: Used to direct chemical to Corrosion Inhibitor Storage Tank 1 from the transfer pump.
2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (1) PC MANUAL: The operator shall have the ability to open or close the valve.
      (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
   a) Reference the Corrosion Inhibitor Chemical Transfer Sequence
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

d. Corrosion Inhibitor Transfer Pump
1) General: Used to pump Corrosion Inhibitor chemical between tanks.
2) Control:

a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
(2) AUTO: Corrosion Inhibitor Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Corrosion Inhibitor Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.

4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Alarm
b) PCS: Motor High Temperature, Motor Overload

e. Corrosion Inhibitor Day Tank Inlet Valve

1) General: Used to direct chemical to Corrosion Inhibitor Day Tank from the transfer pump.

2) Control:
a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.

4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

f. Corrosion Inhibitor Day Tank High Level

1) General: Used to prevent overfilling the day tank.

2) Control:
a) Local: None.
b) PCS: None.

3) Logic Interlocks/Permissives:
   a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Corrosion Inhibitor Day Tank High Level

g. Corrosion Inhibitor Day Tank Weight
1) General: Used to continuously monitor the weight of the Corrosion Inhibitor Day Tank.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Instantaneous weight indication
   b) PCS: Corrosion Inhibitor Day Tank Weight
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Day Tank Weight, Loss of Signal

h. Corrosion Inhibitor Feed Pump 1
1) General: Used to inject Corrosion Inhibitor into the water for treatment.
2) Control:
   a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
   b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
      (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
      (2) AUTO: Corrosion Inhibitor Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
         (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
         (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint.
3) Logic Interlocks/Permissives:
   a) Corrosion Inhibitor Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:

a) Local: Fault
b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

i. Corrosion Inhibitor Chemical Transfer Sequence
1) General: Used for automated control of transferring chemical between tanks.
2) Control:
a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
(1) TRANSFER:
a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop level is reached.
e. Once the level is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
j. All applicable equipment must not have any active alarms in order to initiate the transfer.
(2) RECIRC:
a. The operator shall select a storage tank and enter a desired time duration setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
d. Once both opened, the transfer pump shall operate until the time duration has expired.
e. Once time expires, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

a. The operator shall select the source storage tank and enter a Stop weight setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
e. Once the weight is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

j. Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Flow Switch
   1) General: Used to detect an activation of the emergency eyewash/shower.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives: None
   4) Monitoring:
      a) Local: None
      b) PCS: None
   5) Alarms:
      a) Local: None
      b) PCS: Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Activated

k. Corrosion Inhibitor Containment Area Wet Floor Switch
   1) General: Used to detect a Corrosion Inhibitor tank leak.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives: None
   4) Monitoring:
      a) Local: None
      b) PCS: None
   5) Alarms:
      a) Local: None
      b) PCS: Corrosion Inhibitor Containment Area Wet Floor Switch Activated

9. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM

a. Sodium Hydroxide Storage Tank 1 Level
   1) General: Used to continuously monitor the liquid level in Sodium Hydroxide Storage Tank 1.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
   4) Monitoring:
      a) Local: Instantaneous level indication
      b) PCS: Sodium Hydroxide Storage Tank 1 Level
   5) Alarms:
      a) Local: None
      b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Storage Tank 1 Level, Loss of Signal

b. Sodium Hydroxide Storage Tank 1 Outlet Valve
   1) General: Used to isolate Sodium Hydroxide Storage Tank 1 from the outlet header.
   2) Control:
      a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
      b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
         (1) PC MANUAL: The operator shall have the ability to open or close the valve.
         (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
   3) Logic Interlocks/Permissives:
      a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
   4) Monitoring:
      a) Local: Opened, Closed
      b) PCS: Remote, Opened, Closed
   5) Alarms:
      a) Local: None
      b) PCS: None

c. Sodium Hydroxide Storage Tank 1 Recirc Valve
   1) General: Used to direct chemical to Sodium Hydroxide Storage Tank 1 from the transfer pump.
   2) Control:
      a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
      b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.

(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hydroxide Chemical Transfer Sequence

4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

d. Sodium Hydroxide Transfer Pump

1) General: Used to pump Sodium Hydroxide chemical between tanks.

2) Control:
a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
(2) AUTO: Sodium Hydroxide Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Sodium Hydroxide Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hydroxide Chemical Transfer Sequence.

4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Alarm
b) PCS: Motor High Temperature, Motor Overload

e. Sodium Hydroxide Day Tank Inlet Valve

1) General: Used to direct chemical to Sodium Hydroxide Day Tank from the transfer pump.

2) Control:
a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.

(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

f. Sodium Hydroxide Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
   a) Local: None.
   b) PCS: None.
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Sodium Hydroxide Day Tank High Level

g. Sodium Hydroxide Day Tank Weight
1) General: Used to continuously monitor the weight of the Sodium Hydroxide Day Tank.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Instantaneous weight indication
   b) PCS: Sodium Hydroxide Day Tank Weight
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Day Tank Weight, Loss of Signal

h. Sodium Hydroxide Feed Pump 1
1) General: Used to inject Sodium Hydroxide into the water for treatment.
2) Control:
   a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
   b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.

(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
(2) AUTO: Sodium Hydroxide Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
(a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
(b) DOSE: The pump speed shall vary in order to maintain an operator entered desired Blended Water pH setpoint.

3) Logic Interlocks/Permissives:
a) Sodium Hydroxide Day Tank Low-Low Level Alarm must be inactive for pump to operate.

4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Fault
b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

i. Sodium Hydroxide Carrier Water Valve

1) General: Used to convey chemical for injection into the process stream.

2) Control:
a) Local: None
b) PCS: The operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall be open when any Sodium Hydroxide Feed Pump is operating.

3) Logic Interlocks/Permissives:
a) None

4) Monitoring:
a) Local: None
b) PCS: Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

j. Sodium Hydroxide Chemical Transfer Sequence

1) General: Used for automated control of transferring chemical between tanks.

2) Control:
a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
(1) TRANSFER:
a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.

b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop level is reached.
e. Once the level is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
j. All applicable equipment must not have any active alarms in order to initiate the transfer.

(2) RECIRC:

a. The operator shall select a storage tank and enter a desired time duration setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
d. Once both opened, the transfer pump shall operate until the time duration has expired.
e. Once time expires, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

a. The operator shall select the source storage tank and enter a Stop weight setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
e. Once the weight is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.

h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

k. Sodium Hydroxide Feed Room Emergency Eyewash/Shower Flow Switch
1) General: Used to detect an activation of the emergency eyewash/shower.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Sodium Hydroxide Feed Room Emergency Eyewash/Shower Activated

l. Sodium Hydroxide Containment Area Wet Floor Switch
1) General: Used to detect a Sodium Hydroxide tank leak.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Sodium Hydroxide Containment Area Wet Floor Switch Activated

m. Sodium Hydroxide Feed Room Temperature
1) General: Used to continuously monitor the temperature of the Sodium Hydroxide Feed Room.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous temperature indication
b) PCS: Sodium Hydroxide Feed Room Temperature
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Feed Room Temperature, Loss of Signal

10. SODIUM BISULFITE CHEMICAL FEED SYSTEM

a. Sodium Bisulfite Storage Tank 1 Level
   1) General: Used to continuously monitor the liquid level in Sodium Bisulfite Storage Tank 1.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
   4) Monitoring:
      a) Local: Instantaneous level indication
      b) PCS: Sodium Bisulfite Storage Tank 1 Level
   5) Alarms:
      a) Local: None
      b) PCS: High-High, High, Low, Low-Low Sodium Bisulfite Storage Tank 1 Level, Loss of Signal

b. Sodium Bisulfite Storage Tank 1 Outlet Valve
   1) General: Used to isolate Sodium Bisulfite Storage Tank 1 from the outlet header.
   2) Control:
      a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
      b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
         (1) PC MANUAL: The operator shall have the ability to open or close the valve.
         (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Bisulfite Chemical Transfer Sequence.
   3) Logic Interlocks/Permissives:
      a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
   4) Monitoring:
      a) Local: Opened, Closed
      b) PCS: Remote, Opened, Closed
   5) Alarms:
      a) Local: None
      b) PCS: None

c. Sodium Bisulfite Storage Tank 1 Recirc Valve
   1) General: Used to direct chemical to Sodium Bisulfite Storage Tank 1 from the transfer pump.
   2) Control:
      a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
      b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.

(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Bisulfite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Bisulfite Chemical Transfer Sequence

4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

d. Sodium Bisulfite Transfer Pump

1) General: Used to pump Sodium Bisulfite chemical between tanks.

2) Control:
a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
(2) AUTO: Sodium Bisulfite Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Sodium Bisulfite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Bisulfite Chemical Transfer Sequence.

4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Alarm
b) PCS: Motor High Temperature, Motor Overload

e. Sodium Bisulfite Day Tank Inlet Valve

1) General: Used to direct chemical to Sodium Bisulfite Day Tank from the transfer pump.

2) Control:
a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.

(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Bisulfite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
   a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

f. Sodium Bisulfite Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
   a) Local: None.
   b) PCS: None.
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Sodium Bisulfite Day Tank High Level

g. Sodium Bisulfite Day Tank Weight
1) General: Used to continuously monitor the weight of the Sodium Bisulfite Day Tank.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Instantaneous weight indication
   b) PCS: Sodium Bisulfite Day Tank Weight
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Sodium Bisulfite Day Tank Weight, Loss of Signal

h. Sodium Bisulfite Feed Pump 1
1) General: Used to inject Sodium Bisulfite into the water for treatment.
2) Control:
   a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
   b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.

(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
(2) AUTO: Sodium Bisulfite Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
(a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
(b) DOSE: The pump speed shall vary in order to maintain an operator entered desired NF Feed ORP (Pre-Injection) setpoint.

3) Logic Interlocks/Permissives:
a) Sodium Bisulfite Day Tank Low-Low Level Alarm must be inactive for pump to operate.

4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Fault
b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

i. Sodium Bisulfite Chemical Transfer Sequence

1) General: Used for automated control of transferring chemical between tanks.

2) Control:
a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
(1) TRANSFER:
a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop level is reached.
e. Once the level is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
j. All applicable equipment must not have any active alarms in order to initiate the transfer.
(2) RECIRC:

a. The operator shall select a storage tank and enter a desired time duration setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
d. Once both opened, the transfer pump shall operate until the time duration has expired.
e. Once time expires, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

a. The operator shall select the source storage tank and enter a Stop weight setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
e. Once the weight is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

j. Sodium Bisulfite Feed Room Emergency Eyewash/Shower Flow Switch

1) General: Used to detect an activation of the emergency eyewash/shower.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None

b) PCS: Sodium Bisulfite Feed Room Emergency Eyewash/Shower Activated

k. Sodium Bisulfite Containment Area Wet Floor Switch
1) General: Used to detect a Sodium Bisulfite tank leak.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Sodium Bisulfite Containment Area Wet Floor Switch Activated

l. Sodium Bisulfite Feed Room Temperature
1) General: Used to continuously monitor the temperature of the Sodium Bisulfite Feed Room.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous temperature indication
b) PCS: Sodium Bisulfite Feed Room Temperature
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Sodium Bisulfite Feed Room Temperature, Loss of Signal

11. ANTISCALANT CHEMICAL FEED SYSTEM
a. Antiscalant Transfer Pump
1) General: Used to pump Antiscalant chemical between tanks.
2) Control:
a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
(2) AUTO: Antiscalant Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Antiscalant Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
a) Reference the Antiscalant Chemical Transfer Sequence.
4) Monitoring:

a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Alarm
b) PCS: Motor High Temperature, Motor Overload

b. Antiscalant Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
a) Local: None.
b) PCS: None.
3) Logic Interlocks/Permissives:
a) Reference the Antiscalant Chemical Transfer Sequence.
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Antiscalant Day Tank High Level

c. Antiscalant Day Tank Weight
1) General: Used to continuously monitor the weight of the Antiscalant Day Tank.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Antiscalant Chemical Transfer Sequence.
4) Monitoring:
a) Local: Instantaneous weight indication
b) PCS: Antiscalant Day Tank Weight
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Antiscalant Day Tank Weight, Loss of Signal

d. Antiscalant Feed Pump 1
1) General: Used to inject Antiscalant into the water for treatment.
2) Control:
a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
(2) AUTO: Sodium Bisulfite Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
(a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.

(b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint using the sum of all Skid Inlet Flows.

3) Logic Interlocks/Permissives:
   a) Antiscalant Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

e. Antiscalant Injection Flow
   1) General: Used to detect that Antiscalant is being injected into the process stream.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) An Antiscalant Feed Pump must be operating for alarm logic to be active.
      b) Antiscalant flow must be present for an NF Skid to operate.
   4) Monitoring:
      a) Local: None
      b) PCS: None
   5) Alarms:
      a) Local: None
      b) PCS: Antiscalant No Flow Alarm

f. Antiscalant Chemical Transfer Sequence
   1) General: Used for automated control of transferring chemical between tanks.
   2) Control:
      a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
      b) PCS: The operator shall be able to fill the day tank automatically using PLC programming.
         (1) DAY TANK FILL:
            a. The operator shall select the source storage tank and enter a Stop weight setpoint.
            b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
            c. Once the button is pressed, the transfer pump shall operate until the Stop weight is reached.
            d. Once the weight is reached, the transfer pump shall stop.
            e. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
            f. Day Tank High Level Alarm must be inactive for the transfer pump to start.
            g. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.

h. All applicable equipment must not have any active alarms in order to initiate the transfer.

12. SODIUM HYPOCHLORITE CHEMICAL FEED SYSTEM
    a. Sodium Hypochlorite Storage Tank 1 Level
        1) General: Used to continuously monitor the liquid level in Sodium Hypochlorite Storage Tank 1.
        2) Control:
            a) Local: None
            b) PCS: None
        3) Logic Interlocks/Permissives:
            a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
        4) Monitoring:
            a) Local: Instantaneous level indication
            b) PCS: Sodium Hypochlorite Storage Tank 1 Level
        5) Alarms:
            a) Local: None
            b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Storage Tank 1 Level, Loss of Signal
    b. Sodium Hypochlorite Storage Tank 1 Outlet Valve
        1) General: Used to isolate Sodium Hypochlorite Storage Tank 1 from the outlet header.
        2) Control:
            a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
            b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
                (3) PC MANUAL: The operator shall have the ability to open or close the valve.
                (4) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.
        3) Logic Interlocks/Permissives:
            a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
        4) Monitoring:
            a) Local: Opened, Closed
            b) PCS: Remote, Opened, Closed
        5) Alarms:
            a) Local: None
            b) PCS: None
    c. Sodium Hypochlorite Storage Tank 1 Recirc Valve
        1) General: Used to direct chemical to Sodium Hypochlorite Storage Tank 1 from the transfer pump.
        2) Control:
            a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Chemical Transfer Sequence

4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

d. Sodium Hypochlorite Dilution Water Flow

1) General: Used to continuously monitor the Sodium Hypochlorite Dilution Water flow rate.

2) Control:
a) Local: None
b) PCS: None

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Dilution Control Loop.

4) Monitoring:
a) Local: Instantaneous flow indication
b) PCS: Sodium Hypochlorite Dilution Water Flow

5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Dilution Water Flow, Loss of Signal

e. Sodium Hypochlorite Storage Tank 1 Dilution Water Valve

1) General: Used to direct dilution water to Sodium Hypochlorite Storage Tank 1 to lower the solution concentration.

2) Control:
a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Dilution Control Loop.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Dilution Control Loop.

4) Monitoring:
a) Local: Opened, Closed

b) PCS: Remote, Opened, Closed

5) Alarms:
   a) Local: None
   b) PCS: None

f. Sodium Hypochlorite Transfer Pump
1) General: Used to pump Sodium Hypochlorite chemical between tanks.
2) Control:
   a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
   b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
      (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
      (2) AUTO: Sodium Hypochlorite Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Sodium Hypochlorite Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Alarm
   b) PCS: Motor High Temperature, Motor Overload

g. Sodium Hypochlorite Day Tank Inlet Valve
1) General: Used to direct chemical to Sodium Hypochlorite Day Tank from the transfer pump.
2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (1) PC MANUAL: The operator shall have the ability to open or close the valve.
      (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:

a) Local: None
b) PCS: None

h. Sodium Hypochlorite Day Tank Level
1) General: Used to continuously monitor the liquid level in Sodium Hypochlorite Day Tank.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
4) Monitoring:
a) Local: Instantaneous level indication
b) PCS: Sodium Hypochlorite Day Tank Level
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Day Tank Level, Loss of Signal

i. Sodium Hypochlorite Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Sodium Hypochlorite Day Tank High Level

j. Sodium Hypochlorite Disinfection Feed Pump 1
1) General: Used to inject Sodium Hypochlorite into the water for disinfection treatment.
2) Control:
a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
(2) AUTO: Sodium Hypochlorite Disinfection Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
(a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.

(b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Blended Water Flow.

3) Logic Interlocks/Permissives:
   a) Sodium Hypochlorite Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

k. Sodium Hypochlorite Oxidation Feed Pump 1
1) General: Used to inject Sodium Hypochlorite into the water for oxidation treatment.
2) Control:
   a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
   b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
      (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
      (2) AUTO: Sodium Hypochlorite Oxidation Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
         (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
         (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Total Filter Flow.
3) Logic Interlocks/Permissives:
   a) Sodium Hypochlorite Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Opened, Closed, Position
   b) PCS: Remote, Opened, Closed, Position
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal

l. Sodium Hypochlorite Chemical Transfer Sequence
1) General: Used for automated control of transferring chemical between tanks.
2) Control:
   a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.

b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.

(1) TRANSFER:

a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop level is reached.
e. Once the level is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
j. All applicable equipment must not have any active alarms in order to initiate the transfer.

(2) RECIRC:

a. The operator shall select a storage tank and enter a desired time duration setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
d. Once both opened, the transfer pump shall operate until the time duration has expired.
e. Once time expires, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

a. The operator shall select the source storage tank and enter a Stop level setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.

d. Once both opened, the transfer pump shall operate until the Stop level is reached.
e. Once the level is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Level Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Switch Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

m. Sodium Hypochlorite Dilution Control Loop
1) General: Used for automated control of adding dilution water to storage tanks to reduce the concentration of the solution.
2) Control:
a) Local: The operator shall have the ability at the LCP to manually operate system equipment to add dilution water.
b) PCS: The operator shall be able to add dilution water automatically using PLC programming.
(1) Dilution Water Sequence:
a. The operator shall select which storage tanks to add dilution water to and enter a GALLONS setpoint.
b. The applicable Storage Tank Dilution Water Valves will open.
c. Once the GALLONS setpoint has been reached, the valves shall close.
d. Applicable Storage Tank(s) High Level Alarm(s) must be inactive for the sequence to start.
e. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
f. All applicable equipment must not have any active alarms in order to initiate the sequence.

n. Sodium Hypochlorite Containment Area Wet Floor Switch
1) General: Used to detect a Sodium Hypochlorite tank leak.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Sodium Hypochlorite Containment Area Wet Floor Switch Activated

o. Sodium Hypochlorite Feed Room Temperature
1) General: Used to continuously monitor the temperature of the Sodium Hypochlorite Feed Room.

2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: Instantaneous temperature indication
   b) PCS: Sodium Hypochlorite Feed Room Temperature
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Feed Room Temperature, Loss of Signal

13. FLUORIDE CHEMICAL FEED SYSTEM

a. Fluoride Storage Tank 1 Level
   1) General: Used to continuously monitor the liquid level in Fluoride Storage Tank 1.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) Reference the Fluoride Chemical Transfer Sequence.
   4) Monitoring:
      a) Local: Instantaneous level indication
      b) PCS: Fluoride Storage Tank 1 Level
   5) Alarms:
      a) Local: None
      b) PCS: High-High, High, Low, Low-Low Fluoride Storage Tank 1 Level, Loss of Signal

b. Fluoride Storage Tank 1 Outlet Valve
   1) General: Used to isolate Fluoride Storage Tank 1 from the outlet header.
   2) Control:
      a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
      b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
         (1) PC MANUAL: The operator shall have the ability to open or close the valve.
         (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.
   3) Logic Interlocks/Permissives:
      a) Reference the Fluoride Chemical Transfer Sequence.
   4) Monitoring:
      a) Local: Opened, Closed
      b) PCS: Remote, Opened, Closed
   5) Alarms:
      a) Local: None

b) PCS: None

c. Fluoride Storage Tank 1 Recirc Valve
   1) General: Used to direct chemical to Fluoride Storage Tank 1 from the transfer pump.
   2) Control:
      a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
      b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
         (1) PC MANUAL: The operator shall have the ability to open or close the valve.
         (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.
   3) Logic Interlocks/Permissives:
      a) Reference the Fluoride Chemical Transfer Sequence
   4) Monitoring:
      a) Local: Opened, Closed
      b) PCS: Remote, Opened, Closed
   5) Alarms:
      a) Local: None
      b) PCS: None

d. Fluoride Transfer Pump
   1) General: Used to pump Fluoride chemical between tanks.
   2) Control:
      a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
      b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
         (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
         (2) AUTO: Fluoride Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Fluoride Chemical Transfer Sequence.
   3) Logic Interlocks/Permissives:
      a) Reference the Fluoride Chemical Transfer Sequence.
   4) Monitoring:
      a) Local: Running, Stopped
      b) PCS: Running, Stopped, Remote
   5) Alarms:
      a) Local: Alarm
      b) PCS: Motor High Temperature, Motor Overload

e. Fluoride Day Tank Inlet Valve

1) General: Used to direct chemical to Fluoride Day Tank from the transfer pump.
2) Control:
    a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
    b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
        (1) PC MANUAL: The operator shall have the ability to open or close the valve.
        (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
    a) Reference the Fluoride Chemical Transfer Sequence.
4) Monitoring:
    a) Local: Opened, Closed
    b) PCS: Remote, Opened, Closed
5) Alarms:
    a) Local: None
    b) PCS: None

f. Fluoride Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
    a) Local: None
    b) PCS: None
3) Logic Interlocks/Permissives:
    a) Reference the Fluoride Chemical Transfer Sequence.
4) Monitoring:
    a) Local: None
    b) PCS: None
5) Alarms:
    a) Local: None
    b) PCS: Fluoride Day Tank High Level

g. Fluoride Day Tank Weight
1) General: Used to continuously monitor the weight of the Fluoride Day Tank.
2) Control:
    a) Local: None
    b) PCS: None
3) Logic Interlocks/Permissives:
    a) Reference the Fluoride Chemical Transfer Sequence.
4) Monitoring:
    a) Local: Instantaneous weight indication
    b) PCS: Fluoride Day Tank Weight
5) Alarms:
    a) Local: None
    b) PCS: High-High, High, Low, Low-Low Fluoride Day Tank Weight, Loss of Signal

h. Fluoride Feed Pump 1
   1) General: Used to inject Fluoride into the water for treatment.
   2) Control:
      a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
      b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
         (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
         (2) AUTO: Fluoride Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
            (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
            (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Blended Water Flow.
   3) Logic Interlocks/Permissives:
      a) Fluoride Day Tank Low-Low Level Alarm must be inactive for pump to operate.
   4) Monitoring:
      a) Local: Running, Stopped
      b) PCS: Running, Stopped, Remote
   5) Alarms:
      a) Local: Fault
      b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

i. Fluoride Chemical Transfer Sequence
   1) General: Used for automated control of transferring chemical between tanks.
   2) Control:
      a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
      b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
         (1) TRANSFER:
            a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
            b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
            c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
            d. Once both opened, the transfer pump shall operate until the Stop level is reached.

e. Once the level is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
j. All applicable equipment must not have any active alarms in order to initiate the transfer.

(2) RECIRC:

a. The operator shall select a storage tank and enter a desired time duration setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
d. Once both opened, the transfer pump shall operate until the time duration has expired.
e. Once time expires, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

a. The operator shall select the source storage tank and enter a Stop weight setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
e. Once the weight is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

j. Fluoride Containment Area Wet Floor Switch
   1) General: Used to detect a Fluoride tank leak.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives: None
   4) Monitoring:
      a) Local: None
      b) PCS: None
   5) Alarms:
      a) Local: None
      b) PCS: Fluoride Containment Area Wet Floor Switch Activated

14. HIGH SERVICE PUMPS
   a. High Service Pump 5
      1) General: Used to pump water into the water distribution system.
      2) Control:
         a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
         b) VFD: The VFD speed can be manually adjusted utilizing the manual speed potentiometer or VFD HIM module at the VFD.
         c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of High Service Pump 5 via the HMI.
            (1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the speed of High Service Pump 5.
            (2) AUTO: High Service Pump 5 shall be automatically controlled via PLC programming. High Service Pump 5 shall be incorporated into the existing High Service Pump control scheme.
      3) Logic Interlocks/Permissives: None
      4) Monitoring:
         a) Local: Running, Stopped
         b) VFD: Running, Stopped, Frequency, Amps, Volts
         c) PCS: Remote, Running, Stopped, (2) Vibration Sensors, (2) Motor Bearing Temps, Frequency, Amps, Volts, VFD LOR Switch Position
      5) Alarms:
         a) Local: General Alarm
         b) VFD: VFD Fault Alarm
         c) PCS: Motor High Temperature, (2) High Vibration Alarms, (2) High Bearing Temp Alarm, Low Suction Pressure, High Discharge Pressure, VFD Fault, Loss of Signal

15. EXISTING PROCESS CONTROL MODIFICATIONS
   a. Groundwater Wells and Pretreatment Systems
      1) General: Used to pump water to the plant and provide treatment upstream of the NF Building Softening process.

2) Control: Modify groundwater pumps level control to be based on Break Tank levels instead of Clearwell levels.
   a) Operator shall have the ability to select Break Tank 1 or Break Tank 2 Level as control variable.

16. EMERGENCY POWER

a. Automatic Transfer Switch
   1) General: Used to automatically transfer plant power to generator during a utility power outage.
   2) Control:
      a) Local: Per manufacturer
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) Generator running and Automatic Transfer Switch in the Emergency Source position will initiate step loading logic for loads to be sequentially started.
   4) Monitoring:
      a) Local: Per manufacturer
      b) PCS: Utility Source Available, Emergency Source Available, Utility Source Connected, Emergency Source Connected
   5) Alarms:
      a) Local: Per manufacturer
      b) PCS: Not in Auto

b. Generator
   1) General: Used to supply emergency power to the plant during a utility power outage.
   2) Control:
      a) Local: Per manufacturer
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) Generator running and Automatic Transfer Switch in the Emergency Source position will initiate step loading logic for loads to be sequentially started.
   4) Monitoring:
      a) Local: Per manufacturer
      b) PCS: Running, Stopped, Remote
   5) Alarms:
      a) Local: Per manufacturer
      b) PCS: General Alarm, Not in Auto

17. CRITICAL ALARMS

a. General: Programming shall include the following as critical alarms. Critical alarms shall initiate a telephone call to designated personnel.
   1) Utility Power Failure
   2) PLC Failure Alarm
   3) Emergency NF Process Shutdown

3.2 EXAMINATION

A. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.

B. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.3 PREPARATION

A. Protection
   1. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
   2. Provide blocking and cushioning materials to prevent damage during shipment.
   3. Panel mounted instruments and equipment to be installed inside enclosures, panels, or consoles shall be mounted and assembled at the panel manufacturer's facility.

3.4 INSTALLATION

A. General: Install equipment, as indicated, with manufacturer's written instructions and with recognized industry practices.

3.5 FIELD QUALITY CONTROL

A. Inspection: Provide for services of a qualified representative of the manufacturer to inspect and approve installation.

B. Tests: Upon completion of all inspections, and prior to acceptance, perform field tests outlined in Division 40 Section “Plant Instrumentation and Control System General Requirements”.

C. Operational Demonstration: After completion of the field test, perform a 30-day operational demonstration as specified in Division 40 Section “Plant Instrumentation and Control System General Requirements”.

3.6 DEMONSTRATION

A. General: When all required tests have been performed and prior to final acceptance, the Contractor shall perform a 30-day operational demonstration in accordance with the requirements of Division 40 Section “Plant Instrumentation and Control System General Requirements”.

3.7 EXTRA MATERIALS

A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.

B. Quantity: Provide spares for each type of module listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
   1. Processor Modules
   2. Power Supply
   3. Digital Input Modules

4. Digital Output Modules
5. Analog Input Modules
6. RTD Analog Input Modules
7. Analog Output Modules
8. Analog Input/Analog Output Modules
9. Flex I/O Modules
10. Flex I/O Module Terminal Blocks

C. Provide (6) OIT protective screen overlays.

D. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no cost.

3.8 PLC SYSTEM TRAINING

A. General.
1. Provide a training course customized for the control system hardware.
2. Provide training on the operation and maintenance of the control system hardware.
3. Provide training manuals for each attendee plus two additional manuals in archival preservation at the project site.
4. Include the following in each manual.
   a. An agenda
   b. Defined objectives for each lesson.
5. Provide all equipment, materials, and supplies used in the training.
6. For guidance in planning the required instruction, assume that attendees will have a high school education or equivalent and basic electrical maintenance knowledge.

B. Location, duration, and schedule.
1. Teach the course at the project site.
2. Provide one day of training for five personnel designated by the Owner.
3. Conduct training after completion of the Contractor's field testing.

3.9 INPUT/OUTPUT SCHEDULE

A. Abbreviations
1. AI = Analog Input
2. AO = Analog Output
3. CPU = Processor
4. DI = Digital Input
5. DO = Digital Output
6. RTD = RTD Analog Input

B. Installed spare inputs and outputs (I/O): In addition to the I/O listed below, provide a minimum of 10 percent installed.
1. All SPARE I/O shall be wired to terminal blocks within the PLC enclosure.

END OF SECTION 40 9443

SECTION 40 9513

CONTROL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General:
   1. Drawings and general provisions of Contract.
   2. General and Supplementary Conditions and all Division 1 specification sections.

B. Related Sections of Division 26.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install control panels and consoles in accordance with the Plans and as specified herein.

1.3 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.

B. Standards: Materials and workmanship shall conform to the following standards:
   1. National Electrical Manufacturers Association (NEMA).
   2. Institute of Electrical and Electronic Engineers (IEEE).
   3. American National Standards Institute (ANSI).
   4. National Fire Protection Association (NFPA).
   5. Underwriters' Laboratories (UL).
   6. Joint Industrial Council (JIC).
   7. International Society for Measurement and Control (ISA).

C. Qualifications
   1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of control panels whose products have been in satisfactory use in similar service for not less than 5 years.
   2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data for enclosures and all components.

B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.

C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished or installed under this section.
   1. Elementary diagrams shall follow JIC standards.
   2. Instrument loop diagrams shall follow the ISA Standard S5.4.

3. Wire, terminal, and component labeling shall follow established facility conventions where applicable.

D. Shop Drawings: Provide control panel layout drawings which follow JIC standards. Provide shop drawings for each control panel and console as follows:
   1. Dimensional drawings of each enclosure and mounting panel.
   2. Scaled layout drawings identifying name and location of all components and nameplates.
   3. Mounting details including location of anchoring flanges, holes, and data on anchor bolt sizing and load-carrying capacity.
   4. Entry and exit locations of external wiring and conduit and equipment connections.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Storage and Protection: The Contractor shall store the items furnished under this section until they can be installed. Such storage shall meet the requirements of the manufacturer and be approved by the Owner. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

PART 2 - PRODUCTS

2.1 ENCLOSURES

A. Enclosure shall be NEMA 4X, unless otherwise specified or shown on the Drawings.
   1. Hinged Door Enclosures: Material of construction shall be fiberglass, 304 stainless steel or as shown on the Drawings.
      a. Manufacturer: Hoffman Enclosures, Inc.; Saginaw Control and Engineering; Stahlin Enclosures; or approved equal.
   2. Fabricated control panel shall be UL508A labeled.

2.2 COMPONENTS

A. As specified in related sections.

B. Miscellaneous Equipment
   1. Slotted plastic wiring ducts with snap-on covers.
   2. Nylon spiral wrap wiring sheaths.
   3. Nylon cable ties with screw anchors.
   4. Nameplates as specified in Division 26. Nomenclature as shown on the Drawings.
   5. Stainless steel screws, fasteners, and miscellaneous hardware, unless otherwise noted.

C. Corrosion Inhibitor Device: Shall be provided for all control enclosures. Provide one (1) unit per 5 cubic feet of volume. Provide one (1) replacement unit for each inhibitor device installed. Devices shall be Hoffman A-HCI 10E or approved equal. Install and date mark while enclosure is in fabricator's shop.

D. Provide thermostatically controlled electric heater in each enclosure for condensation prevention. Heater shall be sized for 40°F temperature rise above ambient, based on enclosure dimensions. Locate heater in compliance with manufacturer recommendations.

E. Surge Protection

1. Provide surge protection for all communication, analog and digital signals which the cable/conductor(s) enter from outside or underground. These signals include, but are not limited to, all 120VAC digital inputs and 24VDC analog inputs.
    a. Surge protection devices shall be type Category C as defined by IEEE C62.41, and consist of a base and a replaceable plug-in surge element.
2. Provide surge protection on all other PLC inputs, PLC outputs, relays and all other instrumentation and control system components as recommended by the manufacturer of each device.
3. Surge protection device shall include a visual indicator for "fault/no protection" indication.
4. Manufacturer: Pheonix Contact, Edco, Thor Systems or approved equal.

F. Power Supplies
1. Provide power supplies as required for the various components and functions of this contract.
2. Required Features:
    a. Provide power for 2-wire transmitter loops using 4-20mAdc current signals.
    b. Input Voltage: 115 VAC.
    c. Output Voltage: 24V to 45V DC, or 12V to 16V DC, as required.
    d. Voltage Regulation: $\pm$ 5 percent.
    e. Fusing: 115 VAC line.
    f. Loop circuits: Suitable for 1 loop circuit only.
    g. Mounting: Suitable for wall mounting inside of panel enclosure.
3. Manufacturers:
    a. Allen-Bradley Bulletin 1606.
    b. Moore Industries.
    c. Or approved equal.

G. Lighting Kit: Provide a 120VAC, fluorescent light fixture inside the enclosure. Fixture shall use 20 watt lamps, minimum. Each light shall include a manual on/off toggle switch and a 120VAC convenience outlet.

H. Uninterruptible Power Supply (UPS).
1. General: Provide a UPS to supply power to the control panel's associated PLC, radio, and internal power supplies during failure of normal power. Maintain battery power to load for 30 minute duration with "no breaks," or interruptions. Upon return of normal ac power, automatically equalize recharge batteries and revert to floating condition.
2. Enclosures: Free standing enclosures sized to house both the batteries and the electronics. DIN rail mounted units may be used when loads/battery time comply with specification requirements.
3. Rectifier/Charger: Solid state rectifiers/charger sized to supply dc power to both the batteries and the static inverter. Equip with automatic shutdown to prevent discharging the batteries completely.
4. Static Inverter: Single phase solid-state static inverter to supply regulated ac output.
5. Batteries: Sealed, maintenance-free lead acid batteries.
6. Detachable line cord and NEMA 5-20R output receptacles.
7. Available Manufacturers: Subject to compliance with requirements, manufacturers offering UPS systems which may be incorporated in the work include, but are not limited to, the following:
    a. APC
    b. Liebert

c. Pheonix Contact

I. Network Access Port
1. For enclosures that include a programmable logic controller (PLC), provide a door mounted GFCI 120VAC duplex power outlet, rated 3A minimum, with front door mounted RJ-45 Ethernet jack connected to the PLC network.
2. Provide a nameplate engraved with "For Programming Use Only".
3. NEMA 4X rated with hinged cover and securing latch
4. Power external outlet from a dedicated circuit breaker.
5. Provide CAT6 Ethernet cable internally from port to network switch.
6. Manufacturer:
   a. Grace Engineered Products, Inc
   b. Phoenix Contact
   c. Or approved equal

J. Miscellaneous Equipment
1. Slotted plastic wiring ducts with snap-on covers.
2. Nylon spiral wrap wiring sheaths.
3. Nylon cable ties with screw anchors.
4. Nameplates as specified in Division 26 Section "Electrical Identification", and as shown on the Plans.
5. Stainless steel screws, fasteners, and miscellaneous hardware unless otherwise noted.

2.3 SHOP FABRICATION

A. Fully assemble and test each panel at the factory prior to shipment.
1. Ensure that all wires and cables are securely connected.
2. Ensure all labels and nameplates are easily readable.
3. Perform 100% continuity checks.
4. Provide a temporary power source (120VAC), and check voltage on all applicable circuits, including all 24VDC power supplies.
5. Provide documents and drawings of the completed testing procedures.
6. Complete the fabrication and testing to the satisfaction of the Owner or its designee.
7. Factory Acceptance Test (FAT) – At the discretion of the Owner or its designee, fabricated panels may be subjected to inspection and testing prior to arrival at site. The FAT may be a prerequisite for acceptance. The Contractor shall plan for personnel to arrive at the fabricator's facility for the FAT. The Contractor shall also allow provisions for a Contractor's representative and a technician to assist in testing. Temporary power and networking should also be expected as part of the FAT procedure.
   a. A punch list shall be generated by the FAT personnel for any modifications needed prior to shipment to the Owner's facility. Successful completion of the FAT is a prerequisite for delivery to the Owner's facility. All FAT punch list items shall be resolved.

B. As a minimum, test all wiring circuits for conductivity and demonstrate that all specified functions can be performed.

C. Identify all components with laminated plastic nameplates.

D. Provide all devices, electrical hardware, wiring, support hardware, fasteners and other components required to make the control enclosures complete and workable units.

E. Estimated Size: Minimum sizes are shown on the Drawings. Contractor shall furnish enclosures of the size and quantity required to house the manufacturers' equipment supplied and all other electrical components installed in the enclosures.

F. Provide stainless steel quick-release latching clamps on three sides of each door and pad-lockable hasp and staple on all panels.

G. All hardware on the enclosures including hinges, pins, clamps, nuts, bolts, washers, screws, etc., shall be stainless steel.

H. Design panels so that conduits and wiring enter and leave through the bottom of the enclosures, unless noted otherwise.

I. Component Arrangement
   1. Group all like components.
   2. Place all internal components on sub-panels.
   3. Arrange all components to allow easy access for connections and service, and to allow removal without affecting other components.
   4. Provide a minimum of 2.5” from device terminals to edge of closest wiring duct.

J. Component Installation
   1. Make all panel cutouts carefully and leave no visible gaps between components and panels.
   2. Mount all components plumb and square.
   3. Attach all components and nameplates with stainless steel machine screws into drilled and tapped holes.
   4. Support and restrain all components to prevent movement.
   5. Attach all relays to mounting strips or rails.

K. Wiring
   1. Route wiring horizontally or vertically.
   2. Protect wiring to door-mounted devices with spiral nylon sheath.
   3. Separate alternating current (ac) and direct current (dc) wiring a minimum of 4 inches. Separate AC and DC buses.
   4. All DC (+) wiring shall be separately fused per device.
   5. Label all wires at each termination with a unique number.
   6. Label each terminal with a unique number.
   7. Terminate all external wiring on terminal blocks.
   8. Terminate all internal wiring on terminal blocks or device terminals. Device neutrals shall not be daisy-chained between devices.
   9. Group all externally powered wiring and terminate on knife disconnect isolating terminal blocks.
   10. Terminate all wiring to devices powered from the control panel on fused terminal blocks.
   11. Fused terminal blocks shall include LED blown fuse indication.
   12. Color code all internal wiring as follows:
      a. Line Voltage ac Power and Control: Black.
      b. AC Control Circuits: Red.
      c. DC Wiring: Blue (positive), Blue with White Stripe (negative).
      d. Externally Powered Wiring: Yellow.
      e. Neutral Conductors: White.
      f. Equipment Grounding Conductors: Green.

13. Route all wiring on sub-panels through plastic wiring ducts with removable covers. Wiring duct shall not be filled over 50%, including spares.
14. Support all wiring to prevent movement or sagging.
15. Secure all cable ties with bolted or screwed mounting plates.
16. Provide a warning sign, placed in a conspicuous location in the interior of the panel, identifying yellow wiring as being powered from an external source and warning that disconnecting power to the panel will not de-energize externally powered wiring.

L. Panel Grounding
1. Provide ground studs factory welded to the enclosure and the enclosure door.
2. Provide tinned copper braided ground strap between enclosure and door.
3. Provide a minimum #8 AWG ground wire from sub-panel to enclosure mounting stud.
4. Ground control power transformer secondary directly to sub-panel immediately adjacent to transformer.
5. Where signal cable shields are to be grounded in the control panel, connect to the equipment ground bus.
6. Connect all DC commons to the low-level isolated dc ground bus.

2.4 EXTRA MATERIALS

A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.
1. Quantity: Provide spares for each type listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
a. Control Relay
b. Power Supply
c. Pilot Light
d. Selector Switch
e. Pushbutton
f. Fuses
g. Terminal Block
2. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no additional cost.

PART 3 - EXECUTION

3.1 INSTALLATION:

A. General: Install equipment as indicated, in accordance with manufacturer's written instructions, and with recognized industry practices.

B. Examination
1. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
2. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

C. Preparation
1. Protection.

a. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
b. Provide blocking and cushioning materials to prevent damage during shipment.
c. Provide temporary lifting lugs on shipping package as needed.
d. Include approximately 1 pint of touch-up paint for each finish color in shipment.

2. Surface Preparation: The work shall be carefully laid out in advance. Where cutting, drilling, etc., of floors, walls, ceilings, or other surfaces is necessary, this work shall be carefully done. Any damage to building, piping, or equipment shall be repaired by skilled mechanics of the trades involved, and at no additional cost to the Owner.

D. Application

1. Enclosure, Cabinets, Console Installation.
   a. Locate as shown on the contract drawings. Freestanding enclosures and consoles require an Electrical Equipment Pad provided and installed by this Contractor. Refer to detail on Drawings.
   b. Floor-mounted control panels shall be installed utilizing all stainless steel hardware consisting of concrete anchor and machine bolt assembly.
   c. Wall-mounted panels shall be offset from walls with standoffs. Wall-mounted panels requiring freestanding mounting shall be supported on stainless steel strut with cross bracing and stainless steel hardware.
   d. Seal all conduit entrances watertight.

3.2 FIELD QUALITY CONTROL

A. Tests: Upon completion of all inspections and prior to acceptance by the Owner, perform the field tests outlined in Division 40 Section “Instrumentation – General”.

B. Inspection: Upon completion of this portion of the work, the Contractor shall provide for the services of a qualified representative of the manufacturer to inspect and approve the installation.

END OF SECTION 40 9513

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 40 9553

NETWORK DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General:
   1. Drawings and general provisions of Contract.
   2. General and Supplementary Conditions and all Division 1 specification sections.

B. Related Sections: Refer to Division 40 9XXX Sections for additional requirements related to this section.

1.2 DESCRIPTION OF WORK

A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install network switches in accordance with the plans and as specified herein.

B. Types: The types of equipment specified in this section include the following.
   1. Ethernet Switch
   2. Ethernet Media Converter
   3. DIN-rail Fiber Patch Panel

1.3 DEFINITIONS

A. Abbreviations
   1. AHJ. Authority having jurisdiction.
   2. NRTL. Nationally recognized testing laboratory.

1.4 SUBMITTALS

A. General
   1. Comply with the requirements of Division 01 Section “Submittal Procedures”.
   2. Submit information as described below.
   3. Provide all information necessary to determine compliance with the Plans and specifications.

B. Product Data
   1. Manufacturer’s product data sheets, delete or cross out non-applicable information.

C. Quality Control Submittals
   1. Field test reports. Submit certified copies of the field test reports.
   2. Manufacturer’s instructions: Submit manufacturer's current installation instructions.

D. Contract Closeout Submittals: Operation and maintenance (O&M) data

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General
   1. Provide new and unused products of current manufacture.
   2. Provide products free from defects affecting performance.
   3. All units of the same type shall be from the same manufacturer.

B. Listing and Labeling
   1. Provide UL listed and labeled products.
   2. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 ETHERNET SWITCH

A. General: Provide an Ethernet switch for segment connection to the network backbone for area PLCs and operator workstations and as shown on the Drawings.

B. Features
   1. Minimum of (2) send/receive 100Base-FX fiber optic ports
   2. Minimum of (8) 10/100Base-TX (RJ-45) ports
   3. Per-port Status Indicators
      a. Link Integrity
      b. Disabled
      c. Activity
      d. Speed
      e. Half/Full Duplex
   4. Alarm Relay: 1A @ 30VDC
   5. Memory Card
   6. Management console port:
      a. Mini USB cable (driver provided)
   7. Power Requirements: 12-48VDC

C. Performance Requirements:
   1. Support spanning tree protocol
   2. Support ring topology
   3. Switch Management”
      a. Support Simple Network Management Protocol (SNMP)
      b. Bridging Management Information Base
      c. Remote Monitoring (RMON) control
   4. Comply to IEEE 802.3x Full-Duplex on 10Base-T and 100Base-T
   5. Full performance from 32 to 113°F, 5-95% humidity non-condensing

D. Small Form Factor Pluggable Module (SFP):
   1. SFP module shall be provided as integral part of the Ethernet switch to provide connection into fiber optic media as shown on the Drawings.
   2. Support for IEEE 802.3z, 1000BASE-SX standard for 1Gbps data transmission rate.

E. Product Manufacturer and Model
   1. Stratix 5700 Switch, 1783-BMS10CL or equivalent latest compatible series, as manufactured by Allen-Bradley

2.3 ETHERNET MEDIA CONVERTER

A. Description: Converts 10/100Base-T(X) Ethernet media from copper to fiber optic.

B. Features
1. Converts to utilized fiber optic cable type as indicated on the Drawings.
2. (1) 10/100MBit/s RJ45 Port
3. (1) 100MBit/s SC-FX Port
4. Fiber wavelength shall be 1300nm
5. Auto-negotiation
6. Integrated MDI/MDIx changeover
7. Status and diagnostic indicators on device
8. Redundant power supply capable
9. DIN rail mounted
10. Conforms to IEEE 802.3
11. Input power: 24VDC
12. Operating Temperature Range: 32degF – 131degF
13. Humidity: 30-95%, non-condensing

C. Manufacturers: Subject to compliance, provide products manufactured by one of the following:
1. Phoenix Contact
2. Hirschmann
3. Or approved equal.

2.4 DIN-RAIL FIBER PATCH PANEL

A. General: Shall be designed to manage and organize fiber optic cables to and from the equipment or cabling plant.
1. Single panel housing fiber optic enclosure adapted for DIN-rail mounting
2. Protect fiber optic connections for patching or splicing requirements
3. Accommodate up to 12 fibers per enclosure and shall be constructed of steel
4. Include removable covers and pass-through holes
5. Model and Manufacturer:
a. SPH-01P, enclosure by Corning
b. CCH-CP12-15T, adapter plate by Corning

PART 3 - EXECUTION

3.1 INSTALLATION

A. General
1. Conform to manufacturer recommended installation guidelines.
2. Mount the Ethernet switches in enclosures indicated on the Drawings.

B. Physical Network Architecture
1. Physically configure the plant-wide LAN system as shown on the Drawings.
2. Some workstations will be equipped with two network interface cards (NIC) for connection to both networks.
3. IP addresses shall be assigned by Owner for all equipment connected to the plant networks.

3.2 FIELD QUALITY CONTROL

A. Field Test
1. Conduct testing after all connections are made.

2. Test the switches for proper operation by simulating fault conditions at the input terminals of the LAN equipment.
3. Correct any malfunction or error in the designed performance.
4. Check the operation after all LAN equipment has been wired by manually activating the inputs with testing devices that simulate network traffic.

B. Manufacturer Field Services
1. Provide the services of a factory-trained manufacturer representative to configure and start-up equipment specified under this Section.
2. Certify in writing that that the equipment has been installed, configured, and tested in accordance with manufacturer recommendations.

3.3 EXTRA MATERIALS

A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.
1. Quantity: Provide spares for each type listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
a. Ethernet Switch
b. Ethernet Media Converter
c. DIN-rail Fiber Patch Panel
2. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no additional cost.

END OF SECTION 40 9553

SECTION 46 6340

NANOFILTRATION MEMBRANE EQUIPMENT

PART 1 - GENERAL

1.1 REFERENCE

A. All applicable requirements of other portions of the Contract Documents apply to the work of this Section, including but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

A. OEM and Contractor Scope
   1. The OEM's scope shall include all work after the inlet flange connection on the skid and shall end at the flanged connections for the permeate, concentrate, and cleaning connections after the various control, isolation, and block and bleed valves. NF feed pumps will be provided by Contractor (off-skid).

B. The system provided under this specification shall be complete and operable in all respects including, but not limited to connections to other systems and facilities, component and system tests, calibration, alignment, and adjustments as necessary to place the system in operation to perform its intended function.

C. The Contractor shall coordinate scheduling, delivery, and shall unload, store, protect equipment, and install the equipment.

D. Connections of electrical, control, and instrumentation components shall be furnished and installed as specified in Division 26 and 409XXX.

1.3 RELATED WORK SPECIFIED ELSEWHERE

A. Division 09, Section "High Performance Coatings."

B. Division 26—Electrical.

C. Division 40—Process Integration.

1.4 QUALITY ASSURANCE

A. The skid components shall be manufactured from all new materials and equipment.

B. The Owner and/or Engineer shall be provided access at any time to inspect or observe all equipment prior to shipment to the site.

C. All valves, actuators, flow meters, and instrumentation shall be of the same type and from the same manufacturer.

1.5 SUBMITTALS

A. All submittals shall conform completely to the requirements of the Contract Documents, including all requirements set forth in Division 01 General Requirements.

B. Manufacturer shall submit P&IDs for all equipment furnished under this section to the Engineer for approval, prior to submittal of shop drawings. Once P&IDs have been approved, Manufacturer shall submit shop drawings to the Engineer for approval, in accordance with the Contract Documents, for equipment furnished under this section.

C. Manufacturer's product data including but not limited to valves pressure vessels, end assembly, piping, couplings, membrane elements, instrumentation, controls, and electrical components. Data sheets shall include materials of construction for all hardware used to assemble the skids.

D. Submit process design information detailing the number of stages, number of pressure vessels per stage, flux rate per stage and for the entire membrane train, design feed pressures, design product water quality parameters (based on the projected feed water quality), number of membrane elements per pressure vessel, general information on the proposed membrane element, specific instructions on membrane train construction based on membrane system configuration, piping plan and sections, wiring plan, wiring diagram, control panel layout, sample panel layout, and other relevant information.

E. Assembly and installation drawings including arrangement, layout, and dimensions of all components of the membrane trains, including the control panel, sample panel, piping connections and membrane element loading sequence.

F. Factory acceptance testing results.

G. The OEM's printed instructions for the handling, delivery, storage, and installation of the membrane system components.

H. Operations and Maintenance (O&M) Manual
   1. The OEM shall prepare a comprehensive operation and maintenance (O&M) manual for the system specified as part of this Contract. The manual shall include information on the operation and maintenance of the individual components of the system, and on the operation of the overall package. O&M Manual shall be in accordance with Division 01, Section "Operation and Maintenance Data".

I. The OEM shall also provide personnel training prior to startup, and field assistance during the system checkout, startup, and commissioning.

1.6 SPARE PARTS

A. Provide two spare grooved-end, flexible-type coupling assemblies for each size and type supplied on the membrane skid assembly.

B. Provide two pressure vessel repair kits, consisting of all O-rings and seals and clips required for the rebuilding of one end closure assembly.

C. Provide four permeate orifice plugs, sized to simulate hydraulic design of the membranes.

1.7 HANDLING, DELIVERY, AND STORAGE

A. The OEM shall fabricate and deliver all components of the NF System to the site.

B. All components shall be properly crated and stored at the job site until ready for installation. All components shall be kept clean, dry, and protected from freezing.

C. Weight, handling instructions, type of storage required, and instructions for protective maintenance during storage shall be included with each shipment to the job site.

1.8 WARRANTY

A. The membrane manufacturer shall guarantee the membrane performance as specified herein during the performance warranty period as described below:
   1. Performance Warranty Period: 1 year full warranty plus 2 additional year warranty pro-rated.

B. If the performance requirements specified (permeate water quality and feed pressure) are not met the OEM shall replace all membranes at no cost to the Owner until the requirements are met.

C. Performance Requirements:
   1. Performance Requirements are included in the NF Membrane Equipment Schedule.

PART 2 - PRODUCTS

2.1 GENERAL

A. NF Skid design information and dimensions are included the NF Membrane Equipment Schedule.

B. Membranes
   1. Provide interconnectors, O-rings, and brine seals required for installation in specified pressure vessels. Elements shall be non-telescoping, non-flexing, and leak-free.
   2. Spiral Wound Thin-Film Composite.
   3. Nominal Diameter: 8 inches.
   4. Nominal Length: 40 inches.
   5. Nominal Active Membrane Area: 400 square feet.
   6. Seal Materials: Brine seals and O-rings shall be manufactured from EPDM.
   7. Feed Brine Spacer Thickness: 34 mil.
   8. Manufacturer/Model:
      a. DOW/NF90.

C. Manufacturers
   1. Wigen Water Technologies
   2. H2O Innovation
   3. Harn

2.2 SKID ASSEMBLY

A. Material
   1. Base Bid: Epoxy Coated Carbon Steel or FRP
   2. Alternate Bid: 304 SST

B. Frame/Supports
   1. Fabricate frame and supports using material as noted above.
   2. If onsite erection or assembly of the frames is required, OEM shall certify that the skids have been constructed correctly.
   3. All other supports and hardware on the skids shall be either 304 SST or FRP.
   4. Frames shall be designed and stamped by registered professional engineer, and all calculations submitted in accordance with Division 1 Section “Submittals”.

C. Anchor Bolts
   1. Contractor shall provide 316 SST expansion bolts to anchor the skid to the equipment pad below. OEM to coordinate with Drawings to determine anchor bolt locations.

D. Accessories
   1. Locate control panel, sample panel, pressure transmitters, flow transmitters, conductivity meters, and other instruments for each skid where indicated on the drawings, and no less than 2.5 feet no more than 5 feet above floor level.

2.3 FEED, INTERSTAGE, CONCENTRATE, AND PERMEATE PIPING

A. All high pressure feed, interstate, and concentrate piping shall be 316 stainless steel, schedule 10S conforming to the requirements of Division 40, Section “Process Piping.”
   1. All stainless steel piping associated with the membrane skid shall be stress relieved and passivated. Passivation shall be continued to a bright metal finish.
   2. All stainless steel piping shall be thoroughly cleaned inside and out, disinfected, and all scale and welding slag removed.
   3. All piping shall be designed for a working pressure no less than the shutoff head of the NF Feed Pumps being provided (OEM to coordinate with Contractor and NF Feed Pump Supplier).
   4. All stainless steel spool pieces shall be pressure tested to 1.5 times the rated working pressure of the pipe. Pressure testing shall conform to the requirements set forth in Division 40 Section “Process Piping”. Cut or roll-groove as appropriate to the pipe material, wall thickness, pressure, size, and method of joining. Use Victaulic “RX” rolls for grooving Schedule 10 stainless steel pipe.

B. All other piping shall be Schedule 80 PVC conforming to the requirements of Division 40, Section “Process Piping.”

C. Vessel Connections
   1. Feed, Interstage, and Concentrate Connections: Side-ported pressure vessels shall be directly connected to their respective manifolds using grooved-end flexible pipe couplings.

D. Grooved-End Flexible Pipe Couplings
   1. Housings: 304 SST
   2. Gaskets: EPDM rubber, suitable for hot and cold water service.
   3. Bolts / nuts: Round head, square neck, type 316 SST bolts and heavy hex type 316 SST nuts. Washers shall be heavy pattern 316 SST.
   4. Pressure Rating
      a. < 2-inches: 600 psi.
      b. 2-inches and larger: 300 psi.
   5. Manufacturer: Victaulic Style 489, Piedmont Style K, or Engineer Approved Equal.

a. All grooved components shall be of one manufacturer. Installation shall be in strict accordance with the coupling manufacturer's latest published instructions.

E. OEM shall carefully review drawings for coordination on skid connection locations. Skid connection locations have been located for coordination with the Architectural and Structural Layout of the Building. Alternate connection points may not be acceptable. No additional costs will be paid by the Owner for piping revisions that are required for alternate connection points.

F. Manifolds and piping shall be securely supported from the vessel support structure. Manifold support stanchions that are welded to the manifold must be the same material and finish as the manifold. For side-ported pressure vessels, provision must be made for either the feed or concentrate manifold of each stage to allow for movement of the manifold with the vessel side ports as vessel length expands under pressure. Manifolds shall not rely upon mechanical-type coupling joints to support coupled sections of manifolds.

2.4 SIDE PORTED PRESSURE VESSELS

A. Pressure vessels shall be as specified in Division 46 Section "Side Ported Pressure Vessels".

2.5 VALVES

A. Valves and actuators shall conform to the requirements of Division 40 Section "Process Valves, Gates and, Accessories."

2.6 INSTRUMENTATION

A. Flow Measurement
   1. Magnetic Flowmeters
      a. In accordance with Division 40, Section "Primary Sensors and Field Instruments."
   2. Paddlewheel Flowmeter
      a. Manufacturer/Model: Seametrics IP800 Series or Engineer Approved Equal.
      b. Materials: Cast Aluminum housing, PVC sensor, Viton O-ring, PVDF rotor, and Kynar shaft.
      c. Features: 4-20 mA output, loop powered.

B. Pressure Measurement
   1. Pressure Transmitters and Switches
      a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
   2. Pressure Switches
      a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
   3. Pressure Gauges
      a. In accordance with Division 40, Section "Process Valves, Gates, & Accessories".

C. Analyzers
   1. ORP
      a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
   2. Conductivity
      a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
   3. Temperature
      a. Moore Industries TDZ with D2LC housing or Engineer Approved Equal.

2.7 SAMPLE PANEL

A. There shall be a sample panel on each skid made of HDPE or FRP. The panel shall be mounted with corrosion resistant clamps (316 SST) similar to those used to attach the pressure vessels to the support structure.

B. The sample panel shall be fitted with angle-pattern, 1/4-inch-turn, black PVC valves, installed to panel with Swagelock backhead tube fitting SS-400-71-4 for 1/4-inch OD tubing or Engineer Approved Equal.

1. There shall be one sample valve for the permeate for each pressure vessel on the skid, plus valves for 1st stage feed, interstage, concentrate, 1st stage total permeate, 2nd stage total permeate, and total permeate. Provide a label for each sample valve corresponding to the location from which the sample is drawn.

C. The sample panel shall be equipped with a 6-inch deep x 6-inch wide trough for each row of sample valves, of the same material as the panel, which shall be drained by a 2-inch PVC pipe. Route drain pipe to trench drain located beneath each skid as shown on the drawings. Provide slope in trough to properly drain sample water. Provide adequate clearance for a one-gallon milk jug between the sample valves and the trough.

D. Sample tubing shall be 1/4-inch OD polyethylene, with a minimum working pressure of 300 psi at 75 deg F. Sample tubing shall be black. Tubing shall be Manufactured by Imperial Eastman Division, Imperial Clevite, Inc., or Engineer Approved Equal.

E. Tubing shall be neatly arranged and bundled where possible. Bundles shall be retained with nylon tywraps, or grouped in PVC conduit with properly arranged openings for tubing. Label sample taps according to stage and sequential number.

2.8 WET PANEL

A. A Wet Panel shall be provided for each skid made of HDPE or FRP board, floor-mounted where indicated by the Drawings, adjacent to each skid. The panel shall be mounted on FRP supports with corrosion resistant (316 SST) clamps similar to those used to attach the pressure vessels to the support structure. The Skid Wet Panel may be combined with the Skid Sample Panel.

B. The Wet Panel shall incorporate all instrumentation and control components local to each train except for those that must be installed inline, or otherwise indicated in the PID drawings. The panel shall include pressure gauges, transmitters, indicators, analytical instruments, and other components indicated on the Drawings. The panel shall consist of a flat panel for gauges, analytical sensor cells, and other surface mounted components; a NEMA 4X enclosure for mounting analytical transmitters, electronic displays, and components.

C. Skid shall include drain piping from the wet panel to the trench drain beneath each skid as shown on the drawings.

2.9 MCS SYSTEM

A. MCS Tanks(s)

1. MCS Tank(s) are specified in Division 46, Section "Polyethylene Chemical Storage Tanks and Appurtenances". These tanks to be provided by the Contractor. OEM to coordinate with Contractor and MCS Tank Supplier.

B. Piping
1. MCS Piping is specified in Division 40 Section "Process Piping". MCS piping shall be provided and assembled by the Contractor. Skidded MCS systems are not acceptable.

C. Valves
1. MCS valves are specified in Division 40, Section "Process Valves, Gates, and Accessories". MCS valves shall be provided by the Contractor. OEM to coordinate with Contractor and MCS Valve Supplier.

D. Pump(s)
1. MCS Pump(s) are specified in Division 43, Section "Horizontal End Suction Pumps". These pumps shall be provided by the Contractor. OEM to coordinate with Contractor and MCS Pump Supplier.

E. Cartridge Filter Housing(s)
1. MCS Cartridge Filter Housing(s) are specified in Division 44, Section "Cartridge Filters and Appurtenances". Cartridge filter housing(s) shall be supplied by the Contractor. OEM to coordinate with Contractor and Cartridge Filter Housing Supplier.

F. Instrumentation/Accessories
1. MCS System instrumentation and accessories shall be provided by the OEM. OEM to coordinate with Contractor and Instrumentation Supplier. Conduit and wiring between instrumentation and MCS shall be provided by OEM. Conduit and wiring shall comply with Division 26 and 409XXX series specifications.

G. Water Heaters:
1. OEM shall provide the heaters. OEM to coordinate with MCS Tank Supplier.
2. Sizes: Per the equipment schedule.
3. Material: 304 SST flange and Incoloy sheath.
4. Electrical Characteristics: 480V, 3 phase, cold section first 10 inches. Include thermostat.
5. The heater shall have a maximum temperature thermostat switch to prevent excessive heating and damage to the tank.
6. Installation: Per the manufacturer's recommendations.
7. Manufacturer: Indeeco, Chromalox, or Engineer Approved Equal.

2.10 PERMEATE FLUSH SYSTEM

A. Permeate Flush System (PFS): OEM shall provide the permeate flush system (where indicated) which shall include tank(s), pump(s), valves, meters, and controls as indicated on the drawings.

B. Permeate Flush Tanks(s)
1. Permeate Flush Tank(s) are specified in Division 46, Section "Polyethylene Chemical Storage Tanks and Appurtenances". These tanks to be provided by the Contractor. OEM to coordinate with Contractor and Permeate Flush Tank Supplier.

C. Piping

1. Permeate Flush Piping is specified in Division 40 Section “Process Piping”. MCS piping shall be provided and assembled by the Contractor. Skidded Permeate Flush systems are not acceptable.

D. Valves
1. Permeate Flush valves are specified in Division 40, Section “Process Valves, Gates, and Accessories”. Permeate Flush valves shall be provided by the Contractor. OEM to coordinate with Permeate Flush Valve Supplier.

E. Pump(s)
1. Permeate Flush Pump(s) are specified in Division 43, Section “Horizontal End Suction Pumps”. These pumps shall be provided by the Contractor.

F. Instrumentation/Accessories
1. Permeate Flush System instrumentation and accessories shall be provided by the OEM.

2.11 ACCESSORIES

A. SDI Test Apparatus
1. Provide and install one silt density index (SDI) test apparatus for each array at the sample panel.
2. SDI test apparatus shall conform to the requirements of ASTM D4189.
3. Provide 500 filters with each apparatus.

2.12 IDENTIFICATION

A. Identify all equipment per Division 40 Section “Process Valves, Gates, and Accessories”.

B. Identification Schedule
1. Identify all valves on each skid. Valve numbers are listed in the valve schedule.
2. Identify all piping using the language indicated on the drawings.
3. For cleaning connections, provide placards mounted on the piping showing and describing the valve settings for cleaning both stages.
4. Identify each pressure vessel. Locate the label on the side of the pressure vessel facing the sample sink and at the front of the skid. Pressure vessel numbering shall correspond to the sample valve numbering.
5. Identify each pressure gauge, transmitter, flow element, analytical element, and all other pieces of equipment. Tag shall be descriptive of the equipment, i.e. “1ST STAGE FEED PRESSURE”.

2.13 ELECTRICAL

A. Refer to Division 26 - Electrical for Electrical Requirements.

B. Conduit
1. All on skid electrical and control conduits shall be schedule 80 PVC conduit in accordance with Division 26, Section “Raceway.”

2.14 CONTROL PANELS

A. OEM shall provide the following control panels:

1. NF Skids Master Control Panel (NF-MCP)
2. NF Skid Control Panels (NF1, NF2, NF3, etc….)
3. NF MCS Control Panel (MCS-CP)

B. Control Panels and components shall be in accordance with Division 40, Section 409XXX series and as shown on the drawings.

C. MCS Control Panel (NF-MCSCP)
1. Provide VFDs for each MCS Pump (MCSP-1 and MCSP-2) and Permeate Flush Pump (PFP-1).
   a. VFDs shall be in accordance with Division 26, Section "Variable Frequency Drives".
2. Provide local on/off switches for operation of the heaters.

D. Provide spare parts for control panel components as specified in Section 409XXX series.

2.15 CONTROLS

A. Provide controls for all elements scope supplied. All instrumentation required to control and monitor the operation of the equipment shall be provided including all PLC and OIT programming for all supplied equipment.

B. OEM shall control the NF Feed Pumps (NFFPs).
1. There will be one (1) feed pump for each NF skid.
2. NF feed pumps are VFD driven.
3. NF-MCP shall control the VFD to slowly adjust the pump flow rate to desired setpoint.

C. Provide an electronic copy of the software on a USB jump drive to allow the customer to reconfigure the program. The software provided to the customer shall be the "As-Built" version of the operating program that includes all start up and on-site changes that were made to the original program.

D. Control components, where specified within this section, shall be provided under this section.

E. The equipment specified under this section shall operate manually/automatically as shown on the drawings and specified in Section 409XXX. Any additional materials of equipment required by this section's OEM, but not shown on the drawings or specified in sections 409XXX, to allow this equipment to function in the required manner, shall be furnished and installed under this section.

F. Provide all miscellaneous supports, brackets, fasteners, and fabrications required to mount and install equipment controls provided under this section.

2.16 NF CONTROL DESCRIPTION

A. The controls shall be designed to operate and control the NF Skids, NFFPs, MCS system, and Permeate Flush System.

B. The permeate flux and recovery shall be adjustable such that the skid can be programmed to make different amounts of permeate. OEM shall program the skids to operate at varying capacities by adjusting the permeate flux and recovery.

C. NF Flow Calculations
   1. Operator shall have the ability to enter the desired NF flux rate (gfd) and percent recovery (%) for each NF skid.
   2. Operator shall have the ability to enter the number of pressure vessels in the first stage (#PV1) and second stage (#PV2), number of elements per vessel (#EL), and square footage of membrane area per element (AEL) for each NF Skid. #EL and AEL shall be a common input at one location for all skids.
   3. Indicate the Total #PV (#PV1 + #PV2).
   4. Indicate NF Permeate Flow (NFP = #PV x AEL x Flux)
   5. Indicate NF Feed Flow (NFF = NFP / % recovery)
   6. Indicate NF Concentrate Flow (NFC = NFF – NFP)
   7. Indicate 2nd Stage NF Concentrate flow per pressure vessel:
      a. NFCPV2nd = NFC / #PV2nd
      b. If NFCPV2nd < 15, then provide alarm stating “Minimum 2nd Stage NFC flow per Pressure Vessel too low. Lower % recovery or raise flux.”

D. Communicate all parameters with the Plant SCADA system (PCS). Refer to Division 40, Section “Plant Control System” for a description of the plant operation.

E. General
   1. The following control function description is preliminary; final design, detailing, and implementation of control strategy will be performed by the OEM.
   2. All skids will be controlled by NF-MCP which will receive run/shutdown signals from the NF Building ACP (NF-ACP). NF-MCP will also receive the number of NF skids to be in service. Interface with NF-ACP must be coordinated with the System Integrator.
   3. All control functions on the skids shall have Local Automatic, Remote Automatic, Off, and manual override. Manual control shall be limited to authorized personnel only and shall not be selectable from the face of the control panel. Remote/local selection shall apply to the overall start and stop function only, and shall not interfere with manual/auto operation of individual components, except where necessary safeties apply.
      a. Remote position of selector permits the skid to receive the plant run signal from the NF-ACP.
      b. Local position of selector inhibits the skid from receiving the plant run signal from the PCS.
      c. All NF skid components must be capable of manual operation, but manual controls shall not be located individually at the NF Skid Control Panel (NF1, NF2, NF3, etc…)

F. Start Sequence
   1. Start signal will be sent from the NF-ACP to NF-MCP. The number of NF skids in service will be sent from the NF-MCP to NF-ACP. Only one skid shall start at a time. Only one skid shall shutdown at a time (except for alarm conditions).
   2. Pre-Flush
      a. Open the NF concentrate (NFC) throttling valve 100%.
      b. Close NF permeate (NFP) valve and open NF permeate dump (NFD) valve.
      c. Start the NF feed pump at 25% and increase speed to obtain pre-programmed concentrate flow rate.
      d. At the end of the pre-flush period, open the NF permeate (NFP) valve and close the NF permeate dump (NFD) valve. Valves shall be programmed to open/close slowly over 1 minute). Turn control over to the PID loops.
      e. If pre-flush continues beyond an operator adjustable duration, initiate alarm.

G. Permeate Flush System (if equipped)
   1. Permeate Flush system shall be operated as described below during permeate flushing:
      a. Permeate Flush tank fill shall be automatically controlled. Tank fill shall be accomplished using the Permeate Flush Tank fill valve, and the Permeate Flush Tank tank level sensor. The Permeate Flush System tank level sensor shall include operator adjustable setpoints for pump cut off, low water level, fill, and high water level.
      b. Flush shall be performed as described under normal shutdown sequence. NF PLC to control all valving on the skid being flushed as well as the Permeate Flush Pump on/off and speed.

H. MCS System
   1. MCS system shall be operated as described below during membrane cleaning:
      a. Skid to be cleaned shall be locked out from running via a HMI selector switch on any of the OITs. All automatic valves on the skid shall be automatically placed in the appropriate position for cleaning.
      b. MCS tank fill will be manually controlled.
      c. MCS tank water shall be automatically heated. Heating shall be accomplished using the heater. An operator adjustable setpoint shall be used to set the desired heated water temperature. An operator adjustable setpoint shall be included for a high temperature alarm. Heating is initiated using an operator controlled on/off/auto switch.
      d. Once the MCS tank water is heated, the operator will manually add chemical (either in the top of the tank or using the eductor) and manually start the MCS pump using the on/off/auto switch. Operator will manually throttle the flow by observing the flowrate and controlling the VFD speed on the MCS pump.

I. Normal Run Operation
   1. Start the selected skid (one at a time). NF-MCP shall automatically rotate the skids and shall display the accumulated skid runtime. If any skid has not ran for an operator selectable duration, provide an alarm indicating that the skids have to be rotated.
   2. The operator shall be able to exclude each skid from running using a selector switch on any of the OITs. Each skid shall be started at 50% of design capacity and ran for 60 seconds before increasing slowly to the desired flow rate setting.
   3. Permeate Flow Control: The feed flow meter controls the feed pump VFD to maintain the preset flowrate.
   4. Concentrate Flow Control: Concentrate flowmeter controls the concentrate control valve to maintain the pre-set concentrate flow rate.
   5. Flow rates, pressures, and conductivities shall be monitored by the NF skid system controller. If any parameter goes beyond pre-set limits for more than an allowable time, it will indicate on the control panel and send a general alarm to the plant control system.
   6. If ORP exceeds setpoint, shut down the skid.

J. Normal Shutdown
   1. Stop signal will be sent from the NF-ACP to NF-MCP. The number of NF skids in service will be sent from the NF-MCP to NF-ACP. Only one skid shall stop at a time.
   2. Post-flush
      a. System shall be set up for flushing with feed water (forward flush) or Permeate Flush (if equipped). If equipped, an operator adjustable selector switch shall indicate which flushing water source is to be used (forward flush or permeate flush).

b. Control the NF feed pump or the permeate flush pump and/or the NF concentrate (NFC) control valve speed to obtain operator adjustable concentrate flow rate during the flush.
c. Open NF permeate dump (NFD) valve and close NF permeate (NFP) valve.
d. Open NF concentrate (NFC) valve 100%.
e. Continue post-flush for an operator adjustable setpoint duration.
f. Stop the NF feed pump or the Permeate Flush Pump.
g. Close the NF feed valve.

K. Emergency Shutdown (Loss of Power): The emergency shutdown sequence shall be identical to the normal shutdown except that it is initiated by the shutdown logic rather than the operator.
1. All skids stop.
2. NFC valve fails open.
3. NFD valve fails open.
4. No automatic restart of feed pumps or skids.

L. Alarms and Shutdown (Internal Logic): There are a variety of conditions listed below which must be verified prior to proceeding with the next step in a start-up or shutdown sequence. These will be defined by the Engineer in conjunction with the OEM following contract award. Should any of these conditions be detected, the NF-MCP PLC shall issue an alarm indicating the failing equipment or permissive that caused the fault, and halt the sequence. If in automatic sequencing, the PLC shall shutdown the skid. If in manual sequencing, the PLC shall either proceed or shutdown the skid as directed by the operator via the OIT. The discrepancy alarm shall describe the condition which caused it in sufficient detail for the operator to investigate and correct the problem.
1. pH out of range: Alarm in main control system.
2. NF feed suction low pressure: alarm and skid shutdown with post-flush.
3. Antiscalant low tank level: Alarm and normal plant shutdown (in main control system).
4. Antiscalant no flow: Alarm and normal plant shutdown (in main control system).
5. High permeate pressure on each skid: Shut down skid with post-flush.
6. Cartridge filter high differential pressure: Alarm in main control system.
7. NF Feed pump high pressure: Alarm and shut down with post-flush.
8. Failure of valve to reach specified position: Alarm.
9. High permeate conductivity: Alarm.
10. Permeate valve and permeate dump valve both closed: Shutdown with post-flush.
11. Concentrate valve closed: Shutdown, no post-flush.
12. Low concentrate flow: Shutdown with post-flush.
13. NF skid rotation: Alarm.

M. Include a performance monitoring software system for purposes of:
1. Automatic data acquisition
2. Data trending
3. Report generation
4. Alarm management including notification and alarm archiving
5. Remote web access to view data trending and reports
6. Facilitating system performance analysis
7. Facilitating performance optimization
8. Refer to Part 3 “Service Agreement and Remote Monitoring”

PART 3 - EXECUTION

3.1 INSTALLATION OF MEMBRANE ELEMENTS

A. Conform to the requirements of Division 01, Section “Quality Control”, paragraph 1.8, Manufacturer's Field Services.

B. Installation work shall conform to the Membrane Manufacturer’s recommended procedures, instructions, and approved loading sequence.

C. Provide for the services of a factory trained service technician of the membrane manufacturer to be present to supervise the installation of the membranes.

3.2 FACTORY ACCEPTANCE TESTING

A. After final assembly is complete and prior to being shipped, each fully assembled skid shall undergo factor acceptance testing. All piping, pressure vessels, and associated appurtenances shall be testing to 150% of their maximum operating pressures. Any leaks, if discovered, shall be repaired, and factory acceptance testing shall be redone. OEM shall submit results of factory acceptance testing for approval. If desired by the Owner and/or Engineer, factory acceptance testing will be witnessed, in-person. OEM shall give written notice to Engineer no less than thirty (30) days prior to factory acceptance testing. OEM is not responsible for travel, lodging, or meal costs for the Owner or Engineer.

3.3 SPECIAL SERVICES

A. Conform to the requirements of Division 01, Section “Quality Control”, paragraph 1.8, Manufacturer's Field Services.

B. Follow the manufacturer's recommended procedures for testing, adjusting, and placing of equipment into proper operation.

C. Startup and Commissioning
   1. Functional Testing
      a. Functional testing of the membrane system shall be accomplished for each membrane skid with test orifices installed in the permeate ports of each vessel to simulate pressure drops. Skid to be operated at representative flows with automatic instrument control as required to confirm responsiveness over design operating range. Testing shall continue until each skid can be run for four consecutive hours without interruption. Two successful start-up and shutdown sequences shall be demonstrated prior to the start of the four-hour test. Demonstration of correct control loop operation in conjunction with CPI loop testing is also required.
      b. At the conclusion of the functional testing the vessels shall be disinfected, cleaned with a manufacturers recommended detergent, and flushed to ensure vessel cleanliness. Vessel interior surfaces shall be thoroughly wiped prior to the loading of the membranes. During membrane loading the brine seals, O-rings, connectors, anti-telescoping devices, and physical condition of the module wrap shall be inspected. Serial numbers and pressure vessel location of each membrane element shall be documented, tabulated and provided to the Engineer for review.
   2. Start-up Testing: Each membrane skid shall be started up, one at a time, and operated for a total of eight hours over a two-day period at design conditions. During this time two bacteriological samples (permeate) shall be taken and tested for heterotrophic plate count

(HPC). Acceptance shall be based upon bacteriological testing of permeate samples showing HPC less than 500 colony forming units per milliliter (CFU/ml). All samples shall be analyzed by an Ohio EPA certified laboratory.

3. Performance Testing
   a. Time of Performance Testing: The performance testing for the membrane system shall occur following completion of all facilities and equipment required for the testing. Final acceptance of the membrane system will be contingent upon successful performance testing. Performance testing of each train must be initiated within 60 days of bacteriological testing during startup.
   b. Testing Protocol: The OEM shall submit a proposed testing protocol 60 days prior to the initiation of the membrane system performance testing. The testing protocol shall have written approval by the Engineer prior to commencement of the testing program. The testing protocol shall include, but not be limited to, water quality sampling parameters, sampling locations, projected dates of the performance testing, Ohio EPA approved laboratory to be used for the water sample analysis, and time of sampling relative to time zero. Time zero for the membrane system performance testing is the time of the first sample.
   c. Duration of Performance Test: Each membrane skid shall be tested for four (4) consecutive days. Two (2) skids may be tested at a time. The OEM shall be fully responsible for every aspect of the performance test. Representatives of the OEM and shall be on site during the entire performance test. Representatives of the Engineer and Owner may also be present during the performance test.
   d. Performance Test Conditions: Each membrane skid shall be tested under design operating conditions.
   e. Data Collection During Performance Test: The following continuous data shall be collected hourly unless otherwise specified during the performance testing:
      1) Water Quality: feed water temperature, feed water conductivity, feed water pH, permeate temperature, permeate conductivity, permeate pH, concentrate conductivity, feed water SDI (twice daily), feed water turbidity, concentrate pH. Temperature, pH, and turbidity readings may be taken from the plant instrumentation provided the instrumentation is operable and calibrated at the time of the test.
      2) A Heterotrophic Plate Count sample shall be taken from the raw water, feed water, interstage feed, concentrate, and permeate within 4 hours after initial startup for each train and repeated just prior to the completion of the performance test. Samples and cultures of samples shall be in accordance with AWWA Standard Methods, current edition.
      3) Mechanical Data: feed water pressure, interstage pressure, permeate pressure, permeate flow, concentrate flow, flow control valve position, concentrate valve position, wells, operating, startup and shutdown times, chemical flow rates and dosages.
   f. Discrete Water Sampling: Samples shall be once per day during the four-day testing for a total of 4 sampling events. During a sampling event, the OEM shall take discrete water samples from the skid's feed, permeate, and concentrate streams for calcium, magnesium, total hardness, sodium, potassium, iron, manganese, barium, strontium, alkalinity, chlorides, sulfates, sulfides, nitrates, nitrites, fluoride, silica, pH, and total dissolved solids. The OEM shall submit samples to an Ohio EPA approved laboratory for analysis. All analytical results shall be transmitted to the OEM and Engineer.
   g. Test Report: A formal bound report shall be produced and submitted to the Engineer for all testing activities. Report shall contain detailed test plans and

results for all activities performed during testing. Results from all testing shall be tabulated, trended, and graphed as appropriate. Discussion of testing, along with conclusions and recommendations, shall be presented in the test report. All laboratory analyses shall be bound into the report as appendices.

4. Field Representative: The OEM shall provide the services of a qualified field representative for all startup and commissioning procedures. The representative shall perform all testing, operation, and debugging of the systems.
5. Training
    a. The OEM shall provide the services of a qualified representative for 5 days to instruct the Owner's personnel on proper operation, installation, sampling, cleaning, and maintenance for the membrane system.
        1) General Background: Ions, organics, bacteria, fungi, algae, sand, silt, clay, colloids, principles of diffusion, dissolved substances, and suspended substances. How nanofiltration works, Principles of net driving pressure. Semipermeable membranes, cellulosic and non-cellulosic. How membranes reject ions, organics, and particles. How NF elements are made and how they work.
        2) NF Skid Operation: The internal and external pieces of a nanofiltration skid. What happens inside the nanofiltration skid. Problems caused by dissolved substances. Why and how scaling and chemical attack occur. Problems caused by suspended substances. Why and how fouling by bacteria and inorganic particles occur. Pretreatment equipment and chemicals used to minimize operating problems. Monitoring techniques such as permeate flow normalization, percent salt rejection, pressure drops, and silt density index to detect problems.
        3) Maintenance: Issues involving the maintenance of the NF skids.
        4) Controls/operation of this specific installation including touch screens, logic, and operations.
6. The OEM shall provide at least two (2) qualified field representatives to be on-site to coordinate and supervise the installation (1 week) and startup and commissioning (3 weeks) of the NF system for each WTP facility. Some time may be combined with that required for the other equipment provided by the OEM.

D. Remote Monitoring: The OEM shall provide two (2) years of monitoring of all of the system operating parameters. Owner to provide OEM will required data (VPN connection is not permitted). The OEM shall provide a monthly status report with a complete analysis of all normalized data with recommendations for operation and maintenance. The period of remote monitoring shall commence upon Substantial Completion of the project.

E. Field Service Agreement: The OEM shall provide a two (2) year service agreement to the Owner. Service agreement shall include all costs (including labor, travel, lodging, meals, and incidentals) for the following for each WTP facility:
    1. Two (2) trips for a qualified field representative to be on-site to assist the Owner in troubleshooting and/or operation of the Nanofiltration Membrane Equipment. Each trip shall consist of four (4) full days of service. Travel days excluded from number of days of service.
    2. Two (2) trips for a qualified field representative to be on-site to assist the Owner in performing membrane cleaning. Each trip shall consist of three (3) full days of service. Travel days excluded from number of days of service.

END OF SECTION 46 6340

RARWTP RO MEMBRANE EQUIPMENT SCHEDULE

A. Performance Requirements
   1. The raw water source is groundwater from wells which has been oxidized with sodium hypochlorite, filtered with gravity filters, and chemically conditioned to reduce ORP and provide antiscalant. Table 1 presents the water quality data which shall be used in the development of the RO system design.
   2. Each NF train shall meet the permeate quality requirements specified in Table 1 throughout the performance warranty period while operating at the design recovery and permeate flowrate.

Table 1 – RARWTP Water Quality Data

Parameter	Unit	Raw Water	Permeate Requirements
NH4+ +NH3	mg/L	0.00	
K	mg/L	2.9	
Na	mg/L	33

B. NF Skid Design:
   1. No. of Skids: Six (6)
   2. Configuration: 2 Stage, 24:12
   3. No. of Elements per Vessel: 7
   4. Permeate Capacity: 1,030 gpm
   5. Recovery: 80% (adjustable from 70% to 83% to maintain min. concentrate flow of 15 gpm/vessel and a maximum membrane recovery of 19% per element)
   6. Flux: 14.7 gfd
   7. Permeate Backpressure after skid:
      a. Stage 1: 0-35 psig (adjustable)
      b. Stage 2: 0-15 psig

C. NF Skid Dimensions:
   1. Maximum Width: 95 inches (8’-0”)
   2. Maximum Length: 318 inches (26’-6”)
   3. Maximum Height: 150 inches (12’-6”)

D. MCS:
   1. Stage 1
      a. Heater: 120 kW
   2. Stage 2
      a. Heater: 75 kW

FAWTP RO MEMBRANE EQUIPMENT SCHEDULE

A. Performance Requirements
   1. The raw water source is groundwater from wells which has been chemically conditioned to reduce ORP and provide antiscalant. Table 2 presents the water quality data which shall be used in the development of the RO system design.
   2. Each NF train shall meet the permeate quality requirements specified in Table 2 throughout the performance warranty period while operating at the design recovery and permeate flowrate.

Table 2 – FAWTP Water Quality Data

Parameter	Unit	Raw Water	Permeate Requirements

SECTION 46 6342

SIDE-PORTED PRESSURE VESSELS

PART 1 - GENERAL

1.1 REFERENCE

A. All applicable requirements of other portions of the Contract Documents apply to the work of this Section, including but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

A. Work of this section includes furnishing and installation of all equipment necessary to provide the side-ported pressure vessels for the NF system.

B. Equipment specified under this section shall be provided by the ROEM as part of the membrane treatment system.

C. Equipment furnished and installed under this section shall be fabricated, assembled, erected and placed in proper operating condition in full compliance with drawings, specifications, engineering data, instructions, and recommendations of the equipment manufacturer unless exceptions are noted by the engineer.

1.3 QUALITY ASSURANCE

A. Manufacturer's Qualifications: All pressure vessels specified under this section shall be manufactured and supplied by one manufacturer.

B. Reference Standards: The pressure vessel design must meet all the requirements of ASME Section X, entitled Fiber Reinforced Boilers and Pressure Vessels.

1.4 SUBMITTALS

A. The manufacturer shall provide instructions on installation, operation and maintenance and proper application of the vessels as well as a vessel drawing. Submittals shall conform to the requirements set forth by Division 01 Section "Submittal Procedures". The documents provided shall include the following:

1. Operation and Maintenance Instructions: Step-by-step instructions for opening and closing the vessel along with precautions and recommended maintenance procedures. These instructions shall be written to inform a general mechanic unfamiliar with NF vessels.
2. Installation Instructions: Detailed instructions for handling, mounting and connecting the vessel.
3. Application Guide: General guidelines to assist the NF system engineer to apply vessels correctly to the specific requirements.
4. Engineering Drawing: detailed drawings that specify all parameters necessary to incorporate the vessel component into the NF system, including dimensions, weights, materials of construction and port size.

1.5 SPARE PARTS

A. Spare parts shall be of the same manufacture and quality as those provided with the equipment. Spare parts shall be suitably packaged in accordance with the Manufacturer's recommendations, with labels indicating the contents of each package. Spare parts shall be delivered to the Owner with the equipment of this Section.

B. Provide the following spare parts:
   1. 2 complete pressure vessel heads.

1.6 HANDLING, DELIVERY, AND STORAGE

A. The pressure vessels shall be completely factory assembled and securely crated for shipment.

B. When received at the site, the pressure vessels shall be stored in a clean, dry environment until ready for installation.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Pressure vessels shall have a diameter and length designed specifically to contain a quantity of 7 standard eight-inch diameter by 40-inch long spiral-wound membrane elements. The feed and concentrate ports shall be located in the sidewall of the pressure vessel. Vessels with multiple ports per end for direct vessel-to-vessel connection are permitted and required in order to simplify system design, provide a smaller footprint and eliminate excessive manifolds.

B. Vessels shall have a maximum working pressure of not less than 200 PSI at a temperature up to 120 deg F (49 deg C) with a minimum operating temperature of not less than 20 deg F (-7 deg C).

C. Vessels shall be complete with end closures, hardware and membrane element end adapters. Membrane elements and membrane interconnectors shall be furnished by the membrane element manufacturer.

D. The adapters furnished shall be appropriate for the brand of membrane element specified. In addition, the vessel shall be designed to allow other makes of membrane elements to be easily accommodated by changing the adapters.

E. The materials used in the construction of the pressure vessel shall meet ASME code requirements, including material selection and required strength for the anticipated operating conditions. These materials shall also have the following characteristics:
   1. All wetted head components in continuous contact with the pressurized process water shall be made from plastics that are known to have long-term resistance to corrosion in the service intended.
   2. All wetted nozzles in continuous contact with the pressurized process water shall be made from wrought pipe that is known to have long-term resistance to corrosion in the service intended.
   3. All other materials of construction shall be of appropriate strength and corrosion resistance for the operating conditions. The use of an unanodized aluminum and plastic load bearing materials is strictly prohibited.

4. The materials of construction for each component part of the vessel shall be clearly and fully specified on the Engineering Drawing.

F. Manufacturer: Bekaert Progressive Composites, Codeline, Wave Cyber.

2.2 VESSEL SAFETY

A. Vessels shall be designed to meet the standards of ASME Boiler and Pressure Vessel Code, Section X. Vessels shall be certified by manufacturer. Code stamp is not required.
   1. The Manufacturer shall be qualified to produce Code Certifiable Pressure Vessels per Section X of the Code as verified by possession of a current Certificate of Authorization issued by the ASME.
   2. Vessels shall be built to a design that has been qualified for fabrication through ASME Design and Procedure Qualification Tests. The tests include destructive pressure tests of prototype vessels. To qualify, a prototype must not burst at less than six times (6X) its rated pressure after being pressure cycled 100,000 times at 150 deg F.
   3. Vessels shall be fabricated so as to duplicate the qualified design through compliance with the ASME approved Procedure Specification written for the prototype. Proof of conformance is established through the workings of the ASME approved Quality Control System.
   4. Vessels shall be tested to assure conformance with the qualified design through ASME Quality Control and Production Tests. Each vessel undergoes ASME Production Tests, which include a Hydrostatic Leakage Test, at a pressure of 1.1 times the rated pressure.
   5. A third party ASME Authorized Inspector shall inspect vessels during fabrication in order to assure conformance with the qualified design.
   6. The materials shall be approved for use in pressure vessel construction by the standards of the ASME Boiler and Pressure Vessel Code. Such materials shall meet the following criteria:
      a. Materials of construction shall be certified by the manufacturer to meet Code standards where applicable and shall be lot traceable to the vessel serial number.

2.3 VESSEL SHELL

A. Pressure vessels shall be designed for ease of use and fail-safe operation. The vessels shall include the following:
   1. In order to provide superior long-term strength, the locking ring groove shall be integrally filament wound into the I. D. of the vessel. In addition, each grove shall incorporate an integrally wound 316L stainless steel insert for added groove durability and improved corrosion resistance. Cutting or grinding of fibers to form the locking ring groove is not acceptable as this may weaken the shell and directly affect the safety and service life of the vessel.
   2. The shell bore shall be fabricated from a resin-rich epoxy barrier that has been cured to allow for superior corrosion resistance, minimal extractables, improved life and high temperature (176 deg F/80 deg C) operation. Winding over plastic pipe is not acceptable under any circumstance.
   3. The shell of the vessel shall be fabricated of filament-wound fiberglass reinforced plastic (FWFRP) using continuous glass roving, impregnated with an elevated temperature cure epoxy resin system to provide superior dimensional stability and long term service life. The use of single monomer resin such as polyester is strictly prohibited.
   4. Each shell inside diameter shall be free of pits or voids that may promote bacterial growth or corrosive attack of the resin-rich barrier and shall conform to level 1 criteria as

ASME Section X, section 6-100.1. The bore diameter shall be a mirror-like, smooth surface and meet the following measurement criteria throughout the membrane interface area:

Nominal 8-inch diameter 7.955 ± .005.

5. Each shell shall have an exterior surface that has been coated with a two-part polyurethane enamel for superior gloss retention, abrasion resistance and to block light that may promote biological growth. Each end-bell shall be free of any grinding or sanding marks. The length of the shell between the bells shall be straight without any lumpiness that may indicate filament-winding inconsistency that could affect performance.
6. The shell shall be fail-safe to prevent catastrophic failure while in service. The head retention system shall fail at a nominal value of not less than 6 times design pressure to prevent the possibility of catastrophic failure while in service.

2.4 VESSEL HEAD

A. Each vessel head shall be designed for removal by hand under normal operating conditions. In addition, each head shall feature a secondary removal means (such as female threads) to assist in head removal as required throughout the service life of the vessel.

B. Each vessel head shall be constructed from ASME approved metal materials for indirect load bearing applications. The use of thermoplastics for direct load bearing applications is strictly prohibited.

C. The primary means for head retention shall be a single retaining mechanism that provides ASME-required redundancy and is constructed of stainless steel for ease of use and long term reliability and shall be able to be removed by hand, without the use of any tools to reduce operation and maintenance costs.

D. Each head shall contain an integral stainless steel secondary interlock that requires a simple, yet specific sequence of events to remove the end closure and shall not require the use of separate components that may become separated from the vessel. The use of plastic secondary interlock mechanisms that may become damaged by wear or environmental exposure are prohibited.

E. The surfaces of the head that come in contact with the process fluid shall be constructed from PVC or other inert plastic to eliminate any problems with metal corrosion such as pitting or crevice corrosion.

F. Permeate Port
   1. The permeate port shall be 1-1/2-inch NPT male or 1-1/2-inch grooved end, as recommended by the ROEM and as approved by the Engineer.
   2. The permeate port shall be constructed from PVC.
   3. Each permeate port shall be designed with an anti-rotation mechanism so that piping may be easily tightened.

G. Permeate Sampling Valve
   1. The feed end permeate port of each pressure vessel shall be fitted with a 1/4-inch diameter thermoplastic ball valve that has been designed exclusively for membrane probing without excess permeate water loss.

2. The valve shall include a gripper nut that can be easily tightened and loosened by hand throughout the probing process.
3. The nut ferrule shall include an o-ring seal to prevent leakage during operation.
4. The valve shall be attached to the permeate port with a 1/4-inch 316 stainless steel nipple.

2.5 VESSEL SIDE PORTS

A. Each side-ported feed/concentrate port shall be 2-1/2-inch diameter and constructed of wrought stainless steel pipe and shall be designed to interface the flexible grooved coupling. The port shall be marked for complete traceability with the part number and the heat lot of the material that can be traced to batch related corrosion test performance. The use of investment cast materials is prohibited.

B. Each side-ported feed/concentrate port shall be designed so that they may be removed and replaced in the field by the end user without the use of special tools.

C. The use of multiple ported vessels that allow direct vessel to vessel connections is permitted providing the following provisions are met:
1. No more than three pressure vessels shall be connected to one feed/concentrate manifold connection without approval.
2. The pressure drop between each connected set of three vessels shall not have a pressure differential in excess of 3 PSI.
3. All multiple port connections shall be sized to limit feed water flow velocities to no more than 11 Feet per second. In addition membrane cleaning flow requirements must be considered when multiple porting is to be used.
4. The feed manifold and concentrate manifold shall be located on opposite sides of each set of pressure vessels to ensure correct flow balancing. Design layouts that locate the feed manifold and concentrate manifold on the same side of each set of pressure vessels shall not be used without prior approval of the Engineer.

D. Each side-ported feed/concentrate port shall be completely flush with the inside surface of the vessel so as to not interfere with membrane element loading. Ports that are in any way raised into the interior surface of the vessel shall not be acceptable.

E. Each side port shall feature a direct metal to composite interface. The compression loading of any non-code material, such as thermoplastic that may creep under pressure, is not permitted.

2.6 VESSEL SEALS

A. In order to assure field serviceability, all seals, whether in the shell or head, shall be visible so as to be directly accessible for replacement without the removal of any other components. Seal designs that do not eliminate dead space and may lead to biological growth are strictly prohibited.

B. All permeate connection seals shall be designed to prevent rolling that may lead to seal damage.

C. All permeate connection seals shall be peroxide-cured ethylene propylene (EPDM) rubber to increase seal life and reduce the effects of permanent compression set.

D. Vessels shall not leak when properly installed. If leaking occurs, the vessel supplier is responsible for the repair or replacement of the vessel. Such leaking must be remedied within 14 working days from the notification of the leak.

E. Each Head Seal shall be so designed to minimize cross sectional thickness to reduce the friction required for head installation and removal.

F. Each head seal gland shall be designed to eliminate dead space and to expose the seal surface to high-pressure fluid for flushing of the seal in order to minimize bacterial growth.

G. Each head seal gland shall be located on the head of the vessel and shall partially capture the seal, so that it remains on the head at all times, even during head removal, without becoming separated from the head, which may cause seal damage, misplacement or vessel leakage.

H. Each side-ported feed/concentrate port shall incorporate an elastomeric seal that seals to vessel shell so that edge laminate surfaces are not exposed. Side port designs that do not eliminate seal dead space and may lead to biological growth are strictly prohibited.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with the Manufacturer's printed instructions.

B. The NFEM shall provide documentation that the membrane skid piping design allows for expansion and contraction of the pressure vessels and that the system is designed in accordance with the vessels manufacturer's recommendations.

3.2 TESTING

A. After installation, conduct pressure and leakage tests for each vessel as part of the membrane skid tests in accordance with Division 46 Section "Nanofiltration Membrane Equipment".

B. Prior to membrane element installation, thoroughly clean, flush, and disinfect the pressure vessels. All disinfectant solution shall be completely flushed from the pressure vessels prior to membrane element installation.

END OF SECTION 46 6342

TO ALL DOCUMENT HOLDERS:

Subject: WCWSD RARWTP Membrane Softening Upgrades

AECOM Job No.: 60551697

Enclosed herewith is a copy of Addendum No. 1 covering the subject project.

Please retain this with your Documents.

Sincerely,

AECOM

Matthew Noelker, P.E.

1. GP-15 – Valve Schedule (FAWTP)

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
Membrane Equipment Procurement

1.1 GENERAL

A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.

B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.2 CLARIFICATIONS

A. The following is a list of clarifications regarding project documents. These clarifications include question received during the advertisement period:

Q: Please confirm that the assembly of goods onsite is in the scope of work of the OEM.

A: Yes, assembly of good onsite is in the scope of work of the OEM. This shall be included on the appropriate line items of the Bid Form. OEM will be responsible for these costs and these costs will be included in the Contract between the Seller and the Buyer.

Q: Please confirm that the value of the Contract between the Seller and the Buyer is equal to the total lump sum of the base bid (or the total lump sum of the alternate bid).

A: Yes, the total value of the Contract between the Seller and the Buyer will be equal to the total lump sum base bid (or the total lump sum alternate bid). Note that the Seller will likely have to enter into Contract with two different Buyers as the RARWTP and FAWTP construction contracts are being bid separately.

Q: In Section 40 0523 – Valves, Gates, and Accessories, paragraph 2.3.K.2, are Hayward BYV Series PVC butterfly valves an acceptable manufacturer?
A: If this valve meets the product specifications, it will be accepted.

Q: In Section 40 0523 – Valves, Gates, and Accessories, paragraphs 2.6.P and 2.7.P, is Rotork an acceptable manufacturer?
A: No. AUMA actuators must be provided.

Q: In Section 40 9100 – Primary Sensors and Field Instruments, paragraph 2.3.A.4, are Rosemount 8750W or Endress + Hauser W400 acceptable manufacturers?
A: No. Siemens Sitrans Series 5100 flow meters and 5000 Series transmitters must be provided.

Q: In Section 46 6340 – Nanofiltration Membrane Equipment, paragraphs 2.9.F.1 and 2.10.F.1, please clarify what is meant by “accessories”.
A: This includes any supports, mounting components, and any specific accessories identified in Section 40 9100 – Primary Sensors and Field Instruments.

Q: In Section 46 6340 – Nanofiltration Membrane Equipment, paragraphs 2.9.F.1 and

2.10.F.1, please clarify who is providing the conduit and wiring between instrumentation and MCS/Permeate Flush Panel(s).
A: This conduit and wiring will be provided by the General Contractor. See clarifications below in the project manual and the drawings.

Q: Please confirm that factory acceptance testing is required for skids that will be shipped to site unassembled for on-site assembly.

A: Factory acceptance testing of fully assembled skids is required for all skids, regardless of method of shipping and assembly. Refer to Section 46 6340 – Nanofiltration Membrane Equipment" paragraph 3.2.A for factory acceptance testing requirements.

Q: What motor size is being provided for the MCS pumps and the permeate flush pump?
A: These pumps will each have a maximum motor size of 60 hp.

1.3 PROJECT MANUAL

A. Section 00 1113 – Advertisement for Bids
   1. Section 2 – Revise "Bids will be received by Engineer until May 15, 2020 @ 2 p.m." to read "Bids will be received by Engineer until May 18, 2020 @ 2 p.m."

B. Section 00 4113 – Bid Form
   1. This section is being revised and reissued as an attachment to this addendum.

C. Section 00 7343 – Wage Rate Determination
   1. This Section is being issued as an attachment to this addendum.

D. Section 26 2200 Transformers
   1. Paragraph 2.2.A – Delete "b. General Electric Company."

E. Section 26 2913 Motor Controllers
   1. Paragraph 2.7.A – Modify the following text to read:
      a. "2. Eaton Corporation."
   2. Paragraph 2.7.A – Delete the following text:
      a. "3. Square D."

F. Section 40 9000 Plant Instrumentation and Control System General Requirements
   1. Paragraph 1.1.B – Delete the entire last sentence starting with "Unit process logic residing…"

G. Section 40 9443 Plant Control System (FAWTP)
   1. This section is being revised and reissued as an attachment to this addendum.

H. Section 40 9443 Plant Control System (RARWTP)
   1. Paragraph 2.1 B.1 – Modify the following text to read:
      a. "b. Color TFT LCD"
      b. "c. 18-bit color graphics"
      c. "h. NEMA 4X"
      d. "j. 512 MB RAM and 512 MB user storage"
   2. Paragraph 2.1 B.2 – Modify the following text to read:

a. “a. Allen-Bradley, PanelView Plus 7 Performance”

I. Section 46 6340 – Nanofiltration Membrane Equipment
1. Paragraph 2.3. Add the following as subparagraph G:
“Velocities in piping shall not exceed 9 feet per second except in control valves or flow metering sections.”
2. Paragraph 2.8.A – Revise “floor-mounted where indicated by the Drawings, adjacent to each skid” to read “mounted on the skid”.
3. Paragraph 2.9.F.1 – Delete the following:
“Conduit and wiring between instrumentation and MCS shall be provided by OEM. Conduit and wiring shall comply with Division 26 and 409XXX series specifications.” This conduit and wiring will be provided by the General Contractor.
4. Paragraph 2.10.A – Delete this paragraph.
5. Paragraph 2.11.A.3 – Revise to read as follows:
“Provide 500 filters for each WTP.”
6. Paragraph 2.16.C. Add the following as subparagraph 8:
“Operator shall have the ability to enter the desired maximum flux for stage 1 of the membrane array. The stage 1 permeate throttling valve shall be automatically controlled to maintain this maximum flux rate.”
7. RARWTP RO Membrane Equipment Schedule:
a. Table 1 – RARWTP Water Quality Data – Delete the row with the SO4 Parameter.
b. Table 1 – Add the following footnote: “TDS shall be calculated using the gravimetric analysis method.”
8. FAWTP RO Membrane Equipment Schedule:
a. Table 1 – FAWTP Water Quality Data – Revise TH Permeate Requirements “<10” to “<15”.
b. Table 1 – FAWTP Water Quality Data – Delete the row with the SO4 Parameter.
c. Table 1 – Add the following footnote: “TDS shall be calculated using the gravimetric analysis method.”

1.4 DRAWINGS

A. E-06 (RARWTP). Note that this work is part of the General Contractor’s scope.
1. Add Coded Note 16 symbol adjacent to the Membrane Cleaning System Control Panel. Under Coded Note 15, add Coded Note 16 text that reads, "PROVIDE CONTROL, ANALOG, AND POWER CONDUIT AND WIRES FROM THE MEMBRANE CLEANING SYSTEM CONTROL PANEL TO THE MEMBRANE CLEANING SYSTEM COMPONENTS. CONTROL CONDUITS SHALL BE 3/4" WITH (2)#14+(1)#14G FOR EACH CONTROL DEVICE. ANALOG CONDUITS SHALL BE 1" WITH (1) STP FOR EACH ANALOG DEVICE. POWER CONDUITS SHALL BE 1.25" WITH (3)#4+(1)#8G VFD CABLES FOR EACH PUMP, 2" CONDUIT WITH (3)#1/0+(1)#6G FOR THE 120KW HEATER, AND 1.5" CONDUIT WITH (3)#1+(1)#6G FOR THE 75KW HEATER."

B. GP-15 Valve Schedule (FAWTP)
1. This sheet is being revised and reissued as an attachment to this addendum.

C. E-09 (FAWTP). Note that this work is part of the General Contractor’s scope.
1. Add Coded Note 18 symbol adjacent to the Membrane Cleaning System Control

Panel. Under Coded Note 17, add Coded Note 17 text that reads, "PROVIDE CONTROL, ANALOG, AND POWER CONDUIT AND WIRES FROM THE MEMBRANE CLEANING SYSTEM CONTROL PANEL TO THE MEMBRANE CLEANING SYSTEM COMPONENTS. CONTROL CONDUITS SHALL BE 3/4" WITH (2)#14+(1)#14G FOR EACH CONTROL DEVICE. ANALOG CONDUITS SHALL BE 1" WITH (1) STP FOR EACH ANALOG DEVICE. POWER CONDUITS SHALL BE 1.25" WITH (3)#4+(1)#8G VFD CABLES FOR EACH PUMP, 2" CONDUIT WITH (3)#1/0+(1)#6G FOR THE 120KW HEATER, AND 1.5" CONDUIT WITH (3)#1+(1)#6G FOR THE 75KW HEATER."

END OF ADDENDUM NO. 1
(SEE ENCLOSURES)

(THIS PAGE INTENTIONALLY LEFT BLANK)

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

SECTION 00 4113

BID FORM

TABLE OF CONTENTS

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted to the Engineer via email or via hand delivery, USPS, UPS, or FedEx to:

AECOM
ATTN: Matthew Noelker, P.E.
277 West Nationwide Blvd
Columbus, Ohio 43215
Matthew.noelker@aecom.com

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Buyer in the form included in the Bid Documents to furnish the Goods and Special Services as specified or indicated in the Bid Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bid Documents.

1.03 The Buyer of the Goods and Special Services will be the successful Bidder(s) (Contractor(s)) for the referenced Projects.

ARTICLE 2 – BIDDER'S ACKNOWLEDGMENTS

2.01 Bidder accepts all of the terms and conditions of the RFP.

2.02 Bidder accepts the provision of the Agreement as to liquidated damages in event of its failure to furnish the Goods and Special Services in accordance with the schedule set forth in the Agreement.

ARTICLE 3 – BIDDER'S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bid Documents included with the RFP, other related data identified, and the following Addenda, receipt of which is hereby acknowledged:

Addendum No.	Addendum Date
_____	_____
_____	_____
_____	_____
_____	_____

B. Bidder has become familiar with and is satisfied as to the local conditions that may affect cost, progress, delivery, or the furnishing of Goods and Special Services.

C. Bidder is familiar with and is satisfied as to all federal, state and local Laws and Regulations that may affect cost, progress, and the furnishing of Goods and Special Services.

D. Bidder has carefully studied and correlated the information known to Bidder, and information and observations obtained from Bidder's visits, if any, to the Point of Destination with the Bid Documents.

E. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bid Documents, and the written resolution thereof by Engineer is acceptable to Bidder.

F. The Bid Documents are generally sufficient to indicate and convey understanding of all terms and conditions for furnishing the Goods and Special Services for which this Bid is submitted.

G. Bidder further represents that this Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any agreement or rules of any group, association, organization or corporation; Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid; Bidder has not solicited or induced any individual or entity to refrain from Bid; and Bidder has not sought by collusion to obtain for itself any advantage over any other Bidder or over Buyer.

ARTICLE 4 – BASIS OF BID

ADD #1

4.01 Bidder will furnish the Goods and Special Services in accordance with these Contract Documents for the following price(s), which do not include sales tax. Prices shall be guaranteed until August 31, 2020. After this date, **if the Owner has not issued a Notice to Proceed to Buyer, and** if requested by the ~~**Buyer**~~ **Seller** and approved by the Owner, ~~**Buyer's**~~ **Seller's** proposed prices may be escalated by the monthly change of the U.S. Consumer Price Index (CPI) as calculated by the U.S. Bureau of Labor Statistics.

ADD #1

Item No.	Description	Proposed Price
	SHOP DRAWINGS	
1.)	Shop Drawing Preparation	
	EQUIPMENT	
2.)	Base Bid: Manufacturing of Goods—Epoxy Coated or FRP Frames Individual skids shall be delivered to the Point of Destination having been fully assembled, ready for installation, and having undergone factory acceptance testing prior to shipping. If skids are delivered not having been fully assembled, costs for such assembly shall be included under Item No. 3.	
3.)	Base Bid: Assembly of Goods Onsite—Epoxy Coated or FRP Frames Include all costs for any required onsite assembly of goods except the following items which will be performed by the Buyer: unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power. **All onsite labor wages shall be in accordance with Division 00, Section "Prevailing Wage Rate Requirements.**	
4.)	Alternate Bid: Manufacturing of Goods—304 SST Frames (Item cost is additive or deductive from Item No. 2). Individual skids shall be delivered to the Point of Destination having been fully assembled, ready for installation, and having undergone factory acceptance testing prior to shipping. If skids are delivered not having been fully assembled, costs for such assembly shall be included under Item No. 3.	Add / Deduct (Circle One)
5.)	Alternate Bid: Assembly of Goods Onsite—304 SST Frames (Item cost is additive or deductive from Item No. 3). Include all costs for any required onsite assembly of goods except the following items which will be performed by the Buyer: unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power. **All onsite labor wages shall be in accordance with Division 00, Section "Prevailing Wage Rate Requirements.**	Add / Deduct (Circle One)
	SPECIAL SERVICES	
6.)	Include costs required for all Special Services including startup and commissioning, remote monitoring, and field service agreement.

4.02 Additional Proposed Costs:

Description	Proposed Price
The Seller's monthly fee for storage of Goods at Seller's facilities in the event that Buyer desires to delay shipment beyond the shipment date stated below in Article 5.02. Such fee shall include interest on money due Seller.	
The Seller's monthly fee for Buyer delaying the initiation of manufacturing of Goods or for not executing the Procurement Agreement within the time specified in 4.03 below.	

4.03 Seller and Buyer shall execute the Procurement Agreement within 30 days after the Contractor's/Buyer's Notice to Proceed from the Owner. Should the Procurement Agreement not be executed within said 30 days due to the fault of the Buyer, the Buyer shall be subject to the prorated additional costs identified in Paragraph 4.02 above. Should the Procurement Agreement not be executed within the said 90 days due to the fault of the Seller, Seller shall be subject to the liquidated damages provisions in the Procurement Agreement. The issue of fault will be determined by the Engineer.

ARTICLE 5 – TIME OF COMPLETION

5.01 Bidder agrees that the furnishing of Goods and Special Services will conform to the schedules set forth below, which will be incorporated into Article 5 of the Agreement.

ADD #1

Description:	Proposed Number of Consecutive Calendar Days:
Time required by Seller to submit approvable Shop Drawings (consecutive calendar days after Notice to Proceed is issued to Buyer)	**(maximum of 30 days)**
~~Time required by Seller after receipt of approved Shop Drawings to deliver acceptable Goods to Point of Destination:~~ **Time required by Seller to deliver acceptable Goods to Point of Destination and complete assembly of goods onsite (consecutive calendar days after Notice to Proceed is issued by Buyer).** (consecutive calendar days)	**(maximum of 150 days)**
~~Time required by Seller to complete assembly of goods onsite~~ ~~(exclude time for unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power)~~	
Time required by Seller to complete all Special Services (consecutive calendar days after notification from Buyer to	

Seller to commence such Special Services.):	
Time required by Seller to be ready for Final Inspection and Acceptance of all Goods and all Special Services (consecutive calendar days after notification from Buyer to Seller to commence such Special Services.):	

5.02 Bidder agrees that the prices in Article 4 above are based on the condition that shipment of goods may be delayed by the Buyer.

ARTICLE 6 – BID DOCUMENTS

6.01 The following documents are attached with and made a condition of this Bid:

A. Attachment 1: Bidder Qualifications

B. Attachment 2: Scope of Supply

C. Attachment 3: OEM Special Services

D. Attachment 4: OEM Warranty

E. Attachment 5: Installation Instructions and Contractor's Responsibilities

F. Attachment 6: Spare Parts

ARTICLE 7 – DEFINED TERMS

7.01 The terms used in this Bid have the meanings indicated in the General Conditions. The significance of terms with initial capital letters is described in the General Conditions.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

ARTICLE 8 – BID SUBMITTAL

8.01 This Bid is submitted by:

If Bidder is:

A Partnership

Partnership Name: _____

By: _____
(Signature of general partner -- attach evidence of authority to sign)

Name (typed or printed): _____

A Corporation

Corporation Name: _____ (SEAL)

SECTION 00 7343

WAGE RATE REQUIREMENTS

PART 1 GENERAL

1.1 REFERENCE

A. Prevailing wage rates, as determined by the United States Department of Labor for Warren County, the county in which the project is located, shall be used in accordance with the provisions of the Davis-Bacon Wage determinations as provided in 29 CFR 1.5 and 1.6(b). A copy of these rates is attached.

1.2 USE

A. Keep posted at all times throughout the Contract period the wage rate pages that are effective at the time of Bid opening.

B. Maintain, throughout the construction period, a legible up-to-date copy. Post in a conspicuous place accessible to workers and protected from the weather.

C. The successful Bidder shall be required to conform to all provisions of the Federal Davis-Bacon and Related Acts (The Act) which requires that all laborers and mechanics employed by contractors and subcontractors performing on federal contracts (and contractors and subcontractors performing on federally assisted contracts under the related ACTS) in excess of $2,000 pay their laborers and mechanics not less than the prevailing wage rates and fringe benefits, as determined by the Secretary of Labor, for corresponding classes of laborers and mechanics employed on similar projects in the area.

D. All Bidders must abide by the latest prevailing wage rate listing effective at the time of Bid opening.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 00 7343

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

(THIS PAGE INTENTIONALLY LEFT BLANK)

"General Decision Number: OH20200103 02/07/2020

Superseded General Decision Number: OH20190103

State: Ohio

Construction Type: Building

County: Warren County in Ohio.

BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

Note: Under Executive Order (EO) 13658, an hourly minimum wage of $10.80 for calendar year 2020 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least $10.80 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2020. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate,if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave

for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

WELDERS - Receive rate prescribed for craft performing

operation to which welding is incidental.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number

where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board

U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

==========

END OF GENERAL DECISION"

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

SECTION 40 9443

PLANT CONTROL SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section.

B. Related Sections: The following sections contain requirements that relate to this section.
1. Division 26 Section “Basic Electrical Requirements”.
2. Division 26 Section “Basic Electrical Materials”.
3. Division 26 Section “Signal and Communication Cables”.
4. Division 26 Section “Wires, Cables, and Connectors”.
5. Division 40 Section “Instrumentation – General”.
6. Division 40 Section “Control Panels”.

1.2 DESCRIPTION OF WORK

A. General: Provide all labor, tools, equipment, and materials necessary for a complete and operational Plant Control System in accordance with the plans and as specified herein.

B. Contractor shall furnish all labor, materials, and components, and shall provide all design, assembly, testing, and start-up services required to provide a complete and operational programmable controller system (referred to herein as PLC) as specified and shown on the Drawings. The system includes, but is not necessarily limited to the following:
1. Processor modules.
2. Communication equipment.
3. Input/output (I/O) modules.
4. Operator interface equipment.
5. Mounting racks.
6. Power supplies.
7. Programming equipment.
8. Software.

1.3 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.

B. Standards: Materials and workmanship shall conform to the following standards:
1. National Electrical Manufacturers Association (NEMA).
2. Institute of Electrical and Electronic Engineers (IEEE).
3. American National Standards Institute (ANSI).
4. National Fire Protection Association (NFPA).
5. Underwriters' Laboratories (UL).
6. International Society for Measurement and Control (ISA).

C. Qualifications
   1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of programmable logic controllers (PLCs) whose products have been in satisfactory use in similar service for not less than 5 years.
   2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

A. General: Furnish manufacturer's product data for all components.

B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.

C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished under this section. Wire, terminal, and component labeling shall follow established facility conventions where applicable.

D. System Hardware and Software Documents: Furnish a system block diagram, I/O drawings, and control strategy descriptions. Turn over all factory software documentation and manuals to the Engineer after completion of field testing.

E. Dimensional Drawings: Furnish dimensional drawings for each piece of equipment to be provided.

F. Program Documentation: Submit annotated printouts of all PLC and Human Machine Interface (HMI) programs. Provide copies of all PLC and HMI programs on a flash drive.

G. Manufacturer's Data Sheet: Provide manufacturer's data sheet on all equipment including model numbers, serial numbers, ranges, scales, and a detail of each component.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Storage and Protection: Store the items furnished under this section in a manner that meets the requirements of the manufacturer until they can be installed. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

1.6 DEFINITIONS

A. Training Day: A training day is defined as 8 hours of classroom and hands-on instruction, including two 15-minute breaks and excluding lunchtime, Monday through Friday.

1.7 SCADA ALLOWANCE

A. The Contractor shall include in the bid an allowance for the purchase of computers, accessories, peripherals, and/or furniture for the Owner. These components shall be provided by the System Integrator. The Owner shall be able to select the computers, accessories, peripherals, and/or furniture during the shop drawing review process with technical input from the System Integrator.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

PART 2 - PRODUCTS

2.1 SCADA SYSTEM

A. Programmable Logic Controller (PLC) Components:
   1. Rack Mounted:
      a. Processor Module: 1756-L81E
      b. Digital Input Module: 1756-IA16I
      c. Digital Output Module: 1756-OW16I
      d. Analog Input Module: 1756-IF8I
      e. Analog Output Module: 1756-OF8I
      f. Communication Module: 1756-EN2T
      g. Power Supply: 1756-PA75/B
      h. Chassis: 1756-A17
   2. Protocol Gateway:
      a. Model as required for native protocol to Ethernet/IP conversion for quantity of connected devices.
      b. DIN Rail mounted
   3. Manufacturers:
      a. All components shall be manufactured by Allen-Bradley or an Encompass Partner.

B. Operator Interface Terminal (OIT):
   1. Features:
      a. Touch screen flat display
      b. Color TFT LCD
      c. 18-bit color graphics
      d. Size: 15” diagonal nominal, unless otherwise noted
      e. Resolution: 1024x768, minimum
      f. Communications: Ethernet/IP, USB
      g. SD card slot
      h. NEMA 4X
      i. Real-time battery backed clock
      j. Memory: 512 MB RAM and 512 MB user storage
      k. Input Power: 120VAC
   2. Manufacturers:
      a. Allen-Bradley, PanelView Plus 7 Performance

PART 3 - EXECUTION

3.1 CUSTOM PROGRAMMING

A. Custom Programming of all vendor provided control panels, including their PLCs and OITs, shall be provided by that vendor under the applicable specification section of the associated equipment.
   1. Provide database spreadsheets for peer-to-peer communication coordination between other onsite PLCs that need to share data.
   2. Provide database spreadsheets for Plant HMI/SCADA communication coordination.
   3. Provide annotated copies of all PLC programs.
   4. Provide an electronic copy of all PLC and OIT programming files for the Owner on a flash drive. Format shall be as required to reload into PLC memory. Logic version shall be the final program after all equipment has been installed and commissioned and Operational Demonstration is complete and successful to the Owner’s approval.

B. Custom Programming of non-vendor provided control panels, including their PLCs and OITs, will be provided by the Owner.

C. Custom Programming of plant's existing HMI/SCADA will be provided by the Owner.

D. Variable Frequency Drives
   1. Provide programming for all VFDs connected to the network.
   2. Read and display the contents of a minimum of eight registers in each VFD.
   3. Coordinate with the Owner prior to the start of programming to select the register to be displayed.

E. Graphic Screens
   1. Submit all graphic screens for Owner review and comment when sixty percent complete.
   2. Provide navigation controls on all screens to allow movement between screens.
   3. Conform to NFPA 79, Industrial Machinery on colors for indicators and controls.
   4. Conform to Owner standards for colors of process equipment and piping.
   5. Utilize industry standard symbols or graphically realistic drawings for process equipment.
   6. Provide a separate screen for each group of process equipment.
   7. Group related screens in a logical manner such as by building, plant flow, liquid stream/solids stream, etc.
   8. At a minimum, provide the following screens:
      a. Plant Overview
      b. NF Building Overview
      c. NF Feed Pumps Overview
      d. NF Skids Overview
      e. Corrosion Inhibitor System Overview
      f. Sodium Hydroxide System Overview
      g. Antiscalant System Overview
      h. NF Feed Pump Control Graphics
      i. Corrosion Inhibitor Chemical Equipment Control Graphics
      j. Corrosion Inhibitor Chemical Feed Control Graphic
      k. Sodium Hydroxide Chemical Equipment Control Graphics
      l. Sodium Hydroxide Chemical Feed Control Graphic
      m. Antiscalant Chemical Equipment Control Graphics
      n. Antiscalant Chemical Feed Control Graphic
      o. Sodium Hypochlorite System Overview
      p. Fluoride System Overview
      q. Sodium Hypochlorite Chemical Equipment Control Graphics
      r. Sodium Hypochlorite Chemical Feed Control Graphic
      s. Fluoride Chemical Equipment Control Graphics
      t. Fluoride Chemical Feed Control Graphic
      u. Electrical Service Overview
      v. Alarm Summary Screens
      w. Equipment Runtimes (with resets) Screen
      x. Totalizers Screen
      y. (10) Analog Signal Trending Screens – Owner Directed
      z. (10) Overview/Control Screens – Owner Directed

F. Global Programmed Control Strategies
   1. Meet with Plant Personnel before start of programming to determin:

a. Time of day for resetting of daily totalizers
b. Security Levels for all screens
c. The master PCS clock and approach to sync network devices

2. Display all alarms at the HMI.
3. Provide means to acknowledge all alarms at the HMI.
4. Provide alarms for PLC failure and network failure.
5. Totalize the number of starts for all process equipment and display on the plant HMI.
6. All process setpoints displayed on HMI screens and read back for confirmation.
7. All process setpoints adjustable from the HMI screens with correct security level.
8. Perform a runtime calculation for all process equipment at PLC and display at the HMI.
9. Display rate, total, and daily total for all process flows at the HMI.
10. Display all process levels at the HMI.
11. Store average daily flow rates and peak hourly flow rates of all flow meters one year or more at SCADA.
12. One year of data shall be stored for trending with data saved every 15 minutes. Daily totals shall also be saved. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
13. All inline instrumentation shall be shown with instantaneous values on the HMI. One year of data shall be stored for trending. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
14. All data shall be automatically graphed when chosen by the operator. These trending graphs shall not reset when closed or when the operator switches between data screens or other graphs.
15. All bits/elements in PLC logic shall be commented. If not used, then comment as SPARE.
16. SCADA historical graphs shall include programming to constantly refresh to appear as a "live, historical trend".

G. SCADA Programming Funtional Requirements

1. The Functional Descriptions below are intended to aid in defining the scope of work for PLC/OIT/HMI programming. These functional descriptions are intended to be supplemental to the requirements as shown on the Drawings. Hardwired interlocks for equipment control may not be described below. Hardwired interlocks shall be mimicked in PLC logic.
2. Where the referenced detail applies to multiple, similar equipment controls, only one is described. Control for associated equipment is similar.
3. Reference the PLC I/O schedules. The PLC I/O shall be utilized by PLC/HMI programming, as required, to allow the respective equipment to function as described by the Contract Documents.
   a. All alarm and equipment status monitoring PLC I/O inputted into the Plant Control System (PCS) shall be annunciated via the HMI.
4. All references to set points as "adjustable" below shall include the capability to adjust the set point via the HMI.
5. <u>FUNCTIONAL DESCRIPTION INDEX:</u>
   a. "6. NF BUILDING SOFTENING SYSTEM"
   b. "7. CORROSION INHIBITOR CHEMICAL FEED SYSTEM"
   c. "8. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM"
   d. "9. ANTISCALANT CHEMICAL FEED SYSTEM"
   e. "10. SODIUM HYPOCHLORITE CHEMICAL FEED SYSTEM"
   f. "11. FLUORIDE CHEMICAL FEED SYSTEM"
   g. "12. EXISTING PROCESS CONTROL MODIFICATIONS"

h. "13. EMERGENCY POWER"
i. "14. CRITICAL ALARMS"

6. NF BUILDING SOFTENING SYSTEM
   a. NF Bypass Flow
      1) General: Used to continuously monitor the NF Bypass flow rate.
      2) Control:
         a) Local: None
         b) PCS: None
      3) Logic Interlocks/Permissives:
         a) Reference the NF Bypass Flow Control Loop
      4) Monitoring:
         a) Local: Instantaneous flow indication
         b) PCS: NF Bypass Flow
      5) Alarms:
         a) Local: None
         b) PCS: High-High, High, Low, Low-Low NF Bypass Flow, Loss of Signal
   b. NF Bypass Flow Control Valve
      1) General: Used to divert flow around the membrane skids.
      2) Control:
         a) Local: With the LOCAL-STOP-REMOTE selector switch at the actuator in the LOCAL position, the operator can open or close the valve by using the OPEN-CLOSE selector switch at the actuator. With the LOCAL-STOP-REMOTE selector switch at the actuator in the STOP position, the actuator will stop and maintain its current position.
         b) PCS: With the LOCAL-STOP-REMOTE selector switch at the actuator in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the NF Bypass Flow Control Valve via the HMI.
            (1) PC MANUAL: The operator shall have the ability to manually set a desired position.
            (2) AUTO: The NF Bypass Flow Control Valve shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED, HARDNESS, and PERCENT control modes.
               (a) FIXED: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate.
               (b) HARDNESS: The valve position shall vary in order to maintain an operator entered desired Blended Water Hardness.
                  a. If no groundwater well pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup initial position and shall remain at that position until a groundwater well pump starts operating.

b. Flow rate = [(BW flowrate x BW hardness) – (NFP flowrate x NFP hardness)] / NFF hardness

(c) PERCENT: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate as a percentage of Blended Water Flow.

a. If no groundwater well pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup initial position and shall remain at that position until a groundwater well pump starts operating.

3) Logic Interlocks/Permissives: None
4) Monitoring:
   a) Local: Opened, Closed, Position
   b) PCS: Remote, Opened, Closed, Position
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal

c. Cartridge Filter 1 Differential Pressure
1) General: Used to monitor if the Cartridge Filter needs cleaned.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: Instantaneous differential pressure indication
   b) PCS: Cartridge Filter 1 Differential Pressure
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Cartridge Filter 1 Differential Pressure, Loss of Signal

d. NF Bypass Header Pressure
1) General: Used to continuously monitor the pressure for NF Bypass Header.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) Used for Groundwater Wells speed control.
4) Monitoring:
   a) Local: Instantaneous pressure indication
   b) PCS: NF Bypass Header Pressure
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low NF Bypass Header Pressure, Loss of Signal

e. NF Feed Pump 1 Suction Pressure
1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Suction.
2) Control:

a) Local: None
b) PCS: None

3) Logic Interlocks/Permissives:
a) None

4) Monitoring:
a) Local: Instantaneous pressure indication
b) PCS: NF Feed Pump 1 Suction Pressure

5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Suction Pressure, Loss of Signal

f. NF Feed Pump 1

1) General: Used to source water to the membrane skids.

2) Control:
a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
b) VFD: The VFD frequency can be manually adjusted utilizing the potentiometer or VFD HIM module at the VFD.
c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of NF Feed Pump 1 via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the frequency of NF Feed Pump 1.
(2) AUTO: NF Feed Pump 1 shall be automatically controlled via PLC programming. NF Feed Pump 1 speed shall be varied as called for by the NF Skids Master PLC.

3) Logic Interlocks/Permissives: None

4) Monitoring:
a) Local: Running, Stopped, Vibration, Bearing Temp, Stator Temp
b) VFD: Running, Stopped, Frequency, Amps, Volts
c) PCS: Remote, Running, Stopped, Vibration, Bearing Temp, Stator Temp, Frequency, Amps, Volts, VFD LOR Switch Position

5) Alarms:
a) Local: General Alarm, High Vibration Alarm, High Bearing Temp Alarm, High Stator Temp Alarm
b) VFD: VFD Fault Alarm
c) PCS: Motor High Temperature, High Vibration Alarm, High Bearing Temp Alarm, High Stator Temp Alarm, Low Suction Pressure, High Discharge Pressure, VFD Fault, Loss of Signal

g. NF Feed Pump 1 Discharge Pressure

1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Discharge.

2) Control:
a) Local: None
b) PCS: None

3) Logic Interlocks/Permissives:
a) None

4) Monitoring:

a) Local: Instantaneous pressure indication
b) PCS: NF Feed Pump 1 Discharge Pressure

5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Discharge Pressure, Loss of Signal

h. Blended Water Flow
1) General: Used to continuously monitor the Blended Water flow rate.
2) Control:
a) Local: None
b) PCS: Operator shall have the ability to select MAINTENANCE, FLOWMETER, or SUM TOTAL as the BW Flow signal source via the HMI.
(1) MAINTENANCE: The operator shall have the ability to enter in a flow value during flowmeter maintenance to reduce impact on chemical feed systems.
(2) FLOWMETER: The signal from this flowmeter is used.
(3) SUM TOTAL: The sum of all Skid Discharge Flows plus the NF Bypass Flow signal is used.

3) Logic Interlocks/Permissives:
a) Used for the chemical feed dosing calculations.
4) Monitoring:
a) Local: Instantaneous flow indication
b) PCS: Blended Water Flow
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water Flow, Loss of Signal

i. Blended Water pH
1) General: Used to continuously monitor the pH level of the Blended Water.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Used for chemical feed dosing calculations.
4) Monitoring:
a) Local: Instantaneous pH indication
b) PCS: Blended Water pH
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water pH, Loss of Signal

j. Blended Water Chlorine Residual
1) General: Used to continuously monitor the chlorine residual of the Blended Water.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:

a) Local: Instantaneous Chlorine Residual indication
b) PCS: Blended Water Chlorine Residual

5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water Chlorine Residual, Loss of Signal

k. Blended Water Fluoride Residual
1) General: Used to continuously monitor the fluoride residual of the Blended Water.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous Fluoride Residual indication
b) PCS: Blended Water Fluoride Residual
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water Fluoride Residual, Loss of Signal

l. Blended Water Phosphate Residual
1) General: Used to continuously monitor the phosphate residual of the Blended Water.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous Phosphate Residual indication
b) PCS: Blended Water Phosphate Residual
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Blended Water Phosphate Residual, Loss of Signal

m. NF Concentrate Conductivity
1) General: Used to continuously monitor the conductivity of the skid concentrate.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) None
4) Monitoring:
a) Local: Instantaneous conductivity indication
b) PCS: NF Concentrate Conductivity
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low NF Concentrate Conductivity, Loss of Signal

n. NF Concentrate pH
   1) General: Used to continuously monitor the pH level of the NF Concentrate.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) None
   4) Monitoring:
      a) Local: Instantaneous pH indication
      b) PCS: NF Concentrate pH
   5) Alarms:
      a) Local: None
      b) PCS: High-High, High, Low, Low-Low NF Concentrate pH, Loss of Signal

o. NF Skid Control Interface
   1) General: All control of individual NF Skids, Membrane Cleaning System, and associated equipment is performed by the NF Skids Master PLC. Custom programming requirements for that vendored system are specified under Section 466340. Programming requirements described below are provided under this Section for NF Building ACP PLC/OIT and SCADA.
   2) Operator shall have the ability to enter the following water quality parameters for NF Feed and NF Permeate. These values will be used to determine the NF Bypass flowrate when operated in HARDNESS mode.
      a) Total Hardness in NF Feed (THNFF = 366 mg/L as $CaCO_3$
      b) Total Hardness in NF Permeate (THNFP = 10.8 mg/L as $CaCO_3$
   3) PLC shall calculate and SCADA shall indicate and trend the following:
      a) Total NF Feed flow rate (Total NFF = NFP + NFC)
      b) NF Bypass Flow (NFB = NFP x %NFB).
      c) Indicate Raw Water Flow Rate (RW = NFF + NFB).
      d) Actual %NFB (%NFB = NFB / BLW)
         (1) NFB from flow meter
         (2) BLW = NFP flow meters from skids + NFB flow meter
         (3) THBLW = [(NFB x THNFF) + (NFP x THNFP)] / BW
   4) All Skid OIT and MCS screen information and operator entry shall be duplicated at SCADA.

p. NF Process Start/Stop
   1) Control: Operator shall have the ability to place the softening process on automated Start/Stop control. If enabled, the plant shall start if the existing clearwell level drops below an operator adjustable setpoint. The plant shall shutdown if the clearwell level rises above an operator adjustable setpoint.
   2) When the plant startup is auto initiated:
      a) Open NF Bypass Valve to initial setpoint.
      b) Start Chemical Feed Systems.
      c) Start Groundwater Wells.
      d) Start NF Feed Pumps and NF Skids. The quantity of skids needed shall be based on NF Skid Call Level setpoints.
   3) When the plant shutdown is auto initiated:
      a) NF Skids and NF Feed Pumps shall perform a permeate flush or forward flush before stopping.
      b) Groundwater Wells shall continue to operate until all NF Skids and NF Feed Pumps have stopped.

c) Close NF Bypass Valve.
d) Stop Chemical Feed Systems.

7. CORROSION INHIBITOR CHEMICAL FEED SYSTEM
   a. Corrosion Inhibitor Storage Tank 1 Level
      1) General: Used to continuously monitor the liquid level in Corrosion Inhibitor Storage Tank 1.
      2) Control:
         a) Local: None
         b) PCS: None
      3) Logic Interlocks/Permissives:
         a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
      4) Monitoring:
         a) Local: Instantaneous level indication
         b) PCS: Corrosion Inhibitor Storage Tank 1 Level
      5) Alarms:
         a) Local: None
         b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Storage Tank 1 Level, Loss of Signal
   b. Corrosion Inhibitor Storage Tank 1 Outlet Valve
      1) General: Used to isolate Corrosion Inhibitor Storage Tank 1 from the outlet header.
      2) Control:
         a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
         b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
            (4) PC MANUAL: The operator shall have the ability to open or close the valve.
            (5) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
      3) Logic Interlocks/Permissives:
         a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
      4) Monitoring:
         a) Local: Opened, Closed
         b) PCS: Remote, Opened, Closed
      5) Alarms:
         a) Local: None
         b) PCS: None
   c. Corrosion Inhibitor Storage Tank 1 Recirc Valve
      1) General: Used to direct chemical to Corrosion Inhibitor Storage Tank 1 from the transfer pump.
      2) Control:
         a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence

4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

d. Corrosion Inhibitor Transfer Pump
1) General: Used to pump Corrosion Inhibitor chemical between tanks.
2) Control:
a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
(2) AUTO: Corrosion Inhibitor Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Corrosion Inhibitor Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.

4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Alarm
b) PCS: Motor High Temperature, Motor Overload

e. Corrosion Inhibitor Day Tank Inlet Valve
1) General: Used to direct chemical to Corrosion Inhibitor Day Tank from the transfer pump.
2) Control:
a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.

4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

f. Corrosion Inhibitor Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
a) Local: None.
b) PCS: None.
3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Corrosion Inhibitor Day Tank High Level

g. Corrosion Inhibitor Day Tank Weight
1) General: Used to continuously monitor the weight of the Corrosion Inhibitor Day Tank.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
4) Monitoring:
a) Local: Instantaneous weight indication
b) PCS: Corrosion Inhibitor Day Tank Weight
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Day Tank Weight, Loss of Signal

h. Corrosion Inhibitor Feed Pump 1
1) General: Used to inject Corrosion Inhibitor into the water for treatment.
2) Control:
a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.

b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
   (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
   (2) AUTO: Corrosion Inhibitor Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
      (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
      (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint.

3) Logic Interlocks/Permissives:
   a) Corrosion Inhibitor Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

i. Corrosion Inhibitor Chemical Transfer Sequence
1) General: Used for automated control of transferring chemical between tanks.
2) Control:
   a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
   b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
      (1) TRANSFER:
         a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
         b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
         c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
         d. Once both opened, the transfer pump shall operate until the Stop level is reached.
         e. Once the level is reached, both valves shall travel closed.
         f. Once either valve is closed, the transfer pump shall stop.
         g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
         h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.

i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
j. All applicable equipment must not have any active alarms in order to initiate the transfer.

(2) RECIRC:
a. The operator shall select a storage tank and enter a desired time duration setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
d. Once both opened, the transfer pump shall operate until the time duration has expired.
e. Once time expires, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:
a. The operator shall select the source storage tank and enter a Stop weight setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
e. Once the weight is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

j. Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Flow Switch
1) General: Used to detect an activation of the emergency eyewash/shower.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None

4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Activated

k. Corrosion Inhibitor Containment Area Wet Floor Switch
1) General: Used to detect a Corrosion Inhibitor tank leak.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Corrosion Inhibitor Containment Area Wet Floor Switch Activated

8. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM
a. Sodium Hydroxide Storage Tank 1 Level
1) General: Used to continuously monitor the liquid level in Sodium Hydroxide Storage Tank 1.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Instantaneous level indication
   b) PCS: Sodium Hydroxide Storage Tank 1 Level
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Storage Tank 1 Level, Loss of Signal

b. Sodium Hydroxide Storage Tank 1 Outlet Valve
1) General: Used to isolate Sodium Hydroxide Storage Tank 1 from the outlet header.
2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (1) PC MANUAL: The operator shall have the ability to open or close the valve.

(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

c. Sodium Hydroxide Storage Tank 1 Recirc Valve
1) General: Used to direct chemical to Sodium Hydroxide Storage Tank 1 from the transfer pump.
2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (1) PC MANUAL: The operator shall have the ability to open or close the valve.
      (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

d. Sodium Hydroxide Transfer Pump
1) General: Used to pump Sodium Hydroxide chemical between tanks.
2) Control:
   a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
   b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
      (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
      (2) AUTO: Sodium Hydroxide Transfer Pump shall be automatically controlled via PLC programming. The pump

shall operate as called for by the Sodium Hydroxide Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Alarm
   b) PCS: Motor High Temperature, Motor Overload

e. Sodium Hydroxide Day Tank Inlet Valve
1) General: Used to direct chemical to Sodium Hydroxide Day Tank from the transfer pump.
2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (1) PC MANUAL: The operator shall have the ability to open or close the valve.
      (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

f. Sodium Hydroxide Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
   a) Local: None.
   b) PCS: None.
3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Sodium Hydroxide Day Tank High Level

g. Sodium Hydroxide Day Tank Weight
1) General: Used to continuously monitor the weight of the Sodium Hydroxide Day Tank.
2) Control:

a) Local: None
b) PCS: None

3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Instantaneous weight indication
   b) PCS: Sodium Hydroxide Day Tank Weight
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Day Tank Weight, Loss of Signal

h. Sodium Hydroxide Feed Pump 1
1) General: Used to inject Sodium Hydroxide into the water for treatment.
2) Control:
   a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
   b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
      (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
      (2) AUTO: Sodium Hydroxide Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
         (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
         (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired Blended Water pH setpoint.
3) Logic Interlocks/Permissives:
   a) Sodium Hydroxide Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

i. Sodium Hydroxide Carrier Water Valve
1) General: Used to convey chemical for injection into the process stream.
2) Control:
   a) Local: None
   b) PCS: The operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (1) PC MANUAL: The operator shall have the ability to open or close the valve.
      (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall be open when any Sodium Hydroxide Feed Pump is operating.

3) Logic Interlocks/Permissives:
   a) None
4) Monitoring:
   a) Local: None
   b) PCS: Opened, Closed
5) Alarms:
   a) Local: None
   b) PCS: None

j. Sodium Hydroxide Chemical Transfer Sequence
   1) General: Used for automated control of transferring chemical between tanks.
   2) Control:
      a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
      b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
         (1) TRANSFER:
            a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
            b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
            c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
            d. Once both opened, the transfer pump shall operate until the Stop level is reached.
            e. Once the level is reached, both valves shall travel closed.
            f. Once either valve is closed, the transfer pump shall stop.
            g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
            h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
            i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
            j. All applicable equipment must not have any active alarms in order to initiate the transfer.
         (2) RECIRC:
            a. The operator shall select a storage tank and enter a desired time duration setpoint.
            b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
            c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
            d. Once both opened, the transfer pump shall operate until the time duration has expired.
            e. Once time expires, both valves shall travel closed.
            f. Once either valve is closed, the transfer pump shall stop.

g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

a. The operator shall select the source storage tank and enter a Stop weight setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
e. Once the weight is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

k. Sodium Hydroxide Feed Room Emergency Eyewash/Shower Flow Switch
1) General: Used to detect an activation of the emergency eyewash/shower.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Sodium Hydroxide Feed Room Emergency Eyewash/Shower Activated

l. Sodium Hydroxide Containment Area Wet Floor Switch
1) General: Used to detect a Sodium Hydroxide tank leak.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: None
b) PCS: None

5) Alarms:
   a) Local: None
   b) PCS: Sodium Hydroxide Containment Area Wet Floor Switch Activated

m. Sodium Hydroxide Feed Room Temperature
   1) General: Used to continuously monitor the temperature of the Sodium Hydroxide Feed Room.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) None
   4) Monitoring:
      a) Local: Instantaneous temperature indication
      b) PCS: Sodium Hydroxide Feed Room Temperature
   5) Alarms:
      a) Local: None
      b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Feed Room Temperature, Loss of Signal

9. ANTISCALANT CHEMICAL FEED SYSTEM
   a. Antiscalant Transfer Pump
      1) General: Used to pump Antiscalant chemical between tanks.
      2) Control:
         a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
         b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
            (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
            (2) AUTO: Antiscalant Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Antiscalant Chemical Transfer Sequence.
      3) Logic Interlocks/Permissives:
         a) Reference the Antiscalant Chemical Transfer Sequence.
      4) Monitoring:
         a) Local: Running, Stopped
         b) PCS: Running, Stopped, Remote
      5) Alarms:
         a) Local: Alarm
         b) PCS: Motor High Temperature, Motor Overload
   b. Antiscalant Day Tank High Level
      1) General: Used to prevent overfilling the day tank.
      2) Control:
         a) Local: None.
         b) PCS: None.
      3) Logic Interlocks/Permissives:

a) Reference the Antiscalant Chemical Transfer Sequence.

4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Antiscalant Day Tank High Level

c. Antiscalant Day Tank Weight
1) General: Used to continuously monitor the weight of the Antiscalant Day Tank.
2) Control:
   a) Local: None
   b) PCS: None
3) Logic Interlocks/Permissives:
   a) Reference the Antiscalant Chemical Transfer Sequence.
4) Monitoring:
   a) Local: Instantaneous weight indication
   b) PCS: Antiscalant Day Tank Weight
5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Antiscalant Day Tank Weight, Loss of Signal

d. Antiscalant Feed Pump 1
1) General: Used to inject Antiscalant into the water for treatment.
2) Control:
   a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
   b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
      (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
      (2) AUTO: Sodium Bisulfite Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
         (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
         (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint using the sum of all Skid Inlet Flows.
3) Logic Interlocks/Permissives:
   a) Antiscalant Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Fault

b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

e. Antiscalant Injection Flow
   1) General: Used to detect that Antiscalant is being injected into the process stream.
   2) Control:
      a) Local: None
      b) PCS: None
   3) Logic Interlocks/Permissives:
      a) An Antiscalant Feed Pump must be operating for alarm logic to be active.
      b) Antiscalant flow must be present for an NF Skid to operate.
   4) Monitoring:
      a) Local: None
      b) PCS: None
   5) Alarms:
      a) Local: None
      b) PCS: Antiscalant No Flow Alarm

f. Antiscalant Chemical Transfer Sequence
   1) General: Used for automated control of transferring chemical between tanks.
   2) Control:
      a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
      b) PCS: The operator shall be able to fill the day tank automatically using PLC programming.
         (1) DAY TANK FILL:
            a. The operator shall select the source storage tank and enter a Stop weight setpoint.
            b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
            c. Once the button is pressed, the transfer pump shall operate until the Stop weight is reached.
            d. Once the weight is reached, the transfer pump shall stop.
            e. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
            f. Day Tank High Level Alarm must be inactive for the transfer pump to start.
            g. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
            h. All applicable equipment must not have any active alarms in order to initiate the transfer.

10. SODIUM HYPOCHLORITE CHEMICAL FEED SYSTEM
    a. Sodium Hypochlorite Storage Tank 1 Level
       1) General: Used to continuously monitor the liquid level in Sodium Hypochlorite Storage Tank 1.
       2) Control:
          a) Local: None
          b) PCS: None
       3) Logic Interlocks/Permissives:

a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.

4) Monitoring:
   a) Local: Instantaneous level indication
   b) PCS: Sodium Hypochlorite Storage Tank 1 Level

5) Alarms:
   a) Local: None
   b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Storage Tank 1 Level, Loss of Signal

b. Sodium Hypochlorite Storage Tank 1 Outlet Valve

1) General: Used to isolate Sodium Hypochlorite Storage Tank 1 from the outlet header.

2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (3) PC MANUAL: The operator shall have the ability to open or close the valve.
      (4) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.

4) Monitoring:
   a) Local: Opened, Closed
   b) PCS: Remote, Opened, Closed

5) Alarms:
   a) Local: None
   b) PCS: None

c. Sodium Hypochlorite Storage Tank 1 Recirc Valve

1) General: Used to direct chemical to Sodium Hypochlorite Storage Tank 1 from the transfer pump.

2) Control:
   a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
   b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
      (1) PC MANUAL: The operator shall have the ability to open or close the valve.
      (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
   a) Reference the Sodium Hypochlorite Chemical Transfer Sequence

4) Monitoring:

a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

d. Sodium Hypochlorite Dilution Water Flow
1) General: Used to continuously monitor the Sodium Hypochlorite Dilution Water flow rate.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Dilution Control Loop.
4) Monitoring:
a) Local: Instantaneous flow indication
b) PCS: Sodium Hypochlorite Dilution Water Flow
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Dilution Water Flow, Loss of Signal

e. Sodium Hypochlorite Storage Tank 1 Dilution Water Valve
1) General: Used to direct dilution water to Sodium Hypochlorite Storage Tank 1 to lower the solution concentration.
2) Control:
a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Dilution Control Loop.
3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Dilution Control Loop.
4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed
5) Alarms:
a) Local: None
b) PCS: None

f. Sodium Hypochlorite Transfer Pump
1) General: Used to pump Sodium Hypochlorite chemical between tanks.
2) Control:
a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.

b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
(2) AUTO: Sodium Hypochlorite Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Sodium Hypochlorite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.

4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote

5) Alarms:
a) Local: Alarm
b) PCS: Motor High Temperature, Motor Overload

g. Sodium Hypochlorite Day Tank Inlet Valve

1) General: Used to direct chemical to Sodium Hypochlorite Day Tank from the transfer pump.

2) Control:
a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.

4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed

5) Alarms:
a) Local: None
b) PCS: None

h. Sodium Hypochlorite Day Tank Level

1) General: Used to continuously monitor the liquid level in Sodium Hypochlorite Day Tank.

2) Control:
a) Local: None
b) PCS: None

3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.

4) Monitoring:

a) Local: Instantaneous level indication
b) PCS: Sodium Hypochlorite Day Tank Level

5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Day Tank Level, Loss of Signal

i. Sodium Hypochlorite Day Tank High Level

1) General: Used to prevent overfilling the day tank.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Sodium Hypochlorite Day Tank High Level

j. Sodium Hypochlorite Feed Pump 1

1) General: Used to inject Sodium Hypochlorite into the water for disinfection treatment.
2) Control:
a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
(2) AUTO: Sodium Hypochlorite Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
(a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
(b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Blended Water Flow.
3) Logic Interlocks/Permissives:
a) Sodium Hypochlorite Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
a) Local: Running, Stopped
b) PCS: Running, Stopped, Remote
5) Alarms:
a) Local: Fault
b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

k. Sodium Hypochlorite Chemical Transfer Sequence
   1) General: Used for automated control of transferring chemical between tanks.
   2) Control:
      a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
      b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
         (1) TRANSFER:
            a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
            b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
            c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
            d. Once both opened, the transfer pump shall operate until the Stop level is reached.
            e. Once the level is reached, both valves shall travel closed.
            f. Once either valve is closed, the transfer pump shall stop.
            g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
            h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
            i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
            j. All applicable equipment must not have any active alarms in order to initiate the transfer.
         (2) RECIRC:
            a. The operator shall select a storage tank and enter a desired time duration setpoint.
            b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
            c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
            d. Once both opened, the transfer pump shall operate until the time duration has expired.
            e. Once time expires, both valves shall travel closed.
            f. Once either valve is closed, the transfer pump shall stop.
            g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
            h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
            i. All applicable equipment must not have any active alarms in order to initiate the sequence.
         (3) DAY TANK FILL:

a. The operator shall select the source storage tank and enter a Stop level setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop level is reached.
e. Once the level is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Level Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Switch Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

l. Sodium Hypochlorite Dilution Control Loop
1) General: Used for automated control of adding dilution water to storage tanks to reduce the concentration of the solution.
2) Control:
a) Local: The operator shall have the ability at the LCP to manually operate system equipment to add dilution water.
b) PCS: The operator shall be able to add dilution water automatically using PLC programming.
(1) Dilution Water Sequence:
a. The operator shall select which storage tanks to add dilution water to and enter a GALLONS setpoint.
b. The applicable Storage Tank Dilution Water Valves will open.
c. Once the GALLONS setpoint has been reached, the valves shall close.
d. Applicable Storage Tank(s) High Level Alarm(s) must be inactive for the sequence to start.
e. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
f. All applicable equipment must not have any active alarms in order to initiate the sequence.

m. Sodium Hypochlorite Containment Area Wet Floor Switch
1) General: Used to detect a Sodium Hypochlorite tank leak.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None
4) Monitoring:
a) Local: None
b) PCS: None

5) Alarms:
   a) Local: None
   b) PCS: Sodium Hypochlorite Containment Area Wet Floor Switch Activated

11. FLUORIDE CHEMICAL FEED SYSTEM
   a. Fluoride Storage Tank 1 Level
      1) General: Used to continuously monitor the liquid level in Fluoride Storage Tank 1.
      2) Control:
         a) Local: None
         b) PCS: None
      3) Logic Interlocks/Permissives:
         a) Reference the Fluoride Chemical Transfer Sequence.
      4) Monitoring:
         a) Local: Instantaneous level indication
         b) PCS: Fluoride Storage Tank 1 Level
      5) Alarms:
         a) Local: None
         b) PCS: High-High, High, Low, Low-Low Fluoride Storage Tank 1 Level, Loss of Signal
   b. Fluoride Storage Tank 1 Outlet Valve
      1) General: Used to isolate Fluoride Storage Tank 1 from the outlet header.
      2) Control:
         a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
         b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
            (1) PC MANUAL: The operator shall have the ability to open or close the valve.
            (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.
      3) Logic Interlocks/Permissives:
         a) Reference the Fluoride Chemical Transfer Sequence.
      4) Monitoring:
         a) Local: Opened, Closed
         b) PCS: Remote, Opened, Closed
      5) Alarms:
         a) Local: None
         b) PCS: None
   c. Fluoride Storage Tank 1 Recirc Valve
      1) General: Used to direct chemical to Fluoride Storage Tank 1 from the transfer pump.
      2) Control:
         a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-

REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.

(1) PC MANUAL: The operator shall have the ability to open or close the valve.

(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:

a) Reference the Fluoride Chemical Transfer Sequence

4) Monitoring:

a) Local: Opened, Closed

b) PCS: Remote, Opened, Closed

5) Alarms:

a) Local: None

b) PCS: None

d. Fluoride Transfer Pump

1) General: Used to pump Fluoride chemical between tanks.

2) Control:

a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.

b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.

(1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.

(2) AUTO: Fluoride Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Fluoride Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:

a) Reference the Fluoride Chemical Transfer Sequence.

4) Monitoring:

a) Local: Running, Stopped

b) PCS: Running, Stopped, Remote

5) Alarms:

a) Local: Alarm

b) PCS: Motor High Temperature, Motor Overload

e. Fluoride Day Tank Inlet Valve

1) General: Used to direct chemical to Fluoride Day Tank from the transfer pump.

2) Control:

a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
(1) PC MANUAL: The operator shall have the ability to open or close the valve.
(2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.

3) Logic Interlocks/Permissives:
a) Reference the Fluoride Chemical Transfer Sequence.
4) Monitoring:
a) Local: Opened, Closed
b) PCS: Remote, Opened, Closed
5) Alarms:
a) Local: None
b) PCS: None

f. Fluoride Day Tank High Level
1) General: Used to prevent overfilling the day tank.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Fluoride Chemical Transfer Sequence.
4) Monitoring:
a) Local: None
b) PCS: None
5) Alarms:
a) Local: None
b) PCS: Fluoride Day Tank High Level

g. Fluoride Day Tank Weight
1) General: Used to continuously monitor the weight of the Fluoride Day Tank.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives:
a) Reference the Fluoride Chemical Transfer Sequence.
4) Monitoring:
a) Local: Instantaneous weight indication
b) PCS: Fluoride Day Tank Weight
5) Alarms:
a) Local: None
b) PCS: High-High, High, Low, Low-Low Fluoride Day Tank Weight, Loss of Signal

h. Fluoride Feed Pump 1
1) General: Used to inject Fluoride into the water for treatment.
2) Control:
a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.

b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
   (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
   (2) AUTO: Fluoride Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
      (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
      (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Blended Water Flow.

3) Logic Interlocks/Permissives:
   a) Fluoride Day Tank Low-Low Level Alarm must be inactive for pump to operate.
4) Monitoring:
   a) Local: Running, Stopped
   b) PCS: Running, Stopped, Remote
5) Alarms:
   a) Local: Fault
   b) PCS: Fault, Loss of Signal, Flow Deviation Alarm

i. Fluoride Chemical Transfer Sequence
1) General: Used for automated control of transferring chemical between tanks.
2) Control:
   a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
   b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
      (1) TRANSFER:
         a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
         b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
         c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
         d. Once both opened, the transfer pump shall operate until the Stop level is reached.
         e. Once the level is reached, both valves shall travel closed.
         f. Once either valve is closed, the transfer pump shall stop.
         g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
         h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.

i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
j. All applicable equipment must not have any active alarms in order to initiate the transfer.

(2) RECIRC:
a. The operator shall select a storage tank and enter a desired time duration setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
d. Once both opened, the transfer pump shall operate until the time duration has expired.
e. Once time expires, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:
a. The operator shall select the source storage tank and enter a Stop weight setpoint.
b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
e. Once the weight is reached, both valves shall travel closed.
f. Once either valve is closed, the transfer pump shall stop.
g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
k. All applicable equipment must not have any active alarms in order to initiate the transfer.

j. Fluoride Containment Area Wet Floor Switch
1) General: Used to detect a Fluoride tank leak.
2) Control:
a) Local: None
b) PCS: None
3) Logic Interlocks/Permissives: None

4) Monitoring:
   a) Local: None
   b) PCS: None
5) Alarms:
   a) Local: None
   b) PCS: Fluoride Containment Area Wet Floor Switch Activated

12. EXISTING PROCESS CONTROL MODIFICATIONS
    a. Groundwater Wells
       1) General: Used to pump water to the NF Building Softening process.
       2) Control: Modify groundwater pumps to operate when NF Skids are being called to run.
          a) AUTO: Wells shall be automatically controlled via PLC programming. Well's with VFD controllers shall have their speed varied to maintain an operator entered NF Bypass Header Pressure setpoint.
          b) Groundwater pumps operating is a permissive in order for NF Skids to start.

13. EMERGENCY POWER

    a. Automatic Transfer Switch
       1) General: Used to automatically transfer plant power to generator during a utility power outage.
       2) Control:
          a) Local: Per manufacturer
          b) PCS: None
       3) Logic Interlocks/Permissives:
          a) Generator running and Automatic Transfer Switch in the Emergency Source position will initiate step loading logic for loads to be sequentially started.
       4) Monitoring:
          a) Local: Per manufacturer
          b) PCS: Utility Source Available, Emergency Source Available, Utility Source Connected, Emergency Source Connected
       5) Alarms:
          a) Local: Per manufacturer
          b) PCS: Not in Auto

14. CRITICAL ALARMS

    a. General: Programming shall include the following as critical alarms. Critical alarms shall initiate a telephone call to designated personnel.
       1) Utility Power Failure
       2) PLC Failure Alarm
       3) Emergency NF Process Shutdown

3.2 EXAMINATION

A. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.

B. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.3 PREPARATION

A. Protection
   1. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
   2. Provide blocking and cushioning materials to prevent damage during shipment.
   3. Panel mounted instruments and equipment to be installed inside enclosures, panels, or consoles shall be mounted and assembled at the panel manufacturer's facility.

3.4 INSTALLATION

A. General: Install equipment, as indicated, with manufacturer's written instructions and with recognized industry practices.

3.5 FIELD QUALITY CONTROL

A. Inspection: Provide for services of a qualified representative of the manufacturer to inspect and approve installation.

B. Tests: Upon completion of all inspections, and prior to acceptance, perform field tests outlined in Division 40 Section “Plant Instrumentation and Control System General Requirements”.

C. Operational Demonstration: After completion of the field test, perform a 30-day operational demonstration as specified in Division 40 Section “Plant Instrumentation and Control System General Requirements”.

3.6 DEMONSTRATION

A. General: When all required tests have been performed and prior to final acceptance, the Contractor shall perform a 30-day operational demonstration in accordance with the requirements of Division 40 Section “Plant Instrumentation and Control System General Requirements”.

3.7 EXTRA MATERIALS

A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.

B. Quantity: Provide spares for each type of module listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
   1. Processor Modules
   2. Power Supply
   3. Digital Input Modules

4. Digital Output Modules
5. Analog Input Modules
6. Analog Output Modules
7. Analog Input/Analog Output Modules
8. Flex I/O Modules
9. Flex I/O Module Terminal Blocks

C. Provide (6) OIT protective screen overlays.

D. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no cost.

3.8 PLC SYSTEM TRAINING

A. General.
1. Provide a training course customized for the control system hardware.
2. Provide training on the operation and maintenance of the control system hardware.
3. Provide training manuals for each attendee plus two additional manuals in archival preservation at the project site.
4. Include the following in each manual.
   a. An agenda
   b. Defined objectives for each lesson.
5. Provide all equipment, materials, and supplies used in the training.
6. For guidance in planning the required instruction, assume that attendees will have a high school education or equivalent and basic electrical maintenance knowledge.

B. Location, duration, and schedule.
1. Teach the course at the project site.
2. Provide one day of training for five personnel designated by the Owner.
3. Conduct training after completion of the Contractor's field testing.

3.9 INPUT/OUTPUT SCHEDULE

A. Abbreviations
1. AI = Analog Input
2. AO = Analog Output
3. CPU = Processor
4. DI = Digital Input
5. DO = Digital Output
6. RIO = Remote I/O Communications

B. Installed spare inputs and outputs (I/O): In addition to the I/O listed below, provide a minimum of 10 percent installed.
1. All SPARE I/O shall be wired to terminal blocks within the PLC enclosure.

END OF SECTION 40 9443

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
Membrane Equipment Procurement

1.1 GENERAL

A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.

B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.2 CLARIFICATIONS

A. The following is a list of clarifications regarding project documents. These clarifications include question received during the advertisement period:

Q: Is a performance or a payment bond required?
A: No, the Buyer (General Contractor) will hold the performance and payment bond. See revisions to the project manual below.

Q: Coded note no. 6 on sheet I-01 (RARWTP) indicates new I/O modules shall be 1769-IA16 and 1769-IF41 by Allen-Bradley. This contradicts Section 40 9443 (RARWTP and FAWTP), paragraph 2.1. Please confirm the requirements for the SCADA System PLC components.

A: SCADA System PLC components shall be in accordance with 40 9443 (RARWTP and FAWTP), paragraph 2.1. Coded note no. 6 on sheet I-01 (RARWTP) refers to an existing panel at the RARWTP.

1.3 PROJECT MANUAL

A. Section 00 1113 – Advertisement for Bids
   1. Section 2.
      a. Revise:
      "Bids will be received by Engineer until May 18, 2020 @ 2:00 p.m. Bids shall be submitted via email or via hand delivery, USPS, UPS, or FedEx to: AECOM, ATTN: Matthew Noelker, P.E., 277 West Nationwide Blvd, Columbus, Ohio 43215, matthew.noelker@aecom.com" to read:
      "Bids will be received by Engineer until May 18, 2020 @ 2:00 p.m Bids shall be submitted via email to matthew.noelker@aecom.com. A webex invitation will follow for interested parties to view the bid opening."

B. Section 00 5215 – Agreement Form
   1. Paragraph 2.04.B – Add the following to the end of this paragraph:
      "Total combined liquidated damages payable by Seller to Buyer shall not exceed 25% of the Contract Price."

C. Section 00 7000 – General Conditions
   1. Paragraph 5.01 – Delete this paragraph.

2. Paragraph 7.07. Add the following as subparagraph C:
"Seller's total limit of liability to the Buyer shall be limited to 1.5 times the total procurement contract value."

D. Section 46 6340 – Nanofiltration Membrane Equipment
1. Paragraph 2.11.A.2 – Add the following to this paragraph:
"SDI test apparatus shall consist of an isolation valve, pressure reducing valve (hand-operated, design to regulate from up to 150 psi to 30 psi), and an SDI pad holder."
2. RARWTP RO MEMBRANE EQUIPMENT SCHEUDLE, paragraph A. Add the following as subparagraph 3:
"Maximum feed pressure shall be no greater than 140 psi when operating with 35 psig of permeate backpressure on stage 1 of the array and 15 psig of permeate backpressure on stage 2 of the array."
3. FAWTP RO MEMBRANE EQUIPMENT SCHEDULE, paragraph A. Add the following as subparagraph 3:
"Maximum feed pressure shall be no greater than 140 psi when operating with 35 psig of permeate backpressure on stage 1 of the array and 15 psig of permeate backpressure on stage 2 of the array."

END OF ADDENDUM NO. 2
(SEE ENCLOSURES)

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

SECTION 00 4113

BID FORM

TABLE OF CONTENTS

Page

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted to the Engineer via email or via hand delivery, USPS, UPS, or FedEx to:

AECOM
ATTN: Matthew Noelker, P.E.
277 West Nationwide Blvd
Columbus, Ohio 43215
Matthew.noelker@aecom.com

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Buyer in the form included in the Bid Documents to furnish the Goods and Special Services as specified or indicated in the Bid Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bid Documents.

1.03 The Buyer of the Goods and Special Services will be the successful Bidder(s) (Contractor(s)) for the referenced Projects.

ARTICLE 2 – BIDDER'S ACKNOWLEDGMENTS

2.01 Bidder accepts all of the terms and conditions of the RFP.

2.02 Bidder accepts the provision of the Agreement as to liquidated damages in event of its failure to furnish the Goods and Special Services in accordance with the schedule set forth in the Agreement.

ARTICLE 3 – BIDDER'S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bid Documents included with the RFP, other related data identified, and the following Addenda, receipt of which is hereby acknowledged:

Addendum No.	Addendum Date
1	5/7/2020
2	5/14/2020

B. Bidder has become familiar with and is satisfied as to the local conditions that may affect cost, progress, delivery, or the furnishing of Goods and Special Services.

C. Bidder is familiar with and is satisfied as to all federal, state and local Laws and Regulations that may affect cost, progress, and the furnishing of Goods and Special Services.

D. Bidder has carefully studied and correlated the information known to Bidder, and information and observations obtained from Bidder's visits, if any, to the Point of Destination with the Bid Documents.

E. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bid Documents, and the written resolution thereof by Engineer is acceptable to Bidder.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

F. The Bid Documents are generally sufficient to indicate and convey understanding of all terms and conditions for furnishing the Goods and Special Services for which this Bid is submitted.

G. Bidder further represents that this Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any agreement or rules of any group, association, organization or corporation; Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid; Bidder has not solicited or induced any individual or entity to refrain from Bid; and Bidder has not sought by collusion to obtain for itself any advantage over any other Bidder or over Buyer.

ARTICLE 4 – BASIS OF BID

ADD #1

4.01 Bidder will furnish the Goods and Special Services in accordance with these Contract Documents for the following price(s), which do not include sales tax. Prices shall be guaranteed until August 31, 2020. After this date, **if the Owner has not issued a Notice to Proceed to Buyer, and** if requested by the ~~**Buyer**~~ **Seller** and approved by the Owner, ~~**Buyer's**~~ **Seller's** proposed prices may be escalated by the monthly change of the U.S. Consumer Price Index (CPI) as calculated by the U.S. Bureau of Labor Statistics.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

RARWTP

ADD #1

Item No.	Description	Proposed Price
	SHOP DRAWINGS	
1.)	Shop Drawing Preparation	**$60,000.00**
	EQUIPMENT	
2.)	Base Bid: Manufacturing of Goods—Epoxy Coated or FRP Frames Individual skids shall be delivered to the Point of Destination having been fully assembled, ready for installation, and having undergone factory acceptance testing prior to shipping. If skids are delivered not having been fully assembled, costs for such assembly shall be included under Item No. 3.	**$2,335,351.00**
3.)	Base Bid: Assembly of Goods Onsite—Epoxy Coated or FRP Frames Include all costs for any required onsite assembly of goods except the following items which will be performed by the Buyer: unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power. **All onsite labor wages shall be in accordance with Division 00, Section "Prevailing Wage Rate Requirements.**	NA Fully Assembled and Skid Mounted except MCS per the specifications. Since MCS is being partially supplied by Contractor, they are responsible for installation.
4.)	Alternate Bid: Manufacturing of Goods—304 SST Frames (Item cost is additive or deductive from Item No. 2). Individual skids shall be delivered to the Point of Destination having been fully assembled, ready for installation, and having undergone factory acceptance testing prior to shipping. If skids are delivered not having been fully assembled, costs for such assembly shall be included under Item No. 3.	**Add** **$26,100.00**
5.)	Alternate Bid: Assembly of Goods Onsite—304 SST Frames (Item cost is additive or deductive from Item No. 3). Include all costs for any required onsite assembly of goods except the following items which will be performed by the Buyer: unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power. **All onsite labor wages shall be in accordance with Division 00, Section "Prevailing Wage Rate Requirements.**	NA Fully Assembled and Skid Mounted except MCS per the specifications. Since MCS is being partially supplied by Contractor, they are responsible for installation.
	SPECIAL SERVICES	
6.)	Include costs required for all Special Services including startup and commissioning, remote monitoring, and field service agreement.	**$134,000.00**

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

4.02 Additional Proposed Costs:

Description	Proposed Price
The Seller's monthly fee for storage of Goods at Seller's facilities in the event that Buyer desires to delay shipment beyond the shipment date stated below in Article 5.02. Such fee shall include interest on money due Seller.	RARWTP: $2500/month FAWTP: $1500/month
The Seller's monthly fee for Buyer delaying the initiation of manufacturing of Goods or for not executing the Procurement Agreement within the time specified in 4.03 below.	RARWTP: $5500/month FAWTP: $3500/month

4.03 Seller and Buyer shall execute the Procurement Agreement within 30 days after the Contractor's/Buyer's Notice to Proceed from the Owner. Should the Procurement Agreement not be executed within said 30 days due to the fault of the Buyer, the Buyer shall be subject to the prorated additional costs identified in Paragraph 4.02 above. Should the Procurement Agreement not be executed within the said 90 days due to the fault of the Seller, Seller shall be subject to the liquidated damages provisions in the Procurement Agreement. The issue of fault will be determined by the Engineer.

ARTICLE 5 – TIME OF COMPLETION

5.01 Bidder agrees that the furnishing of Goods and Special Services will conform to the schedules set forth below, which will be incorporated into Article 5 of the Agreement.

ADD #1

Description:	Proposed Number of Consecutive Calendar Days:
Time required by Seller to submit approvable Shop Drawings (consecutive calendar days after Notice to Proceed is issued to Buyer)	**(maximum of 30 days)**
~~Time required by Seller after receipt of approved Shop Drawings to deliver acceptable Goods to Point of Destination:~~ **Time required by Seller to deliver acceptable Goods to Point of Destination and complete assembly of goods onsite (consecutive calendar days after Notice to Proceed is issued by Buyer).** (consecutive calendar days)	**(maximum of 150 days)**
~~Time required by Seller to complete assembly of goods onsite~~ ~~(exclude time for unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power)~~	
Time required by Seller to complete all Special Services (consecutive calendar days after notification from Buyer to	50 Days for Start-up & Commissioning 2 Years for Service Contract

Seller to commence such Special Services.):	
Time required by Seller to be ready for Final Inspection and Acceptance of all Goods and all Special Services (consecutive calendar days after notification from Buyer to Seller to commence such Special Services.):	60 Days for Start-up & Commissioning & Performance Testing. 2 Years for Service Contract

5.02 Bidder agrees that the prices in Article 4 above are based on the condition that shipment of goods may be delayed by the Buyer.

ARTICLE 6 – BID DOCUMENTS

6.01 The following documents are attached with and made a condition of this Bid:

A. Attachment 1: Bidder Qualifications

B. Attachment 2: Scope of Supply

C. Attachment 3: OEM Special Services

D. Attachment 4: OEM Warranty

E. Attachment 5: Installation Instructions and Contractor's Responsibilities

F. Attachment 6: Spare Parts

ARTICLE 7 – DEFINED TERMS

7.01 The terms used in this Bid have the meanings indicated in the General Conditions. The significance of terms with initial capital letters is described in the General Conditions.

About Us

History & Background

Founded in 1965, Wigen has evolved from a manufacturer's representative firm into a global leader of custom water treatment and purification systems. With several U.S. patents to its credit, Wigen continues to develop new methods aimed at recycling and recovering our most precious resource.

Wigen has fully integrated production and fabrication capabilities; outsourcing only blasting, painting and electropolishing services. Supported by teams of software developers, and mechanical, electrical and chemical engineers. Wigen's manufacturing group includes metalworking, welding, panel-building, pipefitting, cleanroom assembly, general fabrication and testing operations.

Our headquarters are located near Minneapolis, Minnesota, with operations in Chicago, Denver, New York, and Phoenix. Wigen currently markets to customers throughout North America, Europe and Asia.

Vision

Pacing our stride to become the most trusted name in water treatment.

Mission

To be a recognized leader in products, services and solutions that transform the way water is treated, utilized, reused and distributed.

Values

Integrity – Communicate openly.
Satisfaction – Be responsive.
Ownership – Be empowered.
Teamwork – Support others.
Commitment – Stay focused.
Results – Provide value.
Flexibility – Embrace change.
Relationships – Build bridges.

"It's hard enough to win the first time. If the customer isn't satisfied, there won't be a second time."

- Jeff Wigen, President & CEO

Water.
Process.
Solutions.

Letter from the **CEO**

Dear Customer,

On behalf of all of us at Wigen Water Technologies, I want to personally thank you for the opportunity to provide this proposal for the WCWSD Membrane Equipment Procurement Bid. Our engineering team has carefully reviewed the drawings and specifications to be certain we fully understand the project scope. We recognize that details matter, and it starts with interpreting the requirements and carefully detailing our offer. Thus, you can be confident that our proposal identifies exactly what we intend to furnish, so as to reduce the prospect of expensive unknowns.

Since 1965, we have designed, built, and supported systems like that which is specified for this project. We literally have thousands of successful installations worldwide, including those for demanding markets such as municipal drinking water, nuclear power, desalination, oil & gas, etc. To be a recognized leader in this field , and have been in business for over 50 years, customer satisfaction is paramount. We're only as good as our last project, which is why quality is vitally important to client happiness.

To prove that being best-in-class truly matters, we've invested heavily in a comprehensive ISO 9001 quality management system. This requires action and accountability…all the time. We have very high standards for ourselves, because we know that contractors and end users expect nothing less.

I've grown up in the water business and continue to be involved with the day-to-day operations of the company, just as I have for the last 25 years. I say this because, as a consumer myself, I always feel better about a buying decision, knowing that the principal is actively involved in the business. While our phones are answered live 24/7/365, and our team takes great pride in serving our clients, I'm always available to help make certain your expectations have been met.

We hope to earn your business, and welcome the prospect of making this a successful project!

Sincerely

Jeff W. Wigen

Jeff W. Wigen
President & CEO
Wigen Water Technologies

Your Project **Team**

The following members of our organization will be involved with the design, development and deployment of your project:

SALESPERSON - Mr. Eric Geibel, V.P. Business Development

With a B.S. in Business Administration from Clarkson University in 2002, Eric began his career in the water industry as a Sales Engineer at Pall. By 2007, he had become a technical expert for Pall's Aria MF/UF platforms, and managed sales representatives throughout the Western U.S. In 2008, Eric moved to Pall's office in Australia, where in 2012, he came National Sales Manager. With a desire to come back to the U.S., Eric began working for Veolia in 2013, selling evaporation and crystallization systems in Chicago. He joined Wigen in 2015, to return to his love of selling mainstream clean water technologies; with a particular interest in membrane treatment.

PRINCIPAL ENGINEER - Mr. Stacey Bickler, Director of Engineering

Mr. Bickler holds a B.S. in Chemical Engineering from the University of Minnesota. He began his career in the water field in 1999, as an applications engineer for GE Water Technologies. Within two years, he was promoted to project engineer in the phase-3 group, which included the custom equipment team. Mr. Bickler was the lead engineer for several large municipal projects including Clearwater, FL, Brazos River Authority – Granbury, TX, Gila Bend, AZ, Torrington, WY and Bonita Springs, FL to name a few. Mr. Bickler joined Wigen in 2003, and oversees all facets of daily operations, along with serving as the director of the Quality Management team.

PROCESS ENGINEER - Mr. Brandon Coombs, Project Engineer

Brandon became a member of the Wigen team in 2015, after having spent several years in various engineering roles at RWL Water. He obtained degrees in both chemistry and chemical engineering, from the University of Minnesota. Before beginning his career in the water field, he worked for 3M in its fire protection products laboratory. Brandon brings a great deal of unique experience to the engineering group at Wigen.

PROGRAMMING - Mr. Tim Bjornberg, Automation Engineer

Tim joined Wigen in 2011 after a successful tenure at Beef Products, Inc. in South Sioux City, Nebraska, where he worked as a master I&C engineer. He was responsible for managing the operation of sophisticated production equipment for six U.S. meat processing facilities, and has extensive experience with PLC & HMI programming. In the last five years, Tim has been involved with the commissioning activities of a wide variety high profile projects with Wigen.

MECHANICAL - Mr. Matt Harmon, Mechanical Designer

Mr. Harmon joined Wigen in 2010, after working several years as an instrument and controls technician in the power industry. He brings with him, considerable mechanical aptitude, outstanding troubleshooting skills and excellent knowledge of machine instrumentation. As part of the engineering team, Matt creates designs, develops bills of materials and does 3D CAD drawings.

PRODUCTION - Mr. Matt Keehan, Production Manager

Matt graduated in 2001, with a technical diploma in welding from Wisconsin Technical College. He began his career with Bassett Mechanical in Kaukauna, WI, where he obtained his 6G pipe certification. Mr. Keehan started with Wigen in 2011 as a TIG welder, and became an AWS Certified Welding Inspector, before transitioning to the position of Production Manager. He oversees all aspects of Wigen's production floor operations, including safety, workflow and product testing.

PROCUREMENT - Ms. Angela Christoffer, Purchasing Manager

Ms. Christoffer began her water career in 2005, by joining GE in a customer service role, within the custom equipment division. She eventually ascended to a management position, overseeing the flow of materials and resources allocated for projects. After her department was relocated from Minnesota to Canada, she joined Wigen as a project manager in 2013. Today, she is a vital link between vendors, customers and the production process.

CUSTOMER SERVICE - Ms. Andrea Kroska, Customer Care Coordinator

Andrea was hired in 2015, to bring her vast experience in managing and coordinating service activities. She obtained her Associate of Science degree in Contemporary Business from Inver Hills College, and has worked in a variety service related leadership roles throughout her career. Her current responsibilities include coordinating the schedules of the field service group and interfacing with clients seeking support.

TECHNICAL SUPPORT – Mr. Mark Roufs, Aftermarket Services Manager

Prior to joining Wigen in 2012, Mr. Roufs spent 21 years at Culligan, where he worked as a field service engineer for 15 years, followed by 6 years in industrial sales. His responsibility at Wigen, is to help ensure existing customers have access to the full breadth of technical support options. More specifically, Mr. Roufs ultimately handles inbound support inquiries and either addresses them himself or engages the help of other internal technical resources.

Detailed Scope of **Supply**

WIGEN Since 1965 WATER TECHNOLOGIES

Water. Process. Solutions.

RARWTP Scope of **Supply**

Richard A. Renneker WTP (RARWTP)

Nanofiltration Membrane Equipment Scope of Supply:

NF Skid Design	Unit	Data
Number of NF Skids	No.	6
NF Membrane Modules	No.	DOW NF90
Configuration		2 Stage, 24:12, 7 long
Permeate Capacity	gpm	1030
Recovery Rate	%	80% (adjustable from 70% to 83%)
Flux	Gfd	14.7

Membrane Pressure Vessels	
Vessel Quantity	36 Per Train
Manufacturer / Model	Wave Cyber, WAVE-300P-8
Vessel Construction	FRP, 300 psig
Sample Ports	¼" sample valves
NF/RO Skids	
Skid Quantity	(6) with 36 housings per skid
Construction	Powder Coated Carbon Steel (Stainless Option Provided)
Dimensions (W x L x H) – approx.	95"x318"x150" (Approx. Dimensions)
Piping Materials	
NF Skid Inlet	Schedule 10 316 Stainless Steel
NF Skid Permeate	Schedule 80 PVC
NF Skid High Pressure Concentrate	Schedule 10 316 Stainless Steel
NF Skid Low Pressure Concentrate	Schedule 80 PVC

RARWTP NF SYSTEM SCOPE CONT'D

NF System Valves – All mounted on NF Skid	
NF Feed Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
NF Feed Isolation Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ HWGO
NF Feed Drain Valve	One (1) per skid, 1.5" Flow-Tek S40 316SS Ball Valve w/ Lever
1st Stage Cleaning Solution Feed Isolation	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
Cleaning Solution Feed Isolation Valve	One (1) per skid, 8" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1st Stage Cleaning Solution Concentrate Return Isolation Valve	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
1st Stage Cleaning Solution Concentrate Return Block Valve	One (1) per skid, 6" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1st Stage Cleaning Solution Concentrate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1st Stage Concentrate Air Release Isolation Valve	One (1) per skid, 0.5" Flow-Tek S40 316SS Ball Valve w/ Lever
2nd Stage Feed Isolation Valve	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2nd Stage Cleaning Solution Feed Isolation	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2nd Stage Concentrate Drain Valve	One (1) per skid, 1.0" Flow-Tek S40 316SS Ball Valve w/ Lever
Concentrate Throttling Valve	One (1) per skid, 3" Warren Controls Globe Valve, w/ AUMA 120VAC modulating electric actuator with position feedback
Concentrate Flush/Bypass Valve	One (1) per skid, 4" Bray Series 41 Butterfly Valve, with Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
2nd Stage Concentrate Check Valve	One (1) per skid, 4" Ritepro 210 Series 316SS Wafer Check Valve
Final Concentrate Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1st Stage Permeate Throttling Valve	One (1) per skid, 6" Flow-Tek V-Port Ball Valve w/ AUMA 120VAC modulating electric actuator with position feedback
1st Stage Permeate Isolation	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
2nd Stage Permeate Isolation	One (1) per skid, 6" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO

Final Permeate Check Valve	One (1) per skid, 8" Ritepro 210 Series 316SS Wafer Check Valve
Final Permeate Isolation	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
Final Permeate Isolation	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
Final Permeate Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Permeate Dump Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Series 54 prox. switch
Cleaning Solution Permeate Return Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Block Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Final Concentrate / 1st Stage CSCCR Interconnect Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1st Stage Concentrate Air Release Valve	One (1) per skid, 0.5" Valmatic Air Release Valve, Series 15A
Sampling Valves	(42) per skid, Feed, Interstage, Concentrate, 1st Stage Permeate, 2nd Stage Permeate, Combined Permeate, each Housing Permeate– ¼" Labcock Valves, Panel Mounted
Pressure Vessel Permeate Probe	(36) per skid – ¼" Labcock Valves, end of Pressure vessels

RARWTP NF SYSTEM INSTRUMENTS

Conductivity Sensors	
Quantity	(4) Per Train – Feed, 1st Stage Permeate, 2nd Stage Permeate, Total Permeate
Manufacturer / Model	Rosemount 402VP with Retraction Assembly
Feed ORP Meter	
Quantity	(1) Per Train
Manufacturer / Model	Rosemount 389VP with Panel Mounted Low Flow Cell
Analytical Transmitter	
Quantity	(3) Per Train
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
Mag Flow Meters	
Quantity	(3) Per Train – Feed, Interstage, Concentrate
Manufacturer / Model	Siemens 5100 Series Magnetic Flow Meter with Remote Transmitter
Pressure Transmitters / Switches	
Quantity	(5) Per Train – Feed, Interstage, Concentrate, Stage 1 Permeate, Final Permeate
Manufacturer / Model	United Electric Controls, One Series
Pressure Gauges	
Quantity	(4) Per Train – NF Control Panel, Concentrate, 1st Stage Permeate, Final Permeate
Manufacturer / Model	Ashcroft / 4.5” 1279 Duragauge, Panel Mounted
Loose Differential Pressure Transmitters	
Quantity	(2) For Degasifier Blower Intakes
Manufacturer / Model	United Electric Controls, One Series
Loose Paddlewheel Flow Meter	
Quantity	(1) – Downstream of Cartridge Filters
Manufacturer / Model	8” Seametrics IP800 Series

WIGEN Since 1965 WATER TECHNOLOGIES

Water. Process. Solutions.

RARWTP UTILITY REQUIREMENTS & CONNECTIONS (by contractor, Each Skid)

NF Feed Inlet	10” 150# RF Flange
MCS Inlet	8” 150# RF Flange
Permeate Dump	8” 150# RF Flange
Permeate to Clearwell	8” 150# RF Flange
Permeate to CIP	4” 150# RF Flange
Concentrate to Waste	4” 150# RF Flange
Concentrate to CIP	8” 150# RF Flange
Sample Trough Drain	2.0” FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5” FNPT, 1 CFM @ 80 PSI Minimum

ITEMS TO BE SUPPLIED BY OTHERS

- Communications wiring from all RO skid Control Panels to the Master PLC/SCADA System.
- Power wiring to all PLC Panels and Remote I/O panels.
- Off-loading and installation of the skid systems and loose items (including membranes) required for full operation of the system.
- Installation of piping between skids.
- Air piping for instrument air to all skids.
- Skid Anchor Bolts.

RARWTP CIP System

CIP Tank Instruments (Loose)	
Tank Level Control	(4) Level Switches – ITT Flygt ENM-10
CIP Tank Heater (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer	Chromolox,
Type / Size	Flanged Immersion / 120 kW, 75kW
CIP pH Sensor (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer / Model	Rosemount 389VP
Analytical Transmitter (Loose)	
Quantity	One (1)
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
CIP Temperature Gauge (Loose)	
Manufacturer / Model	Wika TI30
Controls/Electrical (Loose)	
Local Control Panel	MCS Remote I/O Control Panel

CIP ITEMS TO BE SHIPPED "LOOSE"

- CIP Tank Level Instruments
- CIP pH Instruments and Transmitter
- CIP Temperature Indicator
- CIP Tank Heaters

Water. Process. Solutions.

RARWTP NF System Controls: Wigen Water Technologies will provide a new ControlLogix PLC system to control the Nanofiltration (NF) system housed in the NF Main PLC Control Panel. Each NF skid and the Membrane Cleaning System (MCS) skid will be supplied with a ControlLogix Ethernet remote I/O rack along with a 15" PanelView Plus 7 operator interface. Each control panel will be supplied with a minimum of 10% spare I/O points as well as adequate space to add I/O modules if required. Skid mounted control panels will be factory wired to devices on the skids. Wiring between the NF Main PLC Control Panel and remote I/O panels and to any field mounted or loose supplied devices is to be by others. Motor controls (VFDs, starters, etc.) will be controlled from the NF system. The control panels and main components being supplied are detailed below.

Main PLC/HMI Control Panel Features: Supplied loose for installation by contractor

(1) NF Main PLC Control Panel (PLC-NF)
• (1) Saginaw NEMA 4X 304 Stainless Steel Wall-Mount Enclosure
  o Approximate Dimensions: 90x36x24
• (1) Saginaw Enclosure Sub Panel
• (1) Saginaw SCE Series Enclosure Heater
• (4) Hoffman AHCI Series Corrosion Inhibitor
• (1) Saginaw Enclosure LED Light Kit
• (1) Liebert GXT5 Series Uninterruptable Power Supply
• (1) Phoenix Contact 120VAC 480W Power Supply
• (1) Allen-Bradley ControlLogix PLC System
  o (1) Allen-Bradley 1756-A17 Chassis
  o (1) Allen-Bradley 1756-PA75/B Power Supply

FAWTP Scope of **Supply**

Franklin Area Water Treatment Plant (FAWTP)

Nanofiltration Membrane Equipment Scope of Supply:

NF Skid Design	Unit	Data
Number of NF Skids	No.	3
NF Membrane Modules	No.	DOW NF90
Configuration		2 Stage, 27:14, 7 long
Permeate Capacity	gpm	1198
Recovery Rate	%	80% (adjustable from 70% to 83%)
Flux	Gfd	15

Membrane Pressure Vessels	
Vessel Quantity	41 Per Train
Manufacturer / Model	Wave Cyber, WAVE-300P-8
Vessel Construction	FRP, 300 psig
Sample Ports	¼" sample valves
NF/RO Skids	
Skid Quantity	(3) with 41 housings per skid
Construction	Powder Coated Carbon Steel (Stainless Option Provided)
Dimensions (W x L x H) – approx.	95"x318"x150" (Approx. Dimensions)
Piping Materials	
NF Skid Inlet	Schedule 10 316 Stainless Steel
NF Skid Permeate	Schedule 80 PVC
NF Skid High Pressure Concentrate	Schedule 10 316 Stainless Steel
NF Skid Low Pressure Concentrate	Schedule 80 PVC

FAWTP NF SYSTEM SCOPE CONT'D

NF System Valves – All mounted on NF Skid	
NF Feed Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
NF Feed Isolation Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ HWGO
NF Feed Drain Valve	One (1) per skid, 1.5" Flow-Tek S40 316SS Ball Valve w/ Lever
Permeate Flush Isolation Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
Permeate Flush Drain Valve	One (1) per skid, 1.5" Flow-Tek S40 316SS Ball Valve w/ Lever
1st Stage Cleaning Solution Feed	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
Cleaning Solution Feed Isolation Valve	One (1) per skid, 8" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1st Stage Cleaning Solution Concentrate Return Isolation Valve	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
1st Stage Cleaning Solution Concentrate Return Block Valve	One (1) per skid, 6" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1st Stage Cleaning Solution Concentrate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1st Stage Concentrate Air Release Isolation Valve	One (1) per skid, 0.5" Flow-Tek S40 316SS Ball Valve w/ Lever
2nd Stage Feed Isolation Valve	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2nd Stage Cleaning Solution Feed Isolation	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2nd Stage Concentrate Drain Valve	One (1) per skid, 1.0" Flow-Tek S40 316SS Ball Valve w/ Lever
Concentrate Throttling Valve	One (1) per skid, 3" Warren Controls Globe Valve, w/ AUMA 120VAC modulating electric actuator with position feedback
Concentrate Flush/Bypass Valve	One (1) per skid, 4" Bray Series 41 Butterfly Valve, with Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
2nd Stage Concentrate Check Valve	One (1) per skid, 4" Ritepro 210 Series 316SS Wafer Check Valve
Final Concentrate Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1st Stage Permeate Throttling Valve	One (1) per skid, 6" Flow-Tek V-Port Ball Valve w/ AUMA 120VAC modulating electric actuator with position feedback
1st Stage Permeate Isolation Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
2nd Stage Permeate Isolation Valve	One (1) per skid, 6" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO

FAWTP NF SYSTEM SCOPE CONT'D

Final Permeate Check Valve	One (1) per skid, 8" Ritepro 210 Series 316SS Wafer Check Valve
Final Permeate Isolation Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
Final Permeate Block Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
Final Permeate Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Permeate Dump Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Series 54 prox. switch
Cleaning Solution Permeate Return Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Block Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Final Concentrate / 1st Stage CSCCR Interconnect Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1st Stage Concentrate Air Release Valve	One (1) per skid, 0.5" Valmatic Air Release Valve, Series 15A
Sampling Valves	(47) per skid, Feed, Interstage, Concentrate, 1st Stage Permeate, 2nd Stage Permeate, Combined Permeate, each Housing Permeate– ¼" Labcock Valves, Panel Mounted
Pressure Vessel Permeate Probe	(41) per skid – ¼" Labcock Valves, end of Pressure vessels

FAWTP NF SYSTEM INSTRUMENTS

Conductivity Sensors	
Quantity	(4) Per Train – Feed, 1st Stage Permeate, 2nd Stage Permeate, Total Permeate
Manufacturer / Model	Rosemount 402VP with Retraction Assembly
Feed ORP Meter	
Quantity	(1) Per Train
Manufacturer / Model	Rosemount 389VP with Panel Mounted Low Flow Cell
Analytical Transmitter	
Quantity	(3) Per Train
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
Mag Flow Meters	
Quantity	(3) Per Train – Feed, Interstage, Concentrate
Manufacturer / Model	Siemens 5100 Series Magnetic Flow Meter with Remote Transmitter
Pressure Transmitters / Switches	
Quantity	(5) Per Train – Feed, Interstage, Concentrate, Stage 1 Permeate, Final Permeate
Manufacturer / Model	United Electric Controls, One Series
Pressure Gauges	
Quantity	(4) Per Train – NF Control Panel, Concentrate, 1st Stage Permeate, Final Permeate
Manufacturer / Model	Ashcroft / 4.5” 1279 Duragauge, Panel Mounted
Loose Paddlewheel Flow Meter	
Quantity	(1) – Downstream of Cartridge Filters
Manufacturer / Model	8” Seametrics IP800 Series

FAWTP UTILITY REQUIREMENTS & CONNECTIONS (by contractor, Each Skid)

NF Feed Inlet	10” 150# RF Flange
MCS Inlet	8” 150# RF Flange
Permeate Dump	8” 150# RF Flange
Permeate to Clearwell	8” 150# RF Flange
Permeate to CIP	4” 150# RF Flange
Concentrate to Waste	4” 150# RF Flange
Concentrate to CIP	8” 150# RF Flange
Sample Trough Drain	2.0” FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5” FNPT, 1 CFM @ 80 PSI Minimum

ITEMS TO BE SUPPLIED BY OTHERS

- Communications wiring from all RO skid Control Panels to the Master PLC/SCADA System.
- Power wiring to all PLC Panels and Remote I/O panels.
- Off-loading and installation of the skid systems and loose items (including membranes) required for full operation of the system.
- Installation of piping between skids.
- Air piping for instrument air to all skids.
- Skid Anchor Bolts.

FAWTP CIP System

CIP Tank Instruments (Loose)	
Tank Level Control	(4) Level Switches – ITT Flygt ENM-10
CIP Tank Heater (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer	Chromolox,
Type / Size	Flanged Immersion / 120 kW, 75kW
CIP pH Sensor (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer / Model	Rosemount 389VP
Analytical Transmitter (Loose)	
Quantity	One (1)
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
CIP Temperature Gauge (Loose)	
Manufacturer / Model	Wika TI30
Controls/Electrical (Loose)	
Local Control Panel	MCS Remote I/O Control Panel

FAWTP CIP SYSTEM CONT'D

CIP ITEMS TO BE SHIPPED "LOOSE"

- CIP Tank Level Instruments
- CIP pH Instruments and Transmitter
- CIP Temperature Indicator
- CIP Tank Heaters

FAWTP PERMEATE FLUSH SYSTEM

Permeate Flush Tank Level Transmitter (Loose)	
Quantity	One (1)
Manufacturer / Model	Dwyer Instruments – PBLT2

PERMEATE FLUSH ITEMS TO BE SHIPPED "LOOSE OR BY OTHERS"

- Permeate Flush Tank Level Transmitter

FAWTP NF System Controls: Wigen Water Technologies will provide a new ControlLogix PLC system to control the Nanofiltration (NF) system housed in the NF Main PLC Control Panel. Each NF skid and the Membrane Cleaning System (MCS) skid will be supplied with a ControlLogix Ethernet remote I/O rack along with a 15" PanelView Plus 7 operator interface. Each control panel will be supplied with a minimum of 10% spare I/O points as well as adequate space to add I/O modules if required. Skid mounted control panels will be factory wired to devices on the skids. Wiring between the NF Main PLC Control Panel and remote I/O panels and to any field mounted or loose supplied devices is to be by others. Motor controls (VFDs, starters, etc.) will be controlled from the NF system. The control panels and main components being supplied are detailed below.

(1) Main PLC/HMI Control Panel Features: Supplied loose for installation by contractor

- (1) Saginaw NEMA 4X 304 Stainless Steel Wall-Mount Enclosure
  - Approximate Dimensions: 90x36x24
- (1) Saginaw Enclosure Sub Panel
- (1) Saginaw SCE Series Enclosure Heater
- (4) Hoffman AHCI Series Corrosion Inhibitor
- (1) Saginaw Enclosure LED Light Kit
- (1) Liebert GXT5 Series Uninterruptable Power Supply
- (1) Phoenix Contact 120VAC 480W Power Supply
- (1) Allen-Bradley ControlLogix PLC System
  - (1) Allen-Bradley 1756-A17 Rack
  - (1) Allen-Bradley 1756-PA75/B Power Supply
  - (1) Allen-Bradley 1756-L81E Processor
  - (5) Allen-Bradley 1756-N2 Slot Filler Module
  - (2) Allen-Bradley 1756-IA16I 16-Point Digital Input Module
  - (1) Allen-Bradley 1756-OW16I 16-Point Digital Output Module
- (1) Stratix 5700, 10-Port Managed Ethernet Switch
- (LOT) Allen-Bradley Circuit Breakers, Relays, Terminal Blocks
- (LOT) Din Rail, Wireway, Etc.
- All I/O and Relay Contacts Wired to Terminal Blocks
- Supplied Loose for Contractor Installation

FAWTP NF SYSTEM CONTROLS CONT'D

(3) NF Remote I/O Control Panel

- (1) Saginaw NEMA 4X 304 Stainless Steel Wall-Mount Enclosure
  - Approximate Dimensions: 48x36x12
- (1) Saginaw Enclosure Sub Panel
- (1) Saginaw SCE Series Enclosure Heater
- (1) Saginaw Enclosure LED Light Kit
- (4) Hoffman AHCI Series Corrosion Inhibitor
- (1) Liebert GXT5 Series Uninterruptable Power Supply
- (1) Phoenix Contact 120VAC 480W Power Supply
- (1) Allen-Bradley ControlLogix Ethernet Remote I/O System
  - (1) Allen-Bradley 1756-EN2TR Ethernet Communication Module
  - (1) Allen-Bradley 1756-A17 Chassis
  - (1) Allen-Bradley 1756-PA75/B Power Supply
  - (2) Allen-Bradley 1756-IA16I 16-Point Digital Input Module
  - (1) Allen-Bradley 1756-OW16I 16-Point Digital Output Module
  - (3) Allen-Bradley 1756-IF8I 8-Point Analog Input Module
  - (1) Allen-Bradley 1756-OF8I 8-Point Analog Output Module
  - (3) Allen-Bradley 1756-N2 Slot Filler Module
- (1) Allen-Bradley PanelView Plus 7 Series 15" Operator Interface
- (4) Numatics 501 Series Solenoid Valves for Valve Actuation
- (1) Stratix 5700, 10-Port Managed Ethernet Switch
- (LOT) Allen-Bradley Circuit Breakers, Relays, Terminal Blocks
- (LOT) Fuses, Din Rail, Wireway, Etc.
- All I/O and Relay Contacts Wired to Terminal Blocks
- Supplied Installed on NF Skids

Pricing and **Commercial Terms**

PRICING

Pricing provided on Bid Form.

PREFERRED PAYMENT TERMS

PLEASE SEE ATTACHMENT 7: Deducts, Clarifications, Exceptions

PRICING NOTES

- All prices are quoted in USD.
- No sales or value added tax is included.
- The customer will pay all applicable local, state, provincial or federal taxes and duties.
- The equipment delivery date, start date, and date of commencement of operations are to be negotiated.
- This proposal supersedes all previous proposals and correspondence.
- This proposal, including all terms and conditions contained herein, shall become part of any resulting contract or purchase order.
- Seller's price and delivery schedule are based on the assumption that Buyer will take delivery as per the agreed delivery schedule in the Agreement. If there is a subsequent change in the schedule, the Parties must agree in advance an alternative place of delivery, failing which the Seller will be entitled to ship the equipment to storage. Buyer shall issue a change order to take into account any additional cost of delay incurred by Seller in implementing this change.

CONDITIONAL OFFERING

Customer understands that this proposal has been issued based upon the information provided by customer, and currently available to WWT at the time of issuing this proposal. Any changes or discrepancies in site conditions, including but not limited to system influent water characteristics, changes in environmental health and safety conditions, Customer financial standing, Customer requirements, or any other relevant change, or discrepancy in, the factual basis upon which this proposal was created, may lead to changes in the offering, including but not limited to changes in pricing, warranties, quoted specifications, or terms and conditions.

Limited Mechanical Equipment **Warranty**

Wigen Companies, Inc., d/b/a Wigen Water Technologies, referred to hereinafter as "WWT," warrants that for a period of 18 months from the date of shipment or 12 months from System Acceptance [whichever occurs sooner] any equipment or other product it manufactures: (1) Will be free of defects in material and workmanship, and, (2) if WWT has recommended or manufactured a specific product based on written plans and specifications or a written statement of requirements provided by Buyer, that the product will be fit for the purpose identified in such written plans, specifications, or statement of requirements; provided, however, that such warranties shall be void if the product is not installed, operated or used in accordance with WWT's written instructions (including, without limitation, installation and operating instructions and manuals). **THE FOREGOING WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED AND WWT EXPRESSLY DISCLAIMS ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.** The foregoing warranties apply only to the original purchaser, and do not extend to any subsequent owner.

WWT'S LIABILITY UPON THE FOREGOING WARRANTIES SHALL BE LIMITED TO, AT WWT'S OPTION, REPAIRING OR REPLACING THE DEFECTIVE EQUIPMENT OR COMPONENTS THEREOF WITHOUT CHARGE, F.O.B. WWT'S FACTORY. Buyer shall provide WWT with reasonable opportunities to make inspections, tests, and repairs using the most cost effective methods available. Without limiting the foregoing, WWT disclaims any and all liability for penalties, special or punitive damages, damages for loss of profits or business, lost revenues, loss of use of the product or any associated equipment, cost of capital, facilities or services, down-time, shut-down or slow-down costs, or any other economic losses or property damage. Buyer shall indemnify WWT against any and all losses, liabilities, damages and expenses (including attorneys' fees or any costs required to defend any legal action) based on defects that are proven not to be the fault or negligence of WWT. WWT will not be liable for damage or wear to products or materials due to or caused by abnormal operating conditions, accident, abuse, misuse, unauthorized alteration or repair, if the product was not installed or applied in accordance with WWT's installation or operating instructions, or, if WWT recommended or manufactured a specific product based on plans and specifications or stated requirements provided by Buyer, if Buyer deviates from the plans and specifications or stated requirements that were provided to WWT. No allowance will be made for repairs or alterations made without WWT's written consent or approval, and any such repairs made without WWT's written consent or approval will render the warranties null and void. No equipment shall be returned to WWT without first obtaining WWT's prior written authorization. If it is determined that WWT is not responsible under the terms of this agreement for any such inspections, tests, repairs or replacements, the Buyer shall pay WWT for such inspections, tests, repairs and replacements at WWT's prevailing rates in effect from time to time.

MEMBRANES AND MEDIA PRODUCTS ARE COVERED BY WWT, BUT ONLY TO THE EXTENT THAT COVERAGE IS OFFERED BY THE ORIGINAL EQUIPMENT MANUFACTURER (OEM) OF SUCH PRODUCTS, AND WWT DOES NOT PROVIDE ANY WARRANTIES OR REMEDIES BEYOND THAT WHICH IS EXPRESSLY STATED IN THE OEM'S OWN WARRANTY DOCUMENTS.

To obtain warranty service for WWT products, the defective product must be returned to WWT together with proof of purchase, installation date, failure date, and supporting technical data. Any defective product returned to the factory must be sent freight prepaid. Documentation supporting the warranty claim and a Returned Material Authorization (RMA) number must be included. Contact your WWT salesperson for details on obtaining a RMA number.

SERVICES: Any services WWT hereafter provides with respect to products purchased from WWT or others, whether directly or through subcontractors, shall be performed in accordance with the standard of care with which such services are normally provided in the industry. If the services fail to meet the applicable industry standard, and WWT receives notice of such failure within 365 days from the date of completion, WWT will re-perform such services at no cost to Buyer. **RE-PERFORMANCE OF SERVICES SHALL BE BUYER'S SOLE AND EXCLUSIVE REMEDY, AND IN NO EVENT WILL WWT BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL OR OTHER DAMAGES (EVEN IF WWT HAS BEEN MADE AWARE OF THE POSSIBILITY OF SUCH DAMAGES), NOR, IN ANY EVENT, SHALL WWT'S WARRANTY OBLIGATIONS WITH RESPECT TO SERVICES EXCEED 100% OF THE TOTAL COST OF THE SERVICES PROVIDED.**

WARRANTY PERIODS: EVERY CLAIM BY BUYER ALLEGING A DEFECT IN ANY GOODS AND/OR SERVICES PROVIDED SHALL BE DEEMED WAIVED UNLESS SUCH CLAIM IS MADE IN WRITING WITHIN THE APPLICABLE WARRANTY PERIOD AS SET FORTH ABOVE. Provided, however, if a defect in any product manufactured by WWT is latent and not discoverable within the warranty period applicable thereto, any claim arising on account of such latent defect shall be deemed waived unless it is made in writing within a reasonable time, not exceeding 30 days, after such latent defect is or should have been discovered by Buyer.

Limitations / Exclusions: The warranties herein shall not apply to, and WWT shall not be responsible for, any damage to the goods or failure of the services supplied hereunder, to the extent caused by Buyer's neglect, failure to follow operational and maintenance procedures, or the use of technicians not specifically authorized by WWT to maintain or service its equipment. Before receiving the final drawings, programming and intangible property provided by WWT, the Owner shall agree in writing, to hold WWT harmless for subpar performance and/or damage to the equipment, related to changes made without the express written consent of WWT. **THE WARRANTIES AND REMEDIES CONTAINED HEREIN ARE IN LIEU OF AND EXCLUDE ALL OTHER WARRANTIES AND REMEDIES, WHETHER EXPRESSED OR IMPLIED BY OPERATION OF LAW OR OTHERWISE, INCLUDING ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A SPECIFIC PURPOSE.**

Attachment 3: OEM Special Services

Richard A. Renneker WTP (RARWTP) Special Services

MAN DAYS INCLUDED	SERVICES PROVIDED
10	**Equipment Installation Support:** Two Service Personnel for one week (5 Days). Includes on-site time to oversee and assist with the installation of the Wigen supplied equipment. Including, placement of the individual process skids, controls integration, and module installation.
30	**Equipment Start-up & Commissioning:** Two Service Personnel for three weeks (15 Days). Includes preparing the equipment to operate (rinse, backwash, steam, regenerate, etc.), testing control sequences, fully operating the system to achieve performance objectives, filling out commissioning data sheets.
12	**Performance Testing:** Includes site time for the 4 day (2 skids at once) performance testing period per the specification. During the performance test Wigen will have a service tech on-site and monitor the system remotely as needed.
5	**Operator Training:** Includes training on Wigen supplied equipment.
14	**Service Agreement & Remote Monitoring:** Per the specification, Wigen will provide an ongoing service contract comprised of 2 trips for 4 days each and 2 CIP trips for 3 days each.

If additional days are required because site/contractor is unprepared or there are unforeseen customer delays, these additional days will be billed at $1500 per day plus per diem, lodging and travel expenses.

Buyer shall provide WWT with reasonable opportunities to make inspections, tests, and repairs using the most cost effective methods available. Without limiting the foregoing, WWT disclaims any and all liability for penalties, special or punitive damages, damages for loss of profits or business, lost revenues, loss of use of the product or any associated equipment, cost of capital, facilities or services, down-time, shut-down or slow-down costs, or any other economic losses or property damage. Buyer shall indemnify WWT against any and all losses, liabilities, damages and expenses (including attorneys' fees or any costs required to defend any legal action) based on defects that are proven not to be the fault or negligence of WWT. WWT will not be liable for damage or wear to products or materials due to or caused by abnormal operating conditions, accident, abuse, misuse, unauthorized alteration or repair, if the product was not installed or applied in accordance with WWT's installation or operating instructions, or, if WWT recommended or manufactured a specific product based on plans and specifications or stated requirements provided by Buyer, if Buyer deviates from the plans and specifications or stated requirements that were provided to WWT. No allowance will be made for repairs or alterations made without WWT's written consent or approval, and any such repairs made without WWT's written consent or approval will render the warranties null and void. No equipment shall be returned to WWT without first obtaining WWT's prior written authorization. If it is determined that WWT is not responsible under the terms of this agreement for any such inspections, tests, repairs or replacements, the Buyer shall pay WWT for such inspections, tests, repairs and replacements at WWT's prevailing rates in effect from time to time.

MEMBRANES AND MEDIA PRODUCTS ARE COVERED BY WWT, BUT ONLY TO THE EXTENT THAT COVERAGE IS OFFERED BY THE ORIGINAL EQUIPMENT MANUFACTURER (OEM) OF SUCH PRODUCTS, AND WWT DOES NOT PROVIDE ANY WARRANTIES OR REMEDIES BEYOND THAT WHICH IS EXPRESSLY STATED IN THE OEM'S OWN WARRANTY DOCUMENTS.

To obtain warranty service for WWT products, the defective product must be returned to WWT together with proof of purchase, installation date, failure date, and supporting technical data. Any defective product returned to the factory must be sent freight prepaid. Documentation supporting the warranty claim and a Returned Material Authorization (RMA) number must be included. Contact your WWT salesperson for details on obtaining a RMA number.

SERVICES: Any services WWT hereafter provides with respect to products purchased from WWT or others, whether directly or through subcontractors, shall be performed in accordance with the standard of care with which such services are normally provided in the industry. If the services fail to meet the applicable industry standard, and WWT receives notice of such failure within 365 days from the date of completion, WWT will re-perform such services at no cost to Buyer. **RE-PERFORMANCE OF SERVICES SHALL BE BUYER'S SOLE AND EXCLUSIVE REMEDY, AND IN NO EVENT WILL WWT BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL OR OTHER DAMAGES (EVEN IF WWT HAS BEEN MADE AWARE OF THE POSSIBILITY OF SUCH DAMAGES), NOR, IN ANY EVENT, SHALL WWT'S WARRANTY OBLIGATIONS WITH RESPECT TO SERVICES EXCEED 100% OF THE TOTAL COST OF THE SERVICES PROVIDED.**

WARRANTY PERIODS: EVERY CLAIM BY BUYER ALLEGING A DEFECT IN ANY GOODS AND/OR SERVICES PROVIDED SHALL BE DEEMED WAIVED UNLESS SUCH CLAIM IS MADE IN WRITING WITHIN THE APPLICABLE WARRANTY PERIOD AS SET FORTH ABOVE. Provided, however, if a defect in any product manufactured by WWT is latent and not discoverable within the warranty period applicable thereto, any claim arising on account of such latent defect shall be deemed waived unless it is made in writing within a reasonable time, not exceeding 30 days, after such latent defect is or should have been discovered by Buyer.

Limitations / Exclusions: The warranties herein shall not apply to, and WWT shall not be responsible for, any damage to the goods or failure of the services supplied hereunder, to the extent caused by Buyer's neglect, failure to follow operational and maintenance procedures, or the use of technicians not specifically authorized by WWT to maintain or service its equipment. Before receiving the final drawings, programming and intangible property provided by WWT, the Owner shall agree in writing, to hold WWT harmless for subpar performance and/or damage to the equipment, related to changes made without the express written consent of WWT. **THE WARRANTIES AND REMEDIES CONTAINED HEREIN ARE IN LIEU OF AND EXCLUDE ALL OTHER WARRANTIES AND REMEDIES, WHETHER EXPRESSED OR IMPLIED BY OPERATION OF LAW OR OTHERWISE, INCLUDING ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A SPECIFIC PURPOSE.**

System Warranty

Warren County, OH – RARWTP – REV 5/14/20

FilmTec™ **Reverse Osmosis / Nanofiltration Element(s)**
Three-Year Limited SYSTEM Warranty

LIMITED WARRANTIES

DuPont provides limited warranties covering the materials, workmanship and performance of its spiral-wound FilmTec™ reverse osmosis / nanofiltration elements[1,2] ("Element(s)"), when installed, operated and maintained by Customer in accordance with the terms and conditions set forth in this Warranty document and in accordance with DuPont published documentation*. The warranties herein set forth are granted to the Customer by the legal entity of the DuPont group of companies that is selling the Elements to the Customer ("Supplier") and the Customer sole remedy under these warranties shall be against the Supplier. By accepting this Warranty document, the Customer agrees to the terms and conditions set forth herein.

1. Elements used in food or dairy applications, residential, specialty applications and sulfate removal are not covered by this warranty.
2. Nanofiltration elements shall be tested on magnesium sulfate when determining salt passage.

Limited Materials and Workmanship Warranty **("Workmanship Warranty")**

Supplier warrants that the Element(s) are free from defects in materials and workmanship which might prevent the Element(s) to be installed, operated and maintained in accordance with DuPont's published literature. This Workmanship Warranty shall be effective during the period beginning on the date of delivery of any such Element(s) to carrier at shipping point (manufacturing site) and ending twelve (12) months after the date of such delivery. This Workmanship Warranty shall be deemed void if Customer does not install, operate and maintain the Element(s) in accordance with the requirements set forth in this Warranty and in DuPont's published documentation or fails to inform the Supplier of the defect within thirty (30) days from the date on which the defect is noticed or could have been noticed by Customer. Customer's exclusive remedy, and Supplier's sole obligation and exclusive liability, under this Workmanship Warranty is expressly limited to the repair or, at Supplier's discretion, replacement of any Element(s), which is determined by Supplier (as applicable) in its sole discretion, after examination, to be defective under this provision.

* DuPont published documentation mentioned in this System Warranty includes but is not limited to the most recent releases of the following:

- FilmTec™ Reverse Osmosis Membranes Technical Manual (Form No. 45-D01504-en)
- Storage and Shipping of New FilmTec™ Elements (Form No. 45-D01633-en)
- Start-Up Sequence (Form No. 45-D01609-en)
- Biological Fouling Prevention (Form No. 45-D01567-en)
- Cleaning Guidelines (Form No. 45-D01696-en)
- Scaling Prevention - Barium Sulfate Scale Prevention (Form No. 45-D01554-en), Calcium Sulfate Scale Prevention (Form No. 45-D01553-en), Strontium Sulfate Scale Prevention (Form No. 45-D01555-en)
- Shimming Elements (Form No. 45-D01057-en)
- FilmTec™ Elements Operating Limits (Form No. 45-D00691)
- Product Specifications (See Attachment A)
- DuPont published documentation is available at www.dupont.com/water

Limited Initial Performance Warranty ("Initial Performance Warranty")

Supplier warrants that, after stabilization, the Element(s) will meet the initial minimum permeate flow and salt rejection under standard test conditions set forth in the specifications in Attachment A, until the first to occur of:

a. the first thirty (30) days after the first day of Customer's initial installation and use of any such Element(s) in Customer's system; or
b. six (6) months after date of delivery of any such wet Element(s) to carrier at shipping point (manufacturing site); or
c. twelve (12) months after date of delivery of any such dry Element(s) to carrier at shipping point (manufacturing site).

This Initial Performance Warranty shall be deemed void if Customer does not notify Supplier in writing of the Element(s) failure within 30 days after the first day of operation.

Customer's exclusive remedy, and Supplier's sole obligation and exclusive liability, under this Initial Performance Warranty is expressly limited to the repair or, at Supplier's discretion, replacement of any Element(s) that Supplier determines to be in breach of this Initial Performance Warranty upon Supplier's inspection. Failure or refusal to disclose to Supplier the use and operating parameters of Elements in the event of alleged failure of performance shall render this Initial Performance Warranty null and void.

Limited System Performance Warranty ("System Performance Warranty")

Supplier warrants that the Element(s) will have the performance specified in Attachment C (System Performance Criteria). Design Systems Operating Conditions are provided in Attachment D for information purposes only.

This system performance warranty is given for a period of THREE (3) years from the first to occur of

a. Customer's initial installation and use of any Elements in Customer's system
b. Six (6) months after date of delivery of any such wet Element(s) to carrier at shipping point (manufacturing site); or
c. Twelve (12) months after date of delivery of any such dry Element(s) to carrier at shipping point (manufacturing site).

If Supplier determines that Customer's claims under this System Performance Warranty are valid, Customer's exclusive remedy, and Supplier's sole obligation and exclusive liability under this System Performance Warranty is expressly limited to, at Supplier's discretion, the repair of the affected Elements, the refund of the purchase paid by Customer for the affected Element(s), or the replacement of the affected Element(s). Notwithstanding, Supplier has no obligation to repair, refund or replace Element(s) that are at or below the quantity of Element(s) to be repaired, refunded or replaced by Customer per the Replacement Rates set forth as follows:

	Replacement Rate (%)
Period	**FilmTec™ NF90-400/34i**
Year 1	0%
Year 2	27%
Year 3	27%
CARR* after 3 years	18%

* Cumulative Average Replacement Rate.

To the extent that repair, refund or replacement of Elements in the system is not required in any given calendar year then that quantity set forth above shall be carried forward on a cumulative basis and added to the following calendar year replacement rate. During the performance warranty, Supplier will replace or repair Element(s), at Supplier's discretion, in excess of the foregoing cumulative annual replacement rate at Supplier expense. This repair, refund or replacement performance warranty shall be deemed void if Customer does not install, operate and maintain Element(s) in accordance with DuPont's published specifications, the Conditions set forth below, and good engineering practices.

Conditions Voiding the Initial Performance and the System Performance Warranty

The THREE (3) year limited system performance warranty and the limited initial performance warranty described above shall be null and void if any of the following conditions are not met:

a. Customer does not record and maintain, according to Supplier's instructions, operational data according to Attachment B
b. Customer fails to provide Supplier with operational data upon request
c. Customer does not install, operate and maintain the Element(s) in accordance with the requirement set forth in this Warranty and in DuPont published documentation or in accordance with good engineering practices.
d. Customer fails to meet any of the following conditions pertaining to any Element(s) and the system in which any Element(s) is used:
    i. The design parameters (array, recovery, etc.) plus instrumentation and other components of the system in which the Element(s) are employed shall be consistent with sound engineering practice. Customer will allow Supplier to review the system design upon Supplier's request.
    ii. Feedwater temperature must be less than 113°F (45°C) unless otherwise stated in the product data sheet of the element(s) (Attachment A) or in this warranty document. Refer to FilmTec™ Elements Operating Limits (Form No. 45-D00691) for warranty voiding conditions and additional information regarding temperature limits.
    iii. Feedwater SDI (15 min., 30 psi) must be less than 5.0.
    iv. Feedwater must not contain any colloidal sulfur.
    v. Feedwater must not contain any oxidizing agents including, without limitation, chlorine, ozone or permanganate.
    vi. The Element(s) must not be exposed to pressure greater than 1,200 psi for seawater Element(s)s, 600 psi for brackish water Element(s)s and 300 psi for tap water Element(s)s, unless otherwise stated in the product specification or unless otherwise indicated in this warranty document.
    vii. Backpressure (where permeate static pressure exceeds reject static pressure) must not exceed 5 psi at any time.
    viii. Sequestrants (and other chemicals used in the system) must be compatible with the Element(s).
    ix. The Element(s) must not be exposed to a pH of less than 2.0 or more than 11.0 during continuous operation, or a pH of less than 1.0 or more than 13.0 during cleaning unless otherwise indicated in the product specifications or in this Warranty. If pH adjustment is required, chemicals that are compatible with the Element(s) must be used.
    x. The Element(s) must be operationally protected against excessive hydraulic changes including, without limitation, water hammer, and rapid pressure swings.
    xi. The Element(s) must be maintained in a clean condition and must not be contaminated by particulate matter, colloidal or precipitated solids, or biological growth; if scaling or fouling should occur, or normalized Element(s) flow decline of 10 percent, cleaning procedures must be employed in accordance with the procedures published in a literature piece entitled Cleaning Guidelines (Form No. 45-D01696-en).

xii. The system design, operating and maintenance procedures must contain adequate provisions to ensure against contamination by particulate matter, colloidal or precipitated solids, or biological growth.
xiii. There must not be scaling caused by failure of the chemical dosing system or ineffective scale- control practices. (e.g., Ca, Ba, or Sr salts).
xiv. The brine-soluble silica must be less than 150 mg/l at 25°C.
xv. There must not be damage caused by chemical compounds (e.g. surfactants, solvents, soluble oils, free oils, lipids, and high molecular weight natural polymers).
xvi. Element(s) must only be cleaned with compatible chemicals and must not be cleaned with nonionic or cationic surfactants, or any other chemical that is not compatible with the Element(s).
xvii. Customer is responsible for providing the user with adequate system operating and maintenance manuals, operator and supervisor training; and ensuring user's ability to properly perform cleaning and other performance restoration and diagnostic procedures.
xviii. Customer is responsible for ensuring that frequent, adequate system and subsystem performance data are normalized and routinely recorded in a systematic format regularly reviewed. Customer will make this data available to Supplier on a reasonable basis in the event a claim is made against Supplier pursuant to the Initial Performance Warranty or the 3Yr Performance Warranty.
xix. Element(s) must be stored in accordance with DuPont's published documentation and specifications.
xx. Permeate and concentrate obtained from the first hour of operation must be discharged.
xxi. Field preservation and cleaning of Element(s) must be done in accordance with DuPont's published documentation.
xxii. Element(s) must be stored in accordance with DuPont's published guidelines.
xxiii. Customer must keep Element(s) moist at all times after initial wetting.
xxiv. Supplier will have the final decision on Element(s) replacement or repair necessary to maintain output quality and quantity.
xxv. Customer's failure or refusal to disclose to Supplier the use and operating parameters of Elements in the event of failure of performance.
xxvi. Failure of the customer to notify Supplier in writing of the Element(s) failure within 30 days after first non-compliance with performance standards set forth herein.

Conditions voiding all Warranties

In addition, all the foregoing warranties (i.e. the Workmanship Warranty, the Initial Performance Warrant and the System Performance Warranty) do not cover and shall be null and void if any of the following conditions are not met:

a. If Customer is not current on all payments due to Supplier, then this warranty is null and void.
b. Accidental and/or external caused damages and damages caused by improper use are excluded from these warranties. Accidental and/or external caused damages and damages caused by improper use are damages caused by but not limited to operation and/or exposure of Element(s) to conditions, outside the instructions and conditions listed in FilmTec™ Elements' product datasheets and specifications and in this Warranty document. If there is any dispute with respect to the above, the Customer should provide evidence to Supplier.
c. Expendable parts and components (e.g. o-rings) are specifically outside of these warranties

d. Damage or malfunction arising from repairs, replacement(s) or substitution(s) not specifically authorized by Supplier are specifically outside of these warranties.
e. Any defects or faults caused by, or resulting from, inaccurate or incomplete operating process information / process operating parameters, or work performed by the Customer or its authorized representative, are specifically excluded from these warranties.
f. If Customer does not furnish adequate and competent operating, supervisory and maintenance staff, and necessary laboratory facilities with test equipment and personnel, then these warranties are null and void.
g. Supplier understands that the Element(s) will be used as a part of a larger water or wastewater treatment process. Supplier must be given the opportunity, with a reasonable notice, to review engineering documents and attend testing and commissioning activities of all aspects of the water or wastewater treatment process which may affect membrane lifetime and performance, or these warranties are null and void. Neither a review of the engineering documents nor attendance of testing or commissioning nor the declining of the opportunity enlarges Supplier's warranties hereunder nor creates any liability or constitutes any endorsement by Supplier for any aspect of the system.
h. In the case where the Customer and user are separate parties, the Customer has sole and exclusive responsibility for making the user aware of its responsibility under the conditions of these warranties. Failure of the Customer to meet its respective obligations set forth in this Warranty document may invalidate these Warranties.

No other warranties & Limitation of Liability

A. The limited warranties granted herein are the sole warranties provided by Supplier with respect to the Elements (including without limitation with respect to Elements quality and performance) and all other warranties, whether express, statutory or implied, including without limitation any implied warranties of fitness for a particular purpose or merchantability are excluded and disclaimed. Supplier's warranties as hereinabove set forth shall not be enlarged, diminished or otherwise affected by, nor shall any obligation or liability of Supplier arise out of, Supplier's or its affiliates' rendering of technical advice or service in connection with the Elements supplied.

B. SUPPLIER'S LIABILITY FOR ANY BREACH OF THESE WARRANTIES SHALL BE LIMITED TO THE REMEDIES EXPRESSLY SET FORTH HEREIN. IN NO EVENT SHALL SUPPLIER BE LIABLE FOR ANY DAMAGE, COSTS OR EXPENSES ASSOCIATED WITH WARRANTY, WHETHER FOR THE REPLACEMENT OR REPAIR OF ELEMENTS, INCLUDING LABOR, INSTALLATION OR OTHER COSTS INCURRED BY CUSTOMER AND, IN PARTICULAR, ANY COSTS RELATED TO THE REMOVAL OR REPLACEMENT OF ANY ELEMENTS INCORPORATED INTO A SYSTEM OR OTHERWISE. WITHOUT PREJUDICE TO SUPPLIER'S OBLIGATIONS UNDER THESE WARRANTIES, CUSTOMER ASSUMES ALL RISKS AND LIABILITIES RESULTING FROM THE USE OF THE ELEMENTS. SUPPLIER'S LIABILITY FOR CONSEQUENTIAL, PUNITIVE, SPECIAL, EXEMPLARY OR INCIDENTAL DAMAGES OR FOR LOSS OF PRODUCTION, LOSS OF PROFITS OR REVENUES ARISING OUT OF OR IN CONNECTION WITH THE USE OF THE ELEMENTS OR A BREACH OF THESE WARRANTIES IS EXCLUDED.

C. Prior to issuing any refund or credit or shipping any replacement of Element(s), Supplier reserves the right to test the alleged defective Element(s) and systems on user's or Customer's premises, or to request Customer to perform such inspections or tests and forward the results thereof to Supplier.

D. If Element(s) failure is determined by Supplier to be from any cause other than breach of the warranties herein set above, Customer shall pay to Supplier a fee of US$1,000.00 per day, plus direct travel expenses incurred by Supplier's employees, in connection with any inspection and testing of such Element(s) and system on user's or Customer's premises.
E. Elements shipped to Supplier for warranty examination must be shipped freight prepaid. Elements examined as part of a warranty claim which are found to be performing as warranted will be returned to the Customer freight collect.
F. Failure or refusal by Customer to fully disclose to Supplier the use and operating parameters for the Element(s) as set forth in Attachment B, Mandatory Measurement and Recording of Operating Parameters, shall render all warranties other than that covering materials and workmanship null and void.
G. Warranty of replacement Element(s) will be limited to the duration of these limited warranties.

Warranty Claim and Notice Procedures

Before returning any Element(s) to Supplier for warranty examination, Supplier must be contacted to obtain a service request number. Any Element(s) shipped to Supplier's facility without proper return documentation will be returned to shipper unopened, freight collected.

The following procedure shall be followed to determine warranty protection:

1. Customer shall send a written notice to Supplier within thirty (30) days of problem occurrence or such other time period as otherwise specified herein or the claim will be deemed waived.
2. Customer shall submit all relevant operating data requested by the Supplier.
3. Supplier will be provided a reasonable time to review the data and make initial recommendations in writing for further evaluation of the claim.
4. Customer will make all reasonable efforts to execute and implement the Supplier's recommendations and collect, record and submit all relevant data resulting from these recommendations.
5. In the event Supplier's initial recommendations do not address and solve the performance issues, the Customer will grant Supplier access to the system and a reasonable time to perform testing and evaluation of Element(s) conditions and performance.
6. In the event Supplier's recommendations address and solve the performance issues, the claim shall immediately be withdrawn and dismissed.
7. In the case the Customer decides not to follow Supplier's recommendations then the claim will be deemed withdrawn and dismissed.

Any defective Element(s) shall be returned to the Supplier at the Customer's expense if so requested by the Supplier in accordance to Supplier's return procedures.

Important Reminders

A. Formaldehyde is not recommended as preservation liquid and is not supported as a preservative for drinking water applications. The Element(s) must be in use for at least 24 hours of continuous operation before formaldehyde is used as a biocide. If such Element(s) are exposed to formaldehyde before this period, a severe loss in flux may result.
B. The use of Element(s) in and of itself does not necessarily guarantee the removal of cysts and pathogens from water. Effective cyst and pathogen reduction is dependent on the complete system design and on the operation and maintenance of the system.

Governing Law
This limited warranty agreement shall be governed by and construed in accordance with the laws of the State of Delaware where the DuPont selling legal entity is established in the U.S.A. or the laws of the country where the DuPont selling legal entity is established in all other cases. The conflict of laws provisions of the applicable law as per the foregoing and the United Nations Convention on Contracts for the International Sale of Goods shall not apply.

Non-assignment
The rights and duties under this limited warranty agreement are not assignable or transferable by either party without the other's written consent, except that Customer hereby consents to Supplier's potential future assignment of some or all of Supplier's obligations hereunder to any affiliate of Supplier without further notice to Customer.

FilmTec™ Membranes

DuPont's Published Data Sheet Specifications

Product Data Sheet

FilmTec™ NF90-400/34i Element

Description

Ideal for: utility managers and operators looking for a technology that delivers high quality permeate water while removing specific contaminants such as salts, nitrates, iron, and organic compounds.

The FilmTec™ NF90-400/34i Element:

- Delivers high productivity and cleanability due to its high active area and widest cleaning pH range (1-13) tolerance
- Offers a nanofiltration technology that selectively removes these components, color and operates at low operating pressures
- Including iLEC™ interlocking end caps, reducing system operating costs and the risk of o-ring leaks that can cause poor water quality

Product Type

Spiral-wound element with polyamide thin-film composite membrane

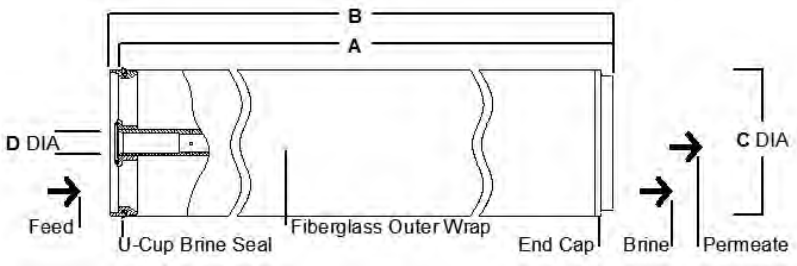
Typical Properties

	Active Area			Permeate Flow Rate		
FilmTec™ Element	(ft^2)	(m^2)	Feed Spacer Thickness (mil)	(GPD)	(m^3/d)	Minimum Salt Rejection (%)
NF90-400/34i	400	37	34-LDP	10,000	38	98.7%

1. Permeate flow and salt passage based on the following test conditions:2,000 mg/l $MgSO_4$, 70 psi (4.8 bar), 77°F (25°C) and 15% recovery.
2. Flow rates for individual elements may vary but will be no more than +15%.
3. Stabilized salt rejection is generally achieved within 24-48 hours of continuous use; depending upon feedwater characteristics and operating conditions.
4. Sales specifications may vary as design revisions take place.
5. Active area guaranteed ±3%. Active area as stated by DuPont Water Solutions is not comparable to nominal membrane area often stated by some manufacturers.

Form No. 45-D01698-en, Rev. 4
January 2020

Element Dimensions



Dimensions – inches (mm)								1 inch = 25.4 mm
	A		B		C		D	
FilmTec™ Element	(in.)	(mm)	(in.)	(mm)	(in.)	(mm)	(in.)	(mm)
NF90-400/34i	40.0	1,016	40.5	1,029	7.9	201	1.125 ID	29 ID

1. Refer to FilmTec™ Design Guidelines for multiple-element systems of 8-inch elements (Form No. 45-D01695-en).
2. Element to fit nominal 8-inch (203-mm) I.D. pressure vessel.
3. Individual elements with iLEC™ endcaps measure 40.5 inches (1,029 mm) in length (B). The net length (A) of the elements when connected is 40.0 inches (1,016 mm).

Operating and Cleaning Limits

Maximum Operating Temperature [a]	113°F (45°C)
Maximum Operating Pressure	600 psig (41 bar)
Maximum Element Pressure Drop	15 psig (1.0 bar)
pH Range	
Continuous Operation [a]	2 – 11
Short-Term Cleaning (30 min.) [b]	1 – 13
Maximum Feed Silt Density Index (SDI)	SDI 5
Free Chlorine Tolerance [c]	< 0.1 ppm

a. Maximum temperature for continuous operation above pH 10 is 95°F (35°C).
b. Refer to Cleaning Guidelines (Form No. 45-D01696-en).
c. Under certain conditions, the presence of free chlorine and other oxidizing agents will cause premature membrane failure. Since oxidation damage is not covered under warranty, DuPont Water Solutions recommends removing residual free chlorine by pretreatment prior to membrane exposure. Please refer to Dechlorinating Feedwater (Form No. 45-D01569-en) for more information.

Additional Important Information

Before use or storage, review these additional resources for important information:

- Usage Guidelines for FilmTec™ 8" Elements (Form No. 45-D01706-en)
- Start-Up Sequence (Form No. 45-D01609-en)

Product Stewardship

DuPont has a fundamental concern for all who make, distribute, and use its products, and for the environment in which we live. This concern is the basis for our product stewardship philosophy by which we assess the safety, health, and environmental information on our products and then take appropriate steps to protect employee and public health and our environment. The success of our product stewardship program rests with each and every individual involved with DuPont products—from the initial concept and research, to manufacture, use, sale, disposal, and recycle of each product.

Form No. 45-D01698-en, Rev. 4
January 2020

Customer Notice

DuPont strongly encourages its customers to review both their manufacturing processes and their applications of DuPont products from the standpoint of human health and environmental quality to ensure that DuPont products are not used in ways for which they are not intended or tested. DuPont personnel are available to answer your questions and to provide reasonable technical support. DuPont product literature, including safety data sheets, should be consulted prior to use of DuPont products. Current safety data sheets are available from DuPont.

Please be aware of the following:

- The use of this product in and of itself does not necessarily guarantee the removal of cysts and pathogens from water. Effective cyst and pathogen reduction is dependent on the complete system design and on the operation and maintenance of the system.
- Permeate obtained from the first hour of operation should be discarded.

Regulatory Note

This product may be subject to drinking water application restrictions in some countries; please check the application status before use and sale.

Attachment B

FilmTec™ Membranes

Mandatory Measurement and Recording of Operating Parameters

From the effective date of the Initial Performance Warranty and the system warranty the following items shall be accurately recorded by continuous on-line recording equipment, and/or by manual measurement and recording at least once per operator shift, for each train:

a. Continuous on-line recording
   i. Raw and acidified feedwater pH value
   ii. Conductivity of feedwater and permeate
   iii. Feedwater residual chlorine concentration.
   iv. Feedwater pressure.
   v. Combined total permeate flow rate and conductivity.
   vi. Acid dosing rate (if used).
   vii. Antiscalant dosing rate.
   viii. Feedwater temperature.
   ix. Permeate Pressure
   x. Differential pressure between feed and concentrate (Δp)

If the system consists of more than one stage or more than one pass, in addition to the parameters listed above, the following parameters will be required as well for each individual stage of every pass:

   xi. Feed Pressure, Permeate pressure and Δp.
   xii. Feed and permeate conductivity
   xiii. Feed and permeate flow

b. Manual measurement / lab testing and recording at least one (1) time per day
   i. All items of continuous recording listed above.
   ii. Feed water Silt Density Index, SDI (15min, 30psi).
   iii. Recovery rate.
   iv. Train flow balance (total feed, concentrate and permeate).
   v. Train mass balance (total feed, concentrate and permeate).
   vi. Train chloride ion balance (total feed, concentrate and permeate).

c. Laboratory measurement and recording at least once per month
   i. Total dissolved solids of feedwater, brine and permeate
   ii. Complete feedwater analysis for the constituents listed in the water analysis.

d. Calibration check of all sensors of continuous recording shall be done at least once per month
   Customer shall document and maintain the data in a systematic and presentable format, and shall make the data available to Supplier at Supplier's request.

Attachment 5: **Installation Instructions & Contractor's Responsibilities**

Installation Instructions & Contractor's Responsibilities

Wigen will supply the equipment as skid mounted packages. Please see below for an overview of the Wigen supplied equipment and the contractor's responsibilities.

Nanofiltration Equipment – The NF skids will be skid mounted, fully assembled, Factory Acceptance Tested, and shipped to site assembled for installation by the Contractor. The Contractor will be responsible for all interconnect piping between the NF skids, connection to the Feed, Permeate, Concentrate, and CIP lines as well as all electrical connections to the Wigen supplied skids.

- The Skid Mounted Nanofiltration Trains will be provided will require no on-site assembly
- Each Train will require Contractor installation of the NF Membrane Elements, with Wigen assistance.

RARWTP Utility Connections (By contractor, each NF Skid)

NF Feed Inlet	10" 150# RF Flange
MCS Inlet	8" 150# RF Flange
Permeate Dump	8" 150# RF Flange
Permeate to Clearwell	8" 150# RF Flange
Permeate to CIP	4" 150# RF Flange
Concentrate to Waste	4" 150# RF Flange
Concentrate to CIP	8" 150# RF Flange
Sample Trough Drain	2.0" FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5" FNPT, 1 CFM @ 80 PSI Minimum

Water.
Process.
Solutions.

FAWTP UTILITY REQUIREMENTS & CONNECTIONS (by contractor, Each Skid)

NF Feed Inlet	10” 150# RF Flange
MCS Inlet	8” 150# RF Flange
Permeate Dump	8” 150# RF Flange
Permeate to Clearwell	8” 150# RF Flange
Permeate to CIP	4” 150# RF Flange
Concentrate to Waste	4” 150# RF Flange
Concentrate to CIP	8” 150# RF Flange
Sample Trough Drain	2.0” FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5” FNPT, 1 CFM @ 80 PSI Minimum

RARWTP & FAWTP CIP ITEMS TO BE SHIPPED “LOOSE”

- CIP Tank Level Instruments
- CIP pH Instruments and Transmitter
- CIP Temperature Indicator
- CIP Tank Heaters

FAWTP PERMEATE FLUSH SYSTEM ITMES TO BE SHIPPED LOOSE

- Permeate Flush Tank Level Transmitter

ITEMS TO BE SUPPLIED BY OTHERS

- Communications wiring from all NF skid Control Panels to the Master PLC/SCADA System.
- Power wiring to all PLC Panels and Remote I/O panels.
- Off-loading and installation of the skid systems and loose items (including membranes) required for full operation of the system.
- Installation of piping between skids.
- Air piping for instrument air to all skids.
- Skid Anchor Bolts.

Attachment 7: Deducts, Clarifications, Exceptions

Deducts & Value Engineering

Richard A. Renneker WTP (RARWTP)

Provide Hydranautics NF/RO elements instead of Dupont NF90: **- $75,600.00****

**NOTE: Hydranautics would not confirm that they could meet the specified performance guarantee/warranty, Dupont has confirmed that they can. We have reviewed both the ESPA4 elements and a Hybrid Hydranautics system. Also, the Hydranautics elements are higher rejecting elements than the Dupont NF 90 elements and may require higher feed pressures than Dupont. Which means long term OPEX, specifically pumping costs, will be higher over a 20 year period.

Franklin Area Water Treatment Plant (FAWTP)

Provide Hydranautics NF/RO elements instead of Dupont NF90: **- $ 43,050.00****

**NOTE: Hydranautics would not confirm that they could meet the specified performance guarantee/warranty, Dupont has confirmed that they can. We have reviewed both the ESPA4 elements and a Hybrid Hydranautics system. Also, the Hydranautics elements are higher rejecting elements than the Dupont NF 90 elements and may require higher feed pressures than Dupont. Which means long term OPEX, specifically pumping costs, will be higher over a 20 year period.

TO ALL DOCUMENT HOLDERS:

Subject: WCWSD RARWTP Membrane Softening Upgrades

AECOM Job No.: 60551697

Enclosed herewith is a copy of Addendum No. 4 covering the subject project.

Please retain this with your Documents.

Sincerely,

AECOM

Matthew Noelker, P.E.

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
WCWSD RARWTP Membrane Softening Upgrades

1.2 GENERAL

A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.

B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.3 NANOFILTRATION MEMBRANE EQUIPMENT SUPPLIER

A. Wigen Water Technologies has been selected as the nanofiltration membrane equipment supplier (OEM). Contractor is to purchase the nanofiltration membrane equipment from the OEM as part of this Contract and shall include all associated costs in their bid price. The Owner/Engineer is not purchasing this equipment on behalf of Contractor.

B. The OEM's pricing is included under the OEM's completed bid form (Section 00 4113—Bid Form). The Owner has selected the alternate bid of $2,555,451.00 (two million, five hundred fifty-five thousand, four hundred and fifty-one dollars and zero cents). Note that this bid form includes pricing for a different project as well—Contractor should only include pricing for the RARWTP Total Lum Sum Alternate Bid as part of their bid.

C. The OEM's timeline for deliverables is included under Article 5 of the completed Section 00 4113—Bid Form.

D. The Agreement for the purchase of the membrane equipment is included under Section 00 5215—Agreement Form. The terms and conditions of the agreement are included under Section 00 7000—General Conditions. Note that some of the condition included on the Agreement Form and in the General Conditions were modified as Part of Addendum No. 2 of the Equipment Procurement Documents.

E. Attached to this addendum are the following:
   1. Equipment Procurement Contract Documents
      a. Drawings (Basis of OEM's bid)
      b. Specifications (Basis of OEM's bid)
      c. Addendum No. 1 (not posted to the above drawings/specifications)
      d. Addendum No. 2 (not posted to the above drawings/specifications)
   2. OEM's Bid
      a. OEM's Bid Form (00 4113—Bid Form, completed)
      b. OEM's Scope of Supply
      c. OEM's Listing of Special Services
      d. OEM' Warranty
      e. OEM's Membrane Element Warranty
      f. OEM's Installation Instructions and Contractor Responsibilities
      g. OEM's Supplied Spare Parts
      h. OEM's Exceptions

1.4 CLARIFICATIONS

A. The following is a list of clarifications regarding project documents. These clarifications include questions received during the advertisement period:

C: Remove the C5 steel on the sill of the masonry opening and chamfer the edge of the CMU to allow the water to run off. See changes to the project drawings below.

Q: Please provide more detail (or an example) of what might be provided under Allowance A - Tools and Maintenance Equipment. The description indicates shall be full compensation for all tools and maintenance equipment (above and beyond that which is specified) to be used during construction.

A: This allowance is intended to cover any supplies, tools, or maintenance equipment the Owner determines they might need to operate the new facility.

Q: Allowance F - Security System, indicates it shall be full compensation for the security system scope of work to provide new equipment relative to the NF Building and West access gate and also for modifications of existing buildings' systems as shown on the drawings and as specified," but further indicates the "New equipment installation shall be provided under the Contractor's bid outside of this allowance." Please indicate what security equipment is to be installed in our base bid.

A: Under the allowance, the Security System Supplier will determine all the field devices. The Contractor shall provide conduits and wiring for field devices in the NF Building (reference Drawing Note E on Sheet E-08 and Drawing Note C on Sheet E-09). Reference Coded Note 9 on Sheet E-04 for West Access Gate equipment. Existing buildings' modifications shall all be performed by the Security System Supplier through the Allowance.

Q: Sheet A-12 appears to show all new FRP railing in the Chemical Feed Building, while sheet 2P-20 calls for most of the existing railing to remain and only few feet to be modified. Please advise what to follow?

A: Sheet 2P-20 is correct, reuse handrail and modify as required.

Q: Drawing 1P-05 shows all penetrations as WP-03, even though most of them are interior castings. Are WP-03 applicable for all penetrations shown on 1P-05?

A: Detail WP-03 states "provide flanged, mechanical joint, or plain ends as indicated in the drawings. Provide with tapped bolt holes." Contractor shall provide ends as piping requirements dictate.

Q: For WP-01 on sheet PD-01 can the contractor use a HDPE Century-Line type sleeve in lieu of the cast iron wall sleeve.

A: Provide the cast iron sleeve as specified.

Q: Section 01 3113 chemical building renovations, it states that 'work must be completed between November 1 and April 30' why is that? It also states that the 'existing chemical must be capable of being fed continuously and automatically' during the renovations. How is that supposed to be done?

A: The existing sodium hypochlorite and fluoride feed facilities must remain operational during construction. Outages of up to eight (8) hours are permitted. It is intended to perform work in these areas between November 1 and April 30 to coincide with the period of minimal water production by the WTP to provide the Contractor with the outage times that are required. The Owner and Engineer will work with the Contractor during construction on any proposed temporary feed system, but the facilities must remain operational and automated.

Q: Are the chemicals in the existing tanks to be transferred to the new tanks, and if so, is this by the Owner or the Contractor?

A: Existing chemical can be transferred to new tanks by Contractor and reused by Owner.

Q: Can this project be awarded if the lowest and best bid is over ten percent of the Engineer's opinion of probable construction cost?

A: Bids will not be awarded if over the engineer's estimate by 10% or more.

Q: Specification section 46 0630 gives specific quantities of chemicals that are to be supplied. Are these chemicals to be used for start-up and testing or is the contractor to supply chemicals in addition to these for start-up and testing?

A: These are chemicals for startup and testing and also for the Owner's initial supply.

Q: Specification Section 43 3225 paragraph 2.3.G states that the effluent nozzle, which is on the bottom of the Forced Draft Degasifier Tower is to be flanged. Typically, the nozzles on the bottom of these types of towers are plain end and the connection is made with a Dresser style of coupling. Please review and confirm that a flange connection is required.

A: Please refer to clarification regarding degasifier outlet connections in Addendum 3.

Q: Referencing the Room Finish Schedule on A-01, the Disinfection Chemical Room, Fluoride Room and Fluoride Pump Room are to receive a coating system for chemical feed areas. Please indicate what, if anything, needs done at the existing tank/equipment pads.

A: The exiting bulk tanks are conical bottom and are supported by piers. These piers are to be demolished per the structural drawings. New concrete surfaces and any surfaces that are damaged during construction are to receive the coatings indicated in the room finish schedule.

Q: Referencing the Room Finish Schedule on A-01, painted gypsum board ceiling (PT-GYP) is called out for the Chemical Room, Fluoride Room and Fluoride Pump Room ceilings. Please indicate if there is existing gypsum board that we are to remove and replace, if we are to install new gypsum board and paint, or if we are to only paint existing gypsum board.

A: The Gypsum board is existing and will only need painted.

Q: Addendum 3 stated that all pressure gauges to have Diaphragm Seal. GP-04 & GP-05 shows pressure gauge & pressure transmitter (PI-2132, PIT2132) connected as one a pressure assembly: Is the intent to have one diaphragm seal for both pressure transmitter & Gauge? Only the pressure gauge are have seal on it? Or each transmitter and gauge are to have a diaphragm seal?

A: A single diaphragm seal for location with both PIs and PITs is acceptable.

Q: GP-12 list FS-2202 as flow switch but Instrument schedule list as flow transmitter FIT-2002. Please clarify.

A: This is a flowmeter. Refer to dwg revisions for GP-12 and GP-04 in this addendum.

Q: Please reference drawing I-01. Is the communication cable and OIT in the Chemical Feed building DCC Enclosure to be bold or should it be ghosted?

A: The OIT and cable are bold. Those are new components to be provided in the existing Chemical Feed Building DCC Enclosure.

Q: For demolition purposes – approximately how much does the existing generator weigh?

A: Per the manufacturer's website it should be about 15,000 lbs.

Q: Please reference drawing E-04, Coded Note 7. Is this relocation of the Telecom Utility Pole covered under Allowance D "Local Utility Company" for the relocations of the existing Telecom Pole and Lines?

A: Yes.

Q: Please reference drawing E-04, General Note A. Is the Local Power Utility supplying and installing the concrete pad for their Main Power transformer?

A: No. The concrete pad would be provided by the Contractor. Detail would be per the Local Electric Utility Company.

Q: The following instruments are not located on the GP drawings, please clarify: LSH-6140, LSH-6240, LSH-6340, LSH-6440, LSH-6540, LSH-6640, TIT-1000, TIT-3000, TIT-6145, TIT-6245, TIT-6545.

A: These instruments are not part of the treatment process and therefore are not included on the Process Flow Schematics. They are shown on the electrical sheets.

Q : Drawing I-01 show modifications to multiple existing enclosures to add new Ethernet hardware. Can this work be combined in 1-2 trips or does each enclosure require a separate outage and only 1-2 enclosure work can be performed per day?

A : This topic will need coordinated through the Construction Manager and decided by the Owner during Construction. Assume a separate trip for each enclosure for bidding purposes.

Q : Spec 409443ATT schedule page 4 of 13 shows new I/O points for HSB010. Drawing I-01 doesn't show adding new PLC hardware. Is the intent to re-use existing spare I/O? Will the owner's programmer coordinate this work or is the SI responsible to perform this coordination? If the owner's programmer will coordinate the HSB work will the SI perform startup/loop check?

A : Existing spare points will be used for DI/DO/AI/AO terminations. A new RTD module will need to be added to accommodate the RTD inputs. Owner's programmers will determine available spare I/O points to terminate on. The System Integrator would be responsible for configuration, startup, and verification for all equipment/devices provided or modified by them in the High Service Building. The Owner's programmer would configure the RTD module.

Q: Spec 409443ATT schedule list multiple 'Ethernet Switch Alarm' as digital inputs to existing PLC. Is the intent to re-use existing spare I/O? Will the owner's programmer coordinate this work or is the SI responsible to perform this coordination?

A: Yes, the intent is to re-use existing spare I/O. The Owner's programmer will determine available spare I/O points to terminate on.

Q: Spec 409443ATT schedule pages 2, 3 show new Digital Output I/O - Drawing I-01 note 6 does not list the PLC Output module to use. Do the outputs require interposing relays or isolating fuses?

A: Which DO module/termination points to use are provided in the 40 9443 ATT I/O Schedule. All DO points to be used are existing. DO field wiring will just need terminated on existing terminal blocks.

Q: In the bid documents there is schedule 08 1113 Hollow Metal Doors and Frames & 08 1116 Aluminum Doors & Frames, but there is not such doors found in the drawings or the door schedule. Are these Specs relevant to this project?

A: These specifications are not relevant and are being removed from the project manual. See changes to the specifications below.

Q: Please confirm the size of the glass block window opening. The windows in A-06 are drawn as 10'-0"x4'-0", but the dimensions above call out 12'.

A: The glass block window openings are to be 12'-0" x 4'0" as shown on sheet A-06.

Q: Referencing the Glass Unit Masonry, multiple types of glass block are listed to be used. There are a few different product lines mixed in as one, which has created some confusion for our subcontractor. All of the types listed come in the wavy design called "Nubia": Premiere Standard - 1/4" thick glass per each face, and is rated for up to 45 minutes, using rated sealants at Head and Jambs; Thickset 60 - 3/8" thick glass per each face, and is rated for up to 60 minutes, using rated sealants at Head and Jambs; Thickset 90 – ¾" thick glass per each face, and is rated for up to 90 minutes, but must be within a steel frame at Head and Jambs and have rated sealants also.

A: Contractor shall provide Thickset 90.

Q: Section 31 2305, 1.4,C.2 says to obtain permits for excavation and fill work. What permits will be required here?

A: No permits will be required for excavation.

Q: Pressure transmitters PI2112, PI2132, PI2142, PI2162, PI3102, PI3302, PI3502, PI3202, PI3402, PI3602 on drawings GP-04 and GP-05 have the nomenclature of pressure gauges, but the instrument schedule has these marked as pressure transmitters. Please clarify if these instruments are to be pressure transmitters or pressure gauges.

A: Refer to Addendum 3. Some locations have both pressure indicators and pressure indicating transmitters with the same number.

Q: Specification section 40 05 23 paragraph 2.9.C has the requirements for the pressure gauges on the project. The air compressor specification and the chemical metering equipment specification sections state pressure gauges are to be provided by these equipment manufacturers, but there is no reference in these equipment specification sections to provide gauges as indicated in specification section 40 0523. Are all gauges supplied by equipment manufacturers supposed to meet the requirements in specification section 40 05 23?

A: Pressure gauges for the Compressed Air System and for the Chemical Peristaltic Metering Pumps do not need to meet the requirements as described in 40 0523 Process Valves, Gates, and Accessories.

Q: Are all pressure gauges supplied on the project supposed to be calibrated in the field or provide factory calibration documentation? Specification section 40 05 23 does not state any calibration requirements for the pressure gauges.

A: No field calibration is required.

Q: Does the Contractor have access to temporary utilities, including water and electric, at both sites?

A: Yes, the contractor will have access to temporary utilities, but the Contractor is required to provide per 01 5000—Construction Facilities and Temporary Controls.

Q: Specification 087100 DOOR HARDWARE, section 2.2.C.6, the finish for the mortise locks is specified as 32D. We have confirmed with Yale that they do not offer 32D for their locksets (they only offer a plated nickel finish (on zinc base metal) to simulate 32D). please confirm finish to be true 32D/we recommend Sargent 8200 LE1L in 32D.

A: The finish will be acceptable. Sargent will be evaluated as an “or equal” during the shop drawing review phase.

Q: Is the 30 day operational demonstration included in 40 9000—Plant Instrumentation and Control System General Requirements paragraph 3.6.B required to be completed prior to substantial completion?

A: Yes.

C: In a previous addendum, it was clarified that that the Contractor is responsible for temporary utilities through substantial completion. We are modifying this response such that the Contractor is responsible for temporary utilities up until the time that the new facility is producing treated water for the benefit of the Owner. This will occur prior to substantial completion due to the operational demonstration noted in our response above.

Q: We did not see a breaker/ panel schedule for the new circuits from existing Power Panels PP1 and PP2 to the new equipment. Do we use spare breakers or existing breakers available from equipment that has been removed?

A: Correct. New circuits will be fed from existing breakers, either existing spares or ones available after removing existing equipment.

Q: Please indicate if we are permitted to utilize the drive that runs from the treatment plant back to the outfall area.

A: Yes, this drive can be used for access to the outfall area.

Q: On drawing E-06 (Basement Power Plan) a control panel is identified as "MEMBRANE CLEANING SYSTEM CONTROL PANEL". This control panel indicates 4 conduits exiting to field devices, 1 conduit is identified the other 3 are not. Please provide conduit and cable designation for the other 3 conduits.

A: Refer to Addendum 2.

Q: On drawing E-05, Note 2 "refer to conduit and wire schedule for continuation of conduits". There are no conduit and cabling designations listed for the continuation of these. Please identify conduit size and fill for conduits extending to the electrical room from this enclosure.

A: The P and L conduit numbers did not change as they passed through the electrical pullboxes. Conduit size and fill are still as identified in the Conduit and Wire Schedule.

Q: On drawing E-05 please indicate the size of the bare ground wire to be used for the grounding loop.

A: The bare ground conductor for the station ground system shall be #4/0.

Q: On drawing E-07 no information is shown for the field end of the Hoist/Trolley Control Panel. Please indicate what conduit and cabling will be required for power and control of this equipment.

A: The field side requirements are specified to be coordinated with the Electrical Contractor by the Hoist/Trolley System manufacturer once a manufacturer is approved.

Q: Referencing addendum #2, a question was asked if excess spoils can remain onsite at both the outfall and the treatment plant. The response specifically indicated that spoils cannot be left at the outfall and will need to be hauled offsite, but does not make mention of allowing spoils to remain onsite for the treatment plant. We interpret this to mean that spoils for the treatment plant can remain onsite. Please indicate if this interpretation is incorrect.

A: Spoils can remain onsite at the treatment plant site to the extent required for grading purposes as shown on the Civil Sheets. Excess soil beyond this will be required to be disposed of offsite.

Q: Referencing drawing 2D-20 we are to demolish the existing Hypochlorite tanks. Drawing 2P-20 indicates equipment pads under all of the new tanks. Please indicate if there are existing equipment pads under the existing tanks that can be utilized, or if all pads shown on 2P-20 are new.

A: All tank pads are new. Existing tanks are conical bottom. Existing tank supports to be demolished as shown on the structural sheets.

Q: Drawing S-18 provides dimensions for the generator pad as 51' long x 20 wide. Drawing C-13 shows the generator pad with a side walk on the North end. Scaling drawing C-13, the generator pad + sidewalk is 51' length. Please verify the length of the generator pad. If the generator pad is to remain 51' long, please indicate if we are to have a sidewalk in addition to the 51' generator pad.

A: For bidding purposes, the generator pad is 51' long and 20' wide. Final dimensions may vary slightly depending on approved equipment (See asterisks and General note 8, drawing S-01). C-13 also shows sidewalk north of the generator pad. For bidding purposes assume the sidewalk is 9' long and 20' wide. Final dimensions of the sidewalk may also vary depending on approved equipment. The generator assumed for design will overhang its equipment pad. The sidewalk is intended for the area underneath the overhang.

Q: Project specification 31 2305 Excavation and Fill, section 2.1 A Select Fill, calls out that Select Fill shall be Item 304 material. Contract drawing S-16 shows a typical concrete wall backfill detail which indicates that all below grade structures with backfill on one side and liquid or open on the other side shall be backfill with compacted select fill. Please verify that the contractor is to price backfilling the exterior walls of all structures with granular material.

A: Basement and buried walls shall be backfilled with select fill material as required by Section 31 2305 and Table 31 2305-A, with the exception of the perimeter drain, which shall follow detail "3" on sheet C-02. Excavated materials may be used as select fill if in compliance with Section 31 2305-3.5.J.

Q: Referencing SECTION D/A-09, please indicate how the eave strut is to be attached to the building. Typically, the eave strut would be attached to the PEMB, however, given the indicated height of the masonry wall, we will be unable to attach the purlin to the structural frame.

A: This detail is within the PEMB manufacture delegated scope of work. In the past, we have seen the eave strut attached to the structure by use of beams extending from the frame.

Q: Referencing drawing A-04, the masonry wall along column line 6 is to go full height, to the upper eave which is above the roof of the control/mechanical/electrical room portion of the building. Referencing SECTION E/A-10, no details are provided on how the roof purlins are supported. In order for purlins to be supported off of the structural steel along column line 6 we would have to penetrate the masonry wall every purlin. Another option is to install a secondary frame to the east of the masonry wall on column line 6, however, this will cause interference issues with the doorway(s). Another option would be to mount supports on the masonry wall the carry the weight of the purlins, but design would need to be provided. Please provide direction.

A: The roof purlins will be connected to the frame on column line 6 and penetrate the masonry wall. Voids shall be filled with mineral wool, similar to details shown on sheet A-16. For fire wall penetrations, follow details on sheet A-15.

Q: There are numerous requirements throughout the specifications for seismic design requirements to be provided, based on the requirements of the project's location. Per Drawings S-01, this project is located in a category C area. Based on the Category C designation, electrical and mechanical components should be exempt from seismic requirements per ASCE Chapter 13. Please confirm that electrical and mechanical components do not require seismic design calculations and requirements.

A: No. ASCE 7-10 13.1.4 exempts seismic design of all electrical and mechanical components that have an importance factor of 1.0. Components with importance factors higher than 1.0 are under ASCE 7-10-13.1.3, and would include sprinkler systems, components containing, transporting, conveying toxic, highly toxic and explosive substances, such as the chemical tanks and associated equipment that fall into the above category).

Q: Do the plumbing sanitary lines on Sheet MP-01 get encased in concrete per Detail 2 on Sheet C-02? We assume this piping is below the basement mat foundation.

A; Yes, all pipes below the slab shall be encased. A new detail “Plumbing Pipe Encasement Detail” has been added to revised sheet S-18. Sheet MP-01 is being revised and reissued as an attachment to this Addendum.

Q: There are precast planks being supported by components of the pre-engineered metal building at the west end over the chemical rooms. Please provide anticipated dead and live loads for these planks so the beams supporting these can be properly sized.

A: Precast Planks will be designed for a 40 PSF LL, and 20 psf collateral load. See Sheet S-01 revisions per this addendum.

Q: Please confirm slag grade 100 is acceptable in lieu of grade 120 per specification 03 3300 2.2 C. 1.

A: Contractor shall submit a substitution request to use grade 100 in lieu of grade 120 that includes an explanation of the substitution. Bid shall be based on grade 120.

Q: Please confirm Penetron is an acceptable alternate to Xypex waterproofing admixture in specification 03 3300 2.5 K. 2. b.

A: It is the onus of the contractor to prove a product is an "Or Equal" in accordance with contract substitution requirements. However, if the product meets the specification as an "Or Equal", Contractor may submit shop drawing for review and approval. Engineer makes no assessment in favor or against at this time.

Q: In Section 03 3000 please clarify which concrete class mixes and locations are to have shrinkage reducing admixture and please clarify which concrete class mixes and locations are to have Crystalline Waterproofing Admixture. The stated requirement to meet .035 or .030 are very stringent for this region without requiring shrinkage reducing admixture.

A: The shrinkage reducing admixture use is specified under Section 03 3000, paragraph 2.6.G, in order to meet the shrinkage requirements. The location of the use of the crystalline waterproofing admixture mix as in section 03 3000, paragraph 1.1.C.6. The use of a shrinkage reducing admixture is not mandatory.

Q: In regard to section 03 3000, paragraph 1.3.B, We request this paragraph be changed to follow the ASTM C157 requirements, without modification.

A: The paragraph shall remain as is.

Q: Referencing details C,D/A-10 and B,C,D/A-11, a hook bar is shown connecting the masonry wall to the precast plank, that is embedded in the bond beam of the masonry wall, comes out the side of the masonry block, and continues into the hollow core of the precast plank. We are unclear on how it is possible to install this bar. Please provide a revised detail.

A: Reinforcing bar to be placed at 4-ft intervals in the joints of the precast plank. This is a standard precast plank detail.

Q: Please provide dimensions of the exterior approach slabs and other concrete stoops around the perimeter of the Softening Building. Do all exterior concrete pads around the Softening Bldg as shown on S-03 have supporting walls as shown in the Approach Slab detail F/S-04?

A: Please see Section F/S-04; B/S-05; C/S-08. In general, stoops are the same width of the sidewalk (5'-0") and 6" wider than the door on each side. A note "7" will be added to Drawing Refer to revised Sheet S-03, reissued as part of this addendum.

Q: Are the sump pits in rooms R107, R108, R109 and in the Chemical Feed Building to be covered with any grating? None is shown on detail B/S-04 & E/S-14. If so, please provide detail.

A: No, the sump pits need not be provided with grating.

Q: What material are the stairs and handrail in Rooms R107, R108, and R109? We can't find it called out on any of the drawings.

A: Railing and stairs in chemical rooms are FRP, see FRP stair detail on Sheet A-17. All locations outside of chemical feed areas shall be aluminum.

Q: Please provide the pilaster/peir sizes for the Chemical Room area along column lines 1 and 2.

A: Pilaster denominations have been added to revised sheet S-03, reissued as part of this addendum.

Q: In spec section 32 9200 and 32 9300 sections it goes into great detail describing very specific topsoil requirements and a planting section. Sheets C-13 an C-14 are the only plans with any seeding shown. With the elaborate Turf and Planting specs and such little information on the plans are we missing a sheet or two or is there more information forthcoming on some more drawings ? Is the Topsoil to be 8" thick as stated in the specifications? Who pays for all the testing of the soils as called out in the specifications?

A: No additional drawings are forthcoming. Provide 8" thick topsoil. Testing shall be paid by the Contractor.

Q: The Demo plans C-09 does not match the new asphalt areas show on pages C-13 and C-14. Please confirm all the existing asphalt in the proposed asphalt areas is to be removed and hauled offsite.

A: The location of the drive access southwest of the NF building is shifting from its existing location to the east. The hatch on C-09 is denoting the area of existing pavement that is outside the boundary of the proposed pavement. Full depth pavement replacement is required in all areas shown for new pavement (except a small portion near the lift station). For much of the area, the amount of excavation for the proposed piping necessitates full depth removal.

Q: We interpret SAN MH 2 shown sheet C-23 is an existing MH. Please confirm our understanding is correct.

A: There is an existing manhole in the location of SAN MH 2. However, due to how close the existing manhole is to the proposed 42" GFE, the Contractor is to replace the existing manhole. Note, the proposed SAN MH 2 shall have additional depth so it is not bearing on the proposed 42" GFE, and the additional depth will be filled up to the invert elevations as indicated.

Q: What is the current flow rate through the 8" SAN line?

A: Flow cannot exceed the downstream lift station pump which is 80 gpm. Flow was 6.6 gpm during a test of the lift station in August 2019 and this flow is assumed to be typical.

Q: What is the required diameter for SAN MH 1?

A: SAN MH 1 is a typical 4' inside-diameter manhole.

Q: Please refer to sheet C-18. What is the elevation of the existing 36" FW line running parallel to the 30" WM line?

A: Records indicate that the centerline elevation of the existing 36" FW line is 746.83 at the connection to both clearwells and 749.00 near the branches to the high service pumps (the pipe going south that runs along the west side of the High Service Pump Building). Contractor shall field verify depths.

Q: In reference to Sheet C-18, what is the maximum allowable time the contractor will be given to tie-in the new BLW line to the existing WM line?

A: This connection would fall under Section 01 3113, Part 1.3.B.2 for shutdown of treated water delivered to the clearwells.

Q: In specification section 01 3113 paragraph 1.3.B there are several shut-downs listed for pipe tie-in work. Assuming the tie-in work can be accomplished within the allowable shut-down duration will any bypass pumping be required? Can the Owner isolate each area where there the only requirement would be for some minor draining of the lines involved in the shut-downs?

A: If the tie-in work can be accomplished within the allowable shut-down duration, then no bypass pumping will be required. Except for the red water filter effluent, tie-in locations can be isolated so only draining of lines are involved in the shut-down; the red water filter effluent will require a gravity sewer plug upstream of the proposed sample vault location to prevent draining of the red water filters. However, draining of the red water filters would be acceptable so long as they are not out of service more than 16 hours. If bypass pumping is preferred for the red water filter effluent the flowrate is 35-60 gpm. Red water filter effluent may be discharged into any existing downstream storm structured through which it currently flows, or to the proposed detention basin if the detention basin effluent is installed.

Q: Per the Note #3 on sheet C-09, are we correct to understand the sample MH on this sheet is used to sample the Red Water Effluent? Is it correct to assume Red Water Effluent from the existing tanks must be maintained through this manhole until new permeant improvements are made to send it through the new Detention Basin?

A: Correct, the sample MH called out on C-09 is currently used for sampling the red water filter effluent. Sampling of the red water filter effluent is only once a month and it is flexible. It should not have a large impact the construction sequencing, but it does need to be considered in the coordination with the Owner. Interim sample locations after the demolition of the ex sample MH and before the construction of the proposed sample vault on C-19 are acceptable if needed as long as the flow is not being diluted by other water sources.

Q: On Sheet No. C-21 there are two pipe tie-ins to the existing 8" Water Main that require tapping sleeves and valves. To the west on the same line that line is rerouted. If the line can be shut down to tie-in the rerouted line why are the hot taps required? The Owner can isolate this area, correct? What is the longest acceptable outage for this line?

A: Shutdowns for rerouting the 8" waterline to the west are limited to two 4-hour shutdowns. The Owner can isolate this area. The connection for the pipe to the south wall of the NF Building may be made by cutting in a tee in lieu of a tapping sleeve if this work is performed during a shutdown for the rerouting of the 8" waterline (i.e. additional shutdown time will not be given). Provide a tapping sleeve and valve for the line connecting to the east wall of the NF Building (isolation for this location is separate from the line farther west).

Q: Can the Owner isolate the PW Line for the tie-ins as shown on Sheet No. C-22? What is the longest acceptable outage for this line?

A: The Owner can isolate the PW line shown on C-22. Shutdowns for this line are limited to 8 hours. This line is looped and can be fed from either the south or the east.

Q: Dwg C-13 Note 1 says to adjust existing manholes and valve boxes to grade. Which items will need to be adjusted?

A: This would include but not be limited to a few valve boxes in the area north of the High Service Pump Building (minimal adjustment, if any needed), the sanitary manhole downstream of proposed SAN MH 1 (raise 3"±), and a number of valve boxes and electrical manholes south of the NF building (raise in the range of 3"± to 16"±).

Q: We noted at the Pre-bid meeting that the existing fence has a continuous grounding wire at the base of the fabric. Please confirm that the new fencing should include a grounding wire.

A: Provide ground wire. Refer to the paragraphs added to Section 32 3100, Part 2.9.

Q: Please confirm that there is a Type 6 Curb per C-04 around all sidewalks of the Softening Bldg. If not, please identify where curb limits start and stop.

A: There is curb around all of the sidewalks around the NF Building except the curbs do not pass through the concrete slabs at the doors. Near overhead doors the asphalt is even with the concrete so the curb reveal will be small.

Q: The concrete lined channel detail (1/C-13) is not dimensioned as to what elevation the top is to be poured to in the Detention Basin. Is it to be poured in the entire Detention Basin to elev. 759.00 or just in the bottom to elev. 754.00?

A: Refer to the North Storm Profile on sheet C-24. The channel invert will match pipe inverts on each end: 752.31 on the downstream end and 753.88 on the upstream end. Provide a constant slope. Provide a uniform depth of 6" from invert to top of concrete for the length of the channel.

Q: Please provide dimensions of the exterior approach slabs and other concrete stoops around the perimeter of the Softening Bldg.

A: Refer to Section F on sheet S-04.

Q: Does standard clean out detail on C-02 also apply to the foundation drain clean outs, or can they be constructed of PVC?
A: Foundation drain cleanout piping shall be of the same material as the foundation drain.

Q: Can non-structural steel, or miscellaneous metals, be supplied by a non-AISC shop?
A: Miscellaneous metals that do not involve shop welding may be fabricated by a non-AISC Shop. Shop welded and all structural steel fabrications shall be supplied by an AISC certified shop to avoid the requirement to provide special inspection at the shop.

Q: Details F and G on S-05 show a formed concrete trench drain with a grouted bottom and aluminum grating. However, the MP-02 shows a prefabricated trench drain that is called out in specification 22 0010, 2.05.G to be a Zurn or Acco product. Please clarify which is correct.
A: For bidding purposes, Contractor shall assume the product specified under 22 0010 2.05.G is required.

Q: Can the valve schedule shown on the GP sheets be provided in excel format?
A: Yes—the valve schedule is being provided as an attachment to this addendum. Note this is being provided as a courtesy and does not affect the schedules listed in the bid documents. In the case of any discrepancies, the schedule on the GP sheets should be followed.

1.5 PROJECT MANUAL

A. Section 00 0100 Table of Contents
   1. Delete “08 113 Hollow Metal Doors and Frames”
   2. Delete “08 1116 Aluminum Doors and Frames”
   3. Add “08 1114 Stainless Steel Doors and Frames”

B. Section 00 4333 Proposed Products Form
   1. This section is being revised and reissued as an attachment to this addendum.

C. Section 00 5215 Agreement Between Owner and Contractor
   1. This section is being revised and reissued as an attachment to this addendum.

D. Section 00 7343 Wage Determination
   1. This section is being revised and reissued as an attachment to this addendum.

E. Section 01 2100 Allowances
   1. Paragraph 1.2.D – Delete “labor, installation costs”

F. Section 02 6500 Underground Storage Tank Demolition
   1. Paragraph 1.3.E – Delete the following text:
      a. “and General Specifications 02105 and 02316”.
   2. Paragraph 3.1.D – Add the following text to this paragraph:
      a. “Contractor shall include 100 gallons of excess liquid removal and disposal in their bid.”

3. Paragraph 3.2.A – Add the following text to this paragraph:
   a. "Contractor shall include 10 CY of contaminated soil disposal in their bid."

G. Section 03 3000 Cast-In-Place Concrete
   1. Paragraph 2.6.G.1 – Replace "… age shall not exceed 0.035 percent and 0.005 percent, respectively." with "….age shall not exceed 0.035 percent and 0.045 percent, respectively."

H. Section 08 1114 Stainless Steel Doors and Frames
   1. This section is being added and issued as an attachment to this addendum.

I. Section 08 1113 Hollow Metal Doors and Frames
   1. Delete this section from the project specifications.

J. Section 08 1116 Aluminum Doors and Frames
   1. Delete this section from the project specifications.

K. Section 08 3323 Overhead Coiling Doors
   1. Paragraph 2.4.D.2 – Delete this paragraph.

L. Section 22 0010 Plumbing Systems
   1. Paragraph 2.5.G.1.a – Modify the following text to read:
      a. "a. Zurn Model Z890-DGC."
   2. Paragraph 2.5.G.6 – Modify the following text to read:
      a. "6. Provide ductile iron slotted grates, Zurn P6-DGC, 20-in. x 5-3/8-in., conforming to DIN rating Class C, ANSI rating of Heavy-Duty, H-20 load rated and ASTM A536 Grade 80-55-06. Grates shall lock down to frame."
   3. Paragraph 2.5.H.1.a – Modify the following text to read:
      a. "Zurn Model Z706-HDS-DGC."
   4. Paragraph 2.5.H.5 – Modify the following text to read:
      a. "5. Grate: Provide ductile iron slotted grate, Zurn DGC, supplied in 20-in nominal lengths with 5/16 in wide slots and ¾-in bearing depth, conforming to DIN rating Class C, ANSI rating of Heavy-Duty, H-20 load rated and ASTM A536 Grade 80-55-06."
   5. Paragraph 2.14.B.4 – Modify the following text to read:
      a. "4. Duplex Pump System (SP-1 and SP-2):
         1) Zoeller high head submersible effluent pumps. Rated for continuous duty and capable of passing 1/2 in. solids. Shutoff head at least 50% greater than TDH at scheduled rated flow.
            a. SP-1 (LEAD Pump): Model 151 - Rated for continuous duty at 29 gpm against 20 ft TDH and capable of passing 1/2 in. solids. 1/3 horsepower at 3450 rpm, 115 Volts, single phase.
            b. SP-2 (LAG Pump): Model 161 - Rated for continuous duty at 79 gpm against 20 ft TDH and capable of passing 1/2 in. solids. 1/2 horsepower at 3450 rpm, 115 Volts, single phase.
         2) Pump Control Settings:

1) 6" Drain Invert EL.	741.50
2) High Water Alarm EL.	743.00
3) Both Pumps On EL.	742.00

4) Lead Pump On EL. 741.50
5) Both Pumps Off EL. 741.17
6) Bottom of Sump EL. 740.50"

6. Paragraph 3.5.D – Modify the following text to read:
   a. "D. Install insulation on domestic hot, cold and tepid piping."
7. Paragraph 3.5.E. – Modify the following text to read:
   a. "E. Provide PVC jacketing with formed fitting covers on all plumbing piping systems located within chemical room spaces and everywhere else where plumbing piping systems are exposed and located within 8-ft above finish floor."
8. Paragraph G.2.a – Modify the following text to read:
   a. "a. Insulation: Fiberglass with vapor barrier jacket (above grade) (PVC over-jacket where exposed and located within 8-ft above finish floor."
9. Paragraph H.1 – Modify the following text to read:
   a. "H. Hot and Tepid Piping (85ºF to 200ºF):
      1) Application Requirements: Insulate following hot and tepid piping systems.
         a. Domestic hot water piping systems.
         b. Domestic hot water return piping systems.
         c. Domestic tepid water piping systems."
10. Schedule 1 to section 22 0010 to read the following:

SCHEDULE 1 TO SECTION 22 0010
Insulation Thicknesses in In. for Pipe Sizes

Piping System Types	Fluid Temp. Range °F.	Runouts up to 2 in. (2)	1 in. and Less	1-1/4 to 2 in.	2-1/2 to 4 in.	5 to 6 in.	8 in. and Larger
Hot & Tepid Systems:							
Low Temp.	85-200	1	1	1	1-1/2	1-1/2	1-1/2
Cold Systems:							
Plumbing	Any	3/4	3/4	1	1	1	1

M. Section 23 0700 HVAC Insulation
1. Paragraph 2.5 – Modify the following text to read:
   a. "E. PVC Jacket Material:
      1) PVC roll jacketing, 20 mil (0.5 mm), high impact UV-resistant polyvinyl chloride, inherent vapor retarder and protection to insulated pipes, designed to fit seamlessly over fitting coverings, Johns Manville, Zeston PVC Jacketing or equal."
2. Paragraph 3.2.B – Modify the following text to read:
   a. "B. Cold Piping (40ºF to 65ºF):
      1) Application Requirements:
         a. Geothermal/raw water piping systems associated with WSHP's.
         b. Condensate drain piping.
      2) Insulate each piping system specified above with the following types and

thicknesses in accordance with Schedule 1.

a. Fiberglass (FGP-1) Insulation with Type JK-2 jacket. (Geothermal/raw water piping)
b. Fiberglass (FGP-1) Insulation with Type PVC jacket. (Geothermal/raw water piping exposed and located within 8-ft above finish floor)
c. Flexible Unicellular Insulation (UP-1). (Condensate drain piping only)"

N. Section 32 3100 Fences
1. Part 2 – Include the following text as paragraph 2.9 FENCE GROUNDING:
A. Conductors: Bare, solid wire for No. 6-gage and smaller, stranded wire for No. 4-gage and larger.
1. Material Above Finished Grade: Copper.
2. Material On or Below Finished Grade: Copper.
3. Bonding Jumpers: Braided copper tape, one inch wide, woven of No. 30-gage bare copper wire, terminated with copper ferrules.
B. Connectors and Ground Rods: As listed in UL 467.
1. Connectors for Below-Grade Use: Exothermic welded type.
2. Ground Rods: Copper-clad steel.
a. Size: 5/8-inch by eight feet.

O. Section 40 0513 Process Piping
1. Paragraph 2.4.A.4 – Modify the following text to read:
a. "Support: Tubing shall be supported by 3-inch diameter schedule 80 PVC carrier piping. Each chemical shall be supported in a separate carrier pipe. No fittings shall be provided on the carrier pipe to facilitate installation of future tubing."

P. Section 40 0523 Process Valves, Gates, and Accessories
1. Paragraph 2.3.A.2 – Add the following text:
a. "e. Engineer Approved Equal."

Q. Section 43 2100.02 Vertical Turbine Pumps and Appurtenances
1. Paragraph 2.10.B.4 – Modify the following text to include "… or Engineer Approved Equal."
2. RARWTP PUMP SCHEDULE – Modify the following schedule to include:
a. "Maximum Suction Can Pressure: 75 psi"

R. Section 46 6320 Cartridge Filtration Equipment
1. Paragraph 2.3.A.1. Delete this paragraph and replace with the following:
Filter vessels shall be designed and constructed in accordance with any of the following three standards for FRP cartridge filter housings: ASME Boiler and Pressure Vessel Code Section X, The European EN13121 code or the German Ad Merkblatt code. The vessels shall have a stainless steel nameplate stamped with the filter model number, the quantity and number of filter cartridges and the equipment number. The vessels shall be designed for use with cartridges that are of common size available from at least two or more manufacturers.
2. Paragraph 2.3.B.2. Delete "FRP" and replace with "PVC/PA/PE/PP/FRP".
3. Paragraph 2.3.B.3. Delete "FRP" and replace with "PVC/PA/PE/PP/FRP".

4. Paragraph 2.3.B.9. Delete "316 SST" and replace with "FRP".
5. Paragraph 2.3.C.1. Delete this paragraph and replace with the following:
   "All the wetted components shall be designed and manufactured of non-corrosive materials. The main body and component material shall be made out of fiberglass reinforced polyester. The cartridge filter housing shall be provided with a deflector plate after the inlet. The deflective plate shall be made from FRP and be an integral part of the cartridge filter housing. A guide plate shall be part of the internal design, to assure perfect cartridge alignment and separation."
6. Paragraph 2.3.C.2. Delete this paragraph and replace with the following:
   "Cartridge Supports: The filter housing shall employ a reinforced internal cartridge support rod made from FRP and/or other corrosion resistant materials, designed for double-open-end (DOE) connection of the cartridge elements. The sealing of each cartridge element shall be ensured by a knife-edged seals in both ends, at the bottom and at the tightening nut at the top."
7. Paragraph 2.3.C.3. Delete this paragraph and replace with the following:
   "The opening system gasket shall be Kroll & Ziller type."
8. Paragraph 2.3.C.4. Delete this paragraph and replace with the following:
   "Horizontal filter vessels shall have a removable internal cartridge alignment support plate located in a manner to prevent cartridge movement. The housing shall have a system to individually seal each double open end cartridge, before closing the housing."
9. Paragraph 2.4.A.1. Add "(for single open end cartridges)"
10. Paragraph 2.4.B. Add "Piedmont" as an acceptable manufacturer.

S. Section 46 6340 Nanofiltration Membrane Equipment
1. Paragraph 2.1.C.1. Delete and replace with the following:
   "Wigen Water Technologies."
2. Paragraphs 2.2.A.1. Delete and replace with "304 SST."
3. Paragraph 2.2.A.2. Delete this paragraph.
4. Paragraph 2.3. Add the following as subparagraph G:
   "Velocities in piping shall not exceed 9 feet per second except in control valves or flow metering sections."
5. Paragraph 2.8.A – Revise "floor-mounted where indicated by the Drawings, adjacent to each skid" to read "mounted on the skid".
6. Paragraph 2.9.F.1 – Delete the following:
   "Conduit and wiring between instrumentation and MCS shall be provided by OEM. Conduit and wiring shall comply with Division 26 and 409XXX series specifications." This conduit and wiring will be provided by the General Contractor.
7. Paragraph 2.10.A – Delete this paragraph.
8. Paragraph 2.11.A.2 – Add the following to this paragraph:
   "SDI test apparatus shall consist of an isolation valve, pressure reducing valve (hand-operated, design to regulate from up to 150 psi to 30 psi), and an SDI pad holder."
9. Paragraph 2.11.A.3 – Revise to read as follows:
   "Provide 500 filters for each WTP."
10. Paragraph 2.16.C. Add the following as subparagraph 8:
    "Operator shall have the ability to enter the desired maximum flux for stage 1 of the membrane array. The stage 1 permeate throttling valve shall be automatically controlled to maintain this maximum flux rate."
11. RARWTP RO Membrane Equipment Schedule:
    a. Table 1 – RARWTP Water Quality Data – Delete the row with the SO4

Parameter.

b. Table 1 – Add the following footnote: “TDS shall be calculated using the gravimetric analysis method.”

c. Paragraph A. Add the following as subparagraph 3:
“Maximum feed pressure shall be no greater than 140 psi when operating with 35 psig of permeate backpressure on stage 1 of the array and 15 psig of permeate backpressure on stage 2 of the array.”

1.6 DRAWINGS

A. Sheet G-04
1. In the “General Provisions” Add the following note as number 11: “CUTTING OF TREES 3” OR LARGER IN DIAMETER IS PERMITTED ONLY BETWEEN OCTOBER 1 AND MARCH 31.”
2. This sheet is not being Reissued as part of this Addendum.

B. Sheet C-13
1. In the concrete lined detail replace “CHANNEL DEPTH VARES” in the dimension with “ 6””.
2. This sheet is not being Reissued as part of this Addendum.

C. Sheet GP-03
1. Remove the following note “ALL CHEMICALS AND MATERIALS COMING INTO CONTACT WITH DRINKING WATER WILL HAVE NSF 60/61 CERTIFICATION.”
2. This sheet is not being Reissued as part of this Addendum.

D. Sheet GP-04
1. Revise “FS-2002” to read “FIT-2002”.
2. This sheet is not being Reissued as part of this Addendum.

E. Sheet GP-12
1. Revise “FS 2002” to read “FIT 2002”.
2. This sheet is not being Reissued as part of this Addendum.

F. Sheet PD-03
1. This sheet is being revised and Reissued as part of this Addendum.

G. Sheet A-06
1. Section E. Revise “C5X ALL AROUND” to read “C5X ALL AROUND (EXCEPT BOTTOM”. Add a chambered edge to the 4” Split-Face CMU Sill.
2. This sheet is not being Reissued as part of this Addendum.

H. Sheet A-15
1. Revise Signage Note 1 to read: “Final signage wording and final quantity of all signs to be determined during construction. Contractor shall include the following quantities of signs in their bid: Type A-1 (18), Type B-1 (4), Type C-1 (5), Type C-2 (8), Type D-1 (7), Type E-1 (6), Type F-1 (5), Type G-1 (3), Type H-1 (13), Type I-1 (1), Type J-1 (7), Type K-1 (12), and Type L-1 (6).
2. This sheet is not being Reissued as part of this Addendum.

I. Sheet S-01
   1. ADD A NEW LINE TO GENERAL NOTE 9, DESIGN LOADS, TO READ: 8" PRECAST PLANK WITH 2" GROUT TOPPING….....50 PSF (INCLUDES COLLATERAL LL = 10 PSF).
   2. This sheet is not being Reissued as part of this Addendum.

J. Sheet S-03
   1. This sheet is being revised and Reissued as an attachment to this addendum.

K. Sheet S-18
   1. This sheet is being revised and Reissued as an attachment to this addendum.

L. Sheet MP-01
   1. This sheet is being revised and Reissued as an attachment to this addendum.

M. Sheet MP-06
   1. This sheet is being revised and Reissued as an attachment to this addendum.

N. Sheet E-07
   1. This sheet is being revised and Reissued as an attachment to this addendum.

O. Sheet E-08
   1. Add the following text to the end of Drawing Note E:
      a. "SECURITY SYSTEM WILL GENERALLY INCLUDE A DOOR CONTACT FOR EACH EXTERIOR DOOR AND CARD READERS FOR ENTRY AND EXIT OF THE CONTROL ROOM."
   2. This sheet is not being Reissued as part of this Addendum.

P. Sheet E-09
   1. Add the following text to the end of Drawing Note C:
      a. "SECURITY SYSTEM WILL GENERALLY INCLUDE A DOOR CONTACT FOR EACH EXTERIOR DOOR AND CARD READERS FOR ENTRY AND EXIT OF THE CONTROL ROOM."
   2. This sheet is not being Reissued as part of this Addendum.

Q. Sheet E-17
   1. A dd the following circuit information to the Panelboard NF-DP1 Schedule:
      a. Use CKT-37/39/41 for the PROCESS ROOM OVERHEAD DOOR. Provide a 15A3P breaker.
      b. Use CKT-38/40/42 for the ANTISCALANT FEED ROOM OVERHEAD DOOR. Provide a 15A3P breaker.
      c. This sheet is not being Reissued as part of this Addendum.

R. Sheet E-33
   1. Add two rows to the schedule between Conduits P151 and P200. Add the following text across columns from left to right:
      a. "P, 152, 3/4", (3)#12+(1)#12G, PANELBOARD NF-DP1, PROCESS ROOM OVERHEAD DOOR, (blank)"
      b. "P, 153, 3/4", (3)#12+(1)#12G, PANELBOARD NF-DP1, ANTISCALANT FEED ROOM OVERHEAD DOOR, (blank)"
      c. This sheet is not being Reissued as part of this Addendum.

S. Sheet I-01
   1. For High Service Building PLC, add Coded Note 7 adjacent to EXISTING I/O MODULES.
   2. Under Coded Note 6, add Coded Note 7 text that reads, "ADD A NEW RTD MODULE TO THE EXISTING PLC RACK. PROVIDE ALL ASSOCIATED WIRING, TERMINAL BLOCKS, AND APPERTENANCES. RTD MODULE SHALL BE 1769-IR6 BY ALLEN-BRADLEY."
   3. This sheet is not being Reissued as part of this Addendum.

T. Sheet I-04
   1. For Detail 4, change Coded Note 2 to be Coded Note 3.
   2. Under Coded Note 2, add Coded Note 3 text that reads, "PROVIDE SIMILAR PANEL FOR SODIUM HYPOCHLORITE CHEMICAL SYSTEM TO THE LAYOUT SHOWN PER THIS DETAIL. SODIUM HYPOCHLORITE PANEL SHALL INCLUDE STORAGE TANK 3 DEVICES/CONTROLS."
   3. This sheet is not being Reissued as part of this Addendum.

PROPOSED PRODUCTS FORM

PART 1 GENERAL

A. Bidder must complete this sheet for the listed items.

B. Circle the Manufacturer that bidder is proposing.

C. If the manufacturer for an item is not circled; or if more than one manufacturer is circled; the first manufacturer listed (from left to right) will be the declared manufacturer.

D. See the Instructions to Bidders for additional information.

LIST OF PROPOSED MANUFACTURERS

ADD #3 & ADD #4

Item		Declared Manufacturer
Motor Control Centers (Section 26 2419)		Allen-Bradley; Cutler-Hammer; ~~**Square D**~~
Variable Frequency Drives (Section 26 2923)		Allen-Bradley; Eaton
Vertical Turbine Pumps and Appurtenances (Section 43 2100.02)		Floway; Flowserve; Peerless**; Fairbanks-Morse**
Horizontal End Suction Pumps (Section 43 2100.23)		Flowserve; Sulzer**; Peerless**
Forced Draft Degasifier Towers (Section 43 3225)		DeLoach Indistries, Inc.; Tonka Equipment Co.
Chemical Peristaltic Metering Pumps and Appurtenances (Section 46 3344)		Watson Marlow Qdos
Polyethylene Chemical Storage Tanks and Appurtenances (Section 46 3393.01)		Flat Bottom: Poly Processing Conical Bottom: Snyder Industries
Cartridge Filters (Section 46 6320)		Fil-Trek; ~~**Nowata;**~~ Parker Hannafin**; Piedmont**

SECTION 00 5215

AGREEMENT BETWEEN OWNER AND CONTRACTOR

THIS AGREEMENT made this _____ day of _____ , 20_____ with the Warren County Board of Commissioners, 406 Justice Drive, Lebanon, Ohio, hereinafter called "OWNER" and _____, doing business as (an individual, a partnership, or a corporation) called "CONTRACTOR".

WITNESSETH: That for and in consideration of the payments and agreements hereinafter mentioned, to be performed by the Owner, the Contractor herby agrees with the Owner to commence and complete the construction described as follows:

RARWTP MEMBRANE SOFTENING UPGRADES

hereinafter called the project, for the sum of $ *(Contractors Bid Price)* and all work in connection therewith, under the terms as stated in the Conditions of the Contract; and as his (its or their) own proper cost and expense furnish all the materials, supplies, machinery, equipment, tools, superintendence, labor insurance, and other accessories and services necessary to complete the said project in accordance with the conditions and prices stated in the Proposal, Conditions of the Contract, the Specifications, and Contract Documents. "Contract Documents" means the following:

(A) ADVERTISEMENT FOR BIDS
(B) INSTRUCTIONS TO BIDDERS
(C) BID
(D) BID SECURITY
(E) AGREEMENT
(F) GENERAL CONDITIONS
(G) SUPPLEMENTARY CONDITIONS
(H) CONTRACT BOND (PERFORMANCE AND PAYMENT BONDS)
(I) NOTICE OF AWARD
(J) NOTICE TO PROCEED
(K) CHANGE ORDER
(L) DRAWINGS prepared or issued by AECOM.
(M) SPECIFICATIONS prepared or issued by AECOM.
(N) ADDENDUM

ADD #4

CONTRACTOR hereby agrees to commence work under this contract on or before a date to be specified in the NOTICE TO PROCEED of the OWNER and shall substantially complete the Contract Work within ~~**five hundred forty-eight (548)**~~ **seven hundred (700)** calendar days and fully complete the Contract Work in its entirety within ~~**six hundred forty (640)**~~ **seven hundred sixty (760)** calendar days after the date of the NOTICE TO PROCEED unless the period for completion is extended otherwise by the CONRACT DOCUMENTS.

CONTRACTOR also agrees to pay as liquidated damages, the amounts as stated in the

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #4

SUPPLEMENTARY GENERAL CONDITIONS.

This Agreement may be terminated by either party upon written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement. The nonperforming party shall have fifteen calendar days from the date of the termination notice to cure or to submit a plan for cure acceptable to the other party.

OWNER may terminate or suspend performance of this Agreement for OWNER'S convenience upon written notice to the CONTRACTOR. CONTRACTOR shall terminate or suspend performance of the services/work on a schedule acceptable to the OWNER.

The CONTRACTOR will indemnify and save the OWNER, their officers and employees, harmless from loss, expenses, costs, reasonable attorney's fees, litigation expenses, suits at law or in equity, causes of action, actions, damages, and obligations arising from (a) negligent, reckless or willful and wanton acts, errors or omissions by CONTRACTOR, its agents, employees, licensees, consultants, or subconsultants; (b) the failure of the CONTRACTOR, its agents, employees, licensees, consultants or subconsultants to observe the applicable standard of care in providing services pursuant to this agreement; (c) the intentional misconduct of the CONTRACTOR, its agents, employees, licensees, consultants, or subconsultants that result in injury to persons or damage to property for which the OWNER may be held legally liable.

The CONTRACTOR does hereby agree to indemnify and hold the OWNER harmless for any and all sums for which the OWNER may be required to pay or for which the OWNER may be held responsible for failure of the CONTRACTOR or any subcontractors to pay the prevailing wage upon this project.

The OWNER agrees to pay the CONTRACTOR in the manner and at such times as set forth in the General Provisions such amounts as required by the Contract Documents.

This Agreement shall be construed under the laws of the State of Ohio, and the parties hereby stipulate to the venue for any and all claims, disputes, interpretations, litigation of any kind arising out of this Agreement being exclusively in the Warren County, Ohio Court of Common Pleas (unless both parties mutually agree in writing to alternate dispute resolution), as well as waiving any right to bring or remove such matters in or to any other state or federal court.

This Agreement shall be binding upon all parties hereto and their respective heirs, executors, administrators, successors, and assigns.

CONTRACTOR shall bind every subcontractor to, and every subcontractor must agree to be bound by the terms of, this Agreement, as far as applicable to the subcontractor's work particularly pertaining to Prevailing Wages and EEO requirements. Nothing contained in this Agreement shall create any contractual relationship between any subcontractor and Owner, nor create any obligations on the part of the Owner to pay or see to the payment of any sums to any subcontractor.

IN WITNESS WHEREOF, the parties hereto have executed, or caused to be executed by their duly authorized officials, this Agreement in three (3) counterparts, each of which shall be deemed an original on the date first above written.

THIS SECTION IS BEING REVISED AND REIUSSED AS PART OF ADD #4

SECTION 00 7343

WAGE RATE REQUIREMENTS

PART 1 GENERAL

1.1 REFERENCE

A. Prevailing wage rates, as determined by the United States Department of Labor for Warren County, the county in which the project is located, shall be used in accordance with the provisions of the Davis-Bacon Wage determinations as provided in 29 CFR 1.5 and 1.6(b). A copy of these rates is attached.

1.2 USE

A. Keep posted at all times throughout the Contract period the wage rate pages that are effective at the time of Bid opening.

B. Maintain, throughout the construction period, a legible up-to-date copy. Post in a conspicuous place accessible to workers and protected from the weather.

C. The successful Bidder shall be required to conform to all provisions of the Federal Davis-Bacon and Related Acts (The Act) which requires that all laborers and mechanics employed by contractors and subcontractors performing on federal contracts (and contractors and subcontractors performing on federally assisted contracts under the related ACTS) in excess of $2,000 pay their laborers and mechanics not less than the prevailing wage rates and fringe benefits, as determined by the Secretary of Labor, for corresponding classes of laborers and mechanics employed on similar projects in the area.

D. All Bidders must abide by the latest prevailing wage rate listing effective at the time of Bid opening.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 00 7343

THIS SECTION IS BEING REVISED AND REIUSSED AS PART OF ADD #4

(THIS PAGE INTENTIONALLY LEFT BLANK)

"General Decision Number: OH20200001 05/01/2020

Superseded General Decision Number: OH20190001

State: Ohio

Construction Types: Heavy and Highway

Counties: Ohio Statewide.

Heavy and Highway Construction Projects

Note: Under Executive Order (EO) 13658, an hourly minimum wage of $10.80 for calendar year 2020 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least $10.80 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2020. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate,if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198

indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

==========

END OF GENERAL DECISION"

THIS SECTION IS BEING ISSUED AS PART OF ADD #4

SECTION 08 1114

STAINLESS STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Furnish all labor, materials, equipment and incidentals required for stainless steel doors and frames as shown and specified.

B. The extent of stainless steel doors and frames is shown on the Drawings.

C. The types of stainless steel door and framework required may include the following:
   1. Fire-rated flush doors and frames

D. Related Sections:
   1. Section 05501, Anchor Bolts, Expansion Anchors and Concrete Inserts
   2. Section 08710, Finish Hardware

1.2 REFERENCES

A. Reference Standards:
   1. ASTM E90, Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements
   2. MIL-PRF-24635, Coating Systems, Weather-Resistant, Exterior Use
   3. National Association of Architectural Metal Manufacturers (NAAMM), Hardware Location for Custom Stainless Steel Doors
   4. NFPA No. 80, Standard for Fire Doors and Windows
   5. SDI 250.6, Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames
   6. SDI 250.8, Recommended Specifications for Standard Steel Doors and Frames
   7. SDI 250.11, Recommended Erection Instructions for Steel Frames
   8. UL 10B, Standard for Fire Tests of Door Assemblies
   9. UL 63, Fire Door Frames

1.3 SUBMITTALS

A. Shop Drawings:
   1. Submit Shop Drawings, including details of each frame type, elevations of door design types, conditions at openings, details of construction, location and installation requirements of finish hardware and reinforcements, and details of joints and connections for the fabrication and installation of stainless steel doors and frames.
   2. Provide a schedule of doors and frames using same reference numbers for details and openings as those on the Drawings.

B. Warranties and Guarantees: Submit a written guarantee stating compliance with the requirements of paragraph 1.11 of this Section.

C. Quality Assurance/Control Submittals:
   1. Certificates:

a. Submit UL certification of construction for doors and frames not requiring labels but requiring labeled construction.

1.4 QUALITY ASSURANCE

A. Manufacturer's Qualifications:
   1. Provide stainless steel doors and frames and accessories manufactured by a single firm specializing in the production of this type of work.
   2. Comply with all applicable standards of the Steel Door Institute recommended specifications for Standard Steel Doors and Frames (SDI 250.8).
   3. Reinforce doors and frames for all hardware to comply with SDI 250.6.
   4. Erect frames per SDI 250.11.

B. Regulatory Requirements:
   1. Identify each fire door and frame with recognized testing laboratory labels, indicating applicable fire rating of both door and frame.

C. Temperature Rise Rating: Comply with UL 10B for temperature ratings as specified.

D. Construct assemblies to comply with NFPA Standard No. 80, and as specified.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver stainless steel doors and frames cartoned or crated to provide protection during transit and job storage.

B. Do not deliver stainless steel doors and frames to job site until work has progressed to the point where doors may be installed without high risk of damage due to construction activities.

C. Store doors and frames at the building site on sills or blocking in a manner that will prevent rusting.

D. Remove from the job site frames that are bowed, twisted or otherwise unacceptable. Replace with properly constructed frames.

1.6 WARRANTY

A. Manufacturer's Extended Express Warranty
   1. The manufacturer shall replace at no cost to the Owner, stainless steel doors and frames which fail in materials or workmanship within 2 years of the date of Substantial Completion.
   2. Failure of materials or workmanship shall include (but not be limited to)failures in operation of doors and hardware, excessive leakage or air infiltration, excessive deflections, deterioration of finish or metal in excess of normal weathering, and defects in accessories, weather-stripping, and other components of the work.

1.7 MAINTENANCE

A. The Contractor and door installer shall return to the Project approximately 6 months and 12 months after the acceptance of the door installation in each area and shall inspect each door for

rubbing, misalignment, or other deficiencies which have occurred due to normal operation or any other cause.

1. All such deficiencies shall be immediately corrected and the doors readjusted to restore the proper operation and function.
2. If such repairs cannot be made, the Contractor shall furnish and install a completely new replacement door, including all new hardware, at no additional cost to the Owner, for each such irreparable door.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products and Manufacturers for Fire-Rated Doors:
   1. Stainless Steel Doors by Next Door Company
   2. Or approved equal.

B. Manufacturers for Fire-Rated Frames:
   1. Fire Rated Frames by Next Door Company
   2. Or approved equal.

2.2 MATERIALS

A. Frames: Type 316 stainless steel.

B. Door Faces and Frames:

C. Type 316 stainless steel sheets.

D. Supports and Anchors: Stainless Steel, Type 316.

E. Inserts, Bolts and Fasteners: Stainless steel, Type 316.

F. Concrete Anchorage: Comply with Section 05501, Anchor Bolts, Expansion Anchors and Concrete Inserts.

G. All internal webs, members, reinforcements, anchors and plates shall be Type 316 stainless steel.

2.3 FABRICATION

A. General:
   1. Fabricate stainless steel units to be rigid, neat in appearance and free from defects, warp or buckle.
      a. Accurately form metal to required sizes and profiles.
      b. Fit and assemble units in the manufacturer's plant wherever practicable.
      c. Clearly identify work that cannot be permanently factory-assembled before shipment to assure proper assembly at the site.
      d. Weld exposed joints continuously, grind, dress, and make smooth, flush and invisible.
      e. Filling to conceal manufacturing defects is not acceptable.

2. Exposed Fasteners: Provide countersunk flat Phillips or Jackson heads for exposed screws and bolts unless otherwise specified.
3. Finish Hardware Preparation:
   a. Prepare stainless steel units to receive mortised and concealed finish hardware, including cutouts, reinforcing, drilling and tapping in accordance with final finish hardware schedule and templates provided by hardware supplier.
   b. Comply with applicable ANSI A115 Specifications for Door and Frame Preparation for Hardware.
   c. Reinforce stainless steel units to receive surface-applied hardware.
   d. Drilling and tapping for surface-applied finish hardware may be done at site.
   e. Locate finish hardware as shown on reviewed Shop Drawings, in accordance with hardware templates provided by hardware manufacturer and in accordance with National Association of Architectural Metal Manufacturers, Hardware Locations for Custom Stainless Steel Doors. Refer to Section 08 71 00, Door Hardware.

B. Doors:
1. Door Types:
   a. Provide doors, with lites, as specified and shown on the Drawings.
   b. Provide 1 3/4-inch thick flush seamless stainless steel construction doors where shown.
2. Door Construction:
   a. Type 316 Stainless Steel Doors:
      1) Fabricate doors of 2 outer stretcher-leveled 18-gage minimum stainless steel sheets.
      2) Construct doors with smooth, flush surfaces, fully welded without visible joints or seams on exposed faces and stile edges. No fillers shall be used.
      3) Provide weep hole openings in the bottom of exterior doors to release entrapped moisture.
   b. Reinforcing:
      1) Reinforce inside of doors with phenolic resin impregnated kraft 1-inch hexagonal cell honeycomb core completely filling the inside of both face panels.
      2) The honeycomb material shall have a crushing strength of 4000 psf minimum and the lamination shall withstand 1100 psf minimum in shear.
      3) Door reinforcement may be modified in fabrication method to provide a UL labeled
         a) 1 1/2-hour (B) fire rated door.
      4) Reinforce tops and bottoms of doors with flush-mounted 16-gage minimum horizontal stainless steel channels welded continuously to the outer sheets.
      5) Provide weather seal by integral closing top and bottom edges or by addition of inverted stainless steel channels
   c. Provide edge profiles on both stiles of doors beveled 1/8 inch in 2 inches.
3. Finish Hardware Reinforcement:
   a. Refer to Section 08710, Finish Hardware, for finish hardware.
   b. Hardware supplier shall furnish stainless steel door and frame manufacturer approved hardware schedule, hardware templates and samples of physical hardware where necessary to insure correct fitting and installation.

c. Preparation includes sinkages and cutouts for mortise and concealed hardware.
d. Provide reinforcements for both concealed and surface applied hardware:
   1) Drill and tap mortise reinforcements at factory using templates.
   2) Install reinforcements with concealed connections designed to develop full strength of reinforcements.
e. Reinforce doors with Type 316 stainless steel sheet or plate for required finish hardware as follows:
   1) Hinges: 7 gage thick plate 1 1/2 inches wide by 6 inches longer than hinge secured by 6 minimum spot or projection welds.
   2) Mortise Locksets and Dead Bolts: 14-gage sheet secured with 2 minimum spot or projection welds.
   3) Cylinder Locks: 12-gage sheet secured with 2 minimum spot or projection welds.
   4) Flush Bolts: 12-gage sheet secured with 2 minimum spot or projection welds.
   5) Surface-Applied Closers: 12-gage sheet secured with 2 minimum spot or projection welds.
   6) Push Plates and Bars: 16-gage sheet secured with 6 minimum spot or projection welds.
   7) Surface Panic Devices: 16-gage sheet secured with minimum of 6 spot or projection welds.

C. Stops and Moldings:
1. Provide stops and moldings around solid, glazed and louvered panels in stainless steel units and in frames to receive glass, where shown.
2. Form fixed stops and moldings integral with frame. Provide fixed stops on inside of stainless steel units exposed to exterior and on corridor side of interior units.
3. Provide removable stops and molds at other locations, formed of not less than galvanized 20-gage steel sheets. Secure with countersunk machine screws spaced uniformly not more than 12 inches on center. Form corners with butted hairline joints.
4. Coordinate width of rabbet between fixed and removable stops with type of glass or panel and type of installation indicated. Refer to Section 08800, Glazing.

D. Fire-Rated Doors:
1. Comply with door construction specified and UL requirements.
2. Provide fire-rated doors in accordance with Underwriters' Laboratories Standard, UL 10B, and NFPA No. 80.
   a. Provide doors with temperature rise rating of not more than 250°F maximum to 30 minutes of exposure for UL 3-hour (A) classification.
   b. Provide doors with temperature rise rating of not more than 450°F or 650°F maximum to 30 minutes of exposure for UL 1 1/2-hour (B) classification.

E. Frames:
1. Frame Types:
   a. Provide stainless steel frames for doors as shown or specified.
   b. Provide fire-rated frames in accordance with UL Standards UL 10B and UL 63 and NFPA Pamphlet No. 80 and as listed in UL.
   c. Form frames of 16-gage Type 316 stainless steel for all stainless steel doors:
      1) Hinge Reinforcement: 1 1/2 inches wide by 6 inches longer than hinge, secured by 6 minimum spot or projection welds.

2) Strike Plate Clips: 10-gage thick plate 1 1/2 inches wide by 3 inches long.
3) Surface-Applied Closer Reinforcement: 12 gage sheet secured with 6 minimum spot or projection welds.
4) All reinforcement shall be Type 316 stainless steel.

d. Head Reinforcing: Leave vertical mullions in frames open at the top where installed in masonry so they can be filled with grout.

e. Jamb Anchors, In-Place Concrete or Masonry:
1) Anchor frame jambs with 3/8-inch minimum concealed bolts into expansion shields or inserts at 24 inches on center between 6 inches from top and bottom.
2) Reinforce frames at anchor locations.
3) Apply removable stop to cover anchor bolts.
4) Provide clip type floor anchors formed of 14-gage stainless steel with holes to receive fasteners.

f. Jamb Anchors, New Masonry:
1) Provide manufacturer's standard "T" type anchors.
2) Comply with Section 04200, Unit Masonry Construction. Anchor frame at every second horizontal masonry joint.
3) Fill frame solidly with mortar as masonry construction progresses.

2. Fire-Rated Frames:
a. Provide the same construction specified above for frames and within UL and NFPA requirements.

2.4 FINISHES

A. Preparation:
1. Prepare the stainless steel surfaces for finishing in accordance with the stainless steel producer's recommendations and standards of the finisher or processor after fabrication of doors and frames but before coating of panels.
2. Process all components of each assembly for the Project simultaneously to attain complete color uniformity.

B. Finish:
1. Doors and Frames:
a. Finish for all surfaces to receive finish painting.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examination and Verification of Condition: Contractor must examine the substrate and conditions under which stainless steel doors and frames are to be installed and review with CMT any conditions detrimental to the proper and timely completion of the work.

B. Do not proceed with the work until deficiencies have been corrected.

3.2 INSTALLATION

A. Install stainless steel units and accessories in accordance with Shop Drawings, manufacturer's data, and as shown and specified.

B. Place frames at fire-rated openings in accordance with NFPA Standard No. 80.

C. Placing Frames:
   1. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set.
   2. Remove temporary braces and spreader bars leaving surfaces smooth and undamaged only after frames have been properly set and secured and wall construction is complete.
   3. Weld and finish field splices in frames to match factory work as detailed on reviewed Shop Drawings.

D. Door Installation:
   1. Fit stainless steel doors accurately in their respective frames using the following clearances:
      a. Jambs and Head: 3/32 inch.
      b. Meeting Edges, Pairs of Doors: 1/8 inch.
      c. Bottom, no threshold or carpet: 3/4 inch.
      d. Bottom, threshold or carpet: 1/8 inch.
   2. Place fire-rated doors with clearances as specified in NFPA Standard No. 80.
   3. Finish Hardware Installation: Comply with Section 08710, Finish Hardware.

3.3 ADJUSTING

A. Final Adjustments:
   1. Check and readjust operating finish hardware items in stainless steel work just prior to final inspection.
   2. Leave work in complete and proper operating conditions.

3.4 PROTECTION

A. Protect installed stainless steel doors and frames against damage from other construction activities.

+ + END OF SECTION + +

THIS SECTION IS BEING ISSUED AS PART OF ADD #4

(THIS PAGE INTENTIONALLY LEFT BLANK)

TO ALL DOCUMENT HOLDERS:

Subject: WCWSD RARWTP Membrane Softening Upgrades

AECOM Job No.: 60551697

Enclosed herewith is a copy of Addendum No. 3 covering the subject project.

Please retain this with your Documents.

Sincerely,

AECOM

Matthew Noelker, P.E.

Specifications

1. Section 00 4113 Bid Form
2. Section 46 3393.01 Polyethylene Chemical Storage Tanks and Appurtenance Schedule

Drawings

1. Sheet GP-01
2. Sheet GP-04
3. Sheet GP-05
4. Sheet GP-10
5. Sheet GP-18

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
WCWSD RARWTP Membrane Softening Upgrades

1.1 GENERAL

A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.

B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.2 CLARIFICATIONS

A. The following is a list of clarifications regarding project documents. These clarifications include questions received during the advertisement period:

C: Davis Bacon Heavy Highway Rates shall be used. Revised wage rates will be issued in the final addendum.

C: Substitution requests included in section 00 4325 will not be considered in the basis of award.

C: Contractor only has to provide the chemical specified in 43 0630.

C: Non-structural steel, or miscellaneous metals, can be supplied by a non-AISC shop.

C: Primary Sensors and Field Instruments are listed in Specification 40 9100 Primary Sensors and Field Instruments Attachment. Pressure Gauges are listed in sheet GP-18 and covered in 40 0523 paragraph 2.9.C. Remaining schedules on sheet GP-18 are by the NF OEM.

Q: Please clarify the integrated spring loaded check valve body material required for the Saf-T-Flo EB-146 injection quills listed in the RARWTP Metering Pump Schedule with section 463344.

A: The check valve is integral to the solution tube. Solution tube materials are listed in 46 3344 RARWTP Metering Pump Schedule.

Q: Can excess spoils remain on site both at the outfall and up at the treatment plant?

A: Excess spoils at the outfall will need to be hauled off site.

Q: Where can the material specification and insulation schedule for process piping be located?

A: Please refer to 40 0513, paragraph 2.5.

Q: Can trees from the outfall work be mulched and left on site or do they need to be hauled off site?

A: Trees can be mulched and left on site.

Q: On sheet no. PD-02 all three pressure gauge details show diaphragm seals. Is every pressure gauge supplied on this project to have a diaphragm seal?

A: Yes, all gauges are to have a diaphragm seal.

Q: What are the outlet connections of the degasifier towers?

A: The degasifier is supplied with a vortex breaker and installed inside of the effluent pipe of the degasifier. There will need to be a slightly oversized sleeve thru the concrete floor. There will be a short piece of down comer pipe and a loose flange that will be glued in the field after the down comer pipe is installed. Typically when the degasification tower is lifted in the air for installation, the down comer pipe is glued into the receiving coupling that is flush with the bottom of the degasification tower bottom. Both pieces are standard PVC material. Once the down comer pipe is glued into the receiver the degasification tower is guided over the hole or sleeve in the concrete and lowered into position. Once placed and level the degasification tower can be secured by anchoring thru the FRP anchor cleats.

Q: To access the wellfield/aerator site, can contractors use the bike path? Will a permit be needed to cross?

A: Yes, contractors should coordinate with ODNR, a specific permit will not be needed as the Client has a license agreement. A unit price line item has been added to the Bid Form.

Q: Section 01 7500 paragraph 1.3.9 states for the contractor to provide all materials necessary to conduct tests, unless otherwise indicated. Are contractors required to pay for the power on testing?

A: Contractor is responsible for temporary power through substantial completion.

Q: Dwg 1P-07 appears to show the 8" CSF, CSPR & CSCR lines with Vic fittings. The pipe schedule on GP-17 indicates pipe material for the lines as SCH 80 PVC. Please clarify pipe material & joint types for these 3 NF Building lines.

A: Pipes less than 8-inch in diameter shall be socket welded. Pipes 8-inches and larger in diameter shall have grooved joints. Refer to 40 0513 paragraph 2.2.E.7.

Q: What is the pipe material for the 18" NFP line shown with VIC Couplings on 1P-10?

A: 18-inch NFP shall be SCH 80 PVC from the skids to BFV-5001 as shown on sheet GP-06.

Q: Is the Automatic Transfer Switch designed for front or side access?

A: The ATS will have front and side accesses as shown on Sheet E-09. The front of the ATS faces MCC-6.

Q: Drawing E-06 Membrane Cleaning system control panel shown at the bottom of the page. Only one of the conduits is identified/labeled. Please identify the others.

A: MCS conduits were originally under the membrane OEM scope since they were providing the MCS system. That scope of conduits and wires were switched to the electrical contractor's scope via Coded Note 16, added in Addendum 2. Conduit numbers will be worked out during construction.

Q: On sheet 1P-08 the NFP Line (18" and 24") is shown to be SCH 80 PVC with grooved joints south of the butterfly valve tagged BF-5001. Per Victaulic PVC fittings are not available for anything over 12", they can only provide the couplings. Please review and advise as to how we are to proceed. We assume that it is not your intent to have any grooved splices in these larger diameter piping systems if the fittings have to be solvent welded.

A: Solvent welded fittings are acceptable at all locations. Joints (where required) shall be grooved for pipes 8-inches and larger per 40 0513 paragraph 2.2.E.7.b.

Q: Are window blinds required? They are specified in section 12 2100, but nothing appears to be shown on the drawings.

A: Window blinds will be required for the two exterior windows in the control room.

Q: Are visual boards required? They are specified in Section 10 1100, but nothing appears to be shown on the drawings.

A: Visual display boards will be located in the control room, location not shown on drawings.

Q: Will elevations of the aluminum & hollow windows be provided?

A: Elevations of exterior windows are provided on sheets A-06 and A-07. Interior window elevation is provided on section K on sheet A-11.

Q: For the fire alarm system, there is a fire alarm panel on the drawing but no devices. Is there a list of fire alarm devices and placement of these available? Is the fire alarm system designed by the fire alarm supplier or does the electrical designer have the design?

A: There are no fire alarm devices shown on the Drawings, the system will be designed by the fire alarm system supplier.

Q: For fire alarm systems, the specifications calls for a system printer, graphic annunciator, voice fire alarm extra materials maintenance agreement and training. Are all of these required?

A: The system components should be bid as specified.

C: For fire alarm systems there are not any hazardous locations that would require explosion proof devices.

1.3 PROJECT MANUAL

A. Section 00 4113 Bid Form
   1. This Section is being revised and reissued as an attachment to this addendum.

B. Section 00 4333 Proposed Products Form
   1. LIST OF PROPOSED MANUFACTURERS – Modify the following Declared Manufacturers as follows:
      a. For Motor Control Centers
         1) Remove "Square D"
      b. For the Vertical Turbine Pumps and Appurtenances Item
         1) Add "Fairbanks Morse"
      c. For the Cartridge Filters Item:
         1) Remove "Nowata"
         2) Add "Piedmont"

C. Section 08 7100 Door Hardware
   1. Paragraph 3.5.B – Modify the following text to include:
      a. "9. Set 9: Doors: R107-3, R108-3, R109-3

Qty	Description
2	Hinges
1	Closer
1	Lockset - Entrance
3	Silencers
1	Threshold
1	Weatherstripping"

D. Section 40 0513 Process Piping
   1. Paragraph 2.2.E.7.b.1 – Delete and replace with the following:
      a. "Grooved joints and socket welded fittings"
   2. Paragraph 2.2.E.7.b.6 – Modify the following text to read:
      a. "Basis of Design: Victaulic Style 357 for piping 8" and smaller and Victaulic style 77 for piping larger than 8"."
   3. Paragraph 2.3.A.1 – Delete subparagraphs a and b and replace with:
      a. "a. Pipe shall conform to ASTM A 778 in the NPS size shown with dimensional tolerances per ASTM A530."
      b. "b. Fittings shall conform to ASTM A 774 and be of the same thickness and material as the pipe. Socket weld fittings are not acceptable."
   4. Paragraph 2.3.A.2 – Delete subparagraphs a, c, and d.

E. Section 41 2200 Cranes and Hoists
   1. Paragraph 2.2.B – Remove the following text:
      a. "2. Max Lift: 15 feet."

F. Section 43 2100.02 Vertical Turbine Pumps and Appurtenances

1. Paragraph 2.2.A. – Modify the following text to read:
   a. "4. Fairbanks Morse".
2. Paragraph 2.4.L.5. – Modify the text to include "316 SST"
3. RARWTP Pump Schedule – Paragraph B.6. – Replace "330 feet" to "310 feet".

G. Section 43 2121 Chemical Transfer Pumps
   1. Paragraph 1.2. – Modify the following text to read:
      a. "C. Provide services of factory-trained Service Technician, specifically trained on type of equipment specified:
         1) Function Testing: 0.5 person days
         2) Field Performance Testing: 0.5 person days".

H. Section 43 1251 Compressed Air System
   1. Paragraph 1.3. – Modify the following text to read:
      a. "B. Provide services of factory-trained Service Technician, specifically trained on type of equipment specified:
         1) Function Testing and Field Performance Testing: 0.5 person days.".

I. Section 46 3323 Liquid Chemical Weighing Equipment
   1. RARWTP Scale Schedule – Modify the following text to read:
      a. Paragraph A.4 – "Capacity: 0-2000 lbs".
      b. Paragraph B.4 – "Capacity: 0-1000 lbs".
      c. Paragraph C.4 – "Capacity: 0-8000 lbs".
      d. Paragraph D.4 – "Capacity: 0-1500 lbs".

J. Section 46 3344 Chemical Peristaltic Metering Pumps and Appurtenances
   1. Paragraph 2.2 – Modify the text to read:
      a. "C. Metering pump panels shall come preassembled from manufacturer. Field assembled panels are not acceptable."

K. Section 46 3393.01 Polyethylene Chemical Storage Tanks and Appurtenances
   1. RARWTP Tank Schedule –Replace this section in its entirety with the revised Section 46 3393.01 Polyethylene Chemical Storage Tanks and Appurtenances RARWTP Tank Schedule included in this addendum.

L. Section 46 6320 Cartridge Filters
   1. Paragraph 2.4.A.7 – Delete this paragraph.

1.4 DRAWINGS

A. Sheet GP-01
   1. This sheet is being revised and Reissued as an attachment to this addendum.

B. Sheet GP-04
   1. This sheet is being revised and Reissued as an attachment to this addendum.

C. Sheet GP-05
   1. This sheet is being revised and Reissued as an attachment to this addendum.

D. Sheet GP-10

1. This sheet is being revised and Reissued as an attachment to this addendum.

E. Sheets GP-11, 12, & 13
   1. Revise Day tank volume to match revised sizes on sheet GP-01 and Section 46 3393.01 Polyethylene Chemical Storage Tanks and Appurtenances Schedule, reissued as part of this addendum.
   2. These sheets are not being Reissued as part of this addendum.

F. Sheet GP-17
   1. Modify the piping schedule to include a row as follows:
      a. "6" Recirc." - "Membrane Cleaning System Recycle" - "SCH 80 PVC"
   2. This sheet is not being Reissued as part of this addendum.

G. Sheet GP-18
   1. This sheet is being revised and Reissued as an attachment to this addendum.

H. Sheet 1P-14
   1. Remove equipment pads for the future break tank pumps.
   2. This sheet is not being Reissued as part of this addendum.

I. Sheets 2P-04, 05, 06, 09, 11, 13, 20, & 21
   1. Replace day tank with revised size as specified in Section 46 3393.01 Polyethylene Chemical Storage Tanks and Appurtenances Schedule, reissued as part of this addendum.
   2. Revise scale size as required to accommodate revisions in Section 46 3323 Liquid Chemical Weighing Equipment, as part of this addendum.
   3. These sheets are not being Reissued as part of this addendum.

J. Sheet A-14
   1. Modify door schedule for R106-1, replace hardware set "5" with "3"
   2. Modify door schedule for R107-3, R108-3, & R109-3, specify hardware set as "9"
   3. This sheet is not being Reissued as part of this addendum.

K. Sheet S-03
   1. Remove concrete pads for future NF skids, only 6 pads should be provided.
   2. This sheet is not being Reissued as part of this addendum.

L. Sheet MP-01
   1. Replace plan note "SEE DETAIL 1 ON DWG XX-XX." with "SEE SECTION E ON SHEET S-05."
   2. This sheet is not being Reissued as part of this addendum.

END OF ADDENDUM NO. 3
(SEE ENCLOSURES)

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #3

SECTION 00 4113

BID FORM

TABLE OF CONTENTS

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #3

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted via hand delivery, USPS, UPS or FedEx to:

Warren County Administration Building
406 Justice Drive
Lebanon, OH 45036

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Owner in the form included in the Bidding Documents to perform all Work as specified or indicated in the Bidding Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bidding Documents.

ARTICLE 2 – BIDDER'S ACKNOWLEDGEMENTS

2.01 Bidder accepts all of the terms and conditions of the Instructions to Bidders, including without limitation those dealing with the disposition of Bid security. This Bid will remain subject to acceptance for 90 days after the Bid opening, or for such longer period of time that Bidder may agree to in writing upon request of Owner.

ARTICLE 3 – BIDDER'S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bidding Documents, other related data identified in the Bidding Documents, and the following Addenda, receipt of which is hereby acknowledged:

Addendum No.	Addendum Date

B. Bidder has visited the Site and become familiar with and is satisfied as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

C. Bidder is familiar with and is satisfied as to all Laws and Regulations that may affect cost, progress, and performance of the Work.

D. Bidder has carefully studied all: drawings and applicable reports of physical conditions relating to existing surface or subsurface conditions at the Site.

E. Bidder has considered the information known to Bidder; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Bidding Documents; and the Site-related reports and drawings identified in the Bidding Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by

Bidder, including applying the specific means, methods, techniques, sequences, and procedures of construction expressly required by the Bidding Documents; and (3) Bidder's safety precautions and programs.

F. Based on the information and observations referred to in Paragraph 3.01.E above, Bidder does not consider that further examinations, investigations, explorations, tests, studies, or data are necessary for the determination of this Bid for performance of the Work at the price(s) bid and within the times required, and in accordance with the other terms and conditions of the Bidding Documents.

G. Bidder is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents.

H. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bidding Documents, and the written resolution thereof by Engineer is acceptable to Bidder.

I. The Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance of the Work for which this Bid is submitted.

ARTICLE 4 – BIDDER'S CERTIFICATION

4.01 Bidder certifies that:

A. This Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any collusive agreement or rules of any group, association, organization, or corporation;

B. Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid;

C. Bidder has not solicited or induced any individual or entity to refrain from bidding; and

D. Bidder has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for the Contract. For the purposes of this Paragraph 4.01.D:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of any thing of value likely to influence the action of a public official in the bidding process;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process to the detriment of Owner, (b) to establish bid prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Contract.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #3

ARTICLE 5 – BASIS OF BID

5.01 Bidder will complete the Work in accordance with the Contract Documents for the following price(s):

A. General Trades

_____	Dollars	$ _____
(Words)		(Figures)

5.02 Allowances:

A. Tools and Maintenance Equipment

Fifteen thousand	Dollars	$ 15,000.00
(Words)		(Figures)

B. Office Furniture

Ten thousand	Dollars	$ 10,000.00
(Words)		(Figures)

C. Materials Testing

Forty thousand	Dollars	$ 40,000.00
(Words)		(Figures)

D. Local Utility Company

Forty thousand	Dollars	$ 40,000.00
(Words)		(Figures)

E. Trailer Mounted Valve Operator

Fifteen thousand	Dollars	$ 15,000.00

F. Security System

Seventy thousand	Dollars	$ 70,000.00
(Words)		(Figures)

G. NFC Cleanouts and CCTV

Forty-five thousand	Dollars	$ 45,000.00
(Words)		(Figures)

H. Lab Equipment

Five thousand	Dollars	$ 5,000.00
(Words)		(Figures)

I. SCADA

Twenty thousand	Dollars	$ 20,000.00
(Words)		(Figures)

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #3

ADD #3

5.03 **Unit Prices**

A. Bike Path Replacement: Bike path access from Grandin Road to the site of the proposed Cascade Aerator is acceptable. The County has a license agreement with ODNR for access to their wellfield, however, Contractor should coordinate with ODNR prior to access. Contractor shall include a unit price per linear foot of bike path replacement after completion of all construction at the site of the Cascade Aerator. Pavement section shall consist of 1.5-inches of ODOT No. 448 (asphalt concrete surface course, medium traffic, type 1, PG64-22) overtop 3-inches of ODOT No. 301 (asphalt concrete base, PG64-22). Width of bike path is 10-feet. Unit price shall include removal of 4.5-inches of existing asphalt, compaction/leveling, placement of new asphalt, and striping.

ITEM	UNIT	ESTIMATED QUANTITY	BID UNIT PRICE (figures)	TOTAL BID PRICE
Bike Path Replacement	**LF**	**4,300**	**$_____**	**$_____**

5.04 ~~**Base Bid Plus Allowances**~~ **Base Bid Plus Allowances Plus Unit Prices:**

_____ Dollars _____
(Words) (Figures)

5.05 Alternates

A. No Alternates.

ARTICLE 6 – TIME OF COMPLETION

6.01 Bidder agrees that the Work will be substantially complete within the number of calendar days specified in Section 00 5215 "Agreement between Owner and Contractor" after the date when the Contract Times commence to run as provided in Paragraph 2.03 of the General Conditions, and will be completed and ready for final payment in accordance with Paragraph 14.07 of the General Conditions within the number of calendar days specified in 00 5215 after the date when the Contract Times commence to run.

6.02 Bidder accepts the provisions of the Agreement as to liquidated damages.

ARTICLE 7 – ATTACHMENTS TO THIS BID

7.01 The following documents are submitted with and made a condition of this Bid:

A. See Section 00 4393.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #3

ARTICLE 8 – DEFINED TERMS

8.01 The terms used in this Bid with initial capital letters have the meanings stated in the Instructions to Bidders, the General Conditions, and the Supplementary Conditions.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #3

BID SUBMITTAL

8.02 This Bid is submitted by:

If Bidder is:

An Individual

Name (typed or printed): _____

By: _____
(Individual's signature)

Doing business as: _____

A Partnership

Partnership Name: _____

By: _____
(Signature of general partner -- attach evidence of authority to sign)

Name (typed or printed): _____

A Corporation

Corporation Name: _____ (SEAL)

State of Incorporation: _____
Type (General Business, Professional, Service, Limited Liability):_____

By: _____
(Signature -- attach evidence of authority to sign)

Name (typed or printed): _____

Title: _____
(CORPORATE SEAL)

Attest _____

Date of Qualification to do business in Ohio is ____/____/____.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #3

A Joint Venture

Name of Joint Venture: _____

First Joint Venturer Name: _____ (SEAL)

By: _____
(Signature of first joint venture partner -- attach evidence of authority to sign)

Name (typed or printed): _____

Title: _____

Second Joint Venturer Name: _____(SEAL)

By: _____
(Signature of second joint venture partner -- attach evidence of authority to sign)

Name (typed or printed): _____

Title: _____

(Each joint venturer must sign. The manner of signing for each individual, partnership, and corporation that is a party to the joint venture should be in the manner indicated above.)

Bidder's Business Address _____

_____

Phone No. _____ Fax No. _____

E-mail _____ _____

SUBMITTED on _____, 20____.

END OF SECTION 00 4113

THIS SECTION IS BEING REVISED AND REISSED AS PART OF ADD #3

RARWTP TANK SCHEDULE

A. Sodium Bisulfite ($NaHSO_3$)
   1. Day Tank
      a. Quantity: One (1)
      b. Volume (min): ~~**100 ga**~~l **155 gal**
      c. Diameter (max): ~~**1'-11"**~~ **2'-7"**
      d. Height (max): ~~**5'-7"**~~ **4'9"**
   2. Bulk Tank
      a. Quantity: Two (2)
      b. Volume (min): 2,750 gal
      c. Diameter (max): 8'-2"
      d. Height (max): 9'-3"

B. Antiscalant (A.S.)
   1. Day Tank
      a. Quantity: One (1)
      b. Volume (min): ~~**30 gal**~~ **55 gal**
      c. Diameter (max): 1'-11"
      d. Height (max): ~~**2'-2"**~~ **3'-3"**

C. Sodium Hypochlorite (NaOCl)
   1. Day Tank
      a. Quantity: One (1)
      b. Volume (min): ~~**685 gal**~~ **755 gal**
      c. Diameter (max): ~~**5'-1"**~~ **5'6"**
      d. Height (max): ~~**5'-4"**~~ **5'10"**
   2. Bulk Tank
      a. Quantity: Three (3)
      b. Volume (min): 6,100 gal
      c. Diameter (max): 10'-0"
      d. Height (max): 12'-8"

D. Sodium Hydroxide (NaOH)
   1. Day Tank
      a. Quantity: One (1)
      b. Volume (min): ~~**280 gal**~~ **615 gal**
      c. Diameter (max): ~~**2'-10"**~~ **4'0"**
      d. Height (max): ~~**7'-1"**~~ **7'5"**
   2. Bulk Tank
      a. Quantity: Two (2)
      b. Volume (min): 3,000 gal
      c. Diameter (max): 7'-1"
      d. Height (max): 12'-0"

E. Corrosion Inhibitor (PHOS.)
   1. Day Tank
      a. Quantity: One (1)
      b. Volume (min): 155 gal
      c. Diameter (max): 2'-7"
      d. Height (max): 4'-9"

2. Bulk Tank
   a. Quantity: Two (2)
   b. Volume (min): 3,000 gal
   c. Diameter (max): 7'-1"
   d. Height (max): 12'-0"

F. Fluoride (FLUOR.)
1. Day Tank
   a. Quantity: One (1)
   b. Volume (min): ~~**60 gal**~~ **100 gal**
   c. Diameter (max): 1'-11"
   d. Height (max): ~~**3'-6"**~~ **5'7"**
2. Bulk Tank
   a. Quantity: Two (2)
   b. Volume (min): 1,150 gal
   c. Diameter (max): 5'-4"
   d. Height (max): 8'-6"

G. Membrane Cleaning System (MCS)
1. Stage 1- Conical Bottom, Closed-top
   a. Quantity: One (1)
   b. Volume (min): 3,600 gal
   c. Diameter (max): 8'-6"
   d. Height (max): 11'-3"
2. Stage 2- Conical Bottom, Closed-top
   a. Quantity: One (1)
   b. Volume (min): 2,500 gal
   c. Diameter (max): 7'-11"
   d. Height (max): 10'-5"

TO ALL DOCUMENT HOLDERS:

Subject: WCWSD RARWTP Membrane Softening Upgrades

AECOM Job No.: 60551697

Enclosed herewith is a copy of Addendum No. 2 covering the subject project.

Please retain this with your Documents.

Sincerely,

AECOM

Matthew Noelker, P.E.

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
WCWSD RARWTP Membrane Softening Upgrades

1.1 GENERAL

A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.

B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.2 CLARIFICATIONS

A. The following is a list of clarifications regarding project documents. These clarifications include questions received during the advertisement period:

C: No plan holder's list is being maintained for this project. An attendance sheet from the pre-bid meeting is attached as part of this addendum.

C: The time of bid opening will be postponed to 2:00 p.m. still on May 28, 2020 – refer to the revised 00 1113 advertisement for bids and resolution as part of this addendum.

C: The NF supplier has not been selected at this point and will be issued in a following addendum.

C: Any substitute products meeting the specification requirements will be reviewed during the shop drawing process as an "Or Equal" to the specified manufacturer.

C: The valve schedule will be issued as an attachment to addendum 3 as an xls.

C: The buried piping schedule is located on Sheet C-01.

C: The existing UV unit is the TrojanUV Swift 24.

C: Valve CK-2100 is to be replaced with a 316 SST insect screen – refer to revised drawings and valve schedule.

C: All piping hardware shall be as identified in 40 0513 paragraph 2.2.B and 40 0523 paragraph 2.2.C.

Q: What is the size for valve BF-2101?

A: This is a 24" valve—refer to revised drawings and valve schedule.

Q: Is there a minimum distance the flange or MJ bell needs to be away from the face of the wall regarding the break tank interconnect?

A: The section of the wall pipe for the break tank interconnect that is on the side of valve BF-2101 must extend 8" away from the wall, refer to revised sheet 1P-05. The section of wall pipe that extends away from the wall can be plain end, and flush with the wall.

Q: The break tank pump suction elbows as shown on 1P-05 and 1P-16 appear to be fabricated fittings, what are these fittings to be?

A: These should be ductile iron flare fittings—refer to revised drawings.

Q: For the 48" break tank overflow piping the submerged elbow appears to be a fabricated fitting, is this fitting to be ductile iron?

A: This should be a ductile iron flare fitting—refer to revised drawings.

Q: Where is the specification description for the two flanged rubber expansion joints at the Break Tank Pumps?

A: Expansion joints are covered under 40 0523 paragraph 2.9.H.

Q: What piping connections will be used on the NF skids?

A: Piping connections on the NF skids shall be flanged. Contractor to provide a grooved coupling or a grooved flanged adaptor to pass the piping from the basement through the finished floor. Contractor to provide grooved flange adaptors to connect to the NF skids.

Q: What pipe material is required for the Cartridge Filter Drains and Air Release?

A: Cartridge filter drains and air release connections are to be stainless steel, refer to modified piping schedule attached to this addendum.

Q: What are the sizes for the branch connections for the future filter skid units.

A: The blind flanges for the future skids are to be 10".

Q: Are the future pump cans to have covers over the opening on the top or the inlet flange connection?

A: The contractor is to provide a cover, inlet blind flange, hardware, and gaskets for cans—refer to revised drawings.

Q: Should pipe sleeves be provided for the four future filter skid units?

A: The Contractor is to provide pipe sleeves for all finished floor penetrations for future skids.

Q: What are the pipe material requirements for the DGE pipe?

A: DGE piping shall be ductile iron, refer to revised piping schedule.

Q: What are the piping material requirements for the analyzers and sample taps?

A: Sample taps and analytical instrumentation piping are to be stainless steel. Refer to the revised piping schedule.

Q: Is a clean-out required for the NFC line at the cascade aerator?

A: A clean-out is required, please refer to revised drawing 4P-01.

Q: Please clarify what the storm drainpipe penetration at the break tank overflow sump location is.

A: The WP-03 callout for both connections have been removed, please refer to revised drawings. Provide a boot connection with a corrugate pipe adaptor, please refer to the paragraph added to section 33 4413, Drainage Structures, Part 2.3 Resilient Connectors.

Q: What is meant by the "MJxMJ adapter" note used for the 36"BLW connection to the existing 30" WM?

A: "MJxMJ Adapter" is meant to be what is needed to connect a mechanical joint bell directly to another mechanical joint bell. The bolt through mechanical joint restraint by In Fact is an example that can be used. Another example is the MJxMJ Adapter by Star Pipe Products.

Q: For valve BF-5201 what are to be the END and SPEC notes as shown as empty cells on the valve schedule?

A: For valve BF-5201 provide mechanical joint ends. Refer to the revised valve schedule.

Q: For BF-5200 there are callouts for dismantling joints on either side of the new valve on an existing 30" WM line, should there still need to be flange by MJ adapters to connect to the existing watermain line? Please review and clarify this valve, its end connections, and specifications.

A: Conform to the "BFV-AWWA" specification (section 40 0523, Part 2.3.A). Provide a mechanical joint butterfly valve for BF-5200. Provide a MJ sleeve and MJ x MJ Adapter as needed to facilitate installation into the existing pipe. The callout on C-18 has been revised, removing callouts for dismantling joints.

Q: What is the depth of the existing 30" waterline that BF-5200 is to be installed on?

A: According to record drawings, the centerline elevation of the 30" pipe is approximately 755'. The ground elevation at the valve is approximately 766'. Field verification of the depth of the existing pipe will be required.

Q: For buried valve end connections is the intention to have flanged butterfly valves installed in the buried yard piping?

A: Provide mechanical joints for buried valves. This includes BF-2000, BF-2001, BF-2002, BF-5200, BF-5201. Refer to the revised valve schedule.

Q: What are the details/specifications for deep buried valves and valve boxes, what will be used for the valve box extension?

A: Refer to paragraph I. Appurtenances for Buried Metallic Valves" that was added to section 40 0523, Part 2.9. For valve boxes where a length longer than 5 ft is required, provide PC 250 (or thicker) cast iron or ductile iron pipe extensions.

Q: How is PI-4015 to be installed?

A: Provide an 8" grooved cross with a socket end reducer for PI 4015 – refer to revised drawings.

Q: For ductile iron piping in the yard or buried, what is the required thickness class?

A: The minimum thicknesses of the buried ductile iron piping shall be per the buried piping schedule on C-01, and thus may be thinner than thickness class 53. This applies only to the buried ductile iron.

Q: For HVAC controls, is there a requirement to tie into an existing building control system for HVAC? What is the current controls system?

A: There is no existing building control system/building automation system to tie into. The HVAC controls associated with the new Membrane Softening building will be electrical and/or DDC stand-a-lone controls as specified in Sections 23 0933 – Automatic Temperature Control Systems and 23 0993 – Automatic Control Sequences. There is no current HVAC Control manufacturer under contract.

1.3 PROJECT MANUAL

A. Section 00 1113 Advertisement for Bids
   1. Paragraph 1 – Replace "11:00 AM" with "2:00 PM".
   2. Resolution – Replace "11:00 a.m." with "2:00 p.m.".

B. Section 09 9600 High Performance Coatings
   1. Paragraph 2.3 – Add the following text to read:
      a. "F. Ferrous Metals, Interior or Exterior, Submerged or Intermittently Submerged in Potable Water:
         1. Surface Preparation: SSPC-SP10 Near White Blast
         2. Shop Primer:
            a. Tnemec N140 Pota Pox Plus @ 3.0 – 5.0 DFT
            b. Carboline Carboguard 61 @ 3.0 – 5.0 DFT
            c. Sherwin Williams Macropoxy 646PW @ 3.0 – 5.0 DFT
         3. Field Preparation: SSPC-SP10 Near White Blast
         4. Field Spot Prime:
            a. Tnemec N140 Pota Pox Plus @ 3.0 – 5.0 DFT
            b. Carboline Carboguard 61 @ 3.0 – 5.0 DFT
            c. Sherwin Williams Macropoxy 646PW @ 3.0 – 5.0 DFT
         5. Stripe Coat:
            a. Tnemec N140 Pota Pox Plus

b. Carboline Carboguard 61
c. Sherwin Williams Macropoxy 646PW

6. Intermediate:
   a. Tnemec N140 Pota Pox Plus @ 4.0 - 6.0 DFT
   b. Carboline Carboguard 61 @ 4.0 - 6.0 DFT
   c. Sherwin Williams Macropoxy 646PW @ 4.0 – 6.0 DFT
7. Finish:
   a. Tnemec N140 Pota Pox Plus @ 4.0 - 6.0 DFT
   b. Carboline Carboguard 61 @ 4.0 - 6.0 DFT
   c. Sherwin Williams Macropoxy 646PW @ 4.0 – 6.0 DFT
8. Total DFT: 11.0 – 17.0 mils

2. Replace "Carboguard 60" coatings with "Carboguard 890". Sub-paragraphs where this occurs include 2.3.A.2.b., 2.3.A.4.b., 2.3.A.5.b., 2.3.D.2.b., 2.3.D.4.b., 2.3.E.5.b., 2.4.A.4.b., 2.4.A.5.b., 2.4.A.5.b., 2.4.A.6.b., 2.4.B.4.b., 2.4.B.5.b., 2.5.A.2.b., 2.5.A.4.b., 2.4.A.5.b., 2.4.B.2.b., 2.4.B.4.b., 2.4.B.5.b., 2.6.A.3.,b., 2.6.A.4.b., 2.6.B.4.b., 2.6.C.3.b, 2.6.C.4.b., 2.7.A.2.b., 2.7.A.3.b., 2.7.D.3.b., 2.7.D.4.b., and 2.8.A.3.b.
3. Paragraph 2.8.A.2.b – replace "Carboguard 60" with "Sanitile 120"
4. Paragraph 2.11.A.2.b. – replace "3358" with "3359DMT"
5. Paragraph 2.11.A.3.b. – replace "3358" with "3359DMT"

C. Section 09 9673 Coating Systems for Chemical Feed Areas
   1. Replace this section in its entirety with the revised Section 09 9673 included in this addendum.

D. Section 26 2200 Transformers
   1. Paragraph 2.2.A – Delete "b. General Electric Company."

E. Section 26 2413 Switchboards
   1. Paragraph 2.2.A – Modify the following text to read:
      a. "2. Square D Company."
      b. "3. Or approved equal."

F. Section 26 2416 Panelboards
   1. Paragraph 2.2 A. – Modify the following text to read:
      a. "2. Square D Company."
      b. "3. Or approved equal."

G. Section 26 2419 Motor Control Centers
   1. Paragraph 2.1.A – add the following text:
      a. "17. Provide ethernet switches and internal ethernet cabling in MCCs as shown on the Drawings. Ethernet switches shall be as specified in Division 40. Ethernet cabling shall be as specified in Division 26."
   2. Paragraph 2.2.A – Modify the following text to read:
      a. "2. Eaton Corporation."
   3. Paragraph 2.2.A – Delete the following text:
      a. "3. Square D."
      b. "4. Or approved equal."

H. Section 26 2913 Motor Controllers
   1. Paragraph 2.7.A – Modify the following text to read:

a. "2. Eaton Corporation."

2. Paragraph 2.7.A – Delete the following text:
   a. "3. Square D."

I. Section 33 4413 Drainage Structures
   1. Part 2 – Modify the following text to read:
      "2.3 RESILIENT CONNECTOR:
         A. Stom pipe to drainage structures on all storm sewers shall be flexible and watertight. Sewer pipe shall be sealed in the manhole section pipe openings with a resilient connector meeting the requirements of ASTM C 923. The resilient connector shall be manufactured by:
            1. Trelleborg Pipe Seals
            2. Press-Seal Corporation
            3. A-Lok Producs Inc.
            4. Or equal"

J. Section 40 0513
   1. Paragraph 2.2.B.1 – Modify the following text to read:
      a. "e. MCS piping: 316 SST"
      b. "f. Chemical Feed Piping: Refer to Division 46, Section "Polyethylene Chemical Storage Tanks and Appurtenances".
   2. Paragraph 2.2.E.7.c – Revise to read as follows:
      a. "Provide shop fabricated groove by flange adapter fittings."

K. Section 40 0523 Process Valves, Gates, and Accessories
   1. Paragraph 2.2.C – Modify the following text to read:
      a. "8. MCS piping: 316 SST"
      b. "9. Chemical Feed Piping: Refer to Division 46, Section "Polyethylene Chemical Storage Tanks and Appurtenances".
   2. Paragraph 2.3.N – Revise to read as follows:
      a. "Check Valve (CV-Thermoplastic Ball)".
   3. Part 2 – Products, add the following text as section 2.10
      a. "2.10 ELECTRIC ACTUATORS (BUTTERFLY/BALL VALVES, CHEMICAL SERVICE)
         1. General: Bidirectional (reversing type) motor, with permanently lubricated gear train.
         2. Motor: Low current, reversing DC motor.
         3. Multi-voltage: 85-265 VAC single-phase, 24 VDC.
         4. Overload protection: Motor cuts out at 2 amps.
         5. Gear Train: Permanently lubricated solid gearing.
         6. Enclosure: Combination type NEMA 4X and NEMA 6 with captive cover screws. Thermally bonded powder coated finish.
         7. LEDs (2): Open/close LED position indication.
         8. Manual Override: Push down override button and use provided lever to manually position the valve in the event of power failure.
         9. Electrical Connections: Sealed cable gland with 1.2M flying leads.
         10. Limit Switches: Two (2) end of travel switches and two (2) dry contact switches.
         11. Space Heater: Standard Equipment.
         12. Manufacture/Model: Asahi/Series 17. "

4. Paragraph 2.9.G.1.c – Delete this paragraph.
5. Paragraph 2.9.F.1.c.3 – Modify the following text to read:
    a. "All stem brackets and stem guides shall be 304 SST."
6. Part 2 – Products, add the following text as section 2.9.I
    a. "I. APPURTENANCES FOR BURIED METALLIC VALVES
        1. Wrench Nuts:
            a. Provide wrench nuts on buried valves of nominal two-inch size, in accordance with AWWA C500.
            b. Arrow indicating direction of opening the valve shall be cast on the nut along with the word "OPEN".
            c. Material: Ductile iron or cast-iron.
            d. Secure nut to stem by mechanical means.
        2. Extension Stems for Non-Rising Stem Gate Valves and Quarter-turn Buried Valves:
            a. Provide extension stems to bring operating nut to six inches below valve box cover.
            b. Materials of Stems and Stem Couplings: Type 316 stainless steel.
            c. Maximum Slenderness Ratio (L/R): 100
            d. Provide top nut and bottom coupling of ductile iron or cast-iron with pins and set screws of Type 316 stainless steel.
        3. Valve Boxes:
            a. Valve boxes shall be as indicated and as required.
            b. Type: Heavy-duty, suitable for highway loading, two-piece telescopic, and adjustable. Lower section shall enclose valve operating nut and stuffing box and rest on valve bonnet.
            c. Material: Cast-iron or ductile iron.
            d. Coating: Two coats of asphalt varnish conforming to FS TT-C-494.
            e. Marking: As required for service."

L. Section 40 2319.01 Pipe Supports
    1. Replace this section in its entirety with the revised Section 40 2319.01 included in this addendum.

M. Section 40 9000 Plant Instrumentation and Control System General Requirements
    1. Paragraph 1.1.B – Delete the entire last sentence starting with "Unit process logic residing…"
    2. Paragraph 1.6.B.5 – Modify the following text to read:
        a. "d. Rawdon Myers, Inc. of Ohio"

N. Section 40 9100ATT Primary Sensors and Field Instruments (Attachment)
    1. Change all text as follows under the PROCESS DESCRIPTION column:
        a. From "CAUSTIC SODA" to "SODIUM HYDROXIDE"
        b. From "ORTHOPHOSPHATE" to "CORROSION INHIBITOR"

O. Section 40 9443 Plant Control System
    1. Paragraph 2.1 B.1 – Modify the following text to read:
        a. "b. Color TFT LCD"
        b. "c. 18-bit color graphics"
        c. "h. NEMA 4X"
        d. "j. 512 MB RAM and 512 MB user storage"

2. Paragraph 2.1 B.2 – Modify the following text to read:
    a. "a. Allen-Bradley, PanelView Plus 7 Performance"

P. Section 40 9443ATT Plant Control System (Attachment)
1. PLC Designation CFB010 – Change all text as follows under the MODULE/POINT DESCRIPTION column:
    a. From "HYPO" to "SODIUM HYPOCHLORITE"

2. PLC Designation HSB010 – Modify the rows as follows:
    a. Delete the row with the MODULE/POINT DESCRIPTION as "HIGH SERVICE PUMP 5 HIGH VIBRATION".
    b. Add a row with the following text across columns from left to right, "HSB010, AI, (blank), (blank), SPARE, HIGH SERVICE PUMP 5 VIBRATION SENSOR 1".
    c. Add a row with the following text across columns from left to right, "HSB010, AI, (blank), (blank), SPARE, HIGH SERVICE PUMP 5 VIBRATION SENSOR 2".
    d. Add a row with the following text across columns from left to right, "HSB010, RTD, (blank), (blank), SPARE, HIGH SERVICE PUMP 5 MOTOR BEARING TEMP 1".
    e. Add a row with the following text across columns from left to right, "HSB010, RTD, (blank), (blank), SPARE, HIGH SERVICE PUMP 5 MOTOR BEARING TEMP 2".

3. PLC Designation NFB010 – Change all text as follows under the MODULE/POINT DESCRIPTION column:
    a. From "PHOS" to "CORROSION INHIBITOR"
    b. From "CAUSTIC SODA" to "SODIUM HYDROXIDE"

Q. Section 43 2100.02 Vertical Turbine Pumps and Appurtenances
1. RARWTP PUMP SCHEDULE – under Part B. High Service Pumps:
    a. Replace "17. Can Diameter: 20-inch" with "17. Can Diameter: 30-inch"

R. Section 43 2100.01 End Suction Centrifugal Pumps
1. Paragraph 2.2.A – Modify the following text to read:
    a. "3. Peerless"

S. Section 43 2121 Chemical Transfer Pumps
1. Paragraph 2.1.E.1 – replace "KM" with "K+"

1.4 DRAWINGS

A. Sheet PD-01
1. This sheet is being revised and Reissued as an attachment to this addendum.

B. Sheet PD-02
1. Replace the following text from detail 2, "drill and tap carrier pipe for quill" with "refer to pressure gauge details for pipe tapping method."
2. This sheet is not being Reissued as part of this addendum

C. Sheet C-16

1. Remove downspout callout arrow that points to the inside corner of the NF building. There are to be two downspouts, refer to callouts on C-24.

D. Sheet C-18
   1. In plan view, replace the text that reads “DISMANTLING JOINT” with “MJ SLEEVE AS NEEDED.”
   2. This sheet is not being Reissued as part of this addendum

E. Sheet C-24
   1. In plan view, add the following callout regarding the connection of the 36” STM-1 piping to the break tank overflow sump: “PROVIDE RESILIENT CONNECTOR (PER SECTION 33 4413) FOR CONNECTION TO BREAK TANK OVERFLOW SUMP”
   2. This sheet is not being Reissued as part of this addendum.

F. Sheet 3P-01
   1. In section A, remove the “2’-5”” dimension on the pump can.
   2. This sheet is not being Reissued as part of this addendum.

G. Sheet G-01
   1. This sheet is being revised and Reissued as an attachment to this addendum.

H. Sheet GP-06
   1. This sheet is being revised and Reissued as an attachment to this addendum.

I. Sheet GP-09
   1. This sheet is being revised and Reissued as an attachment to this addendum.

J. Sheet GP-10
   1. Delete the “42” TEE W/ PLUG FOR FUTURE FILTER TIE-IN”.
   2. This sheet is not being Reissued as part of this addendum.

K. Sheet GP-16
   1. This sheet is being revised and Reissued as an attachment to this addendum.

L. Sheet GP-17
   1. This sheet is being revised and Reissued as an attachment to this addendum.

M. Sheet 1P-03
   1. This sheet is being revised and Reissued as an attachment to this addendum.

N. Sheet 1P-05
   1. This sheet is being revised and Reissued as an attachment to this addendum.

O. Sheet 1P-08
   1. This sheet is being revised and Reissued as an attachment to this addendum.

P. Sheet 1P-10
   1. This sheet is being revised and Reissued as an attachment to this addendum

Q. Sheet 1P-13

1. This sheet is being revised and Reissued as an attachment to this addendum.

R. Sheet 1P-16
   1. This sheet is being revised and Reissued as an attachment to this addendum.

S. Sheet 1P-18
   1. This sheet is being revised and Reissued as an attachment to this addendum.

T. Sheet 1P-20
   1. This sheet is being revised and Reissued as an attachment to this addendum.

U. Sheet 4P-01
   1. This sheet is being revised and Reissued as an attachment to this addendum.

V. Sheet E-06
   1. Add coded note 16 symbol adjacent to the Membrane Cleaning System Control Panel. Under Coded Note 15, add coded note 16 text that reads, “PROVIDE CONTROL, ANALOG, AND POWER CONDUIT AND WIRES FROM THE MEMBRANE CLEANING SYSTEM CONTROL PANEL TO THE MEMBRANE CLEANING SYSTEM COMPONENTS. CONTROL CONDUITS SHALL BE 3/4" WITH (2)#14+(1)#14G FOR EACH CONTROL DEVICE. ANALOG CONDUITS SHALL BE 1" WITH (1) STP FOR EACH ANALOG DEVICE. POWER CONDUITS SHALL BE 1.25" WITH (3)#4+(1)#8G VFD CABLES FOR EACH PUMP, 2" CONDUIT WITH (3)#1/0+(1)#6G FOR THE 120KW HEATER, AND 1.5" CONDUIT WITH (3)#1+(1)#6G FOR THE 75KW HEATER."
   2. This sheet is not being Reissued as part of this addendum.

END OF ADDENDUM NO. 2
(SEE ENCLOSURES)

AECOM

Meeting Minutes

This meeting was conducted to discuss bidding of RARWTP Membrane Softening Upgrades Project. A sign-in sheet was distributed at the beginning of the meeting and is attached to these minutes.

1) Questions discussed at the pre-bid meeting included:
   a) The Membrane Equipment Procurement will include all terms and conditions for the Contract between the Buyer (Contractor) and the Seller (OEM). The OEM's pricing will include start-up services. This information will be included via addendum once obtained by the Engineer (week of May 18, 2020).
   b) Approval for funding is scheduled to occur on June 25, 2020 at the OWDA board meeting. NTP will be issued shortly thereafter, as soon as July 1, 2020.
   c) Wage rate requirements will be clarified via addendum.
   d) The Ohio EPA Plan Approval has officially been obtained.
2) Bid Opening will be May 28, 2020 at 2:00 pm at The Office of the Warren County Commissioners, 406 Justice Drive, Lebanon, Ohio 45036. The bid opening date cannot be postponed due to the Ohio EPA funding schedule, but the time of day of the bid opening has been pushed back to later in the day. Any change to the bid opening time and clarification of how to drop the bids off will be addressed via addendum.
3) Funding – Ohio EPA WSRLA. The County indicated that some County funds will be used as well.
4) Attachments:
   a) Sign-in Sheet
   b) Agenda

The meeting adjourned at approximately 11:15 A.M.

END OF MINUTES

Warren County, Ohio
RARWTP Membrane Softening Upgrades
Pre-Bid Agenda
May 12, 2020 @ 10:00 A.M.

AGENDA

1) Attendance sheet: please print name, company, email address, and phone number
2) Introductions
3) Note that statements made in this meeting that in any way modify what is contained in the Issued for Bidding documents are not to be considered as a change to those documents unless issued in an Addendum prior to the bid.
4) There will be an opportunity to ask questions at the end.
5) All technical questions must be submitted in writing to: miranda.scheitlin@aecom.com
   a) Questions requiring clarification or changes to the bid documents will be addressed via addenda.
   b) Any verbal or email clarifications made outside of an addendum will not be considered as changes to the bid documents unless officially addressed via addenda.
6) Bid Opening is May 28, 2020 at 11:00 am at The Office of the Warren County Commissioners, 406 Justice Drive, Lebanon, Ohio 45036.
7) Bid Documents Required:
   a. Section 00 2113, “Instructions to Bidders”. (for information only)
   b. Section 00 4113, “Bid Form”.
   c. Section 00 4313, “Bid Security Form”.
   d. Section 00 4325, “Substitution Request Form”. (optional)
   e. Section 00 4333, “Proposed Products Form”.
   f. Section 00 4336, “Proposed Subcontractor’s Form”.
   g. Section 00 4513, “Bidder’s Qualifications”.
   h. Section 00 4515 “OEPA WSRLA Program Requirements”
      i. Contractor Equal Employment Opportunity (EEO) Certification
      ii. Certification Regarding Debarment, Suspension and Other responsibility Matters.
      iii. DBE Forms 1A and 1B
      iv. Certification Regarding Debarment, Suspension, & Other Responsibility Matters
      v. American Iron & Steel Acknowledgement Form
   i. Section 00 4519, “Non-Collusion Affidavit”.
   j. Section 00 4529, “Personal Property Tax Disclosure Affidavit”.
   k. Section 00 4539, “Finding’s for Recovery Affidavit”.
   l. Surety’s Power of Attorney.
   m. Certification of Authorization to do business In Ohio (if applicable)
8) The County will review bids and award the project within 90 days. The County intends to secure funding at the OWDA board meeting on June 25, 2020.
9) Engineer’s Estimate
   a) $26,856,000

10) Allowances (refer to section 01 2100, "Allowances")

a.	Tools and Maintenance Equipment:	$20,000
b.	Office Furniture:	$20,000
c.	Materials Testing:	$60,000
d.	Local Utility Company:	$10,000
e.	Trailer Mounted Valve Operator:	$15,000
f.	Security System:	$70,000
g.	NFC Cleanouts and CCTV:	$45,000
h.	Lab Equipment:	$5,000
i.	SCADA:	$20,000

11) Alternates

a. No alternates.

12) Membrane Equipment

a) Membrane Equipment manufacturer is currently being selected by the Owner. Contractors will be notified of selected manufacturer and manufacturer's pricing via addendum. Owner is not purchasing equipment on behalf of the Contractor.

13) Contract Award

a. Contract award will be determined by base bid plus allowances.

14) Funding – Ohio EPA WSRLA

15) Time of completion for the project:

a.	Substantial Completion:	548 consecutive calendar days.
b.	Final Completion:	640 consecutive calendar days.

16) Liquidated Damages

a. Damage compensation

i.	Substantial Completion:	$500 per day
ii.	Final Completion:	$500 per day

17) Wage Rates

a. Included in Section 00 7343. Wage rates for this project Davis-Bacon for Warren County, Ohio.

18) Permit Status

a. Ohio EPA Plan Approval is to be obtained by the Owner (awaiting final permit approval)
b. Building Permit is to be obtained by the Owner (conditional approval received)
c. NPDES Permit has been obtained by the owner

19) Minutes from this Pre-Bid will be issued in an Addenda.

20) Questions and Answers

21) Further Questions:

a. Technical and Bidding Questions – Submit all questions, in writing, prior to close of business on Thursday May 21, 2020 to be sure a proper response can be made.

22) Site walk-thru.

COATING SYSTEMS FOR CHEMICAL FEED AREAS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specifications sections apply to this Section.

1.2 DESCRIPTION OF WORK

A. Section includes coating systems for secondary containment for chemical feed storage areas in wastewater facilities, including below-grade concrete chemical containment trenches above-grade containment sumps and walls. **All chemical rooms are separated and different coatings may be supplied for different rooms to match compatibility with the store chemical. The stored chemicals are as follows:**

1. 12.5% Sodium Hypochlorite
2. 38% Sodium Bisulfite
3. 100% Antiscalant
4. 50% Sodium Hydroxide
5. 23% Fluoride
6. 28.5% Orthophosphate

B. The following areas within each chemical feed area shall be coated:
1. Floors
2. Sumps
3. Walls (up to top of secondary containment area)

1.3 DELIVERY, STORAGE, AND HANDLING

A. Comply with the requirements specified in Division 01, Section “Product Requirements”.

B. Material shall be delivered to project site in manufacturer's original unopened containers.

C. Material shall be stored indoors, protected from damage, moisture, direct sunlight, and temperatures below 40 deg F or above 90 deg F.

1.4 ENVIRONMENTAL CONDITIONS

A. Surface and surrounding air temperatures must exceed 55 deg F but must be less than 90 deg F with materials at not less than 70 deg F during application. Do not apply if the relative humidity is more than 90% or the surface temperature is less than 5% above the dew point of the air in the working area.

1.5 QUALIFICATIONS OF APPLICATOR

A. Installation shall be performed by an applicator having satisfactory experience in the application of these or similar materials or with on-site consultation by a qualified field service representative from the manufacturer.

1.6 SUBMITTALS

A. Submittals shall follow requirements of Division 01, Section “Submittal Procedures”.

B. Prior to commencing work, submit to owner, manufacturer's technical information and installation details describing materials to be used.

C. Owner, contractor, and manufacturer shall review and mutually agree upon color, grade, and final texture of coating system before starting installation. The acceptance of a sample will constitute the job standard by which installation will proceed.

D. The coating supplier shall submit a written certification that the proposed coating system supplied for individual chemical rooms are compatible with the chemical being stored in that room.

PART 2 - PRODUCTS

2.1 MATERIALS (OPTION #1)

A. Surfacer: Series 218 Mortar Clad epoxy modified cement.

B. Primer: Series 201 Epoxoprime, penetrating polyamine cured epoxy primer.

C. Reinforced Coating: Series 275 Novolac Stranlok fiber reinforced coating.

D. Glaze Coat: Series 282 Tneme-Glaze, pigmented epoxy novolac.

E. Manufacturer
1. Tnemec Company, Incorporated
   3974-A Brown Park Dr.
   Hilliard , Ohio 43026-1168
   1-800-890-7580
2. Carboline Company.
3. Sherwin Williams; Industrial and Marine Coatings (S-W).
4. PolySpec (Thiokol).
5. Sprayroq

2.2 MATERIALS (OPTION #2)

A. Primer: Dudick Inc, Primer 67

B. Resurfacer: Scratch Coat 300

C. Reinforced Coating: **Protecto-Flex 800 or 805, as determined by the manufacturer for specific chemicals. Provide fiberglass mat reinforced with 100 mil crack protection guarantee.** ~~Protecto-Flex 100XT, Fiberglass mat reinforced with 100 mil crack protection guarantee~~.

D. Manufacturer
1. Dudick
1818 Miller Pkwy
Streetsboro, Ohio 44241
1-800-322-1970

2.3 MATERIALS (OPTION #3)

A. Restructuring: Semstone 145 or 800 Series Primer System (selected by manufacturer)

B. Primer: Semstone 140 or 800 Series Primer (selected by manufacturer)

C. Reinforced Coating: Aggregate filled reinforcing coating, Semstone Scrim Cloth, Smestone 145 or 800 series (selected by manufacturer)

D. Manufacturer
1. Carboline Company
2150 Schuetz Rd
St Louis, MO 63146

PART 3 - EXECUTION

3.1 PREPARATION

A. Allow new concrete to cure for 28 days. Verify dryness by testing for moisture by using calcium chloride discs and with the "plastic film tape-down test". (Reference ASTM D 4263)

B. Preparation (Materials Option #1)
1. Degrease and clean to remove all surface contaminants as needed. Mechanically abrade all concrete by means of self-contained, blasting equipment or equal, to remove all laitance and surface contaminants and provide a minimum profile similar to 40-60 grit sandpaper. (Reference ASTM D 4259 and ICRI CSP 4-5)

C. Preparation (Materials Option #2)
1. Concrete must be prepared mechanically to remove surface laitance. Oils, grease or other contaminant must be removed prior to surface preparation. Concrete must be free of curing compounds and form release agents. Surface texture should be similar to 40-60 grit sandpaper or the visual standard, CSP-5 from the International Concrete Repair Institute with exposed pea gravel. The prepared surface should have a minimum tensile strength of 250 PSI per ASTM D-4541.

D. Preparation (Materials Option #3)
1. Proper preparation is critical to ensure an adequate bond. The substrate must be dry and free of all wax, grease, oils, fats, soil, loose or foreign materials and laitance. Laitance and unbonded cement particles must be removed by mechanical methods, i.e., abrasive blasting or scarifying. Other contaminants may be removed by scrubbing with a heavy-duty industrial detergent and rinsing with clean water. Concrete should be properly cured for 28 days or reach a compressive strength of 3625 psi prior to coating.

2. Once either of these 2 conditions is met, the moisture levels of the concrete should be measured. Carboline supports and recommends the standards of SSPC-SP13/NACE 6 for moisture levels and curing of concrete. If the moisture is at the appropriate level for the test run (ASTM D2170-Insitu Probe max of 80% RH; ASTM F1869 (Calcium Chloride teste) max of 3#/1000²feet/24hr; or ASTM D4263 (plastic sheet test) – pass/fail), then the coating system can be applied. If one of the cure parameters AND one of the moisture parameters cannot be met. The tests should be repeated at minimum intervals of 3-5 days until successfully tested. Ensure the pH in the range of 7 to 11. The surface must show open pores throughout and have a medium grit sandpaper texture. Prepare surface by mechanical means: Abrasive "Sweep" Blast with a 16-40 mesh angular aggregate or shot blast and provide a profile similar to ICRI CSP 4 – 6.

E. After mechanically abrading, verify that all surfaces are clean, dry, and free of any contaminants, which could adversely affect the adhesion of the flooring system.

3.2 SPECIFICATION FOR WALLS, FLOORS, SUMPS AND TRENCH DRAINS

A. Installation (Materials Option #1)
1. Surfacing: Fill all bugholes, spalled areas and surface imperfections with 218 MortarClad. Concrete block to be filled using Series 130 Envirofill.
2. Cove: Floor and wall transitions are to have a 2-inch cant or radius cove. This will provide a seamless wall to floor transition.
3. Priming: Series 201 Epoxoprime primer shall be mechanically mixed and applied in accordance with manufacturer's printed instructions and applied uniformly at a film thickness of 6.0 to 8.0 dry mils DFT. It should be topcoated after 2 hours and within 16 hours.
4. Fiber Reinforced Coating: Install Series 275 Stranlok by spray application or trowel in a minimum of 2 passes to a total dry film thickness of 40.0 – 60.0 mils DFT.
5. Glaze Coat: Series 282 epoxy novolac glaze coat shall be mechanically mixed in accordance with manufacturer's printed instructions and applied in a single application at a film thickness 8.0 - 12.0 mils DFT.
6. Joints: Active expansion, construction and control joints are to be honored unless determined otherwise by the owner or project engineer. Joints and epoxy floor terminations are to be keyed and shall be sawed through the Coating system and filled with an appropriate Polysulphide flexible sealant.

B. Installation (Materials Option #2)
1. Priming: Dudick Inc Primer 67 shall be mechanically mixed and applied in accordance with manufacturer's printed instructions and applied uniformly at a film thickness of 3.0 to 5.0 dry mils DFT.
2. Resurfacing: Mechanical preparation removes laitance, exposing honeycombs or voids beneath the surface which must be filled with Dudick Inc Scratch-Coat 300.
3. Fiber Reinforced Coating: Protecto-Flex 100XT shall be an epoxy lining consisting of 1/16" trowel applied basecoat, one layer of fiberglass mat reinforcement, and a flake filled epoxy topcoat at 20 mils DFT.
4. Joints: Active expansion, construction and control joints are to be honored unless determined otherwise by the owner or project engineer. Joints and epoxy floor terminations are to be keyed and shall be sawed through the Coating system and filled with an appropriate Polysulphide flexible sealant. Such as Dudick Caulk 149

C. Installation (Materials Option #3)

1. **Priming vertical section/walls: Semstone 800 series primer shall be mechanically mixed and applied in accordance with manufacturer's printed instructions and applied uniformly at a film thickness of 8.0 to 10.0 dry mils DFT.**
2. **Restructuring and cove: Fill all bug holes, spalled areas, and surface imperfections. Prime with Semstone 800 series primer and allow to cure tack free. Blend 1 gallon of mixed Semstone 800 series primer with 1 gallon of an 80-120 mesh silica or Filler #47 and Semstone Thixotrope Part "D". Pour the blended Semstone 800 series primer at the base of the wall and work the material up into the form voids. Apply as a scratch coat and do not add any thickness. Provide a consistent 1" 45°chamfer or radius at the floor to wall juncture. Allow to cure a minimum of 12 hours before proceeding.**
3. **Semstone 870 Vertical System: Blend Semstone 870 with a fine 80-120 mesh Silica or Filler #47 @ a ratio of 1 part Semstone 870 – 1 part fine Silica aggregate by volume. NOTE: use 1 gallon units for vertical surfaces. Add Semstone Thixotrope Part "D" until the mixture hangs on a stir stick. Trowel apply @ 40 mils. Remove trowel marks with odorless mineral spirits on a clean trowel. For Chemical Service, allow to cure 48 hours @ 75ºF prior to putting the area in service. Note: Filler #47 to be used in place of silica to make mortar and for broadcast for Sodium Hypochlorite and Hydrofluosilicic Acid areas.**
4. **Fiber Reinforced Coating System on Horizontal Surfaces: Apply Semstone 870 at 20-25 mil with notched squeegee and medium nap roller. Unroll the scrim cloth evenly and carefully. Embed into the wet basecoat. Overlap seams a minimum of 1-1/2". Insure that all wrinkles and air is removed and that the cloth conforms to the surface. Apply saturant coat of Semstone 870 at 30 mils. Broadcast the 20/40 mesh Silica or Filler #47 evenly and provide a dry beach sand appearance. Allow to cure until the system can support your weight without disrupting the base-coat. Once cured, remove all excess aggregate. Apply Semstone 870 top-coat @ 20 mils with flat squeegee and back-roll with a medium nap roller. Allow to cure a minimum of 48 hours @ 75 ºF prior to puting the area in service.**
5. **Joints: Active expansion, construction and control joints are to be honored unless determined otherwise by the engineer. Joints and epoxy floor terminations are to be keyed and shall be sawed through the Coating system and filled with an appropriate Polysulphide flexible sealant.**

D. Job Standard: Prior to commencing the installation, the contractor shall install, with the owner's approval, a mutually agreed upon test sample to show final color and appearance of the system. This test area shall serve as a job standard for the final installation.

E. Cleanup: Remove waste materials, rubbish, and debris and dispose of them at the owner's direction. Leave work areas in a clean condition.

F. Protection

1. Protect the completed work from water, airborne particles or other surface contaminants until cured for a minimum of 24 hours after application.
2. Protect from traffic, physical abuse, immersion and chemical exposure until the complete system has thoroughly cured for the minimum equivalent of 24 hours at 75°F. For different temperatures, consult the manufacturer's representative about curing times.

3.3 CONTRACT CLOSEOUT

THIS SECTION IS BEING REVISED AND REISSED AS PART OF ADD #2

A. Provide in accordance with Section 01 7700.

END OF SECTION 09 9673

THIS SECTION IS BEING REVISED AND REISSED AS PART OF ADD #2

SECTION 40 2319.01

PIPE SUPPORTS

PART 1 - GENERAL

1.1 DESCRIPTION:

A. Design, and provide a complete system of pipe supports with inserts, bolts, nuts, restraining and hanger rods, washers, miscellaneous steel, sliding Teflon plates, and accessories as indicated and specified. The term pipe support includes hangers, guides, restraints, anchors and saddles.

B. Provide all support systems and the design of all support systems for all piping as specified herein. The Contractor shall provide pipe support locations, configurations and details through accepted shop drawing submittals stamped by a Registered Professional Engineer as specified herein.

C. The Contractor shall be responsible for the proper design, fabrication, location, shop drawings and installation of all pipe supports in accordance with the specified requirements.

D. Pipe support locations and types for piping 1/2-inch (13 mm) and larger shall be determined by the Contractor using the guidelines for support spacing specified herein and other criteria contained in this pipe support specification. Guidelines for pipe supports may need to be adjusted based upon field coordination, field routing, or other considerations outlined herein such as structural load limits. The Contractor may revise the pipe support locations and details through accepted shop drawing submittals stamped by a Registered Professional Engineer as specified herein. The Contractor is responsible for the proper design, installation and fabrication of all pipe supports in accordance with the specified requirements. For pipe supports 1/2 inch (13 mm) and larger pipe support shop drawings together with a marked up piping drawing showing support number, location and typical type shall be submitted by the Contractor for acceptance.
   1. The Contractor shall be responsible for coordinating all pipe support designs for all trades to ensure compliance with all of the requirements of this specification, including but not limited to the total limitations specified herein.

E. Design and provide all temporary pipe supports required during installation and testing.

1.3 SUBMITTALS:

A. Submit the following in accordance with Division 01, Section "Submittal Procedures":
   1. Pipe support drawings specified herein and including data for accessory items for acceptance prior to fabrication. The Contractor shall submit pipe support coordination drawings including all piping and pipe supports for all trades.
      a. Detailed drawing of the device with dimensions.
      b. A table of applied forces and moments.
      c. A complete bill of materials.
      d. A unique identification and revision level.
      e. Stamp of a Registered Professional Engineer, registered in the state where this project is being constructed, experienced in pipe support design and pipe stress analysis as specified herein.

ADD #2

      f. Detailed connections to ~~**existing**~~ supporting structure**s along with resulting loads to structure**.
      g. Indicate all welds, both shop and field, by Standard Units of Measurement as specified in AWS D1.1.
   2. Welding Procedure: Submit description required to illustrate each welding procedure to be performed in the specified work.
   3. Welding Equipment: Submit descriptive data for welding equipment, including type, voltage and amperage.
   4. Qualification for Welders: Provide certification that welders to be employed in work have satisfactorily passed AWS or ASME qualification tests. If recertification of welders is required, retesting is the Contractor's responsibility at no additional cost to the Owner.
   5. Pipe support manufacturers' qualifications as specified herein.
      a. List of at least five (5) successful pipe support projects and current addresses and telephone numbers of persons in charge of representing the owner or the owner of those construction projects during the time of pipe support design, fabrication and installation.
      b. Qualification of manufacturers' Registered Professional Engineer, registered in the state where this project is being constructed, who stamps and seals shop drawings and designs.
   6. Coordination drawings for pipe supports shall include as a minimum the following information.
      a. Coordination drawings shall include all pipe supports covered by specifications.

b. These coordination drawings will be used by the Contractor to ensure that the pipe supports do not obstruct access, access for equipment operation or removal including all mechanical and electrical equipment, panels, valves, gauges, and instrumentation.
c. The Contractor shall be responsible for including and coordinating the work of all subcontractors into the coordination drawings.
d. Prepare reproducible coordination drawings, indicating equipment, piping, valves, expansion joints, ductwork, conduit, cable trays, junction boxes, lighting fixtures, sleeves, inserts, embedments, supports, hangers and appurtenances at not less than 1/4-inch (5 mm) scale. Drawings shall show beams, columns, ceiling heights, wall, floors, partitions and structural features as indicated on the contract drawings. Individual pipes and conduit 2-inches (50 mm) or less in diameter that will be field routed need not be shown on coordination drawings.
e. Coordination drawings shall include large-scale details as well as cross and longitudinal sections required to fully delineate all conditions. Particular attention shall be given to the location, size, and clearance dimensions of equipment items, shafts, operators and necessary maintenance access.
f. Make all minor changes in duct, pipe or conduit routings that do not affect the intended function, but items may not be resized or exposed items relocated without the approval of the Engineer. No changes shall be made in any wall locations, ceiling heights, door swings or locations, window or other openings or other features affecting the function or aesthetic effect of the building. If conflicts or interferences cannot be resolved, the Engineer shall be notified. Any problems of coordination that require architectural or structural changes of design shall be submitted to the Engineer for resolution.
g. After the reproducible drawings have been coordinated and all changes have been made, the drawings shall be signed by the Contractor and all subcontractors indicating that all work on that drawing has been coordinated with all associated vendors and subcontractors and all conflicts have been resolved.
h. Relocation of any duct, pipe, conduit or other material that has been installed without proper coordination among all trades shall be performed at no additional cost to the Owner.

7. Written notification of any deviations from the requirements of this specification.
8. Support documentation and justification as specified.
9. Certificates of Design signed by a Registered Professional Engineer for all pipe supports.
10. Manufacturer's product data and specifications for shop painting.

B. Material Certification:
1. Provide certification from the manufacturer that the materials of construction specified are recommended and suitable for the service conditions specified and indicated. If materials other than those specified are proposed based on incompatibility with the service conditions, provide technical data and certification that the proposed materials are recommended and suitable for the service conditions specified and indicated including an installation list of a minimum of five (5) installations in operation for a minimum of five (5) years. Provide proposed materials at no additional cost to the Owner.
2. Where materials are not specified, provide technical data and certification that the proposed materials are recommended and suitable for the service conditions specified and indicated.

C. A copy of the contract mechanical process, and structural drawings, with addenda that are applicable to the equipment specified in this section, marked to show all changes necessary for

the equipment proposed for this specification section. If no changes are required, mark all drawings with "No changes required" or provide a statement that no changes are required.

1. Failure to include all drawings or a statement applicable to the equipment specified in this section will result in submittal return without review until a complete package is submitted.
2. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance or marked and indexed to indicate requested deviations and clarifications from the specified requirements.
    a. If deviations and clarifications from the specifications are indicated, therefore requested by the Contractor, provide a detailed written justification for each deviation and clarification.
    b. Failure to include a copy of the marked-up specification sections and or the detailed justifications for any requested deviation or clarification will result in submittal return without review until marked up specifications and justifications are submitted in a complete package.

1.4 QUALITY ASSURANCE:

A. Provide in accordance with Division 01, Section “Quality Control”.

B. Provide manufacturer's certification in writing, that materials meet or exceed minimum requirements as specified.

C. Welder Qualifications:
1. Quality and certify welding procedures, welders, and operators in accordance with ANSI B31.1, paragraph 127.5 for shop and project site welding of piping work.

D. Pipe supports: All supports and parts shall conform to the latest requirements of the Code for Pressure Piping ASME/ANSI B31.1 and Manufactures Standardization Society (MSS) Standard Practice SP-58, SP-69, SP-89 and SP-90 except as supplemented or modified by the requirements of this specification.

E. Structural Concrete: Conform to the requirements of Section 03 30 00. Concrete strength: 4,000 PSI (28 MPa) unless noted otherwise.

F. Conform to the requirements of the latest edition of the AISC Manual of Steel Construction for miscellaneous and supplementary steel. Tube steels are ASTM A500 Grade B, structural shapes A36, plates A-572 or equal. Stainless steel structural members shall conform to ASTM requirement Type 316L.

G. Pipe Support Manufacturer Qualifications:
1. Must possess a written quality assurance program.
2. Have a minimum of 5 years experience in the design and fabrication of pipe supports.
3. Have completed the design and fabrication of at least 5 successful pipe support projects of equal size, complexity, and systems as this project within the past 10 years.
4. Retains the services of a Registered Professional Engineer, registered in the state where this project is being constructed, with a minimum of ten years experience in the design of piping systems and pipe supports.
5. Manufacturers' Standardization Society (MSS) Member.

6. Have a field service technician on staff with at least 5 years experience in resolving field installation, interference and interface problems associated with the design, installation and manufacture of pipe supporting components.

H. Hanger inspections shall be performed in accordance with MSS-SP-89 and ASME B31.1.

1.5 DELIVERY, STORAGE AND HANDLING:

A. Comply with the requirements specified in Division 01, Section "Product Requirements".

PART 2 - PRODUCTS

2.1 MATERIALS:

A. 316L Stainless Steel Supports: All submerged piping, piping within tanks/wet wells, and outdoor piping shall be supported with support, assemblies, including framing, hardware, and anchors, constructed of 316L SST, unless otherwise indicated.

B. FRP Supports: All piping with chemical feed rooms and all piping carrying chemicals shall be supported with assemblies including framing, hardware, and anchors constructed of FRP, unless otherwise indicated. 316L SST supports are an acceptable alternate.

C. Hot Dipped Galvanized Steel Supports: Unless otherwise indicated, all other pipe support assemblies, including framing, hardware, and anchors, shall be of hot dipped galvanized steel construction.

D. Provide only new material. Previously used and/or scrap material is not acceptable.

E. Provide tube steels that are ASTM A500 Grade B, Structural shapes A-36, plates A-572 or equal.

F. Provide sliding Teflon plates. The sliding surfaces shall be a nominal 3/8-inches (10 mm) glass filled Teflon bonded to stainless steel backup plate with a 10 gauge minimum thickness. The bearing pad upper and lower units shall be as follows: Conslide Type CSA elements as manufactured by Con-Serv. Inc., Balco TFE Slide Bearing Plates 10N-cs as manufactured by Balco Inc., or Dynalon Slide Bearings as manufactured by JVI, Inc. or acceptable equivalent product.
   1. The blended TFE material used for this bearing shall be composed of virgin (unreprocessed) TFE resin tested per ASTM D1457 and reinforcing agents milled glass fibers. This structural material shall have the following representative mechanical and physical properties:
   2. Tensile strength -2,000 psi (14 MPa).
   3. Elongation -225 percent
   4. Specific Gravity -2.17 to 2.22
   5. The coefficient of friction shall average 0.06 under compressive load of 2,000 psi (14 MPa).
   6. The compressive creep shall be a minimum of 2 percent at 2,000 psi (14 MPa) and 70 degrees F (21 degrees C).
   7. The elements shall be flat, clean and prepared for installation in the structure. Slots and holes shall be fabricated in the bearing manufacturer's plant.

THIS SECTION IS BEING REVISED AND REISSED AS PART OF ADD #2

ADD #2

G. Concrete anchor **systems. Comply with the requirements of Seciton 05 0533, Anchor Systems.** ~~**bolts - Hilti Kwik-Bolt II Stud Anchors, Rawl Bolt, Phillips Wedge Anchors, or equal.**~~

2.2 DESIGN, LOCATION, AND TYPE OF PIPE SUPPORTS:

A. Design and provide pipe supports for piping 1/2-inch (13 mm) and larger to include the following loads:
   1. Gravity Force: This force includes the weight of pipe, pipe contents (hydro load), valves, in-line equipment, insulation and any other weight imposed on the piping and/or pipe support.
   2. Thermal Expansion Force: This force is developed by the restraint of free end displacement of the piping due to thermal growth.
   3. Hydrostatic/Dynamic Forces: These forces are developed due to the internal pressure (positive and negative) during operation of the piping system. These forces include the forces due to water hammer, pressure pulses due to rapid valve closure, fluid discharge resulting from pump startup, operation of positive displacement pumps, etc.
   4. Wind Loadings: Wind loadings.

B. Provide supports, guides, anchors, flexible couplings and expansion joints in accordance with the coupling and joint manufacturers' specifications and requirements.

C. For all pump suction and discharge nozzles provide an anchor located between the pump nozzles and the nearest expansion joint or non-rigid coupling.

D. Where possible, provide pipe supports, which are the manufacturers' standard products.
   1. Provide pipe supports with individual means of adjustment for alignment.
   2. Provide pipe supports complete with appurtenances including locking and adjusting nuts.
   3. Hanger rods shall be subjected to tension only.
   4. Where lateral or axial pipe movement occurs, provide hangers for the necessary swing without exceeding 4 degrees. Provide base supports designed using pipe slides. The bearing surfaces: 0.06 coefficient of friction or less.
   5. Provide concrete inserts capable of supporting the design loads.
   6. Metal framing systems will be acceptable to support piping 2 inch (50 mm) and smaller.
   7. Provide insulated piping supported using rigid load bearing insulation (baton board type) with 16 gauge (1.5 mm) shields to fit between the insulation and the support. Shields to encompass a minimum 1/3 of the pipe circumference and be 12 inch (300 mm) in length.
   8. Provide load-bearing insulation capable of supporting the load, as a minimum on the bottom 60 degrees of the pipe support. Cope insulation and adjust to avoid interference of steel structures.
   9. Provide supplementary steel as needed.
   10. Do not support pipes from other pipe, conduits or metal stairs.
   11. Chain, strap, T-bar, perforated bar and/or wire hangers are not acceptable.
   12. Contact between piping and dissimilar metals such as hangers, building structural work or equipment subject to galvanic action is not acceptable.
   13. All pipe supports located in fluid flow shall be supplied with double nutting.

E. Provide thrust anchors to resist thrust where required. Wall pipes may be used as thrust anchors if so designed. Welded attachments shall be of material comparable to that of the piping, and designed in accordance with governing codes.

F. Provide expansion joints where indicated and where required based on Contractor's design of the pipe support system. Indicate expansion joints on submittal drawings.

G. For piping 2-inch (50 mm) and smaller provide manufacturer's standard supports and standard spacing guidelines

ADD #2

~~**H. Pipe supports connected to structural framing and slabs are subject to the following limitations:**~~

~~**1. Less than 100 lb horizontal load per support.**~~

~~**2. Vertical loads not to exceed an average of 100 P.S.F. for slabs, with a maximum vertical load per hanger of 2,500 lbs.**~~

~~**3. Maximum of one pipe support per foot of slab width perpendicular to the span.**~~

~~**4. Piping not supported from floors by metal framing must meet the limitations as specified above.**~~

H. Pipe supports connected to structural framing and slabs are subject to the following requirements and restrictions:

1. Where possible, subject to these requirements, piping shall be supported from above. If supporting from above is not possible due to these requirements, piping may be supported from below.

2. Piping 24-inches and larger shall not be hung directed from the 12-inch floor slab above. Overhead supports for these pipes must coincide with the location of floor beams above or they shall be supported from the foundation mat below.

3. Vertical loads not to exceed an average of 100 P.S.F. for slabs. Piping exceeding these requirements must be supported from the foundation mat below.

4. Piping not supported from floors by metal framing must meet the limitations as specified above.

~~**I. All outside above ground supports shall be Type 316L stainless steel as specified herein.**~~

J. Provide pipe supports that do not overload or over stress the piping, equipment, or structure that they are supporting or to which they are attached. Allowable pipe stress to be within ANSI B31.1 code allowable.

K. The Contractor shall provide the services of a field service technician (preferably from the pipe support manufacturer) to field coordinate the locations of supports and resolve interferences and conflicts encountered during installation.

2.3 FABRICATION:

A. Provide pipe supports formed in accordance with paragraph 5.1 of MSS-SP-58.

B. Providing welding in accordance with Structural Welding Code.

C. Provide dimensional tolerances as specified in MSS-SP-89.

D. Provide threading and tapping in accordance with MSS-SP-89.

2.4 SHOP PAINTING:

A. Primer and Finish Paint: Shop apply to all exterior ferrous surfaces, high solids epoxy in accordance with Division 09, Section “High Performance Coatings.”

B. Ferrous surfaces which are not to be painted shall be given a shop applied coat of grease or rust resistant coating.

C. Provide additional shop paint coating for touch-up to all surfaces after installation and testing is completed and equipment accepted.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install items in accordance with manufacturers' printed instructions and as indicated and specified herein.

B. Perform welding in accordance with Structural Welding Code:
1. Visually inspect welding while the operators are making the welds and again after the work is completed in accordance with AWS D1.1 Section 6.0. After the welding is completed, hand or power wire brush welds, and clean them before the Qualified Inspector makes the check inspection. The Qualified Inspector shall inspect welds with magnifiers under light for surface cracking, porosity, and slag inclusions; excessive roughness; unfilled craters; gas pockets; undercuts; overlaps; size and insufficient throat and concavity. The Qualified Inspector shall inspect the preparation of grove welds for throat opening and for snug positioning for back-up bars.
2. Nondestructive evaluation of welds connecting structural steel members subjected to critical stresses: Perform in accordance with the weld quality and standards of acceptance in AWS D1.1.
3. Magnetic Particle Inspection: Perform in accordance with ASTM E709.
4. Liquid Penetrant Inspection: Perform in accordance with ASTM E165.
5. For weld areas containing defects exceeding the standards of acceptance in accordance with AWS D1.1, Section 3.7. Provide additional testing of the repaired area at no additional cost to the Owner.
6. Test Locations: As selected by the Engineer.
7. Correct any deficiencies detected as directed by the Engineer at no additional cost to the Owner.

C. Proceed with the installation of the pipe supports only after required building structural work has been completed and concrete support structure has reached its 28-day compressive strength as specified in Division 03, Section “Cast-in-Place Concrete.”

D. Install pipe supports to comply with MSS-SP-89. Group parallel runs of horizontal piping to be supported together on trapeze type hangers.

E. Install pipe supports to provide indicated pipe slopes. Do not exceed maximum pipe deflection allowed by ANSI B31.1.

F. For exposed continuous pipe runs, install pipe supports of same type and style as installed for adjacent similar piping.

G. Install pipe supports to allow controlled movement of piping systems. Permit freedom of movement between pipe anchors, and facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

H. Piping to be free to move when it expands or contracts except where fixed anchors are indicated or required by the Contractor's pipe support systems. Where hanger rod swing length cannot be provided or where pipe movement based on expansion of 1 inch/100 feet (10 mm/10 m), for each 100 degrees F (50 degrees C) change in temperature exceed 1/2-inch (13 mm), provide sliding supports.

I. Prevent contact between dissimilar metals. Where concrete or metal support is used, place 1/8-inch (3 mm) thick Teflon, neoprene rubber, or plastic strip under piping at point of bearing. Cut to fit entire area of contact between pipe and pipe support.

J. Prevent electrolysis in support of copper tubing by use of pipe supports which are plastic coated. Electrician's tape is not an acceptable isolation method.

K. Apply an anti-seize compound to nuts and bolts on all pipe supports.

L. Locate reinforcing steel in concrete structure with x-ray prior to drilling for embedment plates and anchor bolts. Avoid contact or interference with reinforcing steel.

3.2 INSTALLATION OF BUILDING ATTACHMENTS:

A. Support piping from structural framing, unless otherwise indicated.

B. Concrete Inserts:
1. Use existing embedded concrete items whenever possible.
2. Use expansion anchors only when existing embedded attachment points are not available or unsuitable. Attach to hardened concrete or completed masonry.

3.3 THRUST ANCHORS AND GUIDES:

A. Thrust Anchors:
1. Center thrust anchors between expansion joints and between elbows and expansion joints for suspended piping. Anchors must hold pipe rigid to force expansion and contraction movement to take place at expansion joints and/or elbows and to preclude separation of joints.
2. Restraining rod size and number shall be as indicated and adhere to manufacturers recommendations as a minimum.

B. Pipe guides: Provide adjacent to sliding expansion joints in accordance with recommendations of the National Association of Expansion Joint Manufacturers and the specific joint manufacturer.

3.4 PIPE SUPPORTS:

A. Where piping of various sizes is to be supported together, space supports for the largest pipe size and install intermediate supports for smaller diameter pipes.

B. Provide minimum of two pipe supports for each pipe piece.

C. Where pipe connects to equipment, support pipe independently from the equipment. Do not use equipment to support piping.

D. Provide pipe supports so that there is no interference with maintenance or removal of equipment.

E. Unless otherwise indicated or authorized by the Engineer, place piping running parallel to walls approximately 1-1/2 inch (40 mm) out from face of wall and at least 3 inches (75 mm) below ceiling.

F. Pedestal pipe supports: adjustable with stanchion, saddle, and anchoring flange. Provide grout between baseplate and floor.

G. Piping supports for vertical piping passing through floor sleeves: use hot dipped galvanized steel riser clamps.

H. Support piping to prevent strain on valves, fittings, and equipment. Provide pipe supports at changes in direction or elevation, adjacent to flexible couplings, adjacent to non-rigid joints, and where otherwise indicated. Do not install pipe supports in equipment access areas or bridge crane runs.

I. Stacked horizontal runs of piping along walls may be supported by metal framing system attached to concrete insert channels.

J. Do not support piping from other piping.

K. Designs generally accepted as exemplifying good engineering practice, using stock or production parts, shall be utilized whenever possible.

L. Whenever possible, pipe attachments for horizontal piping shall be pipe clamps.

M. All rigid rod hangers shall provide a means of vertical adjustment after erection.

N. Where the piping system is subjected to shock loads, such as disturbances due to pump discharge or thrust due to actuation of safety valves, hanger design shall include provisions for rigid restraints or shock absorbing devices.

O. Hanger rods shall be subject to tensile loading only. At hanger locations where lateral or axial movement is anticipated suitable linkage shall be provided to permit rod swing.

P. Hanger spacing shall not exceed the spacing listed below:
   1. In the case of concentrated loads the supports shall be placed as close as possible to the load to reduce the bending stress.
   2. Where changes in direction of the piping system occur between supports, the total length between supports shall be kept to less than three-fourths of the full span. When practical,

a support shall be placed immediately adjacent to any change in direction of the piping system.

Q. Where practical, riser piping shall be supported independently of the connected horizontal piping. Pipe support attachments to the riser piping shall be riser clamp shear lugs. Welded attachments shall be of material comparable to that of the piping, and designed in accordance with governing codes. If friction is relied upon to support riser piping proper justification and documentation shall be submitted to ensure that enough friction force is provided to resist the applied loading.

R. Hanger components shall not be used for purposes other than for which they were designed. They shall not be used for rigging and erection purposes.

S. All threads shall be UNC unless otherwise specified.

T. TFE slide bearing plates with steel backup plates shall be stitch weld attachments to the structure. A 1/8-inch (3 mm) fillet weld, 1/2-inch (13 mm) long every 3 inches (75 mm) on center each side of an element shall be used unless otherwise indicated or specified by the manufacturers' written recommendations. Bearing elements with slots or holes shall be stitch welded in place for location. The TFE surfaces of the bearings shall be maintained clean and free from grit, dirt or grease.

3.5 INSULATED PIPING:

A. Attach clamps, including spacers (if any), to piping with clamps projecting through insulation; do not exceed allowable pipe stresses.

B. Where vapor barriers are indicated on water piping, install coated protective shields.

END OF SECTION 40 2319.01

TO ALL DOCUMENT HOLDERS:

Subject: WCWSD RARWTP Membrane Softening Upgrades

AECOM Job No.: 60551697

Enclosed herewith is a copy of Addendum No. 1 covering the subject project.

Please retain this with your Documents.

Sincerely,

AECOM

Matt Noelker

Matthew Noelker, P.E.

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
WCWSD RARWTP Membrane Softening Upgrades

1.1 GENERAL

A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.

B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.2 CLARIFICATIONS

A. The following is a list of clarifications regarding project documents. These clarifications include question received during the advertisement period:

Q: What date is the pre-bid meeting?
A: The pre-bid meeting is scheduled for May 12, 2020 @ 10:00 a.m. at the Richard A. Renneker Water Treatment Plant, 6193 Striker Road, Hamilton Township, Ohio.

1.3 PROJECT MANUAL

A. Section 00 2113 Instruction to Bidders
   1. Part 1.4.G – Revise “May 14” to read “May 12”.

DAVID G. YOUNG

ADVERTISEMENT FOR BIDS

Separate sealed bids will be received by the Clerk of the County Commissioners, Warren County, Ohio, 406 Justice Drive, Lebanon, Ohio 45036, until 11:00 AM, Thursday May 28, 2020, at the Office of the Warren County Commissioners, and then at said time bids will be opened and read aloud for the Richard A. Renneker Water Treatment Plant (RARWTP) Membrane Softening Upgrades Project.

Bid documents including terms, general conditions, supplemental conditions and specifications are available online at the Warren County's Website at
https://www.co.warren.oh.us/Commissioners/Bids/Default.aspx

Questions regarding the technical specifications shall be submitted electronically to the Engineer:
Miranda Scheitlin, EI
Miranda.scheitlin@aecom.com
614-600-5804

A non-mandatory pre-bid meeting has been scheduled for May 12, 2020 @ 10:00 a.m. at the Richard A. Renneker Water Treatment Plant, 6193 Striker Road, Hamilton Township, Ohio. The County will review the project requirements with potential bidders, and receive questions. A visit the project site will be conducted after the meeting. Contact the Warren County Commissioners Office at (513) 695-1250 should you need assistance in accessing the bidding information on the County web site.

The project generally consists of the construction of a membrane softening addition to the existing Richard A. Renneker Water Treatment Plant to treat 13.7 MGD (expandable to 22.0 MGD) of groundwater. Improvements include a new nanofiltration softening building complete with NF softening equipment, pumps, process piping, valves, degasifiers, chemical feed systems, al all associated architectural, structural, HVAC, plumbing, electrical, instrumentation and controls work shown on the plans.

The Engineer's opinion of probable construction cost is $26,856,000.

The Board of Warren County Commissioners reserve the right to accept the lowest and best bid, to reject all bids, and to waive any irregularities in bids.

By order of the Board of County Commissioners, Warren County, Ohio.

BOARD OF COUNTY COMMISSIONERS
WARREN COUNTY, OHIO

Resolution

Number 20-0545 *Adopted Date* April 14, 2020

ADVERTISE FOR BIDS FOR THE RICHARD A. RENNEKER WATER TREATMENT PLANT MEMBRANE SOFTENING UPGRADES PROJECT

BE IT RESOLVED, to advertise for bids for the Richard A. Renneker Water Treatment Plant Membrane Softening Upgrades Project for the Warren County Water and Sewer Department beginning April 27, 2020; and

BE IT FURTHER RESOLVED, to advertise said bid for one (1) week in a newspaper of general circulation two weeks prior to the bid opening date, and to advertise and make the bidding documents available on the County Internet Website, with bid opening to occur on May 28, 2020 @ 11:00 a.m.

Mr. Grossmann moved for adoption of the foregoing resolution, being seconded by Mrs. Jones. Upon call of the roll, the following vote resulted:

Mr. Young – yea
Mr. Grossmann – yea
Mrs. Jones – yea

Resolution adopted this 14th day of April 2020.

BOARD OF COUNTY COMMISSIONERS

Tina Osborne, Clerk

Cc: Water/Sewer (file)
OMB Bid file

SECTION 00 2113

INSTRUCTIONS TO BIDDERS

PART 1 GENERAL

1.1 GENERAL

A. Each Bidder shall include in the Bid a detailed account of its experience, skill, financial standing, and equipment available to perform the work. Each Bid must contain evidence of Bidder's qualification to do business in Ohio or covenant to obtain such qualification prior to award of the Contract.

B. The Owner may make investigations to determine the ability of the Bidder to perform the Work. When required, the Bidder shall present evidence of its experience in similar Work and that it has the necessary equipment and financial resources to provide materials and complete the Work in a satisfactory manner in the time specified.

C. No Bid will be accepted from, or Contract awarded to, any person, firm, or corporation in arrears or in default to the Owner upon any debt or Contract, or a defaulter as surety upon same, or has failed to perform faithfully any previous Contract with the Owner.

D. The Owner reserves the right to reject any Bidder who is in default on any debt or Contract or is a defaulter as surety upon same, or has failed to perform faithfully any previous Contract.

1.2 BIDDING DOCUMENTS

A. The Bidding Documents consist of all items listed in the Table of Contents. Requirements of any one item apply to the Work of all others. It is the responsibility of each Contractor and Subcontractor to review each Document in detail for Work of its trade and how the Work of other trades affects its Work.

B. Bidders shall use complete sets of Bidding Documents in preparing Bids. Neither the Owner nor the Engineer assumes responsibility for errors or misinterpretations resulting from the use of incomplete sets of Bidding Documents.

C. In making copies of the Bidding Documents available on the above terms, the Owner and the Engineer do so only for the purpose of obtaining Bids on the Work and do not confer a license or grant permission for any other use of the Bidding Documents.

D. Specification Sections are edited from a master with fixed numbers. Therefore, Section numbers may not run sequentially. 33 0577 may be followed by 33 3000, etc. Pages of each Section are numbered consecutively, starting with Page 1. Each Section ends with the statement: “END OF SECTION _____". If any pages are missing from the issued Documents, contact the Engineer for replacement. Each Bidder is responsible for all Work shown or specified, whether or not pages are missing from an issued Document.

E. The organization of the Specifications into Divisions, Sections and Articles, and the arrangement of Drawings shall not control the Contractor in dividing the Work among

Subcontractors or in establishing the extent of Work to be performed by any trade. Each Section may be used as a unit of Work, or Sections may be combined as a unit of Work or subdivided into several units of Work.

F. The captions, headings or titles in this Project Manual are for convenience only and in no way define, limit or describe the scope or intent of any provisions, paragraphs, Divisions, or Sections of this Project Manual.

1.3 CONTRACT REQUIREMENTS

A. Type of Contract: Lump sum proposal.

B. Liquidated Damage: Refer to Division 01 Section "Supplementary Conditions".

C. Contract Completion: Refer to Section 00 5215, "Agreement between Owner and Contractor" for completion date requirements for substantial and final completion.

1.4 PREPARATION OF BIDS

A. General: The following items shall be used without variation by all Bidders and submitted with the Bid.
   1. Section 00 2113, "Instructions to Bidders". (for information only)
   2. Section 00 4113, "Bid Form".
   3. Section 00 4313, "Bid Security".
   4. Section 00 4325, "Substitution Request Form". (optional)
   5. Section 00 4333, "Proposed Products Form".
   6. Section 00 4336, "Proposed Subcontractor's Form".
   7. Section 00 4513, "Bidder's Qualifications".
   8. Section 00 4515, "Ohio EPA WSRLA Program Requirements"
      a. Contractor Equal Employment Opportunity (EEO) Certification
      b. Certification Regarding Debarment, Suspension, and Other Responsibility Matters.
      c. DBE Forms 6100-3 and 6100-4
      d. American Iron & Steel acknowledgement Form.
   9. Section 00 4519, "Non-Collusion Affidavit".
   10. Section 00 4529, "Personal Property Tax Disclosure Affidavit".
   11. Section 00 4539, "Finding's for Recovery Affidavit".
   12. Surety's Power of Attorney
   13. Certificate of Authorization to do business in Ohio (if applicable)

B. Fill in all blanks.

C. Bidders shall base their Bids on materials, equipment or processes specified.

D. Signatures
   1. Bids shall be signed with the name typed below the signature. If the Bidder is a corporation, Bid shall be signed with the legal name of the corporation, followed by the legal signature of an officer authorized to bind the corporation to a Contract. If other than a President or Vice President, a copy of authorization from the Board of Directors shall be attached. If the Bidder is a partnership, full names and addresses of each partner must be given and the Bid shall be signed by the number of partners required to bind the

partnership of the partners, using the term "Partner". If the Bidder is an individual, he shall use either the term "doing business as Builder" or "Sole Owner".

2. List the names and addresses of all parties financially interested in this Bid.

E. Bid Security

1. Each bidder shall submit with its bid a bid guaranty in the form of either a bond for the amount of 100 percent of the bid amount or a certified check, cashier's check, or letter of credit in the amount of 10 percent of the bid in accordance with Ohio Revised Code Section 153.54. The form of the bond shall be in accordance with the requirements of Ohio Revised Code Section 153.54.
2. The Bid security of Successful Bidder will be retained until such Bidder has executed the Agreement, furnished the required contract security and met the other conditions of the Notice of Award, whereupon the Bid security will be returned. If the Successful Bidder fails to execute and deliver the Agreement and furnish the required contract security within 10 days after receipt of the Notice of Award, Owner may annul the Notice of Award and the Bid security of that Bidder will be forfeited. The Bid security of other Bidders whom Owner believes to have a reasonable chance of receiving the award may be retained by Owner until the earlier of the 7th day after the Effective Date of the Agreement or the 66th day after the Bid opening, whereupon Bid security furnished by such Bidders will be returned. Bid security with Bids which are not competitive will be returned within 14 days after the Bid Opening.
3. The Owner reserves the right to retain the Bid security of the three lowest Bidders until a responsible Bidder enters into Contract or until 90 days after Bid Opening Date, whichever is less.
4. If any Bidder refuses to enter into Contract, the Owner will retain its Bid Security as liquidated damages.

F. Questions and Answers: Should any Bidder find discrepancies, inconsistencies, ambiguities, errors, or obvious omissions in the Documents, or should it be in doubt as to meaning, Bidder shall notify Miranda Scheitlin at AECOM in writing by email (Miranda.scheitlin@aecom.com), who will send written instructions to all Bidders. Such notification must be received no later than 7 days before the bid date. The

1. Engineer will not be responsible for instructions not addressed in a formal addendum. Oral, written, electronic, or other interpretations or clarifications not issued in a formal addendum will be without legal effect.

G. A Pre-Bid Conference is scheduled for May 14, 2020 at 10 A.M. The meeting will be held at the Richard A. Renneker WTP (RARWTP), 6193 Striker Road, Maineville, Ohio. A tour of the visit of the project site will be conducted immediately after the meeting. It is highly recommended that all bidders attend this meeting.

H. Addendum

1. Bidders will be advised during the Bidding period by Addendum of additions or alterations to the Documents. Changes shall be included in the Work covered by the Bid and, in closing the Contract, will become a part thereof.
2. Bidders shall list on the Bid Form all addenda.

1.5 BIDDERS REPRESENTATION

A. Examination of Documents and Site

1. All Bidders shall visit the Site of the proposed Work during the Bidding period and shall inform themselves of all local conditions bearing on transportation, disposal, handling and storage of materials; other Work being performed; accessibility and general character of the Site; and extent of existing Work within or adjacent thereto.
2. The failure or omission of any Bidder to receive or examine any forms, instruments, or document, or to visit the Site and acquaint himself with conditions there existing shall in no way relieve any Bidder from any obligation with respect to its Bid.

B. Non-Collusion Affidavit: Complete in full the attached Non-Collusion Affidavit. Form shall be signed by the same person authorized to sign Bids.

C. Nondiscrimination In Employment
1. Contracts for Work under this proposal will obligate the Contractors and subcontractors not to discriminate in employment practices.
2. Bidders must, if requested, submit a compliance report concerning their employment practices and policies in order to maintain their eligibility to receive the award of the Contract.
3. Successful Bidders must be prepared to comply in all respects with the Contract Provisions regarding nondiscrimination.

D. License to do Business in Ohio: Corporations not chartered in Ohio shall include an affidavit executed by an officer of the corporation stating that the corporation has conformed with the provisions of the Revised Code of the State of Ohio and obtained a certificate authorizing it to do business in the State of Ohio. Certificates or copies of them shall be obtained from the office of the Secretary of State, Columbus, Ohio.

1.6 SUBMISSION OF BIDS

A. Submit Bids on or before the date stated in the Advertisement for Bids. No Bids will be considered after that time.

B. Submit the Bidding Package with forms completed and all necessary attachments in a sealed opaque envelope marked with:
1. Bidder's Name and Address
2. Signature of person signing the Bid
3. Project Name.

C. Deliver in person or send by mail, enclosed in a separate mailing envelope addressed to:

Warren County Board of Comissioners
406 Justice Drive
Lebanon, OH 45036

1. If mailed, enclose in a separate mailing envelope, mark "Bid Enclosed" on the face.

D. No oral or telegraphic Bids will be accepted.

E. Bids submitted early may be withdrawn by the Bidder by written request signed by the person signing the Bid. Such request must be received by the party receiving Bids prior to the Bid receipt deadline time.

F. If, within 48 hours after Bids are opened, any Bidder files a duly signed, written notice with Owner and promptly thereafter demonstrates to the reasonable satisfaction of Owner that there was a mistake in the preparation of its Bid, in accordance with the provisions of Section 9.31 of the Ohio Revised Code, that Bidder may withdraw its Bid and the Bid security will be returned. Thereafter, that Bidder will be disqualified from further bidding on the work to be provided under the Contract Documents.

G. After 48 hours, no Bid may be withdrawn for 90 days after scheduled closing time for receipt of Bids.

1.7 CONSIDERATION OF BIDS

A. Bid Opening: Properly identified Bids received on time will be publicly opened and read aloud.

B. Rejection of Bids
   1. The Owner reserves the right to reject any or all Bids, and shall have no liability whatsoever to any Bidder whose Bid is not accepted.
   2. Bid Packages containing irregularities, conditional or obscure language, or additions not requested by the Bidding Documents may be rejected.

C. Acceptance of Bids: Acceptance of a Bid will not constitute an Agreement between the Owner and Bidder, and will not be binding upon the Owner unless and until an Agreement covering all conditions and provisions of the Work has been reduced to writing and executed by both parties.

D. Bids to Remain Subject to Acceptance: All bids will remain subject to acceptance for ninety (90) days after the day of the Bid opening, but Owner may, at its sole discretion, release any Bid and return the Bid security prior to that date.

E. Low bidder will be determined by base bid, plus allowances, plus/minus any Owner selected alternates.

1.8 AWARD OF CONTRACT

A. Owner reserves the right to reject any or all Bids, including without limitation the rights to reject any or all nonconforming, nonresponsive, unbalanced or conditional Bids and to reject the Bid of any Bidder if Owner believes that it would not be in the best interest of the Project to make an award to that Bidder, whether because the Bid is not responsive or the Bidder is unqualified or of doubtful financial ability or fails to meet any other pertinent standard or criteria established by Owner. Owner also reserves the right to waive all informalities not involving price, time or changes in the Work and to negotiate contract terms with the Successful Bidder. Discrepancies between the multiplication of units of Work and unit prices will be resolved in favor of the unit prices. Discrepancies between the indicated sum of any column of figures and the correct sum thereof will be resolved in favor of the correct sum.

B. In evaluating Bids, Owner will consider the qualifications of Bidders, whether or not the Bids comply with the prescribed requirements, and such alternates, unit prices, and other data as may be requested in the Bid Form or prior to the Notice of Award.

C. Owner may consider the qualifications and experience of Subcontractors, Suppliers, and other persons and organizations proposed for those portions of the Work to which the identity of Subcontractors, Suppliers, and other persons and organizations must be submitted as provided

in the Supplementary Conditions. Owner also may consider the operating costs, maintenance requirements, performance data and guarantees of major items of materials and equipment proposed for incorporation in the Work when such data is required to be submitted prior to the Notice of Award.

D. Owner may conduct such investigations as Owner deems necessary to assist in the evaluation of any Bid and to establish the responsibility, qualifications, and financial ability of Bidders, proposed Subcontractors, Suppliers, and other persons and organizations to perform and furnish the Work in accordance with the Contract Documents to Owner's satisfaction within the prescribed time.

1.9 SUBSTITUTE AND "OR-EQUAL" ITEMS

A. The Contract, if awarded, will be on the basis of materials and equipment described in the Drawings or specified in the Specifications without consideration of possible substitute or "or-equal" items. Whenever it is indicated in the Drawings or specified in the Specifications that a substitute or "or-equal" item of material or equipment may be furnished or used by Contractor if acceptable to Engineer, application for such acceptance will not be considered by Engineer until after the successful Contractor has been determined. The procedure for submission of any such application by Contractor and consideration by Engineer is set forth in the General Conditions, and as follows.

B. Substitution of Manufacturers
   1. Those articles, devices, materials, forms of construction fixtures, equipment, process or manufacturers named in the Specifications to denote the kind and quality required, whether or not the words "or equal" are used, shall be known as "standards".
   2. Where two or more "standards" are named together, the successful Bidder may furnish one of the "standards" named.
   3. Bidders desiring consideration for the use of material, equipment, etc. not named in the Specifications may submit the "Substitution Request Form" with the Proposal Form and listing for each change: (1) The "standard" specified, and the substitution, and (2) the deduct price associated with the proposed substitution. The price shall include all work associated with the proposed substitution, including but not limited to architectural, structural, electrical, engineering costs, and all related work.
   4. Substitutions will only be considered after the successful contractor has been determined. The successful contractor must submit complete specifications, samples, catalogs, data sheets, test results, and description of proposed substitutions within 3 days of notification to provide a sound basis for comparison with the specifications.
   5. The listing of substitutions at the time of bid is only required for those items listed on the Substitution Request Form. Substitutions for those items listed on the Substitution Request Form will only be considered if the proposed substitute is listed at the time of Bid. The offering and consideration of substitutions for other items may be made throughout the contract time.
   6. Any substitution which is accepted must be incorporated in the formal Contract by Change Order.

C. Substitution Request Form
   1. Bidders shall base their Bids on materials, equipment or processes described on the Drawings or specified in the Specifications without consideration of possible substitute or "or equal" items.

2. Bidders are invited to submit for consideration quotations for substitutes capable of performing the specified functions.
3. State on the Substitution Request Form submitted with the Bid the amount to be deducted from the amount of the Base Bid for each substitution of items listed.
4. When requested, submit complete specifications and descriptions of any items the successful bidder proposes to substitute, within 3 days of notification to do so.
5. Prior approval by Engineer is not required on items submitted on the Substitution Request Form.
6. Such substitutes will be accepted or rejected, and the Contract sum adjusted accordingly by Change Order.
7. After the Contract is awarded, no further substitutions will be permitted for the items listed, except as outlined on the Substitution Request Form.

D. Approval Process
1. The successful Contractor must submit complete specifications, samples, catalogs, data sheets, test results, and description of proposed substitutions to provide a sound basis for comparison with the specified items. Include a statement and explanatory Drawings showing all changes in related or adjacent Work. List every departure from the specified item.
2. The burden of proof is with the proposer of the substitution.
3. If, in the opinion of the Engineer, the item submitted does not meet with the intent of the design or is not equal to the item specified, it may disapprove it or, if it finds it in the interest of the Owner, it may approve such items submitted.
4. If the substitute is accepted, the Contractor shall pay all costs of extra labor and materials required by other Contractors and Subcontractors arising from the incorporation of substitutions into the Project, and provide additional Drawings as required by the Engineer. The substitution will be incorporated in the formal Contract by Change Order.

1.10 DECLARATION OF MANUFACTURER

A. The Drawings and Specifications have been designed around the manufacturer that is first listed in the Specifications for the item. This manufacturer shall be known as the Basis of Design.

B. Other acceptable manufacturers may be listed for each item. The Engineer has determined that similar equipment supplied by these additional manufacturers will be acceptable provided it will perform the necessary function, is of similar design, and meets the intent of the Contract Documents.

C. The bids submitted by the bidder must be based on one of the named manufacturers. Or equal, or other manufacturers must be included on the Substitution Request Form for consideration.

D. The bid forms contain a Proposed Products Form which must be completed for the items listed.

E. The bidder shall indicate, in the space provided, the manufacturer upon which it has based its bid, and the bidder agrees to supply equipment furnished by this manufacturer when performing the contract.

F. If the bidder fails to indicate which manufacturer it is basing its bid upon in the form, it is assumed, understood, and agreed that the bidder will furnish equipment supplied by the manufacturer listed as the "Basis of Design" for the particular equipment.

G. The declaration of manufacturers is only required for those items listed on the Proposed Products Form.

1.11 MINIMUM WAGE RATES

A. The minimum wage to be paid to all skilled labor, intermediate grade labor, and unskilled and common labor employed on this Project shall be in accordance with the Wage Determination ascertained and determined by the Ohio Bureau of Employment Services and subject to Federal Prevailing Wage Rates (Davis-Bacon Act).

B. The wage rates included herein are applicable as of the date of advertising for bids. However, Contractors must abide by the latest prevailing wage rate listing effective at the time of Bid opening and must update rates of wages paid to employees as changes in the wage rates occur. Contractors shall submit certified copies of payrolls to the Owner as required by law.

1.12 SMALL BUSINESSES IN RURAL AREAS

A. This procurement is subject to the EPA policy of encouraging the participation of small businesses in rural areas. It is EPA policy that recipients of EPA financial assistance awards utilize the services of small businesses in rural areas (SBRAs), to the maximum extent practicable. The objective is to assure that such small business entities are afforded the maximum practicable opportunity to participate as subcontractors, suppliers and otherwise in EPA-awarded financial assistance programs. This policy applies to all contracts and subcontracts for supplies, construction, and services under EPA grants or cooperative agreements. Small purchases are also subject to this policy.

1.13 POST-BID REQUIREMENTS

A. Contract Forms
   1. The following Contract Forms will be provided by the Engineer and shall be used without variation by the selected Bidder:
      a. Owner-Contractor Agreement
      b. Contract Bond (Performance and Payment Bonds)
         1) The Bidder shall deliver the required bonds to the Owner not later than 10 days following the date of receipt of the Notice of Award.
         2) If the Work is to be commenced prior thereto in response to a letter of intent, the Bidder shall, prior to commencement of the Work, submit evidence satisfactory to the Owner that such bonds will be furnished and delivered in accordance with this Subparagraph.
      c. MBE/WBE Form 5700-52A.
   2. Copies of each form will be furnished to the selected Bidder.

B. Submittals
   1. Comply with Division 01 Section “Submittal Procedures”.
   2. Submit the following items prior to Contract signing:
      a. Contract Bond (Performance and Payment Bonds)
   3. Lack of submission or an untimely submission shall be considered a Nonresponsive Bid and such Bid may be rejected.

Terracon Project No. N1195378

Dear Mr. Noelker:

We have revised our preliminary geotechnical report for the proposed expansion of the Renneker Water Treatment Plant (RARWTP) dated May 24, 2019. Our supplemental services were performed in general accordance with Terracon Proposal No. PN1195380 dated October 31, 2019 and authorized on November 6, 2019. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork and the design and construction of foundations and floor slabs for the proposed project.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,
Terracon Consultants, Inc.

Geotechnical Engineering Report

RARWTP Membrane Softening Upgrades

6391 Striker Road

Maineville, Warren County, Ohio

Terracon Project No. N1195378

Preliminary Report issued on May 24, 2019

Revised on January 7, 2020

INTRODUCTION

This report presents the results of our subsurface exploration and geotechnical engineering services performed for the proposed Renneker Water Treatment Plant (RARWTP) improvement project located at 6391 Striker Road in Maineville, Warren County, Ohio. The purpose of these services is to provide geotechnical engineering recommendations relative to:

- subsurface soil and rock conditions
- site preparation and earthwork
- floor slab design and construction
- general pavement subgrade design parameters
- short-term groundwater conditions
- foundation design and construction
- seismic site classification per IBC

The geotechnical engineering Scope of Services for this improvement included the advancement of six test borings (2R to 7R) to depths ranging from approximately 27 to 33.8 feet below existing site grades within the proposed development area. In addition, one boring (1R) was drilled to a depth of approximately 31.5 feet below existing site grades at the proposed cascade aerator location.

Maps showing the site and boring locations are shown in the **Site Location** and **Exploration Plan** sections, respectively. The results of the laboratory testing performed on select soil samples obtained from the site during the field exploration are included on the boring logs in the **Exploration Results** section.

SITE CONDITIONS

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly-available geologic and topographic maps.

Item	Description
Parcel Information	■ The project is located at 6391 Striker Road in Maineville, Warren County, Ohio. ■ Latitude: 39°20'46.66"N, Longitude: 84°14'28.86"W (approximate) ■ See **Site Location**
Existing Conditions	■ Existing WTP buildings and infrastructure associated with the existing high service pump station, UV disinfection systems, filters and detention tanks to the east of proposed expansion area. Based on review of historical aerial imagery, it appears that former buildings and associated pavements had been demolished sometime between 2006 and 2009. It is our understanding that the former building foundations were not completely and were partially demolished (up to 3-feet below existing site grades) and then abandoned in-place. ■ Little Miami River (into which cascade aerator is planned to discharge) with wooded area to the east.
Existing Topography (from Grading Plan provided)	■ Grades at the proposed WTP expansion area vary from an elevation of about 760 feet to 764 feet, mean sea level. ■ Grades at the cascade aerator location vary from an elevation of about 601 feet to 604 feet, mean sea level.
Site Geology	Based on NCRS soil map, surficial soils at the site are mapped as the Clermont and Cincinnati silt loam soils. Based on publicly-available bedrock geology maps, the overburden soils on site are underlain by the Ordovician age bedrock belonging to the Grant Lake and Fairview Formations" which consist of interbedded shale and limestone.

PROJECT DESCRIPTION

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated and our understanding of the project conditions is as follows:

Item	Description
Information Provided	■ All preliminary information for this project was provided via correspondence with Infrastructure & Development Engineering (IDE), Arcadis US, Inc. and AECOM, the provided scope document, and aerial maps/site plans. ■ Soil Boring Locations for RARWTP Membrane Softening Upgrades and Cascade Aerator prepared by AECOM (dated February 28, 2019). ■ RARWTP Membrane Softening Upgraded Drawing Set (Architectural, Civil and Structural) last plotted on October 25, 2019.

Item	Description
Project Description	■ It is planned to expand the existing treatment plant with a single-story NF membrane softening building (approximately 99' long x 88' wide) with a basement level, a tank (28' long x 54' long) and a chemical feed building and a generator pad (12' long x 50' long). ■ A concentrate disposal line will be installed connecting the NF membrane building to an outfall that will discharge into the Little Miami River with a cascade aerator at the headwall. Terracon already completed the test borings within the NF building footprint in April 2019. Please refer to Preliminary Geotechnical Engineering Report for RARWTP Membrane Softening Upgrades Report prepared by Terracon on May 24th, 2019.
Proposed Structure	Pre-engineered metal building with masonry walls.
Finished Floor Elevation (FFE)	■ Upper basement level FFE, to be supported on mat foundation: 759.67 feet, MSL ■ Lower basement level FFE, to be supported on mat foundation: 746.5 feet, MSL ■ Upper floor FFE at southwest corner of the building to be supported on conventional spread footings: 761 feet, MSL ■ Cascade aerator FFE, to be supported on conventional spread footings: 598 feet, MSL
Maximum Loads (From email conversation and drawings provided by Arcadis)	It is anticipated that the maximum building loads will be: ■ Columns: 50 to 250 kips ■ Walls: 2.5 to 5.5 kips per linear foot (klf) ■ Contact pressure for upper basement level mat foundation: 3,000 psf ■ Contact pressure for lower basement level mat foundation: 4,000 psf ■ Slabs: 100 to 300 pounds per square foot (psf) ■ Generator pad: 250 pounds per square foot (psf) Maximum loads for the cascade aerator were not provided to Terracon. Below grade portions of the NF Building will not incorporate a base drainage system. According to Aracadis, the buoyant forces will be balanced by the weight of the structures.
Grading/Slopes (Sheets C-12 and C-13)	Up to 8 feet of fill and minimal (less than 2-feet) cut will be required to achieve final site grades. Deeper cuts (about 6.5 to 16.5 feet) will be required within the proposed detention basin, NF building and tank areas.
Pavements	Asphalt pavement sections to match existing features.
Estimated Start of Construction	2020

GEOTECHNICAL CHARACTERIZATION

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of site preparation and foundation options. Conditions encountered at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** section and the GeoModel can be found in the **Figures** section of this report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	General Description
1	FILL	lean clay or sand, with gravel
2	LEAN CLAY	trace gravel and sand, reddish-brown/brown trace gray, soft to very stiff
3	LEAN CLAY (Brown glacial till)	with cobbles, some gravel and sand, light brown, hard
4	LEAN CLAY (Gray glacial till)	with cobbles, some gravel, sand and silt, gray, hard
5	SAND	trace gravel, fine to coarse grained, light brown, very loose to dense
6	INTERBEDDED SHALE AND LIMESTONE	Shale: brownish-gray to gray, extremely weak to weak, moderately weathered to unweathered Limestone: light gray, medium strong to strong, unweathered

Glacial till is a dense conglomerate of silt, clay, sand and gravel that has been mixed, deposited and consolidated by the actions of glacial ice movement. It is commonly encountered with cobble-size fragments and meltwater channel deposits of silt and sand. These channels occasionally transmit groundwater. Glacial till is typically over-consolidated due to its depositional method and was identified in two (2) distinct zones in the test borings. The uppermost zone of glacial till is brown in color and is typically visually classified as hard in consistency. The deeper glacial till is gray in color and also visually classified as hard.

The boreholes were observed while drilling and after completion for the presence and level of groundwater. The water levels observed in the boreholes can be found on the boring logs in **Exploration Results**. However, groundwater levels during construction or at other times in the life of the structure may be higher or lower than the levels indicated on the boring logs. Groundwater level fluctuations occur due to seasonal variations in the amount of rainfall, runoff and other factors not evident at the time the borings were performed. Perched groundwater is often

encountered at the fill/natural soil interfaces, within existing fill, within granular zones or seams amongst the glacial tills, at the overburden soil/bedrock interface or within seams, bedding planes or fractures within the bedrock. As a result, perched water could be encountered during construction. Some of the test borings for this study revealed the presence of interbedded sand layers and groundwater was observed in some of these layers. The presence of groundwater and quantity/rate of seepage within excavations in these layers will depend on several factors, including their hydraulic connectivity and regional hydrogeology. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project.

GEOTECHNICAL OVERVIEW

The test borings within the proposed WWTP development area (2R through 7R) encountered primarily cohesive soils. Cohesive and granular fill was encountered in Borings 4R, 5R and 6R (located within the footprint of former structures/building at the project site) up to depths ranging from about 4 to 12 feet. The overburden soils are underlain by bedrock at depths ranging from about 12 to 23 feet below existing site grades. Bedrock was not encountered at Boring 4R within the explored depth of approximately 31.5 feet.

Test Boring 1R at the proposed cascade aerator location encountered about 7.5 feet of cohesive soils underlain by silty sands/sand to the boring termination depth of approximately 31.5 feet. Bedrock was not encountered at Boring 1R within the explored depths.

In general, the upper 5 to 10 feet of the soil profile has a low stiffness/density. Since the NF Building will bear at multiple levels, both in and below this stratum of low stiffness, differential settlement may be a concern.

The near surface, soft to stiff cohesive soils and silty sands could become unstable with typical earthwork and construction traffic, especially after precipitation events. Effective drainage should be completed early in the construction sequence and maintained after construction to avoid potential issues. If possible, the grading should be performed during the warmer and drier times of the year. If grading is performed during the winter months, an increased risk for possible undercutting and replacement of unstable subgrade will persist. Additional site preparation recommendations, including subgrade improvement and fill placement, are provided in the **Earthwork** section.

Support of floor slabs and pavements on or above existing fill materials is discussed in this report. However, even with the recommended construction procedures, there is inherent risk for the owner that compressible fill or unsuitable material, within or buried by the fill, will not be discovered. This risk of unforeseen conditions cannot be eliminated without completely removing the existing fill but can be reduced by following the recommendations contained in this report. To take advantage of the cost benefit of not removing the entire amount of undocumented fill, the owner must be willing to accept the risk associated with building over the undocumented fills

following the recommended reworking of the material and extending foundations to bear in competent native soils.

The **Pavements** section addresses recommended pavement subgrade design parameters. The **Floor Slabs** section addresses slab-on-grade support of the building. The **Shallow Foundations** section addresses support of the building bearing on native at-least stiff clay, at-least medium dense sand or new engineered fill.

The **General Comments** section provides an understanding of the report limitations.

EARTHWORK

Earthwork is anticipated to include clearing and grubbing, excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria, as necessary, to render the site in the state considered in our geotechnical engineering evaluation for foundations, floor slabs, and pavements.

Site Preparation

Based on review of RARWTP Membrane Softening Upgrades Drawings (Sheet C-07), abandoned foundations for the former reaction tanks, filter beds, chemical building and pressure feed building are located within the proposed NF building footprint, about 3 feet below existing site grades. All existing/abandoned foundations elements or concrete pads remaining on-site should be completely excavated and removed. All existing underground utilities within the proposed building footprint should be removed or relocated at least 10-feet beyond of the perimeter of the proposed building. Any utilities to be abandoned should be removed or grouted full in-place to prevent future collapse, which could result in subsidence of overlying elements. Excavations created during these activities should be backfilled with structural fill, placed and compacted in accordance with the recommendations provided in this report, or with low-strength mortar otherwise known as flowable fill. If lean concrete is used as backfill, the contractor should refer to the Mechanical-Electrical-Plumbing (MEP) plan and foundation details for the new building to confirm that the concrete backfill material will not conflict with any new installations, floor slabs and utilities associated with the proposed building. Stripped gravel base material can be stockpiled for re-use. Unsuitable materials should be hauled off-site.

Prior to placing fill, existing vegetation and root mat should be removed. Complete stripping of the topsoil should be performed in the proposed building and parking/driveway areas. The stripped topsoil is not suitable for reuse as engineered fill and should be stockpiled for use in future landscape areas. All vegetation and any otherwise unsuitable material should also be removed from the construction areas prior to site grading. Because of the medium stiff consistency of the near surface soils, additional stripping/undercutting should be anticipated due to rutting of the

subgrade. Medium stiff natural cohesive soils were encountered immediately beneath the topsoil from depths ranging from about 1.5 to 7.5 feet below existing grades. The actual depth of soft soils will depend on the weather conditions prior to construction.

After stripping and grubbing, the subgrade should be proofrolled with a minimum 20-ton vehicle such as a fully-loaded tandem-axle dump truck. The proofrolling should be performed under the direction of the Geotechnical Engineer. Areas excessively deflecting under the proofroll should be delineated and subsequently addressed by the Geotechnical Engineer. Such areas should either be undercut and replaced or modified by chemical stabilization. Based on laboratory testing, natural moisture contents of the near surface soils were generally in the twenties to thirties (percent). These upper soils are not expected to pass the recommended proof-rolling tests in that condition and will likely require modification prior to placement of engineered fill or foundation, floor slab, or pavement construction.

Existing Fill

Existing fill was identified at test borings 5R and 6R (within proposed NF building footprint) at depths varying from about 4 to 12 feet. Based on the presence of organic, low-density and variable thickness of the fill material encountered, it is anticipated that the existing fill was placed with limited compactive effort and is not suitable for direct structural support. Based on the grading plan provided, it is our understanding that the FFE of basement level will be at El. 746.5 feet, which is about 16 to 18 feet below existing site grades. It is anticipated that existing fill within the NF building footprint will primarily be undercut during excavation to achieve design basement level, with an exception of the west side of the building footprint where shallower footings at El. 758.6 feet (about 4 feet below existing site grades) are planned.

Support of pavements and floor slabs on or above existing fill soils, is discussed in this report. However, even with the recommended construction procedures, there is inherent risk for the owner that compressible fill or unsuitable material, within or buried by the fill will, not be discovered. This risk of unforeseen conditions cannot be eliminated without completely removing the existing fill but can be reduced by following the recommendations contained in this report.

If the owner elects to construct floor slabs on the existing fill, the following protocol should be followed. Once the planned grading has been completed, the areas of existing fill should be undercut 2-feet within the building areas. Once materials have been removed, the entire area should be proofrolled with heavy, rubber tire construction equipment, to aid in delineating areas of soft or otherwise unsuitable soil. Once unsuitable materials have been remediated, and the subgrade has passed the proofroll test, the existing and undocumented fill that was removed can be evaluated for reuse as structural fill.

If the owner elects to construct pavements on the existing fill, the following protocol should be followed. Once the planned subgrade elevation has been reached the entire pavement area

should be proofrolled. Areas of soft or otherwise unsuitable material should be undercut and replaced with either imported granular fill or suitable, existing on site materials.

Fill Material Types

Fill required to achieve design grade should be classified as structural fill and general fill. Structural fill is material used below, or within 10 feet of structures, pavements or constructed slopes. General fill is material used to achieve grade outside of these areas. Earthen materials used for structural fill should meet the following material property requirements:

Soil Type [1]	USCS Classification	Acceptable Location for Placement
Low Plasticity Cohesive	CL (LL<40 & PI>15)	All locations and elevations
Moderately Plasticity Cohesive	CL (40<LL<50)	>3 feet below slab-on-grade or pavement
Granular	GW[2]	All locations and elevations where adequate drainage is provided.
On-site soils	Varies	The on-site soils can be reused as fill; provided they meet the aforementioned criteria. Significant moisture conditioning may be needed.

1. Structural fill should consist of approved materials free of organic matter and debris. Rock fragments should be limited to maximum 6-inch dimensions. Frozen material should not be used. Fill should not be placed on a frozen subgrade. A sample of each material type should be submitted to the Geotechnical Engineer for evaluation prior to use on this site. The suitability of excavated on-site soils should be evaluated in the field during construction.
2. Like ODOT No. 304 stone or crushed limestone aggregate or granular material such as sand, gravel or crushed stone containing no more than 18% low plasticity fines.

The over-excavation for the lower level basement at FFE 746.5 feet may be achieved using an open excavation with steepened side-slopes. If this is the case, this will result in an approximately 15-feet wide and approximately 14-feet deep wedge (below the portion of the NF building supported on the higher mat foundation at FFE of 759.67 feet) which will have to be backfilled to achieve design subgrade elevation. It is our recommendation that this wedge be backfilled with granular material meeting the criteria listed in the table above.

Fill Compaction Requirements

Structural and general fill should meet the following compaction requirements.

Item	Structural Fill
Maximum Lift Thickness	■ 8-inches or less in loose thickness when heavy, self-propelled compaction equipment is used ■ 4 inches in loose thickness when hand-guided equipment (i.e. jumping jack or plate compactor) is used
Minimum Compaction Requirements [1, 2, 3]	98% of the material's Standard Proctor maximum dry density (ASTM D 698) [1]
Water Content Range [1]	■ Low Plasticity Cohesive Soil (LPS): Within ±3% of optimum moisture content (OMC) as determined by the Standard Proctor test at the time of placement and compaction ■ Granular Material: Within ±2% of OMC/within workable moisture levels [2]

1. Should the results of the in-place density tests indicate the specified moisture or compaction limits have not been met, the area represented by the test should be reworked and retested as required until the specified moisture and compaction requirement are achieved.
2. Specifically, moisture levels should be maintained low enough to allow for satisfactory compaction to be achieved without the cohesionless fill material pumping when proofrolled.

Utility Trench Backfill

For low permeability subgrades, utility trenches are a common source of water infiltration and migration. Utility trenches penetrating beneath the building should be effectively sealed to restrict water intrusion and flow through the trenches, which could migrate below the building. The trench should provide an effective trench plug that extends at least 5 feet from the face of the building exterior. The plug material should consist of cementitious flowable fill or low permeability clay. The trench plug material should be placed to surround the utility line. If used, the clay trench plug material should be placed and compacted to comply with the water content and compaction recommendations for structural fill stated previously in this report.

Earthwork Construction Considerations

Shallow excavations for the proposed structure are anticipated to be accomplished with conventional construction equipment. Upon completion of filling and grading, care should be taken to maintain the subgrade water content prior to construction of floor slabs. Construction traffic over the completed subgrades should be avoided. The site should also be graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over or adjacent to construction areas should be removed. If the subgrade freezes, desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted prior to floor slab construction.

The subsurface profile at the site includes interbedded sand layers that could be water bearing. The magnitude and rate of seepage within excavations in these layers will depend on rainfall,

hydrogeology and hydraulic connectivity of these layers. Temporary excavation support may be necessary to stabilize excavation side walls and dewatering may be necessary to control seepage. The contractor is responsible for groundwater control during construction. The groundwater seepage could affect over-excavation efforts, especially for replacement of lower strength soils and basement excavation. A temporary dewatering system consisting of sumps with pumps could be necessary to achieve the recommended depth of over-excavation.

It is our understanding that the design groundwater level is being considered at El. 754 feet, which is about 7.5 feet above the lower basement level FFE. Arcadis will establish the level as the cut-off for buoyant forces to apply. Based on information provided by Arcadis, a perimeter foundation drain will be installed at an elevation of about 751.5 feet, creating a potential for up to 5-feet of hydrostatic pressure above the lower level basement floor. The backfill material surrounding the perimeter drains should consist of free-draining granular material (wrapped in geofilter material), with a minimum 2-feet thick clay cap just below existing site grades to reduce the infiltration of surface water into the backfill zone. Considerations must be given to providing cleanouts for the maintenance of the perimeter drain. With the provision of the perimeter drain, buoyancy/floatation of the basement is not considered to be a concern.

As a minimum, excavations should be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P, “Excavations” and its appendices, and in accordance with any applicable local, and/or state regulations.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for construction site safety, or the contractor's activities; such responsibility shall neither be implied nor inferred.

Grading and Drainage

All grades must provide effective drainage away from the proposed structures during and after construction and should be maintained throughout the life of the structure. Water retained next to the structures can result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential floor slab and/or foundation movements, cracked slabs and walls, and roof leaks. The roof should have gutters/drains with downspouts that discharge onto splash blocks at a distance of at least 10 feet from the building.

Exposed ground should be sloped and maintained at a minimum 5% away from the building for at least 10 feet beyond the perimeter of the building. Locally, flatter grades may be necessary to transition ADA access requirements for flatwork. After building construction and landscaping have been completed, final grades should be verified to document effective drainage has been achieved. Grades around the structure should also be periodically inspected and adjusted, as necessary, as part of the structure’s maintenance program. Where paving or flatwork abuts the

structure, a maintenance program should be established to effectively seal and maintain joints and prevent surface water infiltration.

Construction Observation and Testing

The earthwork efforts should be monitored under the direction of the Geotechnical Engineer. Monitoring should include documentation of adequate removal of vegetation and topsoil, proofrolling, and mitigation of areas delineated by the proofroll to require mitigation.

Each lift of compacted fill should be tested, evaluated, and reworked, as necessary, until approved by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the structural areas and 5,000 square feet in pavement areas. One density and water content test should be performed for every 50 linear feet of compacted utility trench backfill.

In areas of foundation excavations, the bearing subgrade should be evaluated under the direction of the Geotechnical Engineer. If unanticipated conditions are encountered, the Geotechnical Engineer should prescribe mitigation options.

In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer's evaluation of subsurface conditions, including assessing variations and associated design changes.

FOUNDATIONS

Mat Foundations

Based on information provided by AECOM, the basement level of the NF building is to be supported on a mat foundation with design bottom-of-foundation elevation at 744.5 feet. Majority of the western portion of the NF building will be supported on a shallower mat foundation with a design bottom-of-foundation elevation at 758.67 feet. The upper mat will be partially supported on the backfill of the lower level. The table below summarizes the estimated settlement and recommended design modulus of subgrade reaction for the mat foundations.

Item	Shallower Mat Foundation (FFE: 759.67 feet)	Deeper Mat Foundation (FFE: 745.5 feet)
Contact Pressure provided by Arcadis (psf)	3,000	4,000
Estimated Total Settlement (in)	1.5	1.0
Estimated Differential Settlement (in)	0.75	0.5
Modulus of Subgrade Reaction (psi/in)	13	28

These empirical estimates of settlement indicate a potential differential settlement of 0.5 inches. In order to mitigate this potential, the low-density soil zone can be entirely, or partially undercut and replaced with structural fill. This process may be simplified since the majority of the mat will be supported on the lower-level backfill. It is therefore critical that the backfill be properly placed as described herein and to the degree for structural support.

The generator pad to be located to the east of the NF building will be supported on a mat foundation (approximately 20' long x 50' long). Estimated total settlement of structure is anticipated to be less than 0.25-inches.

Spread Footings

For isolated column and wall footings of the chemical feed building and other ancillary structures, the table below summarizes the design parameters.

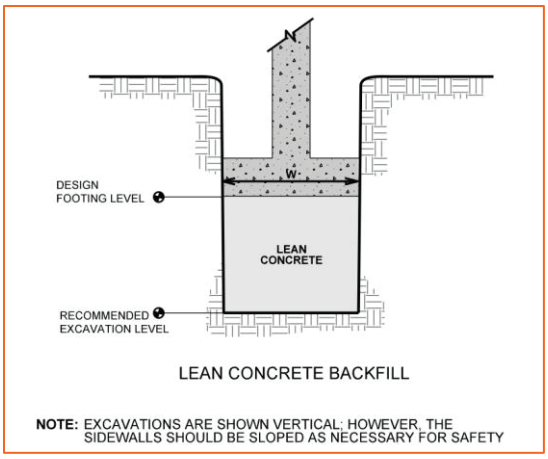
Item	Description
Allowable Bearing Pressure	■ At-least stiff native lean clay (Geomodel Layer No. 2): 3,000 psf ■ At-least stiff brown/gray glacial till (Geomodel Layer No.3 and Geomodel Layer No.4): 5,000 psf
Minimum Footing Dimensions for Spread Footings	■ Columns: 30 inches ■ Continuous: 18 inches
Ultimate Passive Resistance [2] **(equivalent fluid pressures)**	250 pcf
Ultimate Coefficient of Sliding Friction [3]	■ 0.35 (cohesive) ■ 0.45 (granular)
Minimum Embedment below Finished Grade [4]	■ Exterior footings: 30 inches (for frost protection) ■ Interior footings in heated areas: 12 inches
Estimated Total Settlement [1, 5]	Less than 1-inch
Estimated Differential Settlement [1, 5]	About 2/3 of total settlement

1. Values provided are for maximum loads noted in **Project Description**.
2. Use of passive earth pressures require the sides of the excavation for the spread footing foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the footing forms be removed and compacted structural fill be placed against the vertical footing face.
3. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Should be neglected for foundations subject to net uplift conditions.
4. Embedment necessary to minimize the effects of frost and/or seasonal water content variations. For sloping ground, maintain depth below the lowest adjacent exterior grade within 5 horizontal feet of the structure.
5. Differential settlements are as measured over a span of 50 feet for wall footings.

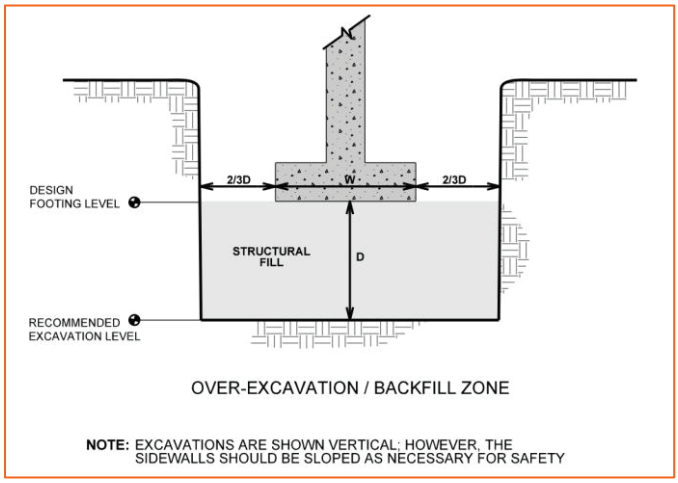
Foundation Construction Considerations

As noted in **Earthwork**, the footing excavations should be evaluated under the direction of the Geotechnical Engineer. The base of all foundation excavations should be free of water and loose soil, prior to placing concrete. Concrete should be placed soon after excavating to reduce bearing soil disturbance. Care should be taken to prevent wetting or drying of the bearing materials during construction. Excessively wet or dry material or any loose/disturbed material in the bottom of the footing excavations should be removed/reconditioned before foundation concrete is placed.

If unsuitable bearing soils (existing fill, soft to medium stiff clay or very loose to loose silty sand/sands) are encountered at the base of the planned footing excavation, the excavation should be extended deeper to suitable soils, and the footings could bear directly on these soils at the lower level or on lean concrete backfill (f'c min = 1,000 psi) placed in the excavations. This is illustrated on the sketch below.



If unsuitable existing soil are encountered up to depths greater than 1.5 times the footing width, consideration should be given to using compacted crushed stone backfill, up to the footing bearing elevation in leiu of using lean concrete. Over-excavation for compacted (as recommended in the **Earthwork** section) crushed stone fill placement below footings should be conducted as shown below. Consideration could also be given to using triaxial geogrid in the granular fill to improve compaction and performance of the granular fill. The lateral extension would allow for stresses distributed from the footings to dissipate laterally and with depth throughout the new structural backfill. This is illustrated on the sketch below.



SEISMIC CONSIDERATIONS

The seismic design requirements for buildings and other structures are based on Seismic Design Category. Site Classification is required to determine the Seismic Design Category for a structure. The Site Classification is based on the upper 100 feet of the site profile defined by a weighted average value of either shear wave velocity, standard penetration resistance, or undrained shear strength in accordance with Section 20.4 of ASCE 7 and the International Building Code (IBC). Based on the soil/bedrock properties encountered at the site and as described on the exploration logs and results, it is our professional opinion that the **Seismic Site Classification is C** at the proposed membrane softening building site and **Seismic Site Classification is D** at the proposed cascade aerator location. Subsurface explorations at this site were extended to a maximum depth of 33.8 feet. Most borings were terminated in bedrock with an exception of 1R and 4R. The site properties below the boring depth to 100 feet were estimated based on our experience and knowledge of geologic conditions of the general area. Additional deeper borings or geophysical testing may be performed to confirm the conditions below the current boring depth or to investigate the use of an improved site classification.

FLOOR SLABS

Depending upon the finished floor elevation, unsuitable, weak, soft to medium stiff soils or existing fill may be encountered at the floor slab subgrade level. These soils should be replaced with structural fill so the floor slab is supported on at least 2-feet of compacted suitable natural soils or structural fill. Design parameters for floor slabs assume the requirements for **Earthwork** have been followed. Specific attention should be given to positive drainage away from the structure and positive drainage of the aggregate base beneath the floor slab.

Floor Slab Design Parameters

Item	Description
Floor Slab Support [1]	Minimum 6 inches of free-draining (less than 6% passing the U.S. No. 200 sieve) crushed aggregate compacted to at least 98% of ASTM D 698 [2, 3]
Estimated Modulus of Subgrade Reaction [2]	100 pounds per square inch per inch (psi/in) for point loads

1. Floor slabs should be structurally independent of building footings or walls to reduce the possibility of floor slab cracking caused by differential movements between the slab and foundation.
2. Modulus of subgrade reaction is an estimated value based upon our experience with the subgrade condition, the requirements noted in **Earthwork**, and the floor slab support as noted in this table. It is provided for point loads. For large area loads the modulus of subgrade reaction would be lower.
3. Free-draining granular material should have less than 5% fines (material passing the No. 200 sieve). Other design considerations such as cold temperatures and condensation development could warrant more extensive design provisions.

The use of a vapor retarder should be considered beneath concrete slabs on grade covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding the use and placement of a vapor retarder.
Saw-cut control joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations refer to the ACI Design Manual. Joints or cracks should be sealed with a water-proof, non-extruding compressible compound specifically recommended for heavy duty concrete pavement and wet environments.

Where floor slabs are tied to perimeter walls or turn-down slabs to meet structural or other construction objectives, our experience indicates differential movement between the walls and slabs will likely be observed in adjacent slab expansion joints or floor slab cracks beyond the length of the structural dowels. The Structural Engineer should account for potential differential settlement through use of sufficient control joints, appropriate reinforcing or other means.

Settlement of floor slabs supported on existing fill materials cannot be accurately predicted but could be larger than normal and result in some cracking. Mitigation measures, as noted in **Existing Fill** within **Earthwork**, are critical to the performance of floor slabs. In addition to the mitigation measures, the floor slab can be stiffened by adding steel reinforcement, grade beams and/or post-tensioned elements.

Floor Slab Construction Considerations

Finished subgrade, within and for at least 10 feet beyond the floor slab, should be protected from traffic, rutting, or other disturbance and maintained in a relatively moist condition until floor slabs are constructed. If the subgrade should become damaged or desiccated prior to construction of floor

slabs, the affected material should be removed and structural fill should be added to replace the resulting excavation. Final conditioning of the finished subgrade should be performed immediately prior to placement of the floor slab support course.

The Geotechnical Engineer should approve the condition of the floor slab subgrades immediately prior to placement of the floor slab support course, reinforcing steel, and concrete. Attention should be paid to high traffic areas that were rutted and disturbed earlier, and to areas where backfilled trenches are located.

LATERAL EARTH PRESSURES

Design Parameters

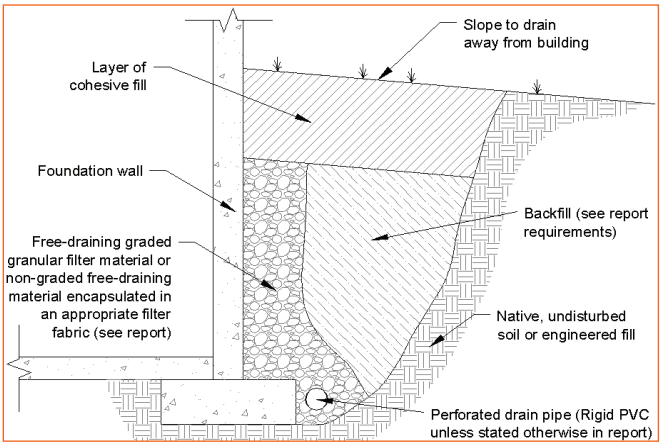
Structures with unbalanced backfill levels should be designed for earth pressures at least equal to the parameters indicated in the following table. Earth pressures will be influenced by structural design of the walls, conditions of wall restraint, methods of construction and/or compaction and the strength of the materials being restrained. We recommend that the "at-rest" lateral earth pressure model be considered at the NF building with partially submerged conditions (up to the perimeter drain level), a multi-soil retained profile and surcharge pressures from the upper mat. The values in the table below do not include a safety factor and represent the average expected conditions surrounding the structures. If a more refined model of lateral earth pressures at specific location(s) is required to achieve a viable structural design, please contact us.

Soil Material	Soil Properties	At-Rest (K_o) Earth Pressure Coefficient	Surcharge Pressure (psf) [3]	Unsaturated Effective Fluid Pressures (psf)	Submerged Effective Fluid Pressures (psf) [4]
Geomodel Layer 1, 2	Y_m = 120 pcf Φ = 28° [1]	0.5	(0.50)S	(60)H	(91)H
Geomodel Layer 3,4	Y_m = 130 pcf Φ = 32°	0.47	(0.47)S	(61)H	(94)H
Granular Import [2]	Y_m = 120 pcf Φ = 32°	0.47	(0.47)S	(56)H	(89)H

1. Fill (Geomodel Layer 1) is presumed to be primarily cohesive. Granular fill is considered to be spatially limited and will not affect the lateral earth pressure model.
2. Uniform, horizontal backfill, compacted to at least 98% of the ASTM D 698 maximum dry density, rendering maximum moist and saturated unit weight of 120 pcf and 125 pcf, respectively.
3. Uniform surcharge, where S is surcharge pressure. Loading from heavy compaction equipment is not included.
4. "Submerged" conditions are recommended when drainage behind walls is not incorporated into the design.

Subsurface Drainage for Below-Grade Walls

A perforated rigid plastic drain line installed behind the base of walls and extends below adjacent grade is recommended to prevent hydrostatic loading on the walls. The invert of a drain line around a below-grade building area or exterior retaining wall should be placed near foundation bearing level. The drain line should be sloped to provide positive gravity drainage to daylight or to a sump pit and pump. The drain line should be surrounded by clean, free-draining granular material having less than 5% passing the No. 200 sieve, such as No. 57 aggregate. The free-draining aggregate should be encapsulated in a filter fabric. The granular fill should extend to within 2 feet of final grade, where it should be capped with compacted cohesive fill to reduce infiltration of surface water into the drain system.



As an alternative to free-draining granular fill, a pre-fabricated drainage structure may be used. A pre-fabricated drainage structure is a plastic drainage core or mesh which is covered with filter fabric to prevent soil intrusion and is fastened to the wall prior to placing backfill.

PAVEMENTS

Support characteristics of subgrade for pavement design do not account for shrink/swell movements of an expansive clay subgrade, such as soils encountered on this project. Thus, the pavement may be adequate from a structural standpoint, yet still experience cracking and deformation due to shrink/swell related movement of the subgrade.

Pavement Design Parameters

A subgrade CBR of 3 can be used for the asphalt pavement designs, and a modulus of subgrade reaction of 100 pci can be used for the concrete pavement designs, following extensive undercutting, drying and/or chemical modification of upper soils, as required. The values were empirically derived based upon our experience with the encountered subgrade soils and our

understanding of the quality of the subgrade as prescribed by the **Site Preparation** conditions as outlined in **Earthwork**.

Pavement Drainage

Pavements should be sloped to provide rapid drainage of surface water. Water allowed to pond on or adjacent to the pavements could saturate the subgrade and contribute to premature pavement deterioration. In addition, the pavement subgrade should be graded to provide positive drainage within the granular base section. Appropriate sub-drainage or connection to a suitable daylight outlet should be provided to remove water from the granular subbase.

Based on the possibility perched groundwater, we recommend that drainage be carried out by sloping the terrain or by installing a pavement subdrain system to control groundwater, improve stability, and improve long-term pavement performance.

We recommend pavement subgrades be crowned at least 2% to promote the flow of water towards the subdrains, and to reduce the potential for ponding of water on the subgrade.

The subdrains should be hydraulically connected to the free-draining granular base layer. Subdrains should be sloped to provide positive gravity drainage to reliable discharge points such as the storm water detention basin. Periodic maintenance of subdrains is required for long-term proper performance.

Pavement Maintenance

Preventive maintenance should be planned and provided for through an on-going pavement management program. Maintenance activities are intended to slow the rate of pavement deterioration and to preserve the pavement investment. Maintenance consists of both localized maintenance (e.g., crack and joint sealing and patching) and global maintenance (e.g., surface sealing). Preventive maintenance is usually the priority when implementing a pavement maintenance program. Additional engineering observation is recommended to determine the type and extent of a cost-effective program. Even with periodic maintenance, some movements and related cracking may still occur and repairs may be required.

Pavement performance is affected by its surroundings. In addition to providing preventive maintenance, the civil engineer should consider the following recommendations in the design and layout of pavements:

- Final grade adjacent to paved areas should slope down from the edges at a minimum 2%.
- Subgrade and pavement surfaces should have a minimum 2% slope to promote proper surface drainage.
- Install below pavement drainage systems surrounding areas anticipated for frequent wetting.

- Install joint sealant and seal cracks immediately.
- Seal all landscaped areas in or adjacent to pavements to reduce moisture migration to subgrade soils.
- Place compacted, low permeability backfill against the exterior side of curb and gutter.

Place curb, gutter and/or sidewalk directly on clay subgrade soils rather than on unbound granular base course materials.

GENERAL COMMENTS

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Natural variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental, ecological or biological assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence or collaboration through this system are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly impact excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety, and cost estimating including, excavation support, and dewatering requirements/design are the responsibility of others. If changes in the nature, design, or location

of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

EXPLORATION AND TESTING PROCEDURES

Field Exploration

Number of Borings	Boring Depth (feet)	Boring Location
6	27 to 33.8	Proposed WWTP development area
1	31.5	Proposed cascade aerator

Boring Layout and Elevations: The boring layout was provided by AECOM. The coordinates and elevation at the test boring locations were provided to Terracon by IDE.

Subsurface Exploration Procedures: We advanced the borings with a track-mounted rotary drill rig using continuous-flight hollow-stem augers. Four samples were obtained in the upper 10 feet of each boring and at intervals of 5 feet thereafter. Soil sampling was performed using split-barrel sampling procedures. In the split-barrel sampling procedure, a standard 2-inch outer-diameter split-barrel sampling spoon was driven into the ground by a 140-pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the last 12 inches of a normal 18-inch penetration is recorded as the Standard Penetration Test (SPT) resistance value. The SPT resistance values, also referred to as N-values, are indicated on the boring logs at the test depths. We observed and recorded short-term groundwater levels during drilling and sampling. No long-term groundwater observations were planned. The borings were backfilled with auger cuttings upon completion.

The sampling depths, penetration distances, and other sampling information was recorded on the field boring logs. The samples were placed in appropriate containers and taken to our soil laboratory for testing and classification by a Geotechnical Engineer. Our exploration team prepared field boring logs as part of the drilling operations. These field logs included visual classifications of the materials encountered during drilling and our interpretation of the subsurface conditions between samples. Final boring logs were prepared from the field logs. The final boring logs represent the Geotechnical Engineer's interpretation of the field logs and include modifications based on observations and tests of the samples in our laboratory.

Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests to understand the engineering properties of the various soil strata, as necessary, for this project. Procedural standards noted below are for reference to methodology in general. In some cases, variations to methods were applied because of local practice or professional judgment. Standards noted below include reference to other, related standards. Such references are not necessarily applicable to describe the specific test performed.

- ASTM D2216 Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
- ASTM D4318 Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils
- ASTM D422 Standard Test Method for Particle-Size Analysis of Soils

The laboratory testing program included examination of soil samples by an engineer. Based on the material's texture and plasticity, we described and classified the soil samples in accordance with the Unified Soil Classification System.

UNIFIED SOIL CLASSIFICATION SYSTEM

Terracon GeoReport

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]					Soil Classification	
					Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	$Cu \geq 4$ and $1 \leq Cc \leq 3$ [E]		GW	Well-graded gravel [F]
			$Cu < 4$ and/or [$Cc<1$ or $Cc>3.0$] [E]		GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH		GM	Silty gravel [F, G, H]
			Fines classify as CL or CH		GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	$Cu \geq 6$ and $1 \leq Cc \leq 3$ [E]		SW	Well-graded sand [I]
			$Cu < 6$ and/or [$Cc<1$ or $Cc>3.0$] [E]		SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH		SM	Silty sand [G, H, I]
			Fines classify as CL or CH		SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots on or above "A"		CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]		ML	Silt [K, L, M]
		Organic:	Liquid limit - oven dried	< 0.75	OL	Organic clay [K, L, M, N]
			Liquid limit - not dried			Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line		CH	Fat clay [K, L, M]
			PI plots below "A" line		MH	Elastic Silt [K, L, M]
		Organic:	Liquid limit - oven dried	< 0.75	OH	Organic clay [K, L, M, P]
			Liquid limit - not dried			Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor				PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.

[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.

[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.

[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.

[E] $Cu = D_{60}/D_{10}$ $\quad Cc = \dfrac{(D_{30})^2}{D_{10} \times D_{60}}$

[F] If soil contains ≥ 15% sand, add "with sand" to group name.

[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.

[H] If fines are organic, add "with organic fines" to group name.

[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.

[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.

[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.

[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.

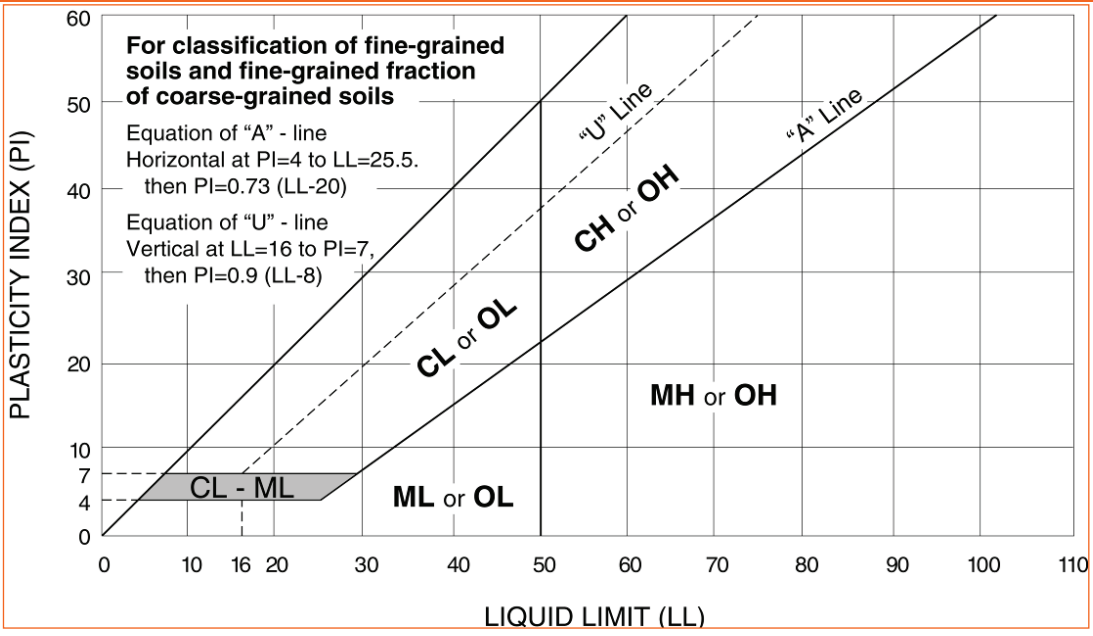
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.

[N] PI ≥ 4 and plots on or above "A" line.

[O] PI < 4 or plots below "A" line.

[P] PI plots on or above "A" line.

[Q] PI plots below "A" line.



DESCRIPTION OF ROCK PROPERTIES

WEATHERING	
Term	**Description**
Unweathered	No visible sign of rock material weathering, perhaps slight discoloration on major discontinuity surfaces.
Slightly weathered	Discoloration indicates weathering of rock material and discontinuity surfaces. All the rock material may be discolored by weathering and may be somewhat weaker externally than in its fresh condition.
Moderately weathered	Less than half of the rock material is decomposed and/or disintegrated to a soil. Fresh or discolored rock is present either as a continuous framework or as corestones.
Highly weathered	More than half of the rock material is decomposed and/or disintegrated to a soil. Fresh or discolored rock is present either as a discontinuous framework or as corestones.
Completely weathered	All rock material is decomposed and/or disintegrated to soil. The original mass structure is still largely intact.
Residual soil	All rock material is converted to soil. The mass structure and material fabric are destroyed. There is a large change in volume, but the soil has not been significantly transported.

STRENGTH OR HARDNESS		
Description	**Field Identification**	**Uniaxial Compressive Strength, psi (MPa)**
Extremely weak	Indented by thumbnail	40-150 (0.3-1)
Very weak	Crumbles under firm blows with point of geological hammer, can be peeled by a pocket knife	150-700 (1-5)
Weak rock	Can be peeled by a pocket knife with difficulty, shallow indentations made by firm blow with point of geological hammer	700-4,000 (5-30)
Medium strong	Cannot be scraped or peeled with a pocket knife, specimen can be fractured with single firm blow of geological hammer	4,000-7,000 (30-50)
Strong rock	Specimen requires more than one blow of geological hammer to fracture it	7,000-15,000 (50-100)
Very strong	Specimen requires many blows of geological hammer to fracture it	15,000-36,000 (100-250)
Extremely strong	Specimen can only be chipped with geological hammer	>36,000 (>250)

DISCONTINUITY DESCRIPTION			
Fracture Spacing (Joints, Faults, Other Fractures)		**Bedding Spacing (May Include Foliation or Banding)**	
Description	**Spacing**	**Description**	**Spacing**
Extremely close	< ¾ in (<19 mm)	**Laminated**	< ½ in (<12 mm)
Very close	¾ in – 2-1/2 in (19 - 60 mm)	**Very thin**	½ in – 2 in (12 – 50 mm)
Close	2-1/2 in – 8 in (60 – 200 mm)	**Thin**	2 in – 1 ft. (50 – 300 mm)
Moderate	8 in – 2 ft. (200 – 600 mm)	**Medium**	1 ft. – 3 ft. (300 – 900 mm)
Wide	2 ft. – 6 ft. (600 mm – 2.0 m)	**Thick**	3 ft. – 10 ft. (900 mm – 3 m)
Very Wide	6 ft. – 20 ft. (2.0 – 6 m)	**Massive**	> 10 ft. (3 m)

Discontinuity Orientation (Angle): Measure the angle of discontinuity relative to a plane perpendicular to the longitudinal axis of the core. (For most cases, the core axis is vertical; therefore, the plane perpendicular to the core axis is horizontal.) For example, a horizontal bedding plane would have a 0-degree angle.

ROCK QUALITY DESIGNATION (RQD) [1]	
Description	**RQD Value (%)**
Very Poor	0 - 25
Poor	25 – 50
Fair	50 – 75
Good	75 – 90
Excellent	90 - 100

1. The combined length of all sound and intact core segments equal to or greater than 4 inches in length, expressed as a percentage of the total core run length.

Technical Manual for Design and Construction of Road Tunnels – Civil Elements

DESCRIPTION OF ROCK PROPERTIES

WEATHERING	
Fresh	Rock fresh, crystals bright, few joints may show slight staining. Rock rings under hammer if crystalline.
Very slight	Rock generally fresh, joints stained, some joints may show thin clay coatings, crystals in broken face show bright. Rock rings under hammer if crystalline.
Slight	Rock generally fresh, joints stained, and discoloration extends into rock up to 1 in. Joints may contain clay. In granitoid rocks some occasional feldspar crystals are dull and discolored. Crystalline rocks ring under hammer.
Moderate	Significant portions of rock show discoloration and weathering effects. In granitoid rocks, most feldspars are dull and discolored; some show clayey. Rock has dull sound under hammer and shows significant loss of strength as compared with fresh rock.
Moderately severe	All rock except quartz discolored or stained. In granitoid rocks, all feldspars dull and discolored and majority show kaolinization. Rock shows severe loss of strength and can be excavated with geologist's pick.
Severe	All rock except quartz discolored or stained. Rock "fabric" clear and evident, but reduced in strength to strong soil. In granitoid rocks, all feldspars kaolinized to some extent. Some fragments of strong rock usually left.
Very severe	All rock except quartz discolored or stained. Rock "fabric" discernible, but mass effectively reduced to "soil" with only fragments of strong rock remaining.
Complete	Rock reduced to "soil". Rock "fabric" no discernible or discernible only in small, scattered locations. Quartz may be present as dikes or stringers.

HARDNESS (for engineering description of rock – not to be confused with Moh's scale for minerals)	
Very hard	Cannot be scratched with knife or sharp pick. Breaking of hand specimens requires several hard blows of geologist's pick.
Hard	Can be scratched with knife or pick only with difficulty. Hard blow of hammer required to detach hand specimen.
Moderately hard	Can be scratched with knife or pick. Gouges or grooves to ¼ in. deep can be excavated by hard blow of point of a geologist's pick. Hand specimens can be detached by moderate blow.
Medium	Can be grooved or gouged 1/16 in. deep by firm pressure on knife or pick point. Can be excavated in small chips to pieces about 1-in. maximum size by hard blows of the point of a geologist's pick.
Soft	Can be gouged or grooved readily with knife or pick point. Can be excavated in chips to pieces several inches in size by moderate blows of a pick point. Small thin pieces can be broken by finger pressure.
Very soft	Can be carved with knife. Can be excavated readily with point of pick. Pieces 1-in. or more in thickness can be broken with finger pressure. Can be scratched readily by fingernail.

Joint, Bedding, and Foliation Spacing in Rock [1]

Spacing	Joints	Bedding/Foliation
Less than 2 in.	Very close	Very thin
2 in. – 1 ft.	Close	Thin
1 ft. – 3 ft.	Moderately close	Medium
3 ft. – 10 ft.	Wide	Thick
More than 10 ft.	Very wide	Very thick

1. Spacing refers to the distance normal to the planes, of the described feature, which are parallel to each other or nearly so.

Rock Quality Designator (RQD) [1]

RQD, as a percentage	Diagnostic description
Exceeding 90	Excellent
90 – 75	Good
75 – 50	Fair
50 – 25	Poor
Less than 25	Very poor

1. RQD (given as a percentage) = length of core in pieces 4 inches and longer / length of run

Joint Openness Descriptors

Openness	Descriptor
No Visible Separation	Tight
Less than 1/32 in.	Slightly Open
1/32 to 1/8 in.	Moderately Open
1/8 to 3/8 in.	Open
3/8 in. to 0.1 ft.	Moderately Wide
Greater than 0.1 ft.	Wide

SECTION 00 4113

BID FORM

TABLE OF CONTENTS

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted via hand delivery, USPS, UPS or FedEx to:

Warren County Administration Building
406 Justice Drive
Lebanon, OH 45036

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Owner in the form included in the Bidding Documents to perform all Work as specified or indicated in the Bidding Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bidding Documents.

ARTICLE 2 – BIDDER'S ACKNOWLEDGEMENTS

2.01 Bidder accepts all of the terms and conditions of the Instructions to Bidders, including without limitation those dealing with the disposition of Bid security. This Bid will remain subject to acceptance for 90 days after the Bid opening, or for such longer period of time that Bidder may agree to in writing upon request of Owner.

ARTICLE 3 – BIDDER'S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bidding Documents, other related data identified in the Bidding Documents, and the following Addenda, receipt of which is hereby acknowledged:

Addendum No.	Addendum Date

B. Bidder has visited the Site and become familiar with and is satisfied as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

C. Bidder is familiar with and is satisfied as to all Laws and Regulations that may affect cost, progress, and performance of the Work.

D. Bidder has carefully studied all: drawings and applicable reports of physical conditions relating to existing surface or subsurface conditions at the Site.

E. Bidder has considered the information known to Bidder; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Bidding Documents; and the Site-related reports and drawings identified in the Bidding Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Bidder, including applying the specific means, methods, techniques, sequences, and procedures

of construction expressly required by the Bidding Documents; and (3) Bidder's safety precautions and programs.

F. Based on the information and observations referred to in Paragraph 3.01.E above, Bidder does not consider that further examinations, investigations, explorations, tests, studies, or data are necessary for the determination of this Bid for performance of the Work at the price(s) bid and within the times required, and in accordance with the other terms and conditions of the Bidding Documents.

G. Bidder is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents.

H. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bidding Documents, and the written resolution thereof by Engineer is acceptable to Bidder.

I. The Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance of the Work for which this Bid is submitted.

ARTICLE 4 – BIDDER'S CERTIFICATION

4.01 Bidder certifies that:

A. This Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any collusive agreement or rules of any group, association, organization, or corporation;

B. Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid;

C. Bidder has not solicited or induced any individual or entity to refrain from bidding; and

D. Bidder has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for the Contract. For the purposes of this Paragraph 4.01.D:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of any thing of value likely to influence the action of a public official in the bidding process;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process to the detriment of Owner, (b) to establish bid prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Contract.

ARTICLE 5 – BASIS OF BID

5.01 Bidder will complete the Work in accordance with the Contract Documents for the following price(s):

A. General Trades

_____	Dollars	$ _____
(Words)		(Figures)

5.02 Allowances:

A. Tools and Maintenance Equipment

Fifteen thousand	Dollars	$ 15,000.00
(Words)		(Figures)

B. Office Furniture

Ten thousand	Dollars	$ 10,000.00
(Words)		(Figures)

C. Materials Testing

Forty thousand	Dollars	$ 40,000.00
(Words)		(Figures)

D. Local Utility Company

Forty thousand	Dollars	$ 40,000.00
(Words)		(Figures)

E. Trailer Mounted Valve Operator

Fifteen thousand	Dollars	$ 15,000.00

F. Security System

Seventy thousand	Dollars	$ 70,000.00
(Words)		(Figures)

G. NFC Cleanouts and CCTV

Forty-five thousand	Dollars	$ 45,000.00
(Words)		(Figures)

H. Lab Equipment

Five thousand	Dollars	$ 5,000.00
(Words)		(Figures)

I. SCADA

Twenty thousand	Dollars	$ 20,000.00
(Words)		(Figures)

5.03 Base Bid Plus Allowances:

_____ Dollars _____
(Words) (Figures)

5.04 Alternates

A. No Alternates.

ARTICLE 6 – TIME OF COMPLETION

6.01 Bidder agrees that the Work will be substantially complete within the number of calendar days specified in Section 00 5215 "Agreement between Owner and Contractor" after the date when the Contract Times commence to run as provided in Paragraph 2.03 of the General Conditions, and will be completed and ready for final payment in accordance with Paragraph 14.07 of the General Conditions within the number of calendar days specified in 00 5215 after the date when the Contract Times commence to run.

6.02 Bidder accepts the provisions of the Agreement as to liquidated damages.

ARTICLE 7 – ATTACHMENTS TO THIS BID

7.01 The following documents are submitted with and made a condition of this Bid:

A. See Section 00 4393.

ARTICLE 8 – DEFINED TERMS

8.01 The terms used in this Bid with initial capital letters have the meanings stated in the Instructions to Bidders, the General Conditions, and the Supplementary Conditions.

BID SUBMITTAL

8.02 This Bid is submitted by:

If Bidder is:

An Individual

DOCUMENT 00 4313

BID SECURITY

FORM OF BID GUARANTY AND CONTRACT BOND
(As prescribed by Ohio Revised Code Section 153.571)

KNOW ALL PERSONS BY THESE PRESENTS, that we, the undersigned,

_____, as Principal, at

_____ (Address)

and _____ as Surety, are hereby held and firmly bound unto the Warren County Board of Comissioners as Oblige, in the penal sum of the dollar amount of the Bid submitted by the Principal to the Obligee on (date) _____ to undertake the Project known as:

Project Name: Richard A. Renneker Water Treatment Plant (RARWTP) Membrane Softening Upgrades

The penal sum, referred to herein, shall be the dollar amount of the Principal's Bid to the Obligee, incorporating any additive alternate Bids made by the Principal on the date referred to above to the Obligee, which are accepted by the Obligee. In no case shall the penal sum exceed the amount of dollars ($_____). (If the preceding line is left blank, the penal sum will be the full amount of the Principal's Bid, including add alternates. Alternatively, if completed, the amount stated shall not be less than the full amount of the Bid, including Alternates, in dollars and cents. A percentage is not acceptable.) For the payment of the penal sum well and truly to be made, we hereby jointly and severally bind ourselves, our heirs, executors, administrators, successors and assigns.

THE CONDITION OF THE ABOVE OBLIGATION IS SUCH, that whereas the above-named Principal has submitted a Bid for the above referenced Project;

NOW, THEREFORE, if the Obligee accepts the Bid of the Principal, and the Principal fails to enter into a proper contract in accordance with the Contract bid, Plans, Specifications, details and bills of material; and in the event the Principal pays to the Obligee the difference, not to exceed ten percent of the penal sum hereof between the amount specified in the Bid and such larger amount for which the Obligee may in

good faith contract with the Bidder determined by the Obligee to be the next lowest responsive and responsible to perform the Work covered by the Bid; or in the event the Obligee does not award the Contract to such next lowest responsive and responsible Bidder and resubmits the Project for bidding, the Principal pays to the Obligee the difference not to exceed ten percent of the penal sum hereof between the amount specified in the Bid, or the costs, in connection with the resubmission, of printing new Contract Documents, required advertising and printing and mailing notices to prospective Bidders, whichever is less, then this obligation shall be null and void, otherwise to remain in full force and effect. If the Obligee accepts the Bid of the Principal, and the Principal, within 10 days after the awarding of the Contract, enters into a proper Contract and executes the Contract Form in accordance with the Contract Documents, including without limitation the Bid, Plans, Specifications, details, and bills of material, which said Contract is made a part of this Bond the same as though set forth herein; and

NOW ALSO, IF THE SAID Principal shall well and faithfully perform each and every condition of such Contract; and indemnify the Obligee against all damage suffered by failure to perform such Contract according to the provisions thereof and in accordance with the Contract Documents, including without limitation Plans, Specifications, details, and bills of material therefore; and shall pay all lawful claims of Subcontractors, Material Suppliers and laborers for labor performed and materials furnished in the carrying forward, performing or completing of said Contract; we, agreeing and assenting that this undertaking shall be for the benefit of any Subcontractor, Material Suppliers or laborer having a just claim, as well as for the Obligee herein; then this obligation shall be void; otherwise the same shall remain in full force and effect; it being expressly understood and agreed that the liability of the Surety for any and all claims hereunder shall in no event exceed the penal amount of this obligation as herein stated.

THE SAID Surety hereby stipulates and agrees that no modifications, omissions or additions, in or to the terms of said Contract, the Work thereunder or the Contract Documents, including without limitation the Plans and Specifications, therefore, shall in any way affect the obligations of said Surety on its bond, and it does hereby waive notice of any such modifications, omissions or additions in or to the terms of the Contract, the Work, or the Contract Documents, including without limitation the Plans and Specifications.

SECTION 00 4325

SUBSTITUTION REQUEST FORM

PART 1 GENERAL

1.1 CONDITIONS OF SUBSTITUTION

A. Submit Bids based upon the materials and equipment specified.

B. List proposed substitutions below, together with the sum to be added to or deducted from the amount of the Base Bid. The amount to be added or deducted shall include all related required changes resulting from the substitution such as all required time and fees for the Engineer. Substitutions will only be permitted if selected by the Engineer.

C. After the Contract is awarded, no further substitutions will be permitted for the items listed.

LIST OF PROPOSED SUBSTITUTIONS

Item		Substitution Manufacturer
Motor Control Centers (Section 26 2419)		
Variable Frequency Drives (Section 26 2923)		
Vertical Turbine Pumps and Appurtenances (Section 43 2100.02)		
Horizontal End Suction Pumps (Section 43 2100.23)		
Forced Draft Degasifier Towers (Section 43 3225)		
Chemical Peristaltic Metering Pumps and Appurtenances (Section 46 3344)		
Polyethylene Chemical Storage Tanks and Appurtenances (Section 46 3393.01)		
Cartridge Filters (Section 46 6320)		

END OF SECTION 00 4325

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 00 4333

PROPOSED PRODUCTS FORM

PART 1 GENERAL

A. Bidder must complete this sheet for the listed items.

B. Circle the Manufacturer that bidder is proposing.

C. If the manufacturer for an item is not circled; or if more than one manufacturer is circled; the first manufacturer listed (from left to right) will be the declared manufacturer.

D. See the Instructions to Bidders for additional information.

LIST OF PROPOSED MANUFACTURERS

Item		Declared Manufacturer
Motor Control Centers (Section 26 2419)		Allen-Bradley; Cutler-Hammer; Square D
Variable Frequency Drives (Section 26 2923)		Allen-Bradley; Eaton
Vertical Turbine Pumps and Appurtenances (Section 43 2100.02)		Floway; Flowserve; Peerless
Horizontal End Suction Pumps (Section 43 2100.23)		Flowserve; Sulzer
Forced Draft Degasifier Towers (Section 43 3225)		DeLoach Indistries, Inc.; Tonka Equipment Co.
Chemical Peristaltic Metering Pumps and Appurtenances (Section 46 3344)		Watson Marlow Qdos
Polyethylene Chemical Storage Tanks and Appurtenances (Section 46 3393.01)		Flat Bottom: Poly Processing Conical Bottom: Snyder Industries
Cartridge Filters (Section 46 6320)		Fil-Trek; Nowata; Parker Hannafin

BIDDER'S CHECKLIST

DISCLAIMER - This checklist is not intended to relieve the bidder of the responsibility to provide other required documents. Rather, this checklist is offered merely to serve as an aid in assisting in the preparation of the bid. Notice is hereby given that the failure to submit all required documents duly and properly completed including but not limited to all required signatures may result in the rejection of your bid on the basis that the bid is non-responsive.

BID DOCUMENT FORMS (PROVIDED)

☐ Instructions to Bidders, Section 00 2113 (for information only)

☐ Bid Form, Section 00 4113

☐ Bid Security Form, Section 00 4313

☐ Substitution Request Form, Section 00 4325

☐ Proposed Products Form, Section 00 4333

☐ Proposed Subcontractors Form, Section 00 4336

☐ Bidders Qualifications, Section 00 4513

☐ Non-Collusion Affidavit, Section 00 4519

☐ Personal Property Tax Disclosure Affidavit, Section 00 4529

☐ Findings for Recovery Affidavit, Section 00 4539

OHIO EPA/DEFA GOVERNMENT REQUIRED FORMS (PROVIDED)

☐ Contractor EEO Certification, Section 00 4515

☐ DBE FORMS 1A & 1B, Section 00 4515
(to be submitted with bid package OR within two weeks of bid opening)

☐ Certification Regarding Debarment, suspension, & Other Responsibility Matters, Section 00 4515

☐ American Iron & Steel Sign-off Form, Section 00 4515

ADDITIONAL BID DOCUMENTS REQUIRED FROM BIDDER

☐ Surety's Power of Attorney

☐ Certificate of Authorization to do Business in Ohio (if applicable)

SECTION 00 4513

BIDDER'S QUALIFICATIONS

At the time of bid, the bidder is required to provide detailed information on the form herein (or referenced and attached hereto) as evidence of the bidder's responsibility, experience, skill, and financial capacity to complete this contract in the time allotted. This information will be used by the owner to determine if the proposal is the lowest responsible and responsive bid. The Owner may make related investigations to determine the ability of the bidder to perform the work. The bidder shall furnish to the Owner or its representative, in a timely manner, all such information and data as the Owner may request for this purpose, which may include a financial statement.

1. General Information

Name: _____

SECTION 00 4515

OEPA WSRLA PROGRAM REQUIREMENTS

PART 1 GENERAL

1.1 OHIO ENVIRONMENTAL PROTECTION AGENCY (OEPA) – WATER SUPPLY REVOLVING LOAN ACCOUNT (WSRLA)

A. The contract work described in the Contract Documents is being funded in part with loan and loan forgiveness funds from the OEPA WSRLA Program. All requirements of the OEPA WSRLA Program must be followed and complied with by all bidders and the successful contractor.

1.2 CONTRACTOR'S REQUIREMENTS

A. The following requirements are included in the Contract for the work and are a part thereof:
   1. Contractor Equal Employment Opportunity Certification (2 pages)
   2. Certification Regarding Debarment, Suspension, and Other Responsibility Matters Form (2 pages)
   3. Certification Regarding Debarment, Suspension, and Other Responsibility Matters Instructions (1 page)
   4. Disadvantaged Business Enterprises (DBE) Utilization (5 pages)
   5. Form 6100-3: DBEP Indiv. DBE Subsonctractor Proposed Performance Form (2 pages)
   6. Form 6100-4: DBEP DBE Subcontractor Utilization Summary (1 page)
   7. Form 6100-2: DBEP DBE Subcontractor Actual Participation Form (2 pages)
   8. Form 5700-52A: USEPA MBE/WBE Utilization Under Federal Grants, Coopertiave Agreements, and Interagency Agreements (2 pages)
   9. Form 5700-52A: Instructions (3 pages)
   10. Davis-Bacon Wage Rate Requirements (10 pages)
   11. Violating Facilities Clause (1 page)
   12. Requirement for Utilization of Small Businesses in Rural Areas (SBRA) (1 page)
   13. Insurance Provisions (2 pages)
   14. Materials Testing (1 page)
   15. Continuous Treatment Provisions (1 page)
   16. WPCLF/WSRLA Change Order (2 pages)
   17. Local Protest Procedure (1 page)
   18. Basis and Method for Award (2 pages)
   19. Payment Methods (2 pages)
   20. WPCLF Contract Documents Review (1 page)
   21. Bid Package Submittals (1 page)
   22. American Iron & Steel Provisions (20 pages)
   23. American Iron & Steel Acknowledgement (1 page)
   24. American Iron & Steel Certification Form (1 page)

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 00 4515

Contract Document Provisions

The following contract requirements and forms are to be included in the construction contract documents. Completed copies of the forms are to be submitted to Ohio EPA within one week after bids are received, or sooner dependent on your individual project schedule. Bid packages for WPCLF projects should be submitted to DEFA in the central office while bid packages for WSRLA projects should be submitted to the appropriate DDAGW district office.

Equal Employment Opportunity (EEO) Requirements

The Contractor's EEO Certification Form must be (1) included in the contract documents and (2) referenced in the Instructions to Bidders, informing bidders that the form must be completed and submitted with their bid.
NOTE: If the loan applicant has its own EEO requirements, local procedures and forms may be substituted for the EPA form.

Debarment

The Certification Regarding Debarment, Suspension, and Other Responsibility Matters must be (1) included in the contract documents and (2) referenced in the Instructions to Bidders, informing bidders that the form must be completed and submitted with their bid.

Disadvantaged Business Enterprises (DBE) Utilization

The DBE Specification language and instructions to the bidders and Forms 6100-3, 6100-4 and 6100-2 must be (1) included in the contract documents and (2) referenced in the Instructions to Bidders, informing bidders that the forms must be completed and submitted with their bid.
NOTE: If the loan applicant has its own DBE requirements or if other funding programs with potentially competing DBE requirements are participating in the project funding, please contact Ohio EPA – DEFA for specific instructions regarding the DBE requirements.

Davis-Bacon wage rate requirements

The contract documents must include language that requires contractors and subcontractors to pay wages at rates not less than those prevailing on similar projects within the area as determined by the US Secretary of Labor. In addition, the loan recipient will be required to conduct wage interviews and monitor payroll for compliance.

American Iron and Steel requirements

All treatment works projects funded by a WPCLF assistance agreement and all public water system projects funded by a WSRLA assistance agreement are required to comply with American Iron and Steel (AIS) requirements. The acknowledgement form must be included in the contract documents. The acknowledgement form should be signed by the contractor and submitted with the final bid package. It is recommended that the AIS guidance document and questions and answers document be included in the contract documents.

The following contract requirements are to be included in the construction contract documents, but are not required to be submitted to Ohio EPA for contract endorsement.

Violating Facilities Clause

Language prohibiting this use of equipment or services from anyone on the EPA List of Violating Facilities must be included in the contract documents.

Small Businesses in Rural Areas (SBRA)

Language encouraging the participation of small businesses in rural areas should be included in the contract documents.

Insurance Provisions

Section 3.5 of the WPCLF/WSRLA Loan Agreement contains specific requirements regarding insurance for all contractors and all subcontractors for the life of the contract. These insurance requirements must be reflected in the contract documents. Adjust the language as needed to meet the specifics of the construction project while still meeting the provisions of the Loan Agreement.

Materials Testing

In addition to the details included with specific equipment testing in the specifications, there should be an overall statement regarding testing for the project. Adjust the language as needed to meet the specifics of the construction project.

Continuous Treatment Provisions

It is important that construction activities not result in any temporary violations of Drinking Water or NPDES permit requirements (for permitted facilities). Construction activities should interrupt wastewater service to the individual resident as little as possible. For drinking water projects, it is important that construction activities not result in any disruption of service. The example language is intended for construction work occurring at an existing drinking water plant or a WWTP and must be adjusted to meet the specifics of the construction project.

WPCLF/WSRLA Change Order Form

All change orders for the construction project must be executed on the WPCLF/WSRLA change order form. The form must be (1) included in the contract documents and (2) the instructions referenced in the Contract Documents.

The following contract requirements are provided in Ohio Revised Code (ORC). Some loan applicants have local requirements that supersede ORC provisions for competitive bidding, and these local requirements can be applied instead of ORC, except for those requirements specified in the WPCLF/WSRLA loan agreements.

Bid Guarantee

The requirements for a bid guarantee (which can be a bond or a certified check, cashier's check, or letter of credit) are covered in ORC 153.54.

Payment and Performance Bonds

The requirements for a Payment and Performance Bond are covered in ORC 153.54 and Section 3.4 of the WPCLF/WSRLA Loan Agreements.

Payment Retention

The requirement for payment retainage is provided in ORC153.12. Details on how the escrow account that holds the retainage are provided in ORC 153.13. Further details on how and when to pay for materials delivered and installed are provided in ORC 153.14.

Completion Time

The contract documents must state the length of the contract time per ORC 153.19. The dates for Initiation of Operation and Project Completion are specified in the WPCLF/WSRLA Loan Agreements, and need to coincide with the specified contract time.

The following are contract provisions to consider, but are not required. The language provided for each are samples only and must be adjusted to reflect the specifics of the project and local needs.

Local Protest Procedure

Some statement as to when a valid protest must be filed, in what form it must be filed and who it must be filed with should be included. ORC 153.12 has some default procedures for handling disputes. If the owner wants more control than provided in ORC, a procedure needs to be spelled out in the Contract Documents.

Basis and Method for Award

The contract documents should include some language that clearly states what the Owner will consider when determining the successful bidder and to provide a clear basis for the Owner when they have a need to reject the low bidder and go with a different bidder.

Payment Methods

To minimize uncertainty and arguments that can slow down the progress of construction it is useful to provide language stating how and when the Contractor will get paid. In addition to ORC and other local requirements, the involvement of public funding Agencies such as the WPCLF, WSRLA, Ohio Public Works Commission and Community Development Block Grant impact the process and timing for payments.

Contract Documents Review

Whenever possible, all of the provisions listed above must be included in the contract documents for the project prior to advertisement for bids. Ohio EPA's review for these contract provisions will occur as part of our normal detail plans and specifications review. The bidding documents are to be submitted to Ohio EPA for review regardless of whether a Permit to Install or a Plan Approval is required for the project.

After bidding has started:

In those cases when WPCLF or WSRLA funding is being requested after advertisement for bids has started, add all missing contract provisions, forms, and requirements via addendum.

After bids have been opened but before contracts have been signed:

If the bid advertisement period is over and bids have been opened, but the construction contract have not been signed yet, provide a draft contract change order which would be used to incorporate all missing contract provisions, forms, and requirements into the contract. This should be done in consultation with local legal council to address any potential bid protest concerns.

Construction contracts have already been signed:

If the construction contract has already been signed, a contract change order must be executed incorporating all missing contract provisions, forms, and requirements into the contract.

A Contract Documents Review checklist is provided here to help ensure that all requirements are included and to help expedite Ohio EPA's review of your documents.

Bid Package Submittals

Certain documents must be submitted to Ohio EPA within one week after bids are received, or sooner dependent on your individual project schedule. Please look here for a complete list of the required submittals.

NOTE: THE CONTRACT LANGUAGE SAMPLES PROVIDED HEREIN ARE EXAMPLES OF WHAT COULD BE INCLUDED IN ALL CONTRACTS THAT USE WPCLF OR WSRLA FUNDS. OHIO EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THESE CLAUSES WITH RESPECT TO STATE OR LOCAL LAW. IT IS IMPERATIVE THAT ANY PARTY INSERTING THESE CLAUSES INTO A CONTRACT VERIFY THAT THEY ARE LEGAL AND ENFORCEABLE ACCORDING TO STATE AND LOCAL LAWS, REGULATIONS, AND ORDINANCES.

Equal Employment Opportunity (EEO) Requirements

(Required Contract Provision)

The Contractor's EEO Certification Form provided on the following page must be:

(1) included in the contract documents and

(2) referenced in the Instructions to Bidders, informing bidders that the form must be completed and submitted with their bid.

NOTE: If the loan applicant has its own EEO requirements, local procedures and forms may be substituted for the EPA form.

Contractor Equal Employment Opportunity Certification

During the performance of this contract, the undersigned agrees as follows:

1. The undersigned will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The undersigned will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The undersigned agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided setting forth the provisions of this equal opportunity (federally assisted construction) clause.

2. The undersigned will, in all solicitations or advertisements for employees placed by or on behalf of the undersigned, state the all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

3. The undersigned will send to each labor union or representative of workers, with which he has a collective bargaining agreement or other contract or understanding, a notice to be provided advising the said labor union or workers' representative of the undersigned's commitment under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

4. The undersigned will comply with all provisions of Executive Order No. 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

5. The undersigned will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and relevant orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records and accounts by the administering agency of the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

6. In the event of the undersigned's non-compliance with the equal opportunity (federally assisted construction) clause of this contract of with any of the said rules, regulations, or orders, this contract may be canceled, terminated or suspended in whole or in part, and the undersigned may be declared ineligible for further Government contracts of federally assisted construction contracts in accordance with procedures authorized in Executive Order No. 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No 11246 of September 24, 1965, or by rules, regulations, or order of the Secretary of Labor, or as provided by law.

7. The undersigned will include this equal opportunity (federally assisted construction) clause in every subcontract or purchase order unless exempted by the rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order No 11246 of September 24, 1965, so that such provision will be binding upon each subcontract or vender. The undersigned will take such action with respect to any subcontract or purchase order as the administering agency may direct as a means of enforcing such provisions, including sanctions for non compliance: Provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor, as a result of such direction by the administering agency the undersigned may request the United States to enter into such litigation to protect the interest of the United States.

Debarment Requirements

(Required Contract Provision)

The Certification Regarding Debarment, Suspension, and Other Responsibility Matters form included on the following page must be:

(1) included in the contract documents and

(2) referenced in the Instructions to Bidders, informing bidders that the form must be completed and submitted with their bid.

Certification Regarding Debarment, Suspension, and Other Responsibility Matters
INSTRUCTIONS

Under Executive Order 12549 an individual or organization debarred or excluded from participation in Federal assistance or benefit programs may not receive any assistance award under a Federal program or a subagreement thereunder for $25,000 or more.

Accordingly, each prospective recipient of an EPA grant, loan, or cooperative agreement and any contract or subagreement participant thereunder must complete the attached certification provide an explanation why they cannot. For further details, see the regulation 40 CFR 32.510, Participants' responsibilities.

Go to www.epls.gov to access the Excluded Parties List System (EPLS). The EPLS includes information regarding entities debarred, suspended, proposed for debarment, excluded or disqualified under the nonprocurement common rule, or otherwise declared ineligible from receiving Federal contracts, certain subcontracts, and certain Federal assistance and benefits. This information may include names, addresses, DUNS numbers, Social Security Numbers, Employer Identification Numbers or other Taxpayer Identification Numbers, if available and deemed appropriate and permissible to publish by the agency taking the action.

Where To Submit

The prospective EPA grant, loan, or cooperative agreement recipient must return the signed certification or explanation with its application to Ohio EPA.

A prospective prime contractor must submit a complete certification or explanation to the individual or organization awarding the contract.

Each prospective subcontractor must submit a complete certification or explanation to the prime contractor for the project.

Applicants may reproduce these materials as needed and provide them to their prospective prime contractor, who, in turn, may reproduce and provide them to prospective subcontractors.

Additional copies / assistance may be requested from:

Ohio EPA
Division of Environmental and Financial Assistance
P.O. Box 1049
Columbus, Ohio 43216-1049
(614) 644-2798
www.epa.state.oh.us/defa/

Certification Regarding Debarment, Suspension, and Other Responsibility Matters

The prospective participant certifies to the best of its knowledge and belief that it and its principals:

(a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;

(b) Have not within a three year period preceding this proposal been convicted of or had a civil judgement rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or local) transaction or contract under a public transaction; violation of Federal of State antitrust statues or commission if embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

(c) Are not presently indicted for or otherwise criminally or civilly charged by a government entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (b) of this certification;

(d) Have not within a three year period preceding this application / proposal had one or more public transactions (Federal, State, or local) terminated for cause or default; and

(e) Will not utilize a subcontractor or supplier who is unable to certify (a) through (d) above.

I understand that a false statement on this certification may be grounds for rejection of this proposal or termination of the award. In addition, under 18 USC Sec. 1001, a false statement may result in a fine of up to $10,000 or imprisonment for up to 5 years, or both.

☐ I am unable to certify to the above statements. My explanation is attached.

Disadvantaged Business Enterprises (DBE) Utilization

(Required Contract Provision)

USEPA has a program to encourage the participation of disadvantaged businesses in the construction activities funded by the Clean Water and Drinking Water SRF's. "DBE" is an all inclusive term that includes Minority Business Enterprises (MBE), Women Business Enterprises (WBE), Small Business Enterprises (SBE), Small Business in Rural Areas (SBRA), HUBZone Small Business, Labor Surplus Area Firms (LSAF), and other entities defined as socially and/or economically disadvantaged. While the WPCLF and WSRLA strongly encourage participation by all disadvantaged groups, specific participation goals are negotiated with USEPA only for Minority Business Enterprises and Women's Business Enterprises.

Goals

As a condition of receiving capitalization grants from U.S. EPA for the Water Pollution Control Loan Fund (WPCLF) and the Water Supply Revolving Loan Account (WSRLA), the Ohio EPA negotiates "fair share" Disadvantaged Business Enterprises (DBE) objectives with U.S. EPA. The current negotiated goals for construction related activities are 1.3% of all contracts to MBEs and 1.0% of all contracts to WBEs.

DBE Certification

Under the DBE program, qualified DBE's are those that have been certified as an MBE or WBE. Certifications can be obtained from a federal agency such as the Small Business Administration or the Department of Transportation or by an approved State agency. The Unified Certification Program (UCP) administered by the Ohio Department of Transportation (ODOT) can provide the necessary DBE certifications. Information on the UCP can be found at www.ohioucp.org as well as the ODOT website www.dot.state.oh.us/divisions/equalopportunity/pages/dbe.aspx. Applications for certification by EPA can be found on EPA's Small Business Programs website at www.epa.gov/osbp under the Disadvantaged Business Enterprise Program link. Any questions regarding EPA's certification process should be directed to Teree Henderson of EPA at 202-566-2222.

DBE Qualifications

To qualify for MBE certification, businesses must be 51 percent owned and controlled by a U.S. citizen and Ohio resident belonging to an African American, Native American, Hispanic, or Asian American ethnic group. In addition, the business must be in operation for at least one year prior to submitting an application. For DBE status, a business must be at least 51 percent owned by a socially and economically disadvantaged person who participates in the daily operations of the business. This person must be a woman or of African-American, Hispanic, Native American, Asian American ethnicity.

Program Requirements

To comply with DBE program requirements the WPCLF/WSRLA loan recipient must do the following:

1. Create and maintain a bidder's list (see description below)

2. Include contract conditions applicable to the DBE program in all procurement contracts entered into by the Borrower for all WPCLF and WSRLA projects. These conditions are listed below.
3. Follow, document, and maintain documentation of good faith efforts on the part of prime contractors to ensure that Disadvantaged Business Enterprises (DBEs) have the opportunity to participate in the project.
4. Review the Form 6100-3 and 6100-4 submittals provided by bidders on the project for completeness and obtain any additional information necessary to verify the certification status of all proposed subcontractors.
5. Obtain documentation of the good faith efforts of the prime contractor if the prime contractor does not meet the MBE or WBE goal.
6. Obtain a written confirmation from any prime contractor states that they will not meet the MBE and WBE goals because they will not be entering into any agreements for goods or services with any company, firm, joint venture, or individual.
7. Submit the following to the Ohio EPA/DEFA as part of the bid package upon which the WPCLF/WSRLA loan amount is determined:
   - Form 6100-3 from each subcontractor
   - Form 6100-4 from each prime contractor
   - a copy of the Good Faith Efforts documentation from any prime contractors that will not meet the MBE and WBE goals,
   - if any of the prime contractors will not meet the MBE and WBE goals because they will not be entering into any agreements for goods or services with any company, firm, joint venture, or individual, a copy of the written confirmation from that prime contractor
8. Report MBE/WBE accomplishments on Form 5700-52A annually (within 15 days after October 1st).

NOTE: It is up to the WPCLF/WSRLA loan recipient whether or not to require completion and submission of Forms 6100-3 and 6100-4 from all bidders with the bid proposal or to accept completion and submission from the successful bidder(s) only at some time after bids are received. Regardless of whether the forms are completed and submitted with the bids or at some later time once the successful bidders are identified, completed forms are to be submitted to Ohio EPA with the bid package.

To comply with DBE program requirements all prime contractors must do the following:

1. Follow, document, and maintain documentation of their good faith efforts.
2. Complete and submit **Form 6100-4 DBE Subcontractor Utilization Summary** as part of the bid proposal package to the loan recipient.
3. Have its Disadvantaged Business Enterprise subcontractors complete **Form 6100-3 DBE Subcontractor Proposed Performance Form** and submit those as part of the bid proposal package to the loan recipient.
4. Provide **Form 6100-2 DBE Subcontractor Actual Participation Form** to all of its Disadvantaged Business Enterprise subcontractors for completion at the end of the work.
5. During construction, provide the data necessary so that the loan recipient can report MBE/WBE accomplishments on Form 5700-52A annually (within 15 days after October 1st).

Bidders List

The Borrower must create, maintain, and use a bidders list for purposes of soliciting both MBE/WBEs and non-MBE/WBEs during procurement of construction, equipment, supplies, and services. This list shall include:

1. Entity's name with point of contact;
2. Entity's mailing address, telephone number, and e-mail address;
3. The procurement on which the entity bid or quoted, and when; and
4. Entity's status as an MBE/WBE or non-MBE/WBE.

Borrowers that receive less than $250,000 or less in any one fiscal year can be exempt from maintaining a Bidders List.

The Bidders List shall be maintained until the project period has expired and the Borrower is no longer receiving EPA funding. The Bidders List must include all firms that bid on the prime contracts, or bid or gave a quote on subcontracts, including both MBE/WBEs and non-MBE/WBEs.

Required Contract Conditions

The DBE Specification language and instructions to the bidders and Forms 6100-2, 6100-3 and 6100-4 must be included in the contract documents and referenced in the Instructions to Bidders, informing bidders that the forms must be completed and submitted with their bid for all WPCLF and WSRLA projects:

1. The prime contractor must pay its subcontractor for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the owner.
2. The prime contractor must notify the owner in writing prior to the termination of any Disadvantage Business Enterprise subcontractor for convenience by the prime contractor.
3. If a Disadvantage Business Enterprise contractor fails to complete work under the subcontract for any reason, the prime contractor must employ the six Good Faith Efforts (listed below) if soliciting a replacement contractor.
4. The prime contractor must employ the six Good Faith Efforts even if the prime contractor has achieved its fair share objectives.
5. An owner must ensure that each procurement contract it awards contains the following terms and conditions:

   The contractor shall not discriminate on the basis of race, color, national origin or sex in the performance of this contract. The contractor shall carry out applicable requirements of 40 CFR Part 33 in the award and administration of contracts awarded under EPA financial assistance agreements. Failure by the contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or other legally available remedies.

Good Faith Efforts

Borrowers and their prime contractors must follow, document, and maintain documentation of their good faith efforts as listed below to ensure that Disadvantaged Business Enterprises (DBEs) have the opportunity to participate in the project by increasing DBE awareness of procurement efforts and outreach.

1. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities; including DBEs on solicitation lists and soliciting them whenever they are potential sources.
2. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitation for bids or proposals for a minimum of 30 calendar days before the bid or proposal closing date.
3. Consider in the contracting process whether firms competing for large contracts could be subcontracted with DBEs. This will include dividing total requirements when economically feasible into smaller tasks or quantities to permit participation by DBEs in the competitive process.
4. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.
5. Use the services and assistance of the Small Business Administration and the Minority Business Development Agency of the U.S. Department of Commerce.
6. If the prime contractor awards subcontracts, require the prime contractor to take the steps in numbers 1 through 5 above.

DBE Forms

Form 6100-3 – Each prime contractor must have its DBE subcontractors complete **Form 6100-3 DBE Subcontractor Proposed Performance Form**. This form gives the DBE subcontractor the opportunity to report the scope and cost of the subcontract and it should be forwarded to the Prime Contractor along with the DBE's quote. Each subcontractor completes one Form 6100-3. The Borrower must submit all Form 6100-3 forms to the Ohio EPA/DEFA as part of the bid package upon which the WPCLF/WSRLA loan amount is determined.

Form 6100-4 – Each prime contractor must complete and submit **Form 6100-4 DBE Subcontractor Utilization Summary** as part of the prime contractor's bid proposal package to the Borrower. This form summarizes the Prime Contractor's intended use of identified DBE(s) and the estimated dollar amount of each subcontract. Only one Form 6100-4 form is required from each Prime Contractor. The Borrower must submit this form to the Ohio EPA/DEFA as part of the bid package upon which the WPCLF/WSRLA loan amount is determined.

Form 6100-2 - The prime contractor must provide **Form 6100-2 DBE Subcontractor Actual Participation Form** to all of its Disadvantaged Business Enterprise subcontractors.

This form gives the DBE subcontractor the opportunity to describe the work the DBE received from the Prime Contractor, how much the DBE was paid and any other concerns the DBE might have. Disadvantaged Business Enterprise subcontractors must send completed Form 6100-2 directly to the Region 5 DBE Coordinator:

Adrianne M. Callahan, Region 5 MBE/WBE Coordinator
USEPA, Acquisition and Assistance Branch
77 West Jackson Boulevard (MC-10J)
Chicago, IL 60604

This form is completed after the work by the subcontractor is done, and is NOT submitted with the bid package to Ohio EPA.

Reporting During Construction – Form 5700-52A

The purpose of MBE/WBE reporting is to monitor the grant recipient's accomplishments in utilizing MBEs and WBEs; and adherence to the good faith efforts (i.e., outreach to MBEs, WBEs, and other DBEs); and progress in achieving MBE and WBE Goals. During the progress of the construction project, the loan recipient must complete & submit Form 5700-52A annually (**within 15 days after October 1st**). If there were no MBEs or WBEs utilized, or no procurement expenditures of any kind were made during the reporting period, a "negative report" is still required.

Reports are to be sent to:

Becky McKinney Ohio EPA – DEFA
P.O. Box 1049
Columbus, OH 43216-1049
E-mail address: Rebecca.McKinney@epa.ohio.gov
Phone: (614) 644-3636
Fax: (614) 644-3687

Disadvantaged Business Enterprise (DBE) Program
DBE Subcontractor Performance Form

This form is intended to capture the DBE[1] subcontractor's[2] description of work to be performed and the price of the work submitted to the prime contractor. An EPA Financial Assistance Agreement Recipient must require its prime contractor to have its DBE subcontractors complete this form and include all completed forms in the prime contractors bid or proposal package.

Recipient	Sub-Recipient and/or SRF Loan Recipient	Prime	Minority	Women				

Type of product or service codes:

1 = Construction 2 = Supplies 3 = Services 4 = Equipment

Note: Refer to Terms and conditions of your Assistance Agreement to determine the frequency of reporting. Recipients are required to submit MBE/WBE reports to EPA beginning with the Federal fiscal year quarter the recipients receive the award, continuing until the project is completed.

Instructions:

A. General Instructions:

MBE/WBE utilization is based on 40 CFR Part 33. EPA Form 5700-52A must be completed by recipients of Federal grants, cooperative agreements, or other Federal financial assistance which involve procurement of supplies, equipment, construction or services to accomplish Federal assistance programs.

Recipients are required to report 30 days after the end of each federal fiscal quarter, semiannually, or annually, per the terms and conditions of the financial assistance agreement.

	Quarterly Reporting Due Date	Semiannual Reporting Due Date	Annual Reporting Due Date
Agreements awarded prior to May 27, 2008	January 30, April 30, July 30, October 30	N/A	October 30
Agreements awarded on or after May 27, 2008	N/A	April 30, October 30	October 30

MBE/WBE program requirements, including reporting, are material terms and conditions of the financial assistance agreement.

B. Definitions:

Procurement is the acquisition through contract, order, purchase, lease or barter of supplies, equipment, construction or services needed to accomplish Federal assistance programs.

A ***contract*** is a written agreement between an EPA recipient and another party (also considered "prime contracts") and any lower tier agreement (also considered "subcontracts") for equipment, services, supplies, or construction necessary to complete the project. This definition excludes written agreements with another public agency. This definition includes personal and professional services, agreements with consultants, and purchase orders.

A ***minority business enterprise*** **(MBE)** is a business concern that is (1) at least 51 percent owned by one or more minority individuals, or, in the case of a publicly owned business, at least 51 percent of the stock is owned by one or more minority individuals; and (2) whose daily business operations are managed and directed by one or more of the minority owners. In order to qualify and participate as an MBE prime or subcontractor for EPA recipients under EPA's DBE Program, an entity must be properly certified as required by 40 CFR Part 33, Subpart B.

U.S. citizenship is required. Recipients shall presume that minority individuals include Black Americans, Hispanic Americans, Native Americans, Asian Pacific Americans, or other groups whose members are found to be disadvantaged by the Small Business Act or by the Secretary of Commerce under section 5 of Executive order 11625. The reporting contact at EPA can provide additional information.

A ***woman business enterprise*** **(WBE)** is a business concern that is, (1) at least 51 percent owned by one or more women, or, in the case of a publicly owned business, at least 51 percent of the stock is owned by one or more women and (2) whose daily business operations are managed and directed by one or more of the women owners. In order to qualify and participate as a WBE prime or subcontractor for EPA recipients under EPA's DBE Program, an entity must be properly certified as required by 40 CFR Part 33, Subpart B.

Business firms which are 51 percent owned by minorities or women, but are in fact managed and operated by non-minority individuals do not qualify for meeting MBE/WBE procurement goals. U.S. Citizenship is required.

Good Faith Efforts

A recipient is required to make the following good faith efforts whenever procuring construction, equipment, services, and supplies under an EPA financial assistance agreement. These good faith efforts for utilizing MBEs and WBEs must be documented. Such documentation is subject to EPA review upon request:

1. Include of MBEs/WBEs on solicitation lists.
2. Assure that MBEs/WBEs are solicited once they are identified.
3. Divide total requirements into smaller tasks to permit maximum MBE/WBE participation, where feasible.
4. Establish delivery schedules which will encourage MBE/WBE participation, where feasible.
5. Encourage use of the services of the U.S. Department of Commerce's Minority Business Development Agency (MBDA) and the U.S. Small Business Administration to identify MBEs/WBEs.

6. Require that each party to a subgrant, subagreement, or contract award take the good faith efforts outlined here.

C. Instructions for Part I:

1a. Specify Federal fiscal year this report covers. The Federal fiscal year runs from October 1st through September 30th (**e.g. November 29, 2010 falls within Federal fiscal year 2011**)

1b. Check applicable reporting box, quarterly, semiannually, or annually. Also indicate if this is the last report for the project.

1c. Indicate if this is a revision to a previous year, half-year, or quarter, and provide a brief description of the revision you are making.

2a-c. Please refer to your financial assistance agreement for the mailing address of the EPA financial assistance office for your agreement.

The "EPA DBE Reporting Contact" is the DBE Coordinator for the EPA Region from which your financial assistance agreement was originated. For a list of DBE Coordinators please refer to the EPA OSBP website at www.epa.gov/osbp. Click on "Regional Contacts" for the name of your coordinator.

3a-c. Identify the agency, state authority, university or other organization which is the recipient of the Federal financial assistance and the person to contact concerning this report.

4a. Provide the Assistance Agreement number assigned by EPA. A separate report must be submitted for each Assistance Agreement.

***For SRF recipients**: In box 4a list numbers for ALL OPEN Assistance Agreements being reported on this form. Please note that although the New DBE Rule (which took effect May 27, 2008) revised the reporting frequency requirements from quarterly to semiannually, that change only applies to agreements awarded AFTER the New DBE Rule took effect. Therefore, SRF recipients may either continue to report activity for all Agreements on one form on a quarterly basis until the last award that was made prior to the New DBE Rule has been closed out; OR, the recipient may split the submission of SRF reports into quarterly reports for Agreements awarded prior the New DBE Rule, and semiannually for the awards made after the New DBE Rule.

4b. Refer back to Assistance Agreement document for this information.

5a. Provide the total amount of the Assistance Agreement which includes Federal funds plus recipient matching funds and funds from other sources.

***For SRF recipients only**: SRF recipients will not enter an amount in 5a. Please leave 5a blank.

5b. Self-explanatory.

5c. Provide the total dollar amount of **ALL** procurements awarded this reporting period by the recipient, sub-recipients, and SRF loan recipients, **including** MBE/WBE expenditures. For example: Actual dollars for procurement from the procuring office; actual contracts let from the contracts office; actual goods, services, supplies, etc., from other sources including the central purchasing/ procurement centers).

***NOTE**: To prevent double counting on line 5C, if any amount on 5E is for a subcontract and the prime contract has already been included on Line 5C in a prior reporting period, then report the amount going to MBE or WBE subcontractor on line 5E, but exclude the amount from Line 5C. To include the amount on 5C again would result in double counting because the prime contract, which includes the subcontract, would have already been reported.

5d. State whether or not sub-awards and/or subcontracts have been issued under the assistance agreement by indicating "yes" or "no".

5e. Where requested, also provide the total dollar amount of all MBE/WBE procurement awarded during this reporting period by the recipient, sub-recipients, SRF loan recipients, and prime contractors in the categories of construction, equipment, services and supplies. These amounts include Federal funds plus recipient matching funds and funds from other sources.

***For SRF recipients only**: In 5c please enter the total procurement amount for the quarter, or semiannual period, under all of your SRF Assistance Agreements. The figure reported in this section is **not** directly tied to an individual Assistance Agreement identification number. **(SRF state recipients report state procurements in this section)**

6. If there were no MBE/WBE accomplishments this reporting period, please briefly explain what

specific steps you are taking to achieve the MBE/WBE requirements specified in the terms and conditions of the Assistance Agreement.

7. Name and title of official administrator or designated reporting official.

8. Signature, month, day, and year report submitted.

D. Instructions for Part II:

For each MBE/WBE procurement made under this assistance agreement during the reporting period, provide the following information:

1. Check whether this procurement was made by the recipient, sub-recipient/SRF loan recipient, or the prime contractor.

2. Check either the MBE or WBE column. If a firm is both an MBE and WBE, the recipient may choose to count the entire procurement towards EITHER its MBE or WBE accomplishments. The recipient may also divide the total amount of the procurement (using any ratio it so chooses) and count those divided amounts toward its MBE and WBE accomplishments. If the recipient chooses to divide the procurement amount and count portions toward its MBE and WBE accomplishments, please state the appropriate amounts under the MBE and WBE columns on the form. **The combined MBE and WBE amounts for that MBE/WBE contractor must not exceed the "Value of the Procurement" reported in column #3**

3. Dollar value of procurement.

4. Date of procurement, shown as month, day, year. Date of procurement is defined as the date the contract or procurement was awarded, **not** the date the contractor received payment under the awarded contract or procurement, unless payment occurred on the date of award. **(Where direct purchasing is the procurement method, the date of procurement is the date the purchase was made)**

5. Using codes at the bottom of the form, identify type of product or service acquired through this procurement (e.g., enter 1 if construction, 2 if supplies, etc).

6. Name, address, and telephone number of MBE/WBE firm.

**This data is requested to comply with provisions mandated by: statute or regulations and 33); OMB Circulars; or added by EPA to ensure sound and effective assistance management. Accurate, complete data are required to obtain funding, while no pledge of confidentiality is provided.

The public reporting and recording burden for this collection of information is estimated to average l hour per response annually. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclosure or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, OPPE Regulatory Information Division, U.S. Environmental Protection Agency (2136), 1200 Pennsylvania Avenue, NW, Washington, D.C. 20460. Include the OMB Control number in any correspondence. Do not send the completed form to this address.

Davis-Bacon Wage Rate Requirements

(required contract provision)

Background and Applicability

On October 30, 2009, P.L. 111-88, "Making appropriations for the Department of the Interior, environment, and related agencies for the fiscal year ending September 30, 2010, and for other purposes," was enacted. This law provides appropriations for both the Clean Water State Revolving Fund (CWSRF) and the Drinking Water State Revolving Fund (DWSRF) for Fiscal Year 2010, while adding new requirements to these already existing programs. One new requirement requires the application of Davis-Bacon Act requirements.

Application of the Davis-Bacon Act requirements extend not only to assistance agreements funded with Fiscal Year 2010 appropriations, but to all assistance agreements executed on or after October 30, 2009, whether the source of the funding is prior year's appropriations, state match, bond proceeds, interest earnings, principal repayments, or any other source of funding so long as the project is financed by an SRF assistance agreement. If a project began construction prior to October 30, 2009, but is financed or refinanced through an assistance agreement executed on or after October 30, 2009, Davis-Bacon Act requirements will apply to all construction that occurs on or after October 30, 2009, through completion of construction.

Ohio EPA Responsibilities

With respect to the Water Pollution Control Loan Fund (WPCLF) and Water Supply Revolving Loan Account (WSRLA) revolving funds, EPA provides capitalization grants to each State which in turn provides funding assistance to eligible recipients within the State. Typically, the assistance recipients are municipal or other local governmental entities that manage the funds. Occasionally, the assistance recipients may be a private for profit or not for profit entity. Although EPA and the State are responsible for ensuring assistance recipients incorporate the wage rate requirements set forth herein as part of contracts for WPCLF and WSRLA funding, the assistance recipient has the primary responsibility to maintain payroll records and for compliance with Davis-Bacon Act requirements as described below.

Municipal Or Other Local Governmental Entities Recipient's Responsibilities

The following is intended to help assistance recipients understand and meet their obligations related to Davis-Bacon (DB). Each assistance recipients should, however, review the contract/subcontract requirements that are set forth later in this document for a more full understanding of DB obligations.

Prior to advertising for bids:

> Obtain the wage determination for the locality in which a covered activity subject to DB will take place from the Department of Labor (DOL) at www.wdol.gov.

> Incorporate these wage determinations into the request for bids.

> Include the required contract provisions (see below) into the contract documents.

> Require prime contracts to include provisions that subcontractors follow the wage determination incorporated into the prime contract.

During the advertisement period:

> Monitor www.wdol.gov on a weekly basis to ensure that the wage determination contained in the request for bids remains current.

> If DOL modifies the DB wage determination more than 10 days prior to the bid opening, issue an addendum reflecting the modification.

> If DOL modifies or supersedes the DB wage determination less than 10 days prior to bid opening and you cannot issue an addendum for the change, you must request a finding from Ohio EPA that there is not reasonable time to notify interested contractors of the modification of the wage determination. The Ohio EPA will give you a report of its findings.

After opening bids:

> If the contract(s) aren't awarded within 90 days of the bid opening you must monitor www.wdol.gov on a weekly basis to ensure that wage determinations used in the bids remain current.

> If the contract(s) aren't awarded within 90 days of the bid opening, any modifications or supersedes that DOL makes to the wage determination must be incorporated into the contract unless (1) you request an extension from Ohio EPA AND (2) Ohio EPA obtains an extension of the 90 day period from DOL pursuant to 29 CFR 1.6(c)(3)(iv).

After contracts are signed and during construction:

> Review all subcontracts subject to DB entered into by prime contractors to verify that the prime contractor has required its subcontractors to include the applicable wage determinations.

> DOL may issue a revised wage determination applicable to one or all of your contracts after the award of the contract or execution of the change order which incorporated DB requirements into the contract if DOL determines that you have failed to incorporate a wage determination or have used a wage determination that clearly does not apply to the contract. If this occurs, you shall either terminate the contract or change order and rebid the contract OR incorporate DOL's wage determination retroactive to the beginning of the contract by change order. The contractor must be compensated for any increases in wages resulting from the use of DOL's revised wage determination.

> Periodically interview a sufficient number of employees entitled to DB prevailing wages (covered employees) to verify that contractors or subcontractors are paying the appropriate wage rates. As provided in 29 CFR 5.6(a)(6), all interviews must be conducted in confidence. You must use Standard Form 1445 or equivalent documentation to memorialize the interviews.

> Establish and follow an interview schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, you must:

- conduct all interviews in confidence.
- conduct interviews with a representative group of covered employees within two weeks of each contractor or subcontractor's submission of its initial weekly payroll data and two weeks prior to the estimated completion date for the contract or subcontract.
- conduct more frequent interviews if the initial interviews or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB.
- immediately conduct necessary interviews in response to an alleged violation of the prevailing wage requirements.

> Periodically conduct spot checks of a representative sample of weekly payroll data to verify that contractors or subcontractors are paying the appropriate wage rates. You must:

- establish and follow a spot check schedule based on your assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract.
- spot check payroll data within two weeks of each contractor or subcontractor's submission of its initial payroll data and two weeks prior to the completion date the contract or subcontract at a minimum.
- conduct more frequent spot checks if the initial spot check or other information indicates that there

is a risk that the contractor or subcontractor is not complying with DB.

• during the examinations, verify evidence of fringe benefit plans and payments thereunder by contractors and subcontractors who claim credit for fringe benefit contributions.

> Periodically review contractors' and subcontractors' use of apprentices and trainees to verify registration and certification with respect to apprenticeship and training programs approved by either the DOL or a state, as appropriate, and that contractors and subcontractors are not using disproportionate numbers of, laborers, trainees and apprentices. These reviews shall be conducted in accordance with the schedules for spot checks and interviews.

> Immediately report potential violations of the DB prevailing wage requirements to Andrew Lausted at EPA Region V at 312-886-0189 and to the appropriate DOL Wage and Hour District Office listed at http://www.dol.gov/esa/contacts/whd/america2.htm.

If contracts have already been signed and DB requirements need to be incorporated:

> If contracts have already been signed prior to WPCLF/WSRLA funding being provided, you must issue a change order, task order, work assignment or similar legally binding instrument and incorporate the appropriate DOL wage determination from www.wdol.gov as well as the required contract provisions into the contract(s).

> Initiate the contractor and subcontractor review and wage interview requirements as described above and provided in the **Contract And Subcontract Provisions**.

Private For Profit Or Not For Profit (Non-Governmental) Entities Recipient's Responsibilities

The requirements, responsibilities and contract provisions for Private For Profit or Not For Profit Entities (Non-Governmental Entities) is exactly the same as for Municipal Or Other Local Governmental Entities EXCEPT for the following:

Prior to advertising for bids:

> Obtain the proposed wage determinations for specific localities from www.wdol.gov.

> Submit the wage determination to Ohio EPA for approval prior to inserting the wage determination into the solicitation unless subsequently directed otherwise by Ohio EPA.

Contract And Subcontract Provisions For Contracts In Excess Of $2,000

The following language must be included in full in any contract in excess of $2,000 which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a public building or public work, or building or work financed in whole or in part with WPCLF or WSRLA funds and which is subject to the labor standards provisions of any of the acts listed in §5.1:

NOTE: Modify the first sentence to include the name of the WPCLF/WSRLA funding recipient prior to including these provisions in the contract documents.

Wage Rate Requirements

As used in these provisions "subrecipient" means_____(fill in WPCLF/WSRLA funding recipient name here).

(a) The following applies to any contract in excess of $2,000 which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a public building or public

work, or building or work financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution (except where a different meaning is expressly indicated), and which is subject to the labor standards provisions of any of the acts listed in § 5.1.

(1) Minimum wages.

(i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

Subrecipients may obtain wage determinations from the U.S. Department of Labor's web site, www.wdol.gov.

(ii)(A) The subrecipient(s), on behalf of EPA, shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The EPA award official shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the subrecipient(s) agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the subrecipient(s) to the State award official. The State award official will transmit the report, to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department

of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the State award official or will notify the State award official within the 30-day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the and the subrecipient(s) do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the award official shall refer the questions, including the views of all interested parties and the recommendation of the State award official, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs (a)(1)(ii)(B) or (C) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

(2) Withholding. The subrecipient(s), shall upon written request of the EPA Award Official or an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(3) Payrolls and basic records.

(i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the

plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii)(A) The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the subrecipient, that is, the entity that receives the subgrant or loan from the State capitalization grant recipient. Such documentation shall be available on request of the State recipient or EPA. As to each payroll copy received, the subrecipient shall provide written confirmation in a form satisfactory to the State indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week. The payrolls shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on the weekly payrolls. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at http://www.dol.gov/esa/whd/forms/wh347instr.htm or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the subrecipient(s) for transmission to the State or EPA if requested by EPA, the State, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the subrecipient(s).

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under § 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under § 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (a)(3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the State, EPA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency or State may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and trainees --

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe

benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

(5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

(6) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the EPA determines may by appropriate, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

(7) Contract termination: debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(8) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

(9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and subrecipient(s), State, EPA, the U.S. Department of Labor, or the employees or their representatives.

(10) Certification of eligibility.

(i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

Contract Provision For Contracts In Excess Of $100,000 And Subject To The Overtime Provisions Of The Contract Work Hours And Safety Standards Act

The following language must be included in full in any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These provisions are to be included in addition to the provisions for contracts in excess of $2,000. As used in these paragraphs, the terms laborers and mechanics include watchmen and guards.

(b) Contract Work Hours and Safety Standards Act. The following applies to any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. As used in these paragraphs, the terms laborers and mechanics include watchmen and guards.

(1) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

(2) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (b)(1) of this section the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (a)(1) of this section, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (b)(1) of this section.

(3) Withholding for unpaid wages and liquidated damages. The subrecipient, upon written request of the EPA Award Official or an authorized representative of the Department of Labor, shall withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.

(4) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (b)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (b)(1) through (4) of this section.

Contract Provision For Contracts In Excess Of $100,000 Subject ONLY To The Contract Work Hours And Safety Standards Act

In addition to the provisions for contracts in excess of $2,000, for any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1, you must insert clauses requiring:

(c) The following applies to any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1.

The contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid.

The records shall be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the Ohio EPA, EPA and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

AMERICAN IRON AND STEEL ACKNOWLEDGEMENT

The Contractor acknowledges to and for the benefit of the City of _____ ("Purchaser") and the State of Ohio (the "State") that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements commonly known as "American Iron and Steel;" that requires all of the iron and steel products used in the project to be produced in the United States ("American Iron and Steel Requirement") including iron and steel products provided by the Contactor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a) the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the State.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

MAR 20 2014

OFFICE OF WATER

MEMORANDUM

SUBJECT: Implementation of American Iron and Steel provisions of P.L. 113-76, Consolidated Appropriations Act, 2014

FROM: Andrew D. Sawyers, Director
Office of Wastewater Management (4201M)

Peter C. Grevatt, Director
Office of Ground Water and Drinking Water (4601M)

TO: Water Management Division Directors
Regions I - X

P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), includes an "American Iron and Steel (AIS)" requirement in section 436 that requires Clean Water State Revolving Loan Fund (CWSRF) and Drinking Water State Revolving Loan Fund (DWSRF) assistance recipients to use iron and steel products that are produced in the United States for projects for the construction, alteration, maintenance, or repair of a public water system or treatment works if the project is funded through an assistance agreement executed beginning January 17, 2014 (enactment of the Act), through the end of Federal Fiscal Year 2014.

Section 436 also sets forth certain circumstances under which EPA may waive the AIS requirement. Furthermore, the Act specifically exempts projects where engineering plans and specifications were approved by a State agency prior to January 17, 2014.

The approach described below explains how EPA will implement the AIS requirement. The first section is in the form of questions and answers that address the types of projects that must comply with the AIS requirement, the types of products covered by the AIS requirement, and compliance. The second section is a step-by-step process for requesting waivers and the circumstances under which waivers may be granted.

Implementation

The Act states:

Sec. 436. (a)(1) None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States.

(2) In this section, the term ''iron and steel products'' means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.

(b) Subsection (a) shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency (in this section referred to as the ''Administrator'') finds that—

(1) applying subsection (a) would be inconsistent with the public interest;

(2) iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or

(3) inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

(c) If the Administrator receives a request for a waiver under this section, the Administrator shall make available to the public on an informal basis a copy of the request and information available to the Administrator concerning the request, and shall allow for informal public input on the request for at least 15 days prior to making a finding based on the request. The Administrator shall make the request and accompanying information available by electronic means, including on the official public Internet Web site of the Environmental Protection Agency.

(d) This section shall be applied in a manner consistent with United States obligations under international agreements.

(e) The Administrator may retain up to 0.25 percent of the funds appropriated in this Act for the Clean and Drinking Water State Revolving Funds for carrying out

the provisions described in subsection (a)(1) for management and oversight of the requirements of this section.

(f) This section does not apply with respect to a project if a State agency approves the engineering plans and specifications for the project, in that agency's capacity to approve such plans and specifications prior to a project requesting bids, prior to the date of the enactment of this Act.

The following questions and answers provide guidance for implementing and complying with the AIS requirements:

Project Coverage

1) What classes of projects are covered by the AIS requirement?

All treatment works projects funded by a CWSRF assistance agreement, and all public water system projects funded by a DWSRF assistance agreement, from the date of enactment through the end of Federal Fiscal Year 2014, are covered. The AIS requirements apply to the entirety of the project, no matter when construction begins or ends. Additionally, the AIS requirements apply to all parts of the project, no matter the source of funding.

2) Does the AIS requirement apply to nonpoint source projects or national estuary projects?

No. Congress did not include an AIS requirement for nonpoint source and national estuary projects unless the project can also be classified as a 'treatment works' as defined by section 212 of the Clean Water Act.

3) Are any projects for the construction, alteration, maintenance, or repair of a public water system or treatment works excluded from the AIS requirement?

Any project, whether a treatment works project or a public water system project, for which engineering plans and specifications were approved by the responsible state agency prior to January 17, 2014, is excluded from the AIS requirements.

4) What if the project does not have approved engineering plans and specifications but has signed an assistance agreement with a CWSRF or DWSRF program prior to January 17, 2014?

The AIS requirements do not apply to any project for which an assistance agreement was signed prior to January 17, 2014.

5) What if the project does not have approved engineering plans and specifications, but bids were advertised prior to January 17, 2014 and an assistance agreement was signed after January 17, 2014?

If the project does not require approved engineering plans and specifications, the bid advertisement date will count in lieu of the approval date for purposes of the exemption in section 436(f).

6) What if the assistance agreement that was signed prior to January 17, 2014, only funded a part of the overall project, where the remainder of the project will be funded later with another SRF loan?

If the original assistance agreement funded any construction of the project, the date of the original assistance agreement counts for purposes of the exemption. If the original assistance agreement was only for planning and design, the date of that assistance agreement will count for purposes of the exemption only if there is a written commitment or expectation on the part of the assistance recipient to fund the remainder of the project with SRF funds.

7) What if the assistance agreement that was signed prior to January 17, 2014, funded the first phase of a multi-phase project, where the remaining phases will be funded by SRF assistance in the future?

In such a case, the phases of the project will be considered a single project if all construction necessary to complete the building or work, regardless of the number of contracts or assistance agreements involved, are closely related in purpose, time and place. However, there are many situations in which major construction activities are clearly undertaken in phases that are distinct in purpose, time, or place. In the case of distinct phases, projects with engineering plans and specifications approval or assistance agreements signed prior to January 17, 2014 would be excluded from AIS requirements while those approved/signed on January 17, 2014, or later would be covered by the AIS requirements.

8) What if a project has split funding from a non-SRF source?

Many States intend to fund projects with "split" funding, from the SRF program and from State or other programs. Based on the Act language in section 436, which requires that American iron and steel products be used in any project for the construction, alteration, maintenance, or repair of a public water system or treatment works receiving SRF funding between and including January 17, 2014 and September 30, 2014, any project that is funded in whole or in part with such funds must comply with the AIS requirement. A "project" consists of all construction necessary to complete the building or work regardless of the number of contracts or assistance agreements involved so long as all contracts and assistance agreements awarded are closely related in purpose, time and place. This precludes the intentional splitting of SRF projects into separate and smaller contracts or assistance agreements to avoid AIS coverage on some portion of a larger

project, particularly where the activities are integrally and proximately related to the whole. However, there are many situations in which major construction activities are clearly undertaken in separate phases that are distinct in purpose, time, or place, in which case, separate contracts or assistance agreement for SRF and State or other funding would carry separate requirements.

9) What about refinancing?

If a project began construction, financed from a non-SRF source, prior to January 17, 2014, but is refinanced through an SRF assistance agreement executed on or after January 17, 2014 and prior to October 1, 2014, AIS requirements will apply to all construction that occurs on or after January 17, 2014, through completion of construction, unless, as is likely, engineering plans and specifications were approved by a responsible state agency prior to January 17, 2014. There is no retroactive application of the AIS requirements where a refinancing occurs for a project that has completed construction prior to January 17, 2014.

10) Do the AIS requirements apply to any other EPA programs, besides the SRF program, such as the Tribal Set-aside grants or grants to the Territories and DC?

No, the AIS requirement only applies to funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12)

<u>Covered Iron and Steel Products</u>

11) What is an iron or steel product?

For purposes of the CWSRF and DWSRF projects that must comply with the AIS requirement, an iron or steel product is one of the following made primarily of iron or steel that is permanently incorporated into the public water system or treatment works:

Lined or unlined pipes or fittings;
Manhole Covers;
Municipal Castings (defined in more detail below);
Hydrants;
Tanks;
Flanges;
Pipe clamps and restraints;
Valves;
Structural steel (defined in more detail below);
Reinforced precast concrete; and
Construction materials (defined in more detail below).

12) What does the term 'primarily iron or steel' mean?

'Primarily iron or steel' places constraints on the list of products above. For one of the listed products to be considered subject to the AIS requirements, it must be made of greater than 50% iron or steel, measured by cost. The cost should be based on the material costs.

13) Can you provide an example of how to perform a cost determination?

For example, the iron portion of a fire hydrant would likely be the bonnet, body and shoe, and the cost then would include the pouring and casting to create those components. The other material costs would include non-iron and steel internal workings of the fire hydrant (i.e., stem, coupling, valve, seals, etc). However, the assembly of the internal workings into the hydrant body would not be included in this cost calculation. If one of the listed products is not made primarily of iron or steel, United States (US) provenance is not required. An exception to this definition is reinforced precast concrete, which is addressed in a later question.

14) If a product is composed of more than 50% iron or steel, but is not listed in the above list of items, must the item be produced in the US? Alternatively, must the iron or steel in such a product be produced in the US?

The answer to both question is no. Only items on the above list must be produced in the US. Additionally, the iron or steel in a non-listed item can be sourced from outside the US.

15) What is the definition of steel?

Steel means an alloy that includes at least 50 percent iron, between .02 and 2 percent carbon, and may include other elements. Metallic elements such as chromium, nickel, molybdenum, manganese, and silicon may be added during the melting of steel for the purpose of enhancing properties such as corrosion resistance, hardness, or strength. The definition of steel covers carbon steel, alloy steel, stainless steel, tool steel and other specialty steels.

16) What does 'produced in the United States' mean?

Production in the United States of the iron or steel products used in the project requires that all manufacturing processes, including application of coatings, must take place in the United States, with the exception of metallurgical processes involving refinement of steel additives. All manufacturing processes includes processes such as melting, refining, forming, rolling, drawing, finishing, fabricating and coating. Further, if a domestic iron and steel product is taken out of the US for any part of the manufacturing process, it becomes foreign source material. However, raw materials such as iron ore, limestone and iron and steel scrap are not covered by the AIS requirement, and the

material(s), if any, being applied as a coating are similarly not covered. Non-iron or steel components of an iron and steel product may come from non-US sources. For example, for products such as valves and hydrants, the individual non-iron and steel components do not have to be of domestic origin.

17) Are the raw materials used in the production of iron or steel required to come from US sources?

No. Raw materials, such as iron ore, limestone, scrap iron, and scrap steel, can come from non-US sources.

18) If an above listed item is primarily made of iron or steel, but is only at the construction site temporarily, must such an item be produced in the US?

No. Only the above listed products made primarily of iron or steel, permanently incorporated into the project must be produced in the US. For example trench boxes, scaffolding or equipment, which are removed from the project site upon completion of the project, are not required to be made of U.S. Iron or Steel.

19) What is the definition of 'municipal castings'?

Municipal castings are cast iron or steel infrastructure products that are melted and cast. They typically provide access, protection, or housing for components incorporated into utility owned drinking water, storm water, wastewater, and surface infrastructure. They are typically made of grey or ductile iron, or steel. Examples of municipal castings are:

Access Hatches;
Ballast Screen;
Benches (Iron or Steel);
Bollards;
Cast Bases;
Cast Iron Hinged Hatches, Square and Rectangular;
Cast Iron Riser Rings;
Catch Basin Inlet;
Cleanout/Monument Boxes;
Construction Covers and Frames;
Curb and Corner Guards;
Curb Openings;
Detectable Warning Plates;
Downspout Shoes (Boot, Inlet);
Drainage Grates, Frames and Curb Inlets;
Inlets;
Junction Boxes;
Lampposts;
Manhole Covers, Rings and Frames, Risers;

Meter Boxes;
Service Boxes;
Steel Hinged Hatches, Square and Rectangular;
Steel Riser Rings;
Trash receptacles;
Tree Grates;
Tree Guards;
Trench Grates; and
Valve Boxes, Covers and Risers.

20) What is 'structural steel'?

Structural steel is rolled flanged shapes, having at least one dimension of their cross-section three inches or greater, which are used in the construction of bridges, buildings, ships, railroad rolling stock, and for numerous other constructional purposes. Such shapes are designated as wide-flange shapes, standard I-beams, channels, angles, tees and zees. Other shapes include H-piles, sheet piling, tie plates, cross ties, and those for other special purposes.

21) What is a 'construction material' for purposes of the AIS requirement?

Construction materials are those articles, materials, or supplies made primarily of iron and steel, that are permanently incorporated into the project, not including mechanical and/or electrical components, equipment and systems. Some of these products may overlap with what is also considered "structural steel". This includes, but is not limited to, the following products: wire rod, bar, angles, concrete reinforcing bar, wire, wire cloth, wire rope and cables, tubing, framing, joists, trusses, fasteners (i.e., nuts and bolts), welding rods, decking, grating, railings, stairs, access ramps, fire escapes, ladders, wall panels, dome structures, roofing, ductwork, surface drains, cable hanging systems, manhole steps, fencing and fence tubing, guardrails, doors, and stationary screens.

22) What is not considered a 'construction material' for purposes of the AIS requirement?

Mechanical and electrical components, equipment and systems are not considered construction materials. Mechanical equipment is typically that which has motorized parts and/or is powered by a motor. Electrical equipment is typically any machine powered by electricity and includes components that are part of the electrical distribution system.

The following examples (including their appurtenances necessary for their intended use and operation) are NOT considered construction materials: pumps, motors, gear reducers, drives (including variable frequency drives (VFDs)), electric/pneumatic/manual accessories used to operate valves (such as electric valve actuators), mixers, gates, motorized screens (such as traveling screens), blowers/aeration equipment, compressors, meters, sensors, controls and switches, supervisory control and

data acquisition (SCADA), membrane bioreactor systems, membrane filtration systems, filters, clarifiers and clarifier mechanisms, rakes, grinders, disinfection systems, presses (including belt presses), conveyors, cranes, HVAC (excluding ductwork), water heaters, heat exchangers, generators, cabinetry and housings (such as electrical boxes/enclosures), lighting fixtures, electrical conduit, emergency life systems, metal office furniture, shelving, laboratory equipment, analytical instrumentation, and dewatering equipment.

23) If the iron or steel is produced in the US, may other steps in the manufacturing process take place outside of the US, such as assembly?

No. Production in the US of the iron or steel used in a listed product requires that all manufacturing processes must take place in the United States, except metallurgical processes involving refinement of steel additives.

24) What processes must occur in the US to be compliant with the AIS requirement for reinforced precast concrete?

While reinforced precast concrete may not be at least 50% iron or steel, in this particular case, the reinforcing bar and wire must be produced in the US and meet the same standards as for any other iron or steel product. Additionally, the casting of the concrete product must take place in the US. The cement and other raw materials used in concrete production are not required to be of domestic origin.

If the reinforced concrete is cast at the construction site, the reinforcing bar and wire are considered to be a construction material and must be produced in the US.

Compliance

25) How should an assistance recipient document compliance with the AIS requirement?

In order to ensure compliance with the AIS requirement, specific AIS contract language must be included in each contract, starting with the assistance agreement, all the way down to the purchase agreements. Sample language for assistance agreements and contracts can be found in Appendix 3 and 4.

EPA recommends the use of a step certification process, similar to one used by the Federal Highway Administration. The step certification process is a method to ensure that producers adhere to the AIS requirement and assistance recipients can verify that products comply with the AIS requirement. The process also establishes accountability and better enables States to take enforcement actions against violators.

Step certification creates a paper trail which documents the location of the manufacturing process involved with the production of steel and iron materials. A step certification is a process under which each handler (supplier, fabricator, manufacturer,

processor, etc) of the iron and steel products certifies that their step in the process was domestically performed. Each time a step in the manufacturing process takes place, the manufacturer delivers its work along with a certification of its origin. A certification can be quite simple. Typically, it includes the name of the manufacturer, the location of the manufacturing facility where the product or process took place (not its headquarters), a description of the product or item being delivered, and a signature by a manufacturer's responsible party. Attached, as Appendix 5, are sample certifications. These certifications should be collected and maintained by assistance recipients.

Alternatively, the final manufacturer that delivers the iron or steel product to the worksite, vendor, or contractor, may provide a certification asserting that all manufacturing processes occurred in the US. While this type of certification may be acceptable, it may not provide the same degree of assurance. Additional documentation may be needed if the certification is lacking important information. Step certification is the best practice.

26) How should a State ensure assistance recipients are complying with the AIS requirement?

In order to ensure compliance with the AIS requirement, States SRF programs must include specific AIS contract language in the assistance agreement. Sample language for assistance agreements can be found in Appendix 3.

States should also, as a best practice, conduct site visits of projects during construction and review documentation demonstrating proof of compliance which the assistance recipient has gathered.

27) What happens if a State or EPA finds a non-compliant iron and/or steel product permanently incorporated in the project?

If a potentially non-compliant product is identified, the State should notify the assistance recipient of the apparent unauthorized use of the non-domestic component, including a proposed corrective action, and should be given the opportunity to reply. If unauthorized use is confirmed, the State can take one or more of the following actions: request a waiver where appropriate; require the removal of the non-domestic item; or withhold payment for all or part of the project. Only EPA can issue waivers to authorize the use of a non-domestic item. EPA may use remedies available to it under the Clean Water Act, the Safe Drinking Water Act, and 40 CFR part 31 grant regulations, in the event of a violation of a grant term and condition.

It is recommended that the State work collaboratively with EPA to determine the appropriate corrective action, especially in cases where the State is the one who identifies the item in noncompliance or there is a disagreement with the assistance recipient.

If fraud, waste, abuse, or any violation of the law is suspected, the Office of Inspector General (OIG) should be contacted immediately. The OIG can be reached at 1-

888-546-8740 or OIG_Hotline@epa.gov. More information can be found at this website: http://www.epa.gov/oig/hotline.htm.

28) How do international trade agreements affect the implementation of the AIS requirements?

The AIS provision applies in a manner consistent with United States obligations under international agreements. Typically, these obligations only apply to direct procurement by the entities that are signatories to such agreements. In general, SRF assistance recipients are not signatories to such agreements, so these agreements have no impact on this AIS provision. In the few instances where such an agreement applies to a municipality, that municipality is under the obligation to determine its applicability and requirements and document the actions taken to comply for the State.

Waiver Process

The statute permits EPA to issue waivers for a case or category of cases where EPA finds (1) that applying these requirements would be inconsistent with the public interest; (2) iron and steel products are not produced in the US in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron and steel products produced in the US will increase the cost of the overall project by more than 25 percent.

In order to implement the AIS requirements, EPA has developed an approach to allow for effective and efficient implementation of the waiver process to allow projects to proceed in a timely manner. The framework described below will allow States, on behalf of the assistance recipients, to apply for waivers of the AIS requirement directly to EPA Headquarters. Only waiver requests received from states will be considered. Pursuant to the Act, EPA has the responsibility to make findings as to the issuance of waivers to the AIS requirements.

Definitions

The following terms are critical to the interpretation and implementation of the AIS requirements and apply to the process described in this memorandum:

Reasonably Available Quantity: The quantity of iron or steel products is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design.

Satisfactory Quality: The quality of iron or steel products, as specified in the project plans and designs.

Assistance Recipient: A borrower or grantee that receives funding from a State CWSRF or DWSRF program.

Step-By-Step Waiver Process

Application by Assistance Recipient

Each local entity that receives SRF water infrastructure financial assistance is required by section 436 of the Act to use American made iron and steel products in the construction of its project. However, the recipient may request a waiver. Until a waiver is granted by EPA, the AIS requirement stands, except as noted above with respect to municipalities covered by international agreements.

The waiver process begins with the SRF assistance recipient. In order to fulfill the AIS requirement, the assistance recipient must in good faith design the project (where applicable) and solicit bids for construction with American made iron and steel products. It is essential that the assistance recipient include the AIS terms in any request for proposals or solicitations for bids, and in all contracts (see Appendix 3 for sample construction contract language). The assistance recipient may receive a waiver at any point before, during, or after the bid process, if one or more of three conditions is met:

1. Applying the American Iron and Steel requirements of the Act would be inconsistent with the public interest;
2. Iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or
3. Inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Proper and sufficient documentation must be provided by the assistance recipient. A checklist detailing the types of information required for a waiver to be processed is attached as Appendix 1.

Additionally, it is strongly encouraged that assistance recipients hold pre-bid conferences with potential bidders. A pre-bid conference can help to identify iron and steel products needed to complete the project as described in the plans and specifications that may not be available from domestic sources. It may also identify the need to seek a waiver prior to bid, and can help inform the recipient on compliance options.

In order to apply for a project waiver, the assistance recipient should email the request in the form of a Word document (.doc) to the State SRF program. It is strongly recommended that the State designate a single person for all AIS communications. The State SRF designee will review the application for the waiver and determine whether the necessary information has been included. Once the waiver application is complete, the State designee will forward the application to either of two email addresses. For CWSRF waiver requests, please send the application to: cwsrfwaiver@epa.gov. For DWSRF waiver requests, please send the application to: dwsrfwaiver@epa.gov.

Evaluation by EPA

After receiving an application for waiver of the AIS requirements, EPA Headquarters will publish the request on its website for 15 days and receive informal comment. EPA Headquarters will then use the checklist in Appendix 2 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

In the event that EPA finds that adequate documentation and justification has been submitted, the Administrator may grant a waiver to the assistance recipient. EPA will notify the State designee that a waiver request has been approved or denied as soon as such a decision has been made. Granting such a waiver is a three-step process:

1. Posting – After receiving an application for a waiver, EPA is required to publish the application and all material submitted with the application on EPA's website for 15 days. During that period, the public will have the opportunity to review the request and provide informal comment to EPA. The website can be found at: http://water.epa.gov/grants_funding/aisrequirement.cfm

2. Evaluation – After receiving an application for waiver of the AIS requirements, EPA Headquarters will use the checklist in Appendix 2 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

3. Signature of waiver approval by the Administrator or another agency official with delegated authority – As soon as the waiver is signed and dated, EPA will notify the State SRF program, and post the signed waiver on our website. The assistance recipient should keep a copy of the signed waiver in its project files.

Public Interest Waivers

EPA has the authority to issue public interest waivers. Evaluation of a public interest waiver request may be more complicated than that of other waiver requests so they may take more time than other waiver requests for a decision to be made. An example of a public interest waiver that might be issued could be for a community that has standardized on a particular type or manufacturer of a valve because of its performance to meet their specifications. Switching to an alternative valve may require staff to be trained on the new equipment and additional spare parts would need to be purchased and stocked, existing valves may need to be unnecessarily replaced, and portions of the system may need to be redesigned. Therefore, requiring the community to install an alternative valve would be inconsistent with public interest.

EPA also has the authority to issue a public interest waiver that covers categories of products that might apply to all projects.

EPA reserves the right to issue national waivers that may apply to particular classes of assistance recipients, particular classes of projects, or particular categories of iron or steel products. EPA may develop national or (US geographic) regional categorical waivers through the identification of similar circumstances in the detailed justifications presented to EPA in a waiver request or requests. EPA may issue a national waiver based on policy decisions regarding the public's interest or a determination that a particular item is not produced domestically in reasonably available quantities or of a sufficient quality. In such cases, EPA may determine it is necessary to issue a national waiver.

If you have any questions concerning the contents of this memorandum, you may contact us, or have your staff contact Jordan Dorfman, Attorney-Advisor, State Revolving Fund Branch, Municipal Support Division, at dorfman.jordan@epa.gov or (202) 564-0614 or Kiri Anderer, Environmental Engineer, Infrastructure Branch, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

Attachments

Appendix 1: Information Checklist for Waiver Request

The purpose of this checklist is to help ensure that all appropriate and necessary information is submitted to EPA. EPA recommends that States review this checklist carefully and provide all appropriate information to EPA. This checklist is for informational purposes only and does not need to be included as part of a waiver application.

Items	✓	Notes
General • Waiver request includes the following information: — Description of the foreign and domestic construction materials — Unit of measure — Quantity — Price — Time of delivery or availability — Location of the construction project — Name and address of the proposed supplier — A detailed justification for the use of foreign construction materials • Waiver request was submitted according to the instructions in the memorandum • Assistance recipient made a good faith effort to solicit bids for domestic iron and steel products, as demonstrated by language in requests for proposals, contracts, and communications with the prime contractor		
Cost Waiver Requests • Waiver request includes the following information: — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products — Relevant excerpts from the bid documents used by the contractors to complete the comparison — Supporting documentation indicating that the contractor made a reasonable survey of the market, such as a description of the process for identifying suppliers and a list of contacted suppliers		
Availability Waiver Requests • Waiver request includes the following supporting documentation necessary to demonstrate the availability, quantity, and/or quality of the materials for which the waiver is requested: — Supplier information or pricing information from a reasonable number of domestic suppliers indicating availability/delivery date for construction materials — Documentation of the assistance recipient's efforts to find available domestic sources, such as a description of the process for identifying suppliers and a list of contacted suppliers. — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of construction materials • Waiver request includes a statement from the prime contractor and/or supplier confirming the non-availability of the domestic construction materials for which the waiver is sought • Has the State received other waiver requests for the materials described in this waiver request, for comparable projects?		

Appendix 2: HQ Review Checklist for Waiver Request

Instructions: To be completed by EPA. Review all waiver requests using the questions in the checklist, and mark the appropriate box as Yes, No or N/A. Marks that fall inside the shaded boxes may be grounds for denying the waiver. If none of your review markings fall into a shaded box, the waiver is eligible for approval if it indicates that one or more of the following conditions applies to the domestic product for which the waiver is sought:

1. The iron and/or steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality.
2. The inclusion of iron and/or steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Review Items	Yes	No	N/A	Comments
Cost Waiver Requests • Does the waiver request include the following information? — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products — Relevant excerpts from the bid documents used by the contractors to complete the comparison — A sufficient number of bid documents or pricing information from domestic sources to constitute a reasonable survey of the market • Does the Total Domestic Project exceed the Total Foreign Project Cost by more than 25%?				
Availability Waiver Requests • Does the waiver request include supporting documentation sufficient to show the availability, quantity, and/or quality of the iron and/or steel product for which the waiver is requested? — Supplier information or other documentation indicating availability/delivery date for materials — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of materials • Does supporting documentation provide sufficient evidence that the contractors made a reasonable effort to locate domestic suppliers of materials, such as a description of the process for identifying suppliers and a list of contacted suppliers? • Based on the materials delivery/availability date indicated in the supporting documentation, will the materials be unavailable when they are needed according to the project schedule? (By item, list schedule date and domestic delivery quote date or other relevant information) • Is EPA aware of any other evidence indicating the non-availability of the materials for which the waiver is requested? Examples include: — Multiple waiver requests for the materials described in this waiver request, for comparable projects in the same State — Multiple waiver requests for the materials described in this waiver request, for comparable projects in other States — Correspondence with construction trade associations indicating the non-availability of the materials • Are the available domestic materials indicated in the bid documents of inadequate quality compared those required by the project plans, specifications, and/or permits?				

Appendix 3: Example Loan Agreement Language

ALL ASSISTANCE AGREEMENT MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE AIS REQUIREMENT. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN SRF ASSISTANCE AGREEMENTS. EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THIS CLAUSE WITH RESPECT TO STATE LAW:

Comply with all federal requirements applicable to the Loan (including those imposed by the 2014 Appropriations Act and related SRF Policy Guidelines) which the Participant understands includes, among other, requirements that all of the iron and steel products used in the Project are to be produced in the United States ("American Iron and Steel Requirement") unless (i) the Participant has requested and obtained a waiver from the Agency pertaining to the Project or (ii) the Finance Authority has otherwise advised the Participant in writing that the American Iron and Steel Requirement is not applicable to the Project.

Comply with all record keeping and reporting requirements under the Clean Water Act/Safe Drinking Water Act, including any reports required by a Federal agency or the Finance Authority such as performance indicators of program deliverables, information on costs and project progress. The Participant understands that (i) each contract and subcontract related to the Project is subject to audit by appropriate federal and state entities and (ii) failure to comply with the Clean Water Act/Safe Drinking Water Act and this Agreement may be a default hereunder that results in a repayment of the Loan in advance of the maturity of the Bonds and/or other remedial actions.

Appendix 4: Sample Construction Contract Language

ALL CONTRACTS MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE AIS REQUIREMENT. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN ALL CONTRACTS IN PROJECTS THAT USE SRF FUNDS. EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THIS CLAUSE WITH RESPECT TO STATE OR LOCAL LAW:

The Contractor acknowledges to and for the benefit of the City of _ ("Purchaser") and the _ (the "State") that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements commonly known as "American Iron and Steel;" that requires all of the iron and steel products used in the project to be produced in the United States ("American Iron and Steel Requirement") including iron and steel products provided by the Contactor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a) the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the State.

Appendix 5: Sample Certifications

The following information is provided as a sample letter of **step** certification for AIS compliance. Documentation must be provided on company letterhead.

Date

Company Name

Company Address

City, State Zip

Subject: American Iron and Steel Step Certification for Project (XXXXXXXXXX)

I, (company representative), certify that the (melting, bending, coating, galvanizing, cutting, etc.) process for (manufacturing or fabricating) the following products and/or materials shipped or provided for the subject project is in full compliance with the American Iron and Steel requirement as mandated in EPA's State Revolving Fund Programs.

Item, Products and/or Materials:

1. Xxxx
2. Xxxx
3. Xxxx

Such process took place at the following location:

_____

If any of the above compliance statements change while providing material to this project we will immediately notify the prime contractor and the engineer.

Signed by company representative

The following information is provided as a sample letter of certification for AIS compliance. Documentation must be provided on company letterhead.

Date

Company Name

Company Address

City, State Zip

Subject: American Iron and Steel Certification for Project (XXXXXXXXXX)

I, (company representative), certify that the following products and/or materials shipped/provided to the subject project are in full compliance with the American Iron and Steel requirement as mandated in EPA's State Revolving Fund Programs.

Item, Products and/or Materials:

1. Xxxx
2. Xxxx
3. Xxxx

Such process took place at the following location:

American Iron & Steel (AIS) Requirement of the Consolidated Appropriations Act of 2014
(Public Law 113-76)

Q&A Part 2

PRODUCT QUESTIONS

1. **Q: Do all fasteners qualify for de minimis exemption?**

   A: No. There is no broad exemption for fasteners from the American Iron and Steel (AIS) requirements. Significant fasteners used in SRF projects are not subject to the de minimis waiver for projects and must comply with the AIS requirements. Significant fasteners include fasteners produced to industry standards (e.g., ASTM standards) and/or project specifications, special ordered or those of high value. When bulk purchase of unknown-origin fasteners that are of incidental use and small value are used on a project, they may fall under the national de minimis waiver for projects. The list of potential items could be varied, such as big-box/hardware-store-variety screws, nails, and staples. The key characteristics of the items that may qualify for the de minimis waiver would be items that are incidental to the project purpose (such as drywall screws) and not significant in value or purpose (such as common nails or brads). See the following: http://water.epa.gov/grants_funding/upload/Deminimis-Waiver-04-15-14.pdf.

   EPA also clarifies that minor components of two listed products – valves and hydrants -- may not need to meet the AIS requirements if the minor components compromise a very small quantity of minor, low-cost fasteners that are of unknown origin. See EPA's questions and answers on the subject at the following: http://water.epa.gov/grants_funding/upload/AIS-QandA-Part-1-Valves-and-Hydrants-final.pdf.

2. **Q: Does PCCP pipe have to be domestically produced?**

   A: Yes. Pre-stressed concrete cylinder pipe (PCCP) or other similar concrete cylinder pipes would be comparable to pre-cast concrete which is specifically listed in the Consolidated Appropriations Act of 2014 as a product subject to the AIS requirement.

3. **Q: If the iron or steel is made from recycled metals will the vendor/supplier have to provide a certification document certifying that the recycled metals are domestically produced?**

   A: No. Recycled source materials used in the production of iron and steel products do not have to come from the U.S. Iron or steel scrap, for instance, are considered raw materials that may come from anywhere. While certification is not required for the raw material, EPA does recommend that additional final processing of iron and steel be certified to have occurred in the U.S.

4. **Q: Do tanks used for filtration systems, if delivered to the construction site separately and then filled with filtration media onsite, have to be domestically produced?**

A: No. Tanks that are specifically designed to be filters, or as parts of a filtration system, do not have to be domestically produced because these parts are no longer simply tanks, even if the filter media has not been installed and will be installed at the project site, as is customary to do for shipping purposes. These parts have only one purpose which is to be housing for filters and cannot be used in another fashion.

5. **Q: Can a recipient use non-domestic flanged pipe?**

   A: No. While the Consolidated Appropriations Act of 2014 does not specifically mention flanged pipe, since it does mention both pipe and flanges, both products would need to be domestically produced. Therefore, flanged pipe would also need to be domestically produced.

6. **Q: Can a recipient use non-domestic couplings, expansion joints, and other similar pipe connectors?**

   A: No. These products would be considered specialty fittings, due to their additional functionality, but still categorized under the larger "fitting" categorization. Fittings are defined as a material that joins pipes together or connects to a pipe (AWWA, The Drinking Water Dictionary, 2000). Therefore, these products must comply with the AIS requirements and be produced domestically.

7. **Q: Can a recipient use non-domestic service saddles and tapping sleeves?**

   A: No. These products are necessary for pipe repair, to tap a water main, or to install a service or house connection. Therefore, they are included under the larger "pipe restraint" category which is a specifically identified product subject to the domestic preference in the Consolidated Appropriations Act of 2014.

8. **Q: The AIS guidance does not appear to cover reused items (i.e., existing pipe fittings, used storage tanks, reusing existing valves). How should reused items be addressed?**

   A: The AIS guidance does not address reuse of items. Reuse of items that would otherwise be covered by AIS is acceptable provided that the item(s) was originally purchased prior to January 17, 2014, the reused item(s) is not substantially altered from original form/function, and any restoration work that may be required does not include the replacement or addition of foreign iron or steel replacement parts. EPA recommends keeping a log of these reused items by including them on the assistance recipient's de minimis list, and stating therein that these items are reused products. The donation of new items (such as a manufacturer waiving cost for certain delivered items because of concerns regarding the origin of a new product) is not, however, considered reuse.

9. **Q: What does "time needed" mean in the AIS guidance, in reference to the definition of "Reasonably Available Quantity"?**

A: For considering whether a product would meet reasonably available quantity, "time needed" is based on the construction schedule. If the item is delayed and there is substantial impact on the overall construction schedule, this would not be according to the "time needed."

10. **Q: If a product is not specifically included on the list of AIS covered products, must it comply with AIS?**

    A: Possibly. The AIS requirements include a list of specifically covered products, one of which is construction materials, a broad category of potential products. For construction materials, EPA's AIS guidance includes a set of example items that it considers construction materials composed primarily of iron and steel and covered by the Act. This example list in the guidance is not an all-inclusive list of potential construction materials. However, the guidance also includes a list of items that EPA specifically does not consider construction materials, generally those of electrical or complex-mechanical nature. If a product is similar to the ones in the non-construction material list (and it is also not specifically listed by the Act), it is not a construction material. For all other items specifically included in the Act, coverage is generally self-evident.

11. **Q: If a listed iron and steel product is used as a part for an assembled product that is non-domestic, do the AIS requirements apply?**

    A: AIS requirements only apply to the final product as delivered to the work site and incorporated into the project. Other assemblies, such as a pumping assembly or a reverse osmosis package plant, are distinct products not listed and do not need to be made in the U.S. or composed of all U.S. parts. Therefore, for the case of a non-covered product used in a larger non-domestic assembly, the components, even if specifically listed in the Consolidated Appropriations Act, do not have to be domestically produced.

12. **Q: Is cast iron excluded from the AIS requirements?**

    A: No. Cast iron products that fall under the definition of iron and steel products must comply with the AIS requirements.

13. **Q: The guidance states that "construction materials" do not include mechanical equipment, but then identifies ductwork as a construction material. Please clarify.**

    A: Ductwork is not mechanical equipment, therefore it is considered a "construction material" and must comply with the AIS requirements.

14. **Q: Do "meters" mentioned in EPA's guidance as non-construction materials include both flow meters and water meters?**

    A: Yes. "Meters" includes any type of meter, including: flow meters, wholesale meters, and water meters/service connections.

15. **Q: Must coiled steel be domestic?**

    A: Yes. Coiled steel is an intermediate product used in the production of steel pipe and must come from a U.S. source or subject to a waiver in order to comply with the AIS requirements.

16. **Q: Are pig iron, direct reduced iron (DRI), and ingot considered raw materials?**

    A: No. These are considered intermediate products used in the production of iron or steel and must come from a U.S. source or subject to a waiver in order to comply with the AIS requirements.

17. **Q: Can assistance recipients rely on a marking that reads, "Made in the USA," as evidence that all processes took place in the U.S.?**

    A: No. This designation is not consistent with our requirements that all manufacturing processes of iron and steel products must take place in the U.S.

18. **Q: When determining what constitutes a product made "primarily" of iron or steel, who makes this determination?**

    A: The manufacturer will show if its product qualifies as primarily made of iron or steel. The recipient should expect the manufacturer to provide documentation/ certification that its product is AIS compliant.

19. **Q: Do aerators need to be produced domestically in order to comply with AIS?**

    A: No. Aerators, similar to pumps, are mechanical equipment that do not need to meet the AIS requirements. "Blowers/aeration equipment, compressors" are listed in EPA's guidance as non-construction materials.

20. **Q: Are Sluice and Slide Gates considered valves?**

    A: No. Valves are products that are generally encased / enclosed with a body, bonnet, and stem. Examples include enclosed butterfly, ball, globe, piston, check, wedge, and gate valves. Furthermore, "gates" (meaning sluice, slide or weir gates) are listed in EPA's guidance as non-construction materials.

AIS PROCESS QUESTIONS

21. **Q: Will notices of waiver applications be published in the federal register?**

    A: No. Applications for waivers will be published on EPA's website (http://water.epa.gov/grants_funding/aisrequirement.cfm**).** EPA will provide 15 days for open public comment, as noted on the website.

22. **Q: Will states be collecting the step certification paper trail, as presented in the AIS guidance?**

    A. No. Assistance recipients must maintain documentation of compliance with AIS. EPA recommends use of the step certification process. This process is a best practice and traces all manufacturing of iron and steel products to the U.S. If the process is used, the state does not have to collect the documentation. The documents must be kept by the assistance recipient and reviewed by the state during project reviews.

23. **Q: Why is it considered a best practice for states to conduct site visits, when it is the assistance recipient's responsibility to meet the AIS requirements?**

    A: It is both the assistance recipient's and the state's responsibility to ensure compliance with the AIS requirements. The state is the recipient of a federal grant and must comply with all grant conditions, including a condition requiring that the AIS requirements be adhered to. Therefore, it is recommended that states conduct site visits of projects during construction and review documentation demonstrating the assistance recipient's proof of compliance.

24. **Q: Please further define the state's role in the waiver process.**

    A: The state's role in the waiver process is to review any waiver requests submitted to the state in order to ensure that all necessary information has been provided by the assistance recipient prior to forwarding the request to EPA. If a state finds the request lacking, the state should work with the assistance recipient to help obtain complete information.

25. **Q: How much time does EPA have to evaluate the waiver during the evaluation step?**

    A: At a minimum, EPA is required to provide 15 days for open public comment. There is no specific deadline or time limit for EPA to review waiver requests. Each waiver request will come with its own specific details and circumstances and may require a different amount of time for review and analysis. For example, public interest waivers in general may take longer to review than availability waivers which are typically more straightforward. However, EPA understands that construction may be delayed while waiting for a waiver and will make every effort to review and issue decisions on waiver requests in a timely manner.

<u>PROJECT QUESTIONS</u>

26. **Q: What if a project is funded by another funding entity (i.e., United States Department of Agriculture – Rural Development) where AIS is not required and begins construction after January 17, 2014 but then applies to the SRF to refinance the project? Are they ineligible?**

A: The project is not ineligible. AIS requirements will apply to any construction that occurs after the assistance agreement is signed, through the end of construction. If construction is complete, there is no retroactive application of the AIS requirements.

27. **Q: If the assistance recipient can demonstrate through market research that the AIS requirement will exceed the 25 percent cost threshold, is the entire project exempt from the AIS requirement?**

    A: If the waiver application shows that the inclusion of American iron and steel products causes the entire cost of the project to increase by more the 25 percent, a waiver may be granted for the entirety of the project.

28. **Q: Can the recipient use non-SRF funds to pay for the non-compliant item.**

    A: No. It is not an acceptable to use non-SRF funds to pay for a non-compliant item. The Consolidated Appropriations Act of 2014 requires that all iron and steel products, no matter the source of funding, must be made in the U.S. if SRF funds are used in the project.

29. **Q: What constitutes "satisfactory quality" as defined in the AIS guidance, in reference to the availability waiver process.**

    A: "Satisfactory quality" means the product meets the project design specifications. A waiver may be granted if a recipient determines that the project plans and design would be compromised because there are no American made products available that meet the project design specifications.

30. **Q: The guidance states that the AIS requirement applies to any project "funded in whole or in part" by an SRF. Where is this in the Act?**

    A: The Act states that, "None of the funds made available by a … [State SRF program] … shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States." This sentence clearly states that no SRF program may use its funds for a project unless all of the iron and steel products used in the project are made in the U.S. This is true even if only $1 of SRF funding is used in the project.

31. **Q: There is always an expectation on the part of an assistance recipient that the construction phase of a planning and/or design only loan will be funded through the SRF. If the original planning and/or design only loan was executed prior to a January 17, 2014, does this mean the entire project will be exempt from the AIS requirement?**

    A: If the original loan includes construction, and was executed prior to January 17, 2014, then the AIS provision does not apply to the project. If the original loan was only for planning and/or design, then a written commitment or documented "expectation" is needed to show exemption from the

requirements. Appearance on a priority list in an Intended Use Plan along with written reasonable assurance from the state that the recipient will receive SRF funding for project construction could provide sufficient evidence of "expectation of funding".

32. **Q: What if there has been a change order or redesign requiring new plans and specifications to be approved and they were approved after January 17, 2014: does the project now have to comply with AIS?**

    A: In most cases, no. Change orders are typically small enough changes that the original plan and specification date will still hold true. For example, if a pipe alignment has to be changed for a block or two due to unforeseen conditions, but new plans and specifications had to be submitted for this section of the project, then that could be considered a minor change. However, if there has been a major redesign, perhaps the whole project had to be redesigned starting from scratch, then the new plans and specification approval date would apply.

33. **Q: What if the bids on a project with plans and specifications approved before January 17, 2014 but the loan is signed after January 17, 2014 come in low, and there is significant funding remaining in the loan agreement, so the community designs a second project with the remaining funds: does that project have to comply with the AIS requirements?**

    A: If the second project is closely related in purpose, place and time to the first project, then the second project would be exempt from the AIS requirements. It is the assistance recipient's responsibility (with state oversight) to show that a project is closely related, or not, in purpose, place and time.

34. **Q: What if the assistance agreement was signed after January 17, 2014, state approval of plans for the first phase of the project was in place prior to January 17, 2014, but state approval of the plans for the second phase of the project was received after January 17, 2014?**

    A: In such a case, the AIS provision would not apply to the first phase of the project. If the second phase of the project is considered the same project as the first phase, due to its close relation in purpose, place and time, the entire project may be exempt. It is the assistance recipient's responsibility (with state oversight) to show that phases of a project is closely related, or not, in purpose, place and time.

35. **Q: Do products purchased through procurement-only contracts have to be comply with AIS?**

    A: Yes. For projects funded by SRF, the products procured under any form of contract must comply with AIS. A procurement-only contract generally involves the bulk purchase of common items (such as pipe, concrete, and/or pumps) of independent timing from a set of planned projects. If products which are purchased through a procurement-only contract are being installed under another contract, the procurement-only contract would probably not be considered a separate project in purpose, place and time; and therefore, would have to comply with the AIS requirements.

March 2015

American Iron & Steel Requirement for the Clean Water and Drinking Water State Revolving Funds

Q&A Part 3

*For CWSRF and DWSRF: On **January 17, 2014**, Public Law 113-76, the "Consolidated Appropriations Act, 2014," was enacted and included an American Iron and Steel requirement for the Clean Water and Drinking Water State Revolving Fund programs through the end of fiscal year 2014. Since then, the AIS requirement has continued for both programs, but through different statutes, with a few changes as described in the questions and answers provided below.*

*For CWSRF: On **June 10, 2014**, the Water Resources Reform and Development Act amended the Clean Water Act to include permanent requirements for the use of AIS products in CWSRF assistance agreements. Section 608 of the CWA now contains requirements for AIS that repeat those of the Consolidated Appropriations Act, 2014. All CWSRF assistance agreements must comply with Section 608 of the CWA for implementation of the permanent AIS requirement.*

*For DWSRF: On **December 16, 2014**, the President signed Public Law 113- 235, the "Consolidated and Further Continuing Appropriations Act, 2015," which provides fiscal year 2015 full-year appropriations through September 30, 2015. This law continues the requirement for the use of AIS products in DWSRF assistance agreements through September 30, 2015.*

CWSRF PROGRAM

1. **Q: The Water Resources Reform and Development Act amended the Clean Water Act to include permanent requirements for the use of AIS for CWSRF funded assistance agreements. Does the CWA include an exemption for plans and specifications approved prior to the enactment of the legislation similar to the exemption included in the Consolidated Appropriations Act (CAA) 2014?**

   A: Yes. The WRRDA amendment to the CWA, which included AIS requirements, included a similar exemption as the CAA 2014. For any CWSRF assistance agreement signed on or after October 1, 2014, if the plans and specifications were approved prior to June 10, 2014 (the enactment of WRRDA), then the project is exempt from AIS requirements. For assistance agreements signed prior to October 1, 2014, the previous dates in the CAA 2014 apply (see March 20, 2014, AIS guidance document).

   If a project does not require approved engineering plans and specifications, the bid advertisement date will count in lieu of the plans and specifications approval date for purposes of this exemption in Section 608 (f).

   The following table summarizes AIS exemptions based on the plans and specifications approval date for CWSRF funded projects.

CWSRF AIS Project Exemption Based on Plans and Specifications Approval Date		
Assistance Agreement Signed:	Exempt from AIS if Plans and Specifications Were Approved Before:	Basis for Exemption:
1/17/2014 through 9/30/2014	4/15/2014	• Consolidated Appropriations Act 2014 • National waiver signed 4/15/2014*
On or after 10/1/2014	6/10/2014	• Clean Water Act Section 608

** To be covered by the national waiver, the plans and specifications had to be submitted to the state prior to 1/17/2014*

2. **Q: Does the AIS requirement apply to refinanced CWSRF projects?**

   A: Yes, in some cases. If a project began construction, financed from a non-CWSRF source prior to June 10, 2014, but is refinanced through a CWSRF assistance agreement executed on or after October 1, 2014, AIS requirements will apply to all construction that occurs on or after June 10, 2014, through completion of construction, unless engineering plans and specifications were approved by the responsible state agency prior to June 10, 2014. For CWSRF projects funded on or after October 1, 2014, there is no retroactive application of the AIS requirements where a refinancing occurs for a project that has completed construction prior to June 10, 2014.

DWSRF PROGRAM

3. **Q: The Consolidated and Further Continuing Appropriations Act 2015 continues the AIS requirements for DWSRF funded assistance agreements. Does the Act include an exemption for plans and specifications approved prior to the enactment of the legislation, similar to the exemption included in the Consolidated Appropriations Act (CAA) 2014?**

   A: Yes. The Consolidated and Further Continuing Appropriations Act 2015 includes a similar exemption as the CAA 2014. For any assistance agreement signed on or after December 16, 2014 (the enactment of the Act), if the plans and specifications were approved prior to December 16, 2014, then the project is exempt from the AIS requirements. For assistance agreements signed prior to December 16, 2014, the previous dates in the CAA 2014 apply (see March 20, 2014 AIS guidance document).

   If a project does not require approved engineering plans and specifications, the bid advertisement date will count in lieu of the plans and specifications approval date for purposes of the exemption in Section 424(f).

4. **Q: Do DWSRF assistance agreements signed during the time period between September 30, 2014, and December 16, 2014, still have to comply with the AIS requirements?**

A: Yes. The Continuing Appropriations Resolution 2015 was signed on September 19, 2014, which extended funding for the DWSRF with the same conditions that were made applicable by the language in the Fiscal Year 2014 appropriations, including the requirement for the use of American Iron and Steel products in projects receiving financial assistance from the DWSRF. Therefore, all assistance agreements starting October 1, 2014, through the enactment of the Consolidated and Further Continuing Appropriations Act 2015 (signed December 16, 2014), must include the AIS requirements. However, if the plans and specifications for any of these projects were approved prior to April 15, 2014 (the date the national waiver was signed), then the project is exempt from the AIS requirements.

The following table summarizes AIS exemptions based on the plans and specifications approval date for DWSRF funded projects.

DWSRF AIS Project Exemption Based on Plans and Specifications Approval Date		
Assistance Agreement Signed:	Exempt from AIS if Plans and Specifications Were Approved Before:	Basis for Exemption:
1/17/2014 through 9/30/2014	4/15/2014	• Consolidated Appropriations Act 2014 • National waiver signed 4/15/2014*
10/1/2014 through 12/15/2014	4/15/2014	• Continuing Appropriations Resolution 2015 (continued CAA 2014 requirements)** • National waiver signed 4/15/2014*
12/16/2014 through 9/30/2015	12/16/2014	• Consolidated and Further Continuing Appropriations Act 2015

** To be covered by the national waiver, the plans and specifications had to be submitted to the state prior to 1/17/2014*

*** Following the first continuing resolution, there were two additional CRs to fill the gap between 12/11/2014 and 12/16/2014*

5. **Q: Does the AIS requirement apply to refinanced DWSRF projects?**

A: Yes, in some cases. If a project began construction, financed from a non-DWSRF source prior to December 16, 2014, but is refinanced through a DWSRF assistance agreement executed on or after December 16, 2014, AIS requirements will apply to all construction that occurs on or after December 16, 2014, through completion of construction, unless engineering plans and

specifications were approved by the responsible state agency prior to December 16, 2014. For DWSRF projects funded on or after December 16, 2014, there is no retroactive application of the AIS requirements where a refinancing occurs for a project that has completed construction prior to December 16, 2014.

BOTH CWSRF AND DWSRF PROGRAMS

6. **Q: If a coating is applied to the external surface of a domestic iron or steel component, and the application takes place outside of the United States, would the product be compliant under the AIS requirements?**

   A: Yes. The product would still be considered a compliant product under AIS requirements. Any coating processes that are applied to the external surface of iron and steel components that would otherwise be AIS compliant would not disqualify the product from meeting the AIS requirements regardless of where the coating processes occur, provided that final assembly of the product occurs in the United States.

   The exemption above only applies to coatings on the *external surface* of iron and steel components. It does not apply to coatings or linings on internal surfaces of iron and steel products, such as the lining of lined pipes. All manufacturing processes for lined pipes, including the application of pipe lining, must occur in the United States for the product to be compliant with AIS requirements.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

OFFICE OF WATER

DECISION MEMORANDUM

SUBJECT: De Minimis Waiver of Section 436 of P.L. 113-76, Consolidated Appropriations Act (CAA), 2014

FROM: Nancy K. Stoner
Acting Assistant Administrator

The EPA is hereby granting a nationwide waiver pursuant to the "American Iron and Steel (AIS)" requirements of P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), section 436 under the authority of Section 436(b)(**1)** (public interest waiver) for de minimis incidental components of eligible water infrastructure projects. This action permits the use of products when they occur in de minimis incidental components of such projects funded by the Act that may otherwise be prohibited under section 436(a). Funds used for such de minimis incidental components cumulatively may comprise no more than a total of 5 percent of the total cost of the materials used in and incorporated into a project; the cost of an individual item may not exceed **1** percent of the total cost of the materials used in and incorporated into a project.

P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), includes an "American Iron and Steel" (AIS) requirement in section 436 that requires Clean Water State Revolving Loan Fund (CWSRF) and Drinking Water State Revolving Loan Fund (DWSRF) assistance recipients to use specific domestic iron and steel products that are produced in the United States if the project is funded through an assistance agreement executed beginning January 17, 2014 (enactment of the Act), through the end of Fiscal Year 2014, unless the agency determines it necessary to waive this requirement based on findings set forth in Section 436(b). The Act states, "[the requirements] shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency ...finds that- (1) applying subsection (a) would be inconsistent with the public interest" 436(b**)(1**).

In implementing section 436 of the Act, the EPA must ensure that the section's requirements are applied consistent with congressional intent in adopting this section and in the broader context of the purposes, objectives, and other provisions applicable to projects funded under the SRF. Water infrastructure projects typically contain a relatively small number of high-cost components incorporated into the project. In bid solicitations for a project, these high-cost components are generally described in detail via project specific technical specifications. For these major components, utility owners and their contractors are generally familiar with the conditions of availability, the potential alternatives for each detailed specification, the approximate cost, and the country of manufacture of the available components.

Every water infrastructure project also involves the use of thousands of miscellaneous, generally low-cost components that are essential for, but incidental to, the construction and are incorporated into the physical structure of the project. For many of these incidental components, the country of manufacture and the availability of alternatives is not always readily or reasonably identifiable prior to procurement in the normal course of business; for other incidental components, the country of manufacture may be known but the miscellaneous character in conjunction with the low cost, individually and (in total) as typically procured in bulk, mark them as properly incidental. Examples of incidental components could include small washers, screws, fasteners (i.e., nuts and bolts), miscellaneous wire, comer bead, ancillary tube, etc. Examples of items that are clearly not incidental include significant process fittings (i.e., tees, elbows, flanges, and brackets), distribution system fittings and valves, force main valves, pipes for sewer collection and/or water distribution, treatment and storage tanks, large structural support structures, etc.

The EPA undertook multiple inquiries to identify the approximate scope of de minimis incidental components within water infrastructure projects during the implementation of the American Reinvestment and Recovery Act (ARRA) and its requirements (Buy American provisions, specifically). The inquiries and research conducted in 2009 applies suitably for the case today. In 2009, the EPA consulted informally with many major associations representing equipment manufacturers and suppliers, construction contractors, consulting engineers, and water and wastewater utilities, and performed targeted interviews with several well-established water infrastructure contractors and firms who work in a variety of project sizes, and regional and demographic settings to ask the following questions:

- What percentage of total project costs were consumables or incidental costs?

- What percentage of materials costs were consumables or incidental costs?

- Did these percentages vary by type of project (drinking water vs. wastewater treatment plant vs. pipe)?

The responses were consistent across the variety of settings and project types, and indicated that the percentage of total costs for drinking water or wastewater infrastructure projects represented by these incidental components is generally not in excess of 5 percent of the total cost of the materials used in and incorporated into a project. In drafting this waiver, the EPA has considered the de minimis proportion of project costs generally represented by each individual type of these incidental components within the many types of such components comprising those percentages, the fact that these types of incidental components are obtained by contractors in many different ways from many different sources, and the disproportionate cost and delay that would be imposed on projects if the EPA did not issue this waiver.

Assistance recipients who wish to use this waiver should in consultation with their contractors determine the items to be covered by this waiver and must retain relevant documentation (i.e., invoices) as to those items in their project files.

If you have any questions concerning the contents of this memorandum, please contact Timothy Connor, Chemical Engineer, Municipal Support Division, at connor.timothy@epa.gov or (202) 566-1059 or Kirsten Anderer, Environmental Engineer, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

Issued on: APR 15 2014

Ohio Water Pollution Control Loan Fund
Use of American Iron and Steel - De Minimis Final Utilization and Certification Form

The Consolidated Appropriations Act of 2014 (P.L. 113-76) Section 436 requires the use of American & Steel in SRF-funded projects. Under the authority of Section 436(b)(1), the EPA has issued a public interest waiver for De Minimis incidental components. The assistance recipient wishing to use this waiver should consult with their contractor(s) to maintain an itemized list of components covered under De Minimis. At the conclusion of the project, this form must be completed and retained in the assistance recipient's project files and a copy provided to DEFA. Please print clearly or type.

Project Name:_____ Loan Agrmt #: _____

NOTE: The De Minimis waiver is only applicable to the cost of materials for the entire project. Do not include other project costs (labor, installation costs, etc.) in the "Total Cost of Materials". The cost of a material must include delivery to the site and any applicable tax. Must have sufficient documentation to support all costs included in this calculation.

Funds used for de minimis incidental components cumulatively may comprise no more than a total of 5 percent of the total cost of the materials used in and incorporated into a project; the cost of an individual item may not exceed 1 percent of the total cost of the materials used in and incorporated into a project.

Total Cost of Materials: _____ 5% Limit: _____ 1% limit: _____

Manufacturer & Component Description	Part/Model #	Quantity (if applicable)	Cost per Unit (if applicable)	Component's Total Cost	How is Cost Documented?*

Use additional sheets as necessary

Total De Minimis Cost of Components: _____

If approaching the 5% or 1% limits, contact DEFA immediately

* Documentation must demonstrate confirmation of the components' actual costs (invoice, etc.).

Name: _____ Title: _____

Signature: _____ Date: _____

Violating Facilities Clause

(Required Contract Provision)

Language prohibiting this use of equipment or services from anyone on the EPA List of Violating Facilities must be included in the contract documents.

Violating Facilities:

The Contractor agrees to comply with all applicable standards, orders or requirements under Section 306 of the Clean Air Act, 42 USC 1857 (h), Section 508 of the Clean Water Act, 33 USC 1368, Executive Order 11738, and EPA regulations, 40 CFR Part 32, which prohibits the use under non-exempt Federal contracts, grants, or loans of facilities included on the EPA List of Violating Facilities.

Requirement For Utilization Of Small Businesses In Rural Areas (SBRA)

(Required Contract Provision)

The following policy should be added to the "Instructions to Bidders" section and referenced in the Table of Contents for the contract documents:

> This procurement is subject to the EPA policy of encouraging the participation of small businesses in rural areas. It is EPA policy that recipients of EPA financial assistance awards utilize the services of small businesses in rural areas (SBRAs), to the maximum extent practicable. The objective is to assure that such small business entities are afforded the maximum practicable opportunity to participate as subcontractors, suppliers and otherwise in EPA-awarded financial assistance programs. This policy applies to all contracts and subcontracts for supplies, construction, and services under EPA grants or cooperative agreements. Small purchases are also subject to this policy.

If possible, also add the following language to the "Advertisement for Bids":

> This procurement is subject to the EPA policy of encouraging the participation of small business in rural areas (SBRAs).

Insurance Provisions

(Required Contract Provision)

Section 3.5 of the WPCLF/WSRLA Loan Agreement contains specific requirements regarding insurance for all contractors and all subcontractors for the life of the contract. These insurance requirements must be reflected in the contract documents. Adjust the following language as needed to meet the specifics of the construction project and local requirements while still meeting the provisions of the Loan Agreement.

The Contractor shall, at his expense, furnish and maintain insurance in the form and amounts specified in subparagraphs 1 through 7 inclusive, of this section. Policies shall be with acceptable insurance companies authorized to do business in the State of Ohio.

The Contractor shall not commence Work nor shall he permit any of his Sub-contractors to commence Work until the insurance policies specified hereinafter, or otherwise required, have been submitted to, and approved by the Owner. Such insurance policies shall be kept in force until the Contractor receives final payment.

Insurance shall be endorsed so that it cannot be changed or canceled in less than ten (10) days after receipt by the Contractor and the Owner of written notice of such proposed action from the Insurer.

The insurance specified in Subparagraphs 1, 2, 3 and 4 shall be written under the comprehensive general form of liability insurance contracts.

The Contractor shall furnish three (3) certificates or, whenever specifically requested by the Owner, three (3) certified copies of the insurance policies themselves and a receipt evidencing full payment of the premiums.

In addition to the insurance described hereinafter, the Contractor shall secure and maintain such other insurance as may be designated elsewhere in the Contract document.

If the Contractor is required to repair or perform Work after the completion of the Work involved under this Contract or obtain new policies in accordance with the requirements in this section.

1. *Builders Risk*: In addition to such fire and other physical damage insurance as the Contractor elects to carry for his own protection, he shall also secure and maintain in the name of the Owner, the government agency sponsoring the Project, Subcontractors, the Consulting Engineer and any other parties having an interest in the Project, as named insured as their interest may appear; a builders' risk policy for fire, extended coverage, vandalism and malicious mischief in the amount of one hundred (100) percent of the value of the complete parts of the Project and Materials in storage, except that such coverage shall not be required in connection with sewer, water main or paving construction. Pump or lift station construction shall not be considered sewer or water main construction for purposes of this paragraph.

2. *Workers Compensation*: The Contractor shall provide Workers Compensation Insurance for all employees engaged in Work who may come within the protection of the workers compensation law, and, where applicable, employer's General Liability Insurances for employees not so protected and shall require all Subcontractors to provide corresponding insurance.

The Contractor shall indemnify the Owner and the Consulting Engineer against any and all liabilities, cost and expenses due to accidents or other occurrences covered by the workers compensation law.

3. *Contractor's Motor Vehicle Bodily Injury and Property Damage Liability Insurance*: Insurance to cover liability arising from the use and operation of motor vehicles in connection with the performance of the Contract (as customarily defined in liability insurance policies), whether they be owned, hired or non-owned by the Contractor, as follows:
a. Bodily Injury Liability: $500,000 for each person; limit of $1,000,000 for each occurrence.
b. Property Damage Liability: $500,000 for each occurrence.

4. *Contractor's Public Liability and Property Damage Liability Insurance*: Contractor's Public Liability Insurance providing a limit of not less than $500,000 for all damages arising out of bodily injuries, including accidental death to one person, and a total limit of $1,000,000 for all damages arising out of bodily injuries, including accidental death, to two or more persons in any one occurrence. Contractor's Property Damage Liability Insurance providing for a limit on not less than $500,000 for all damages to or destruction of property.

Coverage under this policy shall include, to the limits indicated above, the collapse or damage to any structure, building or its contents, public or private utility, or pavement during construction and for two (2) years thereafter.

Whenever Work under the Contract is to be done in the vicinity of existing underground utilities or structures, coverage under the policy shall also include, to the limits indicated, all damages to said underground utilities or structures during construction and for a period of two (2) years thereafter. Whenever Work under the Contract is to be done by blasting, coverage under the policy shall also include, to the limits indicated above, all damages of any kind whatsoever caused by blasting.

5. *Contractor's Protective Public Liability and Property Damage Liability Insurance*: Contractor's Protective Public Liability and Property Damage Liability Insurance for operations performed by Subcontractors providing for coverage and limits corresponding to those described in subparagraph 4.

6. *Owner's Protective Public Liability and Property Damage Liability Insurance*: Regular Owner's Protective Public Liability and Property Damage Liability Insurance for operations performed by the Contractor or any Sub-contractor providing for coverage and limits corresponding to those described in subparagraph 4.

This policy shall be written in the name of the Owner as a separate policy from those specified elsewhere herein.

7. *Railroad Protective Liability Insurance*: In any of the Work under this Contract is on railroad R/W, the Contractor shall at its sole cost and expense, procure and provide, for and in behalf of each railroad company. Protective Liability Insurance (AARAASHO form) with minimum limits per occurrence of not less than $2,000,000 for bodily injury, death and/or property damage, subject to an aggregate limit of $6,000,000 per annum. The policy shall name each railroad company as the insured and be issued to the Contractor. Each railroad company shall be provided with a copy of each policy of insurance prior to commencement of any work.

Materials Testing

(Required Contract Provision)

In addition to the details included with specific equipment testing in the specifications, include an overall statement regarding testing for the project. Adjust the following language as needed to meet the specifics of the construction project

Testing Services

1. Contractor shall appoint, employ, and pay for specified services of an independent firm to perform testing.

2. The independent firm will perform tests and other services specified in individual specification sections and as required by the Architect/Engineer.

3. Testing and source quality control may occur on or off the project site. Perform offsite testing as required by the Architect/Engineer or the Owner.

4. Reports will be submitted by the independent firm to the Architect/Engineer and Contractor, indicating observations and results of tests and indicating compliance or non-compliance with Contract Documents.

5. Cooperate with independent firm; furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor as requested.

   a. Notify Architect/Engineer and independent firm 24 hours prior to expected time for operations requiring services.

   b. Make arrangements with independent firm and pay for additional samples and tests required for Contractor's use.

6. Testing does not relieve Contractor to perform Work to contract requirements.

7. Re-testing required because of non-conformance to specified requirements shall be performed by the same independent firm on instructions by the Architect/Engineer. Payment for re-testing will be charged to the Contractor by deducting testing charges from the Contract Sum/Price.

Continuous Treatment Provisions

(Required Contract Provision)

It is important that construction activities not result in any temporary violations of NPDES permit requirements (for permitted facilities) and construction activities should interrupt wastewater service to the individual resident as little as possible. For drinking water projects, it is important that construction activities not result in any disruption of service. Any disruption of service must be immediately reported to the Ohio EPA, Drinking Water Section of the appropriate district office.

The following example language is a sample of what might be appropriate for construction work occurring at an existing wastewater treatment plant. The language actually incorporated into the contract documents must be adjusted to meet the specifics of the construction project.

Continuous Treatment (wastewater projects)

Federal regulations prohibit by-passing of any sewage during construction operations. The Contractor will be responsible for providing any required temporary pumping facilities piping, etc., necessary to complete the project without any plant by-passing and continuous treatment must be provided at the same level during construction as existed prior to construction.

Unless otherwise previously or subsequently specified, the Contractor shall procure and pay for all permits, licenses, and approvals necessary for the execution of his Contract.

The Contractor shall comply with all laws, ordinances, rules, orders, and regulations relating to the performance of the work required to complete their Contract.

The following example language is a sample of what might be appropriate for construction work occurring at an existing drinking water treatment plant. The language actually incorporated into the contract documents must be adjusted to meet the specifics of the construction project.

Continuous Treatment (drinking water projects)

The Contractor will be responsible for obtaining approval from Ohio EPA for use of temporary pumping facilities, piping and other items in order to complete the project without any plant by-passing. Continuous treatment must be provided at the same level during construction as existed prior to construction.

Unless otherwise previously or subsequently specified, the Contractor shall procure and pay for all permits, licenses, and approvals necessary for the execution of his Contract.

The Contractor shall comply with all laws, ordinances, rules, orders, and regulations relating to the performance of the work required to complete their Contract.

CHANGE ORDER INSTRUCTIONS:

All Change Orders for this work, regardless of costs and whether Water Pollution Control Loan Fund (WPCLF) or Water Supply Revolving Loan Account (WSRLA) funding will be used to finance the changes, must be submitted to Ohio EPA for review.

Changes Requiring Prior Approval

Any change which substantially modifies the Project Facilities as specified in the Ohio EPA approved Facilities Plan and Final Permit to Install or Final Plan Approval (when applicable) or alters the direct or indirect impact of the Project Facilities upon the environment must be incorporated into a Change Order. One copy of the Change Order prior to execution is to be submitted to Ohio EPA for review and prior approval of the acceptability of the change. "Prior to execution" means before the Change Order is signed by the Owner.

Ohio EPA will review the Change Order and inform the Owner of the technical, environmental and operational acceptability of the change, and give the Owner permission to proceed with the proposed work.

All Other Changes

Change Orders not requiring prior approval as described above must be submitted to Ohio EPA within one (1) month of the time at which they are approved by the Owner. Change Orders for WPCLF projects should be submitted to the Division of Environmental and Financial Assistance (DEFA) while Change Orders for WSRLA projects should be submitted to the Division of Drinking and Ground Water (DDAGW) in central office.

Change Order Approval Process

After the Change Order is executed, one (1) copy of the Change Order, including the supporting documentation, is to be sent to Ohio EPA for final review. The WPCLF/WSRLA Change Order forms must have original signatures.

Communities have the option to submit hard copies of the project Change Orders via mail to Ohio EPA or to send PDF Change Order forms and supporting documentation electronically. With either hard copy or electronic submittals, the WPCLF Change Orders should be submitted to DEFA and WSRLA Change Orders should be submitted to DDAGW - Central Office.

The dedicated e-mail address for the electronic submittal of WPCLF Change Orders is EPAWPCLFCO@epa.ohio.gov.

The dedicated e-mail address for the electronic submittal of WSRLA Change Orders is EPAWSRLACO@epa.ohio.gov.

After the Change Order is accepted and eligible costs determined, Ohio EPA will issue a letter informing the Owner and authorizing OWDA to disburse funds from Project Contingency for the work. The OEPA letter will be sent electronically. OWDA will return a PDF of the WPCLF/WSRLA Change Order form which will be signed by all parties including Ohio EPA and OWDA.

Please notify Ohio EPA if the community prefers a hard copy of change order approval documentation and then Ohio EPA and OWDA will send hard copies of approval documentation through the mail.

Payments for Change Order Work

The Owner is precluded from submitting to the OWDA payment requests for Eligible Project Costs associated with the Change Orders until such time as the Ohio EPA's approval of the Change Orders has been obtained.

Local Protest Procedure

(suggested contract provision)

Some statement as to when a valid protest must be filed, in what form it must be filed and who it must be filed with should be included. ORC 153.12 has some default procedures for handling WPCLF and disputes. If the owner wants more control than provided in ORC, a procedure needs to be spelled out in the Contract Documents.

The following example language is a sample of language that could be included. Review all local procedures and requirements and adjust the language to meet the specifics of the project.

Protests

A protest based upon an alleged violation of the procurement requirement may be filed against the OWNER's procurement action by a party with an adversely affected direct financial interest. The protest shall be filed with the Mayor. The OWNER shall determine the protest. The OWNER may request additional information or a hearing in order to resolve the protest.

A protest shall be filed as early as possible during the procurement process, but must be received by the OWNER no later than one week after the basis of the protest is known or should have been known, whichever is earlier. If the protest is mailed, the protester bears the risk of nondelivery with in the required time period.

A protest must clearly present the procurement requirement being protested, the facts which support the protest, and any other information necessary to support the protest.

Basis And Method For Award

(suggested contract provision)

The contract documents should include some language that clearly states what the Owner will consider when determining the successful bidder and to provide a clear basis for the Owner when they have a need to reject the low bidder and go with a different bidder.

The following example language is a sample of language that could be included. Review all local procedures and requirements and adjust the language to meet the specifics of the project.

Basis for Award

1. Owner reserves the right to reject any and all Bids, to waive any and all informalities and to negotiate contract terms with the successful Bidder, and the right to disregard all nonconforming, nonresponsive or conditional bids. Discrepancies between words and figures will be resolved in favor of words. Discrepancies between the indicated sum of any column of figures and the correct sum thereof will be resolved in favor of the correct sum.

2. In evaluating Bids, Owners shall consider the qualifications of the Bidder, whether or not the Bids comply with the prescribed requirements and alternates and unit prices if requested in the Bid forms. The Owner intends to accept alternates (if any are accepted) in the order in which they are listed in the Bid Form but Owner may accept them in any order or combination.

3. Owner may consider the qualifications and experience of Subcontractors and other persons and organizations (including those who are to furnish the principle items of material or equipment) proposed for those portions of the work as to which the identity of Subcontractors and other persons and organizations must submitted as provided in the Supplementary Conditions. Operating costs, maintenance considerations, performance data and guarantees of materials and equipment may also be considered by Owner.

4. Owner may conduct investigations he deems necessary to assist in the evaluation of any Bid and to establish the responsibility, qualifications and financial ability of the Bidders, proposed Subcontractors, and other persons and organizations to do the Work in accordance with the Contract Documents to Owner's satisfaction within the prescribed time.

5. Owner reserves the right to reject the Bid of any Bidder who does not pass investigation of evaluation to Owner's satisfaction. Owner may reject any Proposal where the unit price or individual lump sum prices are unbalanced and/or unfavorable to the Owner's interest.

6. Owner will not make any award or permit any award at any tier to any party which is debarred or suspended or is otherwise excluded from or ineligible for participation in Federal assistance programs under Executive Order 12549 "Debarment and Suspension." Each Contractor and supplier (over $25,000) shall complete the Certification Regarding Debarment, Suspension, and Other Responsibility Matters.

7. If Contract is awarded, it will be awarded to the lowest responsive responsible Bidder whose evaluation by Owner indicates to Owner that the award will be in the best interest of the Project.

8. If the contract is awarded, Owner will give the Successful Bidder a Notice of Award within the time stated in the Advertisement after the day of the Bid opening.

9. When owner gives a Notice of Award to the Successful Bidder, it will be accompanied by at least three unsigned counterparts of the Agreement and three copies of all other Contract Documents. Within ten days thereafter, Contractor shall sign and deliver at least three counterparts of the Agreement to Owner with three copies of all other Contract Documents attached. Within fifteen days thereafter, Owner will deliver one copy of all fully signed counterparts to Contractor.

Payment Methods

(suggested contract provision)

To minimize uncertainty and arguments that can slow down the progress of construction it is useful to provide language stating how and when the Contractor will get paid. In addition to ORC and other local requirements, the involvement of public funding Agencies such as the WPCLF, Ohio Public Works Commission and Community Development Block Grant impact the process and timing for payments.

The following example language is a sample of language that could be included. Review all local procedures and requirements and adjust the language to meet the specifics of the project.

1. At least ten (10) days before each progress payment falls due (but not more often than once a month), the Contractor will submit to the Engineer a partial payment estimated filled out and signed by the Contractor covering the work performed during the period covered by the partial payment estimate and supported by such data as the Engineer may reasonably require. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitable stored at or near the site, the partial payment estimate shall also be accompanied by such supporting data, satisfactory to the Owner as will establish the Owner's title to the material and equipment and protect his interest therein, including applicable insurance. The Engineer will, with ten (10) days after receipt of each partial payment estimate, either indicate in writing his approval of payment and present the partial payment estimate to the Owner, or return the partial payment estimate to the Contractor indicating in writing his reason for refusing to approve payment.

   In the latter case, the Contractor may make the necessary corrections and resubmit the partial payment estimate. The Owner will, within 30 days of presentation to him of an approved partial payment estimate, pay Contractor for labor performed and material incorporated in the Work, at the rate of 92 percent of the amount of the estimate as approved by the Engineer until 50 percent of the Work is completed. All labor performed and material incorporated in the Work after the job is 50 percent of completed shall be paid for at the rate of 100 percent of the amount of additional labor and material furnished and approved and the amount labor and material furnished and approved the amount previously retained shall be deposited in an escrow account. The funds in the escrow account with accumulated interest are to be paid the Contractor at the same time and in the same manner as specified for payment of the of the retained amount in Section 5.

   Payment for material and equipment delivered and not incorporated shall be based on the scheduled of quantities and cost submitted. Any money due from Owner shall, on the day that it is due, be paid to Contractor, or deposited in an escrow account, whichever is applicable, with one or mare banks or building and loan associations in the state selected by mutual agreement between the Contractor and the Owner. The agreement shall contain the following provisions:

   A. The money shall be deposited in a savings account or the escrow agent shall property invest the entire escrow principal in obligations selected by the escrow agent, as stipulated in the agreement.

   B. The escrow agent shall hold the escrow principal and income until receipt of notice from the Owner and the Contractor, of until receipt of an arbitration order specifying the amount of escrow principal to be released and the person to whom it is to be released. Upon receipt of

the notice or order, the agent shall properly pay such amount of principal and the portion of amount of the escrow income to the person indicated.

C. The escrow agent shall be compensated for its services as agreed to by the Owner and the Contractor from the income from the escrow account.

2. The request for payment may also include an allowance for the cost of such major material and equipment which are suitably stored either at the site or the near the site.

_____

_____

PROJECT DESCRIPTION: The project consists of the construction of a membrane softening addition to the existing Richard A. Renneker Water Treatment Plant to treat 13.7 MGD (expandable to 22.0 MGD) of groundwater. Improvements include a new nanofiltration softening building complete with NF softening equipment, pumps, process piping, valves, deasifiers, chemical feed systems, and all associated architectural, structural, HVAC, plumbing, electrical, instrumentation and controls work shown on the plans.

The OWNER has considered the BID submitted by you for the above described WORK in response to its Advertisement For Bids dated _____ and Instructions to Bidders.

You are hereby notified that your BID has been accepted in the amount of $_____.

You are required by the Instructions to Bidders to execute the Agreement and furnish the required CONTRACTOR'S Performance BOND, Payment BOND and certificates of insurance within fifteen (15) calendar days from the date of receipt of this Notice by you.

If you fail to execute said Agreement and to furnish said BONDS within fifteen (15) days from the date of receipt of this Notice, said OWNER will be entitled to consider all your rights arising out of the OWNER's acceptance of your BID as abandoned and as a forfeiture of your BID BOND. The OWNER will be entitled to such other rights as may be granted by law. You are required to return an acknowledged copy of this NOTICE OF AWARD to the OWNER.

AGREEMENT BETWEEN OWNER AND CONTRACTOR

THIS AGREEMENT made this _____ day of _____ , 20_____ with the Warren County Board of Commissioners, 406 Justice Drive, Lebanon, Ohio, hereinafter called "OWNER" and _____, doing business as (an individual, a partnership, or a corporation) called "CONTRACTOR".

WITNESSETH: That for and in consideration of the payments and agreements hereinafter mentioned, to be performed by the Owner, the Contractor herby agrees with the Owner to commence and complete the construction described as follows:

RARWTP MEMBRANE SOFTENING UPGRADES

hereinafter called the project, for the sum of $ *(Contractors Bid Price)* and all work in connection therewith, under the terms as stated in the Conditions of the Contract; and as his (its or their) own proper cost and expense furnish all the materials, supplies, machinery, equipment, tools, superintendence, labor insurance, and other accessories and services necessary to complete the said project in accordance with the conditions and prices stated in the Proposal, Conditions of the Contract, the Specifications, and Contract Documents. "Contract Documents" means the following:

(A) ADVERTISEMENT FOR BIDS
(B) INSTRUCTIONS TO BIDDERS
(C) BID
(D) BID SECURITY
(E) AGREEMENT
(F) GENERAL CONDITIONS
(G) SUPPLEMENTARY CONDITIONS
(H) CONTRACT BOND (PERFORMANCE AND PAYMENT BONDS)
(I) NOTICE OF AWARD
(J) NOTICE TO PROCEED
(K) CHANGE ORDER
(L) DRAWINGS prepared or issued by AECOM.
(M) SPECIFICATIONS prepared or issued by AECOM.
(N) ADDENDUM

CONTRACTOR hereby agrees to commence work under this contract on or before a date to be specified in the NOTICE TO PROCEED of the OWNER and shall substantially complete the Contract Work within five hundred forty-eight (548) calendar days and fully complete the Contract Work in its entirety within six hundred forty (640) calendar days after the date of the NOTICE TO PROCEED unless the period for completion is extended otherwise by the CONRACT DOCUMENTS.

CONTRACTOR also agrees to pay as liquidated damages, the amounts as stated in the SUPPLEMENTARY GENERAL CONDITIONS.

This Agreement may be terminated by either party upon written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement. The nonperforming party

shall have fifteen calendar days from the date of the termination notice to cure or to submit a plan for cure acceptable to the other party.

OWNER may terminate or suspend performance of this Agreement for OWNER'S convenience upon written notice to the CONTRACTOR. CONTRACTOR shall terminate or suspend performance of the services/work on a schedule acceptable to the OWNER.

The CONTRACTOR will indemnify and save the OWNER, their officers and employees, harmless from loss, expenses, costs, reasonable attorney's fees, litigation expenses, suits at law or in equity, causes of action, actions, damages, and obligations arising from (a) negligent, reckless or willful and wanton acts, errors or omissions by CONTRACTOR, its agents, employees, licensees, consultants, or subconsultants; (b) the failure of the CONTRACTOR, its agents, employees, licensees, consultants or subconsultants to observe the applicable standard of care in providing services pursuant to this agreement; (c) the intentional misconduct of the CONTRACTOR, its agents, employees, licensees, consultants, or subconsultants that result in injury to persons or damage to property for which the OWNER may be held legally liable.

The CONTRACTOR does hereby agree to indemnify and hold the OWNER harmless for any and all sums for which the OWNER may be required to pay or for which the OWNER may be held responsible for failure of the CONTRACTOR or any subcontractors to pay the prevailing wage upon this project.

The OWNER agrees to pay the CONTRACTOR in the manner and at such times as set forth in the General Provisions such amounts as required by the Contract Documents.

This Agreement shall be construed under the laws of the State of Ohio, and the parties hereby stipulate to the venue for any and all claims, disputes, interpretations, litigation of any kind arising out of this Agreement being exclusively in the Warren County, Ohio Court of Common Pleas (unless both parties mutually agree in writing to alternate dispute resolution), as well as waiving any right to bring or remove such matters in or to any other state or federal court.

This Agreement shall be binding upon all parties hereto and their respective heirs, executors, administrators, successors, and assigns.

CONTRACTOR shall bind every subcontractor to, and every subcontractor must agree to be bound by the terms of, this Agreement, as far as applicable to the subcontractor's work particularly pertaining to Prevailing Wages and EEO requirements. Nothing contained in this Agreement shall create any contractual relationship between any subcontractor and Owner, nor create any obligations on the part of the Owner to pay or see to the payment of any sums to any subcontractor.

IN WITNESS WHEREOF, the parties hereto have executed, or caused to be executed by their duly authorized officials, this Agreement in three (3) counterparts, each of which shall be deemed an original on the date first above written.

Note: Provide execution by additional parties, such as joint venturers, if necessary.

Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to Owner for the performance of the Contract, which is incorporated herein by reference.

1. If Contractor performs the Contract, Surety and Contractor have no obligation under this Bond, except to participate in conferences as provided in Paragraph 2.1.

2. If there is no Owner Default, Surety's obligation under this Bond shall arise after:
   2.1 Owner has notified Contractor and Surety, at the addresses described in Paragraph 9 below, that Owner is considering declaring a Contractor Default and has requested and attempted to arrange a conference with Contractor and Surety to be held not later than 15 days after receipt of such notice to discuss methods of performing the Contract. If Owner, Contractor, and Surety agree, Contractor shall be allowed a reasonable time to perform the Contract, but such an agreement shall not waive Owner's right, if any, subsequently to declare a Contractor Default; and
   2.2 Owner has declared a Contractor Default and formally terminated Contractor's right to complete the Contract. Such Contractor Default shall not be declared earlier than 20 days after Contractor and Surety have received notice as provided in Paragraph 2.1; and
   2.3 Owner has agreed to pay the Balance of the Contract Price to:
      1. Surety in accordance with the terms of the Contract; or
      2. Another contractor selected pursuant to Paragraph 3.3 to perform the Contract.

3. When Owner has satisfied the conditions of Paragraph 2, Surety shall promptly, and at Surety's expense, take one of the following actions:

   3.1 Arrange for Contractor, with consent of Owner, to perform and complete the Contract; or
   3.2 Undertake to perform and complete the Contract itself, through its agents or through independent contractors; or
   3.3 Obtain bids or negotiated proposals from qualified contractors acceptable to Owner for a contract for performance and completion of the Contract, arrange for a contract to be prepared for execution by Owner and contractor selected with Owner's concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Contract, and pay to Owner the amount of damages as described in Paragraph 5 in excess of the Balance of the Contract Price incurred by Owner resulting from Contractor Default; or
   3.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor, and with reasonable promptness under the circumstances:
      1. After investigation, determine the amount for which it may be liable to Owner and, as soon as practicable after the amount is determined, tender payment therefor to Owner; or
      2. Deny liability in whole or in part and notify Owner citing reasons therefor.

4. If Surety does not proceed as provided in Paragraph 3 with reasonable promptness, Surety shall be deemed to be in default on this Bond 15 days after receipt of an additional written notice from Owner to Surety demanding that Surety perform its obligations under this Bond, and Owner shall be entitled to enforce any remedy available to Owner. If Surety proceeds as provided in Paragraph 3.4, and Owner refuses the payment tendered or Surety has denied liability, in whole or in part, without further notice Owner shall be entitled to enforce any remedy available to Owner.

5. After Owner has terminated Contractor's right to complete the Contract, and if Surety elects to act under Paragraph 3.1, 3.2, or 3.3 above, then the responsibilities of Surety to Owner shall not be greater than those of Contractor under the Contract, and the responsibilities of Owner to Surety shall not be greater than those of Owner under the Contract. To the limit of the amount of this Bond, but subject to commitment by Owner of the Balance of the Contract Price to mitigation of costs and damages on the Contract, Surety is obligated without duplication for:

5.1 The responsibilities of Contractor for correction of defective Work and completion of the Contract;
5.2 Additional legal, design professional, and delay costs resulting from Contractor's Default, and resulting from the actions of or failure to act of Surety under Paragraph 3; and
5.3 Liquidated damages, or if no liquidated damages are specified in the Contract, actual damages caused by delayed performance or non-performance of Contractor.

6. Surety shall not be liable to Owner or others for obligations of Contractor that are unrelated to the Contract, and the Balance of the Contract Price shall not be reduced or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than Owner or its heirs, executors, administrators, or successors.

7. Surety hereby waives notice of any change, including changes of time, to Contract or to related subcontracts, purchase orders, and other obligations.

8. Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the Work or part of the Work is located, and shall be instituted within two years after Contractor Default or within two years after Contractor ceased working or within two years after Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

9. Notice to Surety, Owner, or Contractor shall be mailed or delivered to the address shown on the signature page.

10. When this Bond has been furnished to comply with a statutory requirement in the location where the Contract was to be performed, any provision in this Bond conflicting with said statutory requirement shall be deemed deleted herefrom and provisions conforming to such statutory requirement shall be deemed incorporated herein. The intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

11. Definitions.

11.1 Balance of the Contract Price: The total amount payable by Owner to Contractor under the Contract after all proper adjustments have been made, including allowance to Contractor of any amounts received or to be received by Owner in settlement of insurance or other Claims for damages to which Contractor is entitled, reduced by all valid and proper payments made to or on behalf of Contractor under the Contract.
11.2 Contract: The agreement between Owner and Contractor identified on the signature page, including all Contract Documents and changes thereto.
11.3 Contractor Default: Failure of Contractor, which has neither been remedied nor waived, to perform or otherwise to comply with the terms of the Contract.
11.4 Owner Default: Failure of Owner, which has neither been remedied nor waived, to pay Contractor as required by the Contract or to perform and complete or otherwise comply with the other terms thereof.

FOR INFORMATION ONLY – (*Name, Address and Telephone*) Surety Agency or Broker: Owner's Representative (*Engineer or other party*):

Note: Provide execution by additional parties, such as joint venturers, if necessary.

1. Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to Owner to pay for labor, materials, and equipment furnished by Claimants for use in the performance of the Contract, which is incorporated herein by reference.

2. With respect to Owner, this obligation shall be null and void if Contractor:

2.1 Promptly makes payment, directly or indirectly, for all sums due Claimants, and

2.2 Defends, indemnifies, and holds harmless Owner from all claims, demands, liens, or suits alleging non-payment by Contractor by any person or entity who furnished labor, materials, or equipment for use in the performance of the Contract, provided Owner has promptly notified Contractor and Surety (at the addresses described in Paragraph 12) of any claims, demands, liens, or suits and tendered defense of such claims, demands, liens, or suits to Contractor and Surety, and provided there is no Owner Default.

3. With respect to Claimants, this obligation shall be null and void if Contractor promptly makes payment, directly or indirectly, for all sums due.

4. Surety shall have no obligation to Claimants under this Bond until:

4.1 Claimants who are employed by or have a direct contract with Contractor have given notice to Surety (at the address described in Paragraph 12) and sent a copy, or notice thereof, to Owner, stating that a claim is being made under this Bond and, with substantial accuracy, the amount of the claim.

4.2 Claimants who do not have a direct contract with Contractor:

1. Have furnished written notice to Contractor and sent a copy, or notice thereof, to Owner, within 90 days after having last performed labor or last furnished materials or equipment included in the claim stating, with substantial accuracy, the amount of the claim and the name of the party to whom the materials or equipment were furnished or supplied, or for whom the labor was done or performed; and
2. Have either received a rejection in whole or in part from Contractor, or not received within 30 days of furnishing the above notice any communication from Contractor by which Contractor had indicated the claim will be paid directly or indirectly; and
3. Not having been paid within the above 30 days, have sent a written notice to Surety (at the address described in Paragraph 12) and sent a copy, or notice thereof, to Owner, stating that a claim is being made under this Bond and enclosing a copy of the previous written notice furnished to Contractor.

5. If a notice by a Claimant required by Paragraph 4 is provided by Owner to Contractor or to Surety, that is sufficient compliance.

6. When a Claimant has satisfied the conditions of Paragraph 4, the Surety shall promptly and at Surety's expense take the following actions:

6.1 Send an answer to that Claimant, with a copy to Owner, within 45 days after receipt of the claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed.

6.2 Pay or arrange for payment of any undisputed amounts.

7. Surety's total obligation shall not exceed the amount of this Bond, and the amount of this Bond shall be credited for any payments made in good faith by Surety.

8. Amounts owed by Owner to Contractor under the Contract shall be used for the performance of the Contract and to satisfy claims, if any, under any performance bond. By Contractor furnishing and Owner accepting this Bond, they agree that all funds earned by Contractor in the performance of the Contract are dedicated to satisfy obligations of Contractor and Surety under this Bond, subject to Owner's priority to use the funds for the completion of the Work.

9. Surety shall not be liable to Owner, Claimants, or others for obligations of Contractor that are unrelated to the Contract. Owner shall not be liable for payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligations to make payments to, give notices on behalf of, or otherwise have obligations to Claimants under this Bond.

10. Surety hereby waives notice of any change, including changes of time, to the Contract or to related subcontracts, purchase orders, and other obligations.

11. No suit or action shall be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the location in which the Work or part of the Work is located or after the expiration of one year from the date (1) on which the Claimant gave the notice required by Paragraph 4.1 or Paragraph 4.2.3, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Contract, whichever of (1) or (2) first occurs. If the provisions of this paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

12. Notice to Surety, Owner, or Contractor shall be mailed or delivered to the addresses shown on the signature page. Actual receipt of notice by Surety, Owner, or Contractor, however accomplished, shall be sufficient compliance as of the date received at the address shown on the signature page.

13. When this Bond has been furnished to comply with a statutory requirement in the location where the Contract was to be performed, any provision in this Bond conflicting with said statutory requirement shall be deemed deleted herefrom and provisions conforming to such statutory requirement shall be deemed incorporated herein. The intent is that this Bond shall be construed as a statutory Bond and not as a common law bond.

14. Upon request of any person or entity appearing to be a potential beneficiary of this Bond, Contractor shall promptly furnish a copy of this Bond or shall permit a copy to be made.

15. Definitions

15.1 Claimant: An individual or entity having a direct contract with Contractor, or with a first-tier subcontractor of Contractor, to furnish labor, materials, or equipment for use in the performance of the Contract. The intent of this Bond shall be to include without limitation in the terms “labor, materials or equipment” that part of water, gas, power, light, heat, oil, gasoline, telephone service, or rental equipment used in the Contract, architectural and engineering services required for performance of the Work of Contractor and Contractor’s subcontractors, and all other items for which a mechanic’s lien may be asserted in the jurisdiction where the labor, materials, or equipment were furnished.

15.2 Contract: The agreement between Owner and Contractor identified on the signature page, including all Contract Documents and changes thereto.

15.3 Owner Default: Failure of Owner, which has neither been remedied nor waived, to pay Contractor as required by the Contract, or to perform and complete or otherwise comply with the other terms thereof.

GENERAL CONDITIONS

Following is Standard General Conditions of the Construction Contract (NSPE – EJCDC C-700, 2007 Edition).

(THIS PAGE INTENTIONALLY LEFT BLANK)

Engineers Joint Documents Committee
Design and Construction Related Documents
Instructions and License Agreement

Instructions

Before you use any EJCDC document:

1. Read the License Agreement. You agree to it and are bound by its terms when you use the EJCDC document.

2. Make sure that you have the correct version for your word processing software.

How to Use:

1. While EJCDC has expended considerable effort to make the software translations exact, it can be that a few document controls (e.g., bold, underline) did not carry over.

2. Similarly, your software may change the font specification if the font is not available in your system. It will choose a font that is close in appearance. In this event, the pagination may not match the control set.

3. If you modify the document, you must follow the instructions in the License Agreement about notification.

4. Also note the instruction in the License Agreement about the EJCDC copyright.

License Agreement

You should carefully read the following terms and conditions before using this document. Commencement of use of this document indicates your acceptance of these terms and conditions. If you do not agree to them, you should promptly return the materials to the vendor, and your money will be refunded.

The Engineers Joint Contract Documents Committee ("EJCDC") provides **EJCDC Design and Construction Related Documents** and licenses their use worldwide. You assume sole responsibility for the selection of specific documents or portions thereof to achieve your intended results, and for the installation, use, and results obtained from **EJCDC Design and Construction Related Documents**.

You acknowledge that you understand that the text of the contract documents of **EJCDC Design and Construction Related Documents** has important legal consequences and that consultation with an attorney is recommended with respect to use or modification of the text. You further acknowledge that EJCDC documents are protected by the copyright laws of the United States.

License:

You have a limited nonexclusive license to:

1. Use **EJCDC Design and Construction Related Documents** on any number of machines owned, leased or rented by your company or organization.

2. Use **EJCDC Design and Construction Related Documents** in printed form for bona fide contract documents.

3. Copy **EJCDC Design and Construction Related Documents** into any machine readable or printed form for backup or modification purposes in support of your use of **EJCDC Design and Construction Related Documents**.

You agree that you will:

1. Reproduce and include EJCDC's copyright notice on any printed or machine-readable copy, modification, or portion merged into another document or program. All proprietary rights in **EJCDC Design and Construction Related Documents** are and shall remain the property of EJCDC.

2. Not represent that any of the contract documents you generate from **EJCDC Design and Construction Related Documents** are EJCDC documents unless (i) the document text is used without alteration or (ii) all additions and changes to, and deletions from, the text are clearly shown.

You may not use, copy, modify, or transfer EJCDC Design and Construction Related Documents, or any copy, modification or merged portion, in whole or in part, except as expressly provided for in this license. Reproduction of EJCDC Design and Construction Related Documents in printed or machine-readable format for resale or educational purposes is expressly prohibited.

If you transfer possession of any copy, modification or merged portion of EJCDC Design and Construction Related Documents to another party, your license is automatically terminated.

Term:

The license is effective until terminated. You may terminate it at any time by destroying **EJCDC Design and Construction Related Documents** altogether with all copies, modifications and merged portions in any form. It will also terminate upon conditions set forth elsewhere in this Agreement or if you fail to comply with any term or condition of this Agreement. You agree upon such termination to destroy **EJCDC Design and Construction Related Documents** along with all copies, modifications and merged portions in any form.

Limited Warranty:
EJCDC warrants the CDs and diskettes on which **EJCDC Design and Construction Related Documents** is furnished to be free from defects in materials and workmanship under normal use for a period of ninety (90) days from the date of delivery to you as evidenced by a copy of your receipt.

There is no other warranty of any kind, either expressed or implied, including, but not limited to the implied warranties of merchantability and fitness for a particular purpose. Some states do not allow the exclusion of implied warranties, so the above exclusion may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

EJCDC does not warrant that the functions contained in **EJCDC Design and Construction Related Documents** will meet your requirements or that the operation of **EJCDC Design and Construction Related Documents** will be uninterrupted or error free.

Limitations of Remedies:
EJCDC's entire liability and your exclusive remedy shall be:

1. the replacement of any document not meeting EJCDC's "Limited Warranty" which is returned to EJCDC's selling agent with a copy of your receipt, or

2. if EJCDC's selling agent is unable to deliver a replacement CD or diskette which is free of defects in materials and workmanship, you may terminate this Agreement by returning EJCDC Document and your money will be refunded.

In no event will EJCDC be liable to you for any damages, including any lost profits, lost savings or other incidental or consequential damages arising out of the use or inability to use **EJCDC Design and Construction Related Documents** even if EJCDC has been advised of the possibility of such damages, or for any claim by any other party.

Some states do not allow the limitation or exclusion of liability for incidental or consequential damages, so the above limitation or exclusion may not apply to you.

General:
You may not sublicense, assign, or transfer this license except as expressly provided in this Agreement. Any attempt otherwise to sublicense, assign, or transfer any of the rights, duties, or obligations hereunder is void.

This Agreement shall be governed by the laws of the State of Virginia. Should you have any questions concerning this Agreement, you may contact EJCDC by writing to:

Arthur Schwartz, Esq.
General Counsel
National Society of Professional Engineers
1420 King Street
Alexandria, VA 22314

Phone: (703) 684-2845
Fax: (703) 836-4875
e-mail: aschwartz@nspe.org

You acknowledge that you have read this agreement, understand it and agree to be bound by its terms and conditions. You further agree that it is the complete and exclusive statement of the agreement between us which supersedes any proposal or prior agreement, oral or written, and any other communications between us relating to the subject matter of this agreement.

This document has important legal consequences; consultation with an attorney is encouraged with respect to its use or modification. This document should be adapted to the particular circumstances of the contemplated Project and the controlling Laws and Regulations.

STANDARD GENERAL CONDITIONS OF THE CONSTRUCTION CONTRACT

Endorsed by

CONSTRUCTION SPECIFICATIONS INSTITUTE

These General Conditions have been prepared for use with the Suggested Forms of Agreement Between Owner and Contractor (EJCDC C-520 or C-525, 2007 Editions). Their provisions are interrelated and a change in one may necessitate a change in the other. Comments concerning their usage are contained in the Narrative Guide to the EJCDC Construction Documents (EJCDC C-001, 2007 Edition). For guidance in the preparation of Supplementary Conditions, see Guide to the Preparation of Supplementary Conditions (EJCDC C-800, 2007 Edition).

STANDARD GENERAL CONDITIONS OF THE CONSTRUCTION CONTRACT

TABLE OF CONTENTS

Page

ARTICLE 1 – DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Wherever used in the Bidding Requirements or Contract Documents and printed with initial capital letters, the terms listed below will have the meanings indicated which are applicable to both the singular and plural thereof. In addition to terms specifically defined, terms with initial capital letters in the Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Contract Documents.

2. *Agreement*—The written instrument which is evidence of the agreement between Owner and Contractor covering the Work.

3. *Application for Payment*—The form acceptable to Engineer which is to be used by Contractor during the course of the Work in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. *Asbestos*—Any material that contains more than one percent asbestos and is friable or is releasing asbestos fibers into the air above current action levels established by the United States Occupational Safety and Health Administration.

5. *Bid*—The offer or proposal of a Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.

6. *Bidder*—The individual or entity who submits a Bid directly to Owner.

7. *Bidding Documents*—The Bidding Requirements and the proposed Contract Documents (including all Addenda).

8. *Bidding Requirements*—The advertisement or invitation to bid, Instructions to Bidders, Bid security of acceptable form, if any, and the Bid Form with any supplements.

9. *Change Order*—A document recommended by Engineer which is signed by Contractor and Owner and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, issued on or after the Effective Date of the Agreement.

10. *Claim*—A demand or assertion by Owner or Contractor seeking an adjustment of Contract Price or Contract Times, or both, or other relief with respect to the terms of the Contract. A demand for money or services by a third party is not a Claim.

11. *Contract*—The entire and integrated written agreement between the Owner and Contractor concerning the Work. The Contract supersedes prior negotiations, representations, or agreements, whether written or oral.

12. *Contract Documents*—Those items so designated in the Agreement. Only printed or hard copies of the items listed in the Agreement are Contract Documents. Approved Shop Drawings, other Contractor submittals, and the reports and drawings of subsurface and physical conditions are not Contract Documents.

13. *Contract Price*—The moneys payable by Owner to Contractor for completion of the Work in accordance with the Contract Documents as stated in the Agreement (subject to the provisions of Paragraph 11.03 in the case of Unit Price Work).

14. *Contract Times*—The number of days or the dates stated in the Agreement to: (i) achieve Milestones, if any; (ii) achieve Substantial Completion; and (iii) complete the Work so that it is ready for final payment as evidenced by Engineer's written recommendation of final payment.

15. *Contractor*—The individual or entity with whom Owner has entered into the Agreement.

16. *Cost of the Work*—See Paragraph 11.01 for definition.

17. *Drawings*—That part of the Contract Documents prepared or approved by Engineer which graphically shows the scope, extent, and character of the Work to be performed by Contractor. Shop Drawings and other Contractor submittals are not Drawings as so defined.

18. *Effective Date of the Agreement*—The date indicated in the Agreement on which it becomes effective, but if no such date is indicated, it means the date on which the Agreement is signed and delivered by the last of the two parties to sign and deliver.

19. *Engineer*—The individual or entity named as such in the Agreement.

20. *Field Order*—A written order issued by Engineer which requires minor changes in the Work but which does not involve a change in the Contract Price or the Contract Times.

21. *General Requirements*—Sections of Division 1 of the Specifications.

22. *Hazardous Environmental Condition*—The presence at the Site of Asbestos, PCBs, Petroleum, Hazardous Waste, or Radioactive Material in such quantities or circumstances that may present a substantial danger to persons or property exposed thereto.

23. *Hazardous Waste*—The term Hazardous Waste shall have the meaning provided in Section 1004 of the Solid Waste Disposal Act (42 USC Section 6903) as amended from time to time.

24. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, rules, regulations, ordinances, codes, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

25. *Liens*—Charges, security interests, or encumbrances upon Project funds, real property, or personal property.

26. *Milestone*—A principal event specified in the Contract Documents relating to an intermediate completion date or time prior to Substantial Completion of all the Work.

27. *Notice of Award*—The written notice by Owner to the Successful Bidder stating that upon timely compliance by the Successful Bidder with the conditions precedent listed therein, Owner will sign and deliver the Agreement.

28. *Notice to Proceed*—A written notice given by Owner to Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work under the Contract Documents.

29. *Owner*—The individual or entity with whom Contractor has entered into the Agreement and for whom the Work is to be performed.

30. *PCBs*—Polychlorinated biphenyls.

31. *Petroleum*—Petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute), such as oil, petroleum, fuel oil, oil sludge, oil refuse, gasoline, kerosene, and oil mixed with other non-Hazardous Waste and crude oils.

32. *Progress Schedule*—A schedule, prepared and maintained by Contractor, describing the sequence and duration of the activities comprising the Contractor's plan to accomplish the Work within the Contract Times.

33. *Project*—The total construction of which the Work to be performed under the Contract Documents may be the whole, or a part.

34. *Project Manual*—The bound documentary information prepared for bidding and constructing the Work. A listing of the contents of the Project Manual, which may be bound in one or more volumes, is contained in the table(s) of contents.

35. *Radioactive Material*—Source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954 (42 USC Section 2011 et seq.) as amended from time to time.

36. *Resident Project Representative*—The authorized representative of Engineer who may be assigned to the Site or any part thereof.

37. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.

38. *Schedule of Submittals*—A schedule, prepared and maintained by Contractor, of required submittals and the time requirements to support scheduled performance of related construction activities.

39. *Schedule of Values*—A schedule, prepared and maintained by Contractor, allocating portions of the Contract Price to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

40. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information which are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work.

41. *Site*—Lands or areas indicated in the Contract Documents as being furnished by Owner upon which the Work is to be performed, including rights-of-way and easements for access thereto, and such other lands furnished by Owner which are designated for the use of Contractor.

42. *Specifications*—That part of the Contract Documents consisting of written requirements for materials, equipment, systems, standards and workmanship as applied to the Work, and certain administrative requirements and procedural matters applicable thereto.

43. *Subcontractor*—An individual or entity having a direct contract with Contractor or with any other Subcontractor for the performance of a part of the Work at the Site.

44. *Substantial Completion*—The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Engineer, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.

45. *Successful Bidder*—The Bidder submitting a responsive Bid to whom Owner makes an award.

46. *Supplementary Conditions*—That part of the Contract Documents which amends or supplements these General Conditions.

47. *Supplier*—A manufacturer, fabricator, supplier, distributor, materialman, or vendor having a direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or Subcontractor.

48. *Underground Facilities*—All underground pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or attachments, and any encasements containing such facilities, including those that convey electricity, gases, steam, liquid petroleum products, telephone or other communications, cable television, water, wastewater, storm water, other liquids or chemicals, or traffic or other control systems.

49. *Unit Price Work*—Work to be paid for on the basis of unit prices.

50. *Work*—The entire construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction, and furnishing, installing, and incorporating all materials and equipment into such construction, all as required by the Contract Documents.

51. *Work Change Directive*—A written statement to Contractor issued on or after the Effective Date of the Agreement and signed by Owner and recommended by Engineer ordering an

addition, deletion, or revision in the Work, or responding to differing or unforeseen subsurface or physical conditions under which the Work is to be performed or to emergencies. A Work Change Directive will not change the Contract Price or the Contract Times but is evidence that the parties expect that the change ordered or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order following negotiations by the parties as to its effect, if any, on the Contract Price or Contract Times.

1.02 *Terminology*

A. The words and terms discussed in Paragraph 1.02.B through F are not defined but, when used in the Bidding Requirements or Contract Documents, have the indicated meaning.

B. *Intent of Certain Terms or Adjectives:*

1. The Contract Documents include the terms "as allowed," "as approved," "as ordered," "as directed" or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Work. It is intended that such exercise of professional judgment, action, or determination will be solely to evaluate, in general, the Work for compliance with the information in the Contract Documents and with the design concept of the Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective is not intended to and shall not be effective to assign to Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility contrary to the provisions of Paragraph 9.09 or any other provision of the Contract Documents.

C. *Day:*

1. The word "day" means a calendar day of 24 hours measured from midnight to the next midnight.

D. *Defective:*

1. The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty, or deficient in that it:

a. does not conform to the Contract Documents; or

b. does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or

c. has been damaged prior to Engineer's recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with Paragraph 14.04 or 14.05).

E. *Furnish, Install, Perform, Provide:*

1. The word "furnish," when used in connection with services, materials, or equipment, shall mean to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, shall mean to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, shall mean to furnish and install said services, materials, or equipment complete and ready for intended use.

4. When "furnish," "install," "perform," or "provide" is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, "provide" is implied.

F. Unless stated otherwise in the Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2 – PRELIMINARY MATTERS

2.01 *Delivery of Bonds and Evidence of Insurance*

A. When Contractor delivers the executed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner such bonds as Contractor may be required to furnish.

B. *Evidence of Insurance:* Before any Work at the Site is started, Contractor and Owner shall each deliver to the other, with copies to each additional insured identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance which either of them or any additional insured may reasonably request) which Contractor and Owner respectively are required to purchase and maintain in accordance with Article 5.

2.02 *Copies of Documents*

A. Owner shall furnish to Contractor up to ten printed or hard copies of the Drawings and Project Manual. Additional copies will be furnished upon request at the cost of reproduction.

2.03 *Commencement of Contract Times; Notice to Proceed*

A. The Contract Times will commence to run on the thirtieth day after the Effective Date of the Agreement or, if a Notice to Proceed is given, on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Agreement. In no event will the Contract Times commence to run later than the sixtieth day after the day of Bid opening or the thirtieth day after the Effective Date of the Agreement, whichever date is earlier.

2.04 *Starting the Work*

A. Contractor shall start to perform the Work on the date when the Contract Times commence to run. No Work shall be done at the Site prior to the date on which the Contract Times commence to run.

2.05 *Before Starting Construction*

A. *Preliminary Schedules:* Within 10 days after the Effective Date of the Agreement (unless otherwise specified in the General Requirements), Contractor shall submit to Engineer for timely review:

1. a preliminary Progress Schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract Documents;

2. a preliminary Schedule of Submittals; and

3. a preliminary Schedule of Values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

2.06 *Preconstruction Conference; Designation of Authorized Representatives*

A. Before any Work at the Site is started, a conference attended by Owner, Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in Paragraph 2.05.A, procedures for handling Shop Drawings and other submittals, processing Applications for Payment, and maintaining required records.

B. At this conference Owner and Contractor each shall designate, in writing, a specific individual to act as its authorized representative with respect to the services and responsibilities under the Contract. Such individuals shall have the authority to transmit instructions, receive information, render decisions relative to the Contract, and otherwise act on behalf of each respective party.

2.07 *Initial Acceptance of Schedules*

A. At least 10 days before submission of the first Application for Payment a conference attended by Contractor, Engineer, and others as appropriate will be held to review for acceptability to Engineer as provided below the schedules submitted in accordance with Paragraph 2.05.A. Contractor shall have an additional 10 days to make corrections and adjustments and to complete and resubmit the schedules. No progress payment shall be made to Contractor until acceptable schedules are submitted to Engineer.

1. The Progress Schedule will be acceptable to Engineer if it provides an orderly progression of the Work to completion within the Contract Times. Such acceptance will not impose on Engineer responsibility for the Progress Schedule, for sequencing, scheduling, or progress of

the Work, nor interfere with or relieve Contractor from Contractor's full responsibility therefor.

2. Contractor's Schedule of Submittals will be acceptable to Engineer if it provides a workable arrangement for reviewing and processing the required submittals.

3. Contractor's Schedule of Values will be acceptable to Engineer as to form and substance if it provides a reasonable allocation of the Contract Price to component parts of the Work.

ARTICLE 3 – CONTRACT DOCUMENTS: INTENT, AMENDING, REUSE

3.01 *Intent*

A. The Contract Documents are complementary; what is required by one is as binding as if required by all.

B. It is the intent of the Contract Documents to describe a functionally complete project (or part thereof) to be constructed in accordance with the Contract Documents. Any labor, documentation, services, materials, or equipment that reasonably may be inferred from the Contract Documents or from prevailing custom or trade usage as being required to produce the indicated result will be provided whether or not specifically called for, at no additional cost to Owner.

C. Clarifications and interpretations of the Contract Documents shall be issued by Engineer as provided in Article 9.

3.02 *Reference Standards*

A. Standards, Specifications, Codes, Laws, and Regulations

1. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, shall mean the standard, specification, manual, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Agreement if there were no Bids), except as may be otherwise specifically stated in the Contract Documents.

2. No provision of any such standard, specification, manual, or code, or any instruction of a Supplier, shall be effective to change the duties or responsibilities of Owner, Contractor, or Engineer, or any of their subcontractors, consultants, agents, or employees, from those set forth in the Contract Documents. No such provision or instruction shall be effective to assign to Owner, Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, any duty or authority to supervise or direct the performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies:*

1. *Contractor's Review of Contract Documents Before Starting Work*: Before undertaking each part of the Work, Contractor shall carefully study and compare the Contract Documents and check and verify pertinent figures therein and all applicable field measurements. Contractor shall promptly report in writing to Engineer any conflict, error, ambiguity, or discrepancy which Contractor discovers, or has actual knowledge of, and shall obtain a written interpretation or clarification from Engineer before proceeding with any Work affected thereby.

2. *Contractor's Review of Contract Documents During Performance of Work*: If, during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents, or between the Contract Documents and (a) any applicable Law or Regulation , (b) any standard, specification, manual, or code, or (c) any instruction of any Supplier, then Contractor shall promptly report it to Engineer in writing. Contractor shall not proceed with the Work affected thereby (except in an emergency as required by Paragraph 6.16.A) until an amendment or supplement to the Contract Documents has been issued by one of the methods indicated in Paragraph 3.04.

3. Contractor shall not be liable to Owner or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless Contractor had actual knowledge thereof.

B. *Resolving Discrepancies:*

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Contract Documents and:

a. the provisions of any standard, specification, manual, or code, or the instruction of any Supplier (whether or not specifically incorporated by reference in the Contract Documents); or

b. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

3.04 *Amending and Supplementing Contract Documents*

A. The Contract Documents may be amended to provide for additions, deletions, and revisions in the Work or to modify the terms and conditions thereof by either a Change Order or a Work Change Directive.

B. The requirements of the Contract Documents may be supplemented, and minor variations and deviations in the Work may be authorized, by one or more of the following ways:

1. A Field Order;

2. Engineer's approval of a Shop Drawing or Sample (subject to the provisions of Paragraph 6.17.D.3); or

3. Engineer's written interpretation or clarification.

3.05 *Reuse of Documents*

A. Contractor and any Subcontractor or Supplier shall not:

1. have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media editions; or

2. reuse any such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of Owner and Engineer and specific written verification or adaptation by Engineer.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Contract. Nothing herein shall preclude Contractor from retaining copies of the Contract Documents for record purposes.

3.06 *Electronic Data*

A. Unless otherwise stated in the Supplementary Conditions, the data furnished by Owner or Engineer to Contractor, or by Contractor to Owner or Engineer, that may be relied upon are limited to the printed copies (also known as hard copies). Files in electronic media format of text, data, graphics, or other types are furnished only for the convenience of the receiving party. Any conclusion or information obtained or derived from such electronic files will be at the user's sole risk. If there is a discrepancy between the electronic files and the hard copies, the hard copies govern.

B. Because data stored in electronic media format can deteriorate or be modified inadvertently or otherwise without authorization of the data's creator, the party receiving electronic files agrees that it will perform acceptance tests or procedures within 60 days, after which the receiving party shall be deemed to have accepted the data thus transferred. Any errors detected within the 60-day acceptance period will be corrected by the transferring party.

C. When transferring documents in electronic media format, the transferring party makes no representations as to long term compatibility, usability, or readability of documents resulting from the use of software application packages, operating systems, or computer hardware differing from those used by the data's creator.

ARTICLE 4 – AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS; REFERENCE POINTS

4.01 *Availability of Lands*

A. Owner shall furnish the Site. Owner shall notify Contractor of any encumbrances or restrictions not of general application but specifically related to use of the Site with which Contractor must comply in performing the Work. Owner will obtain in a timely manner and pay for easements for permanent structures or permanent changes in existing facilities. If Contractor and Owner are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the

Contract Price or Contract Times, or both, as a result of any delay in Owner's furnishing the Site or a part thereof, Contractor may make a Claim therefor as provided in Paragraph 10.05.

B. Upon reasonable written request, Owner shall furnish Contractor with a current statement of record legal title and legal description of the lands upon which the Work is to be performed and Owner's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.

C. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

4.02 *Subsurface and Physical Conditions*

A. *Reports and Drawings:* The Supplementary Conditions identify:

1. those reports known to Owner of explorations and tests of subsurface conditions at or contiguous to the Site; and

2. those drawings known to Owner of physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities).

B. *Limited Reliance by Contractor on Technical Data Authorized:* Contractor may rely upon the accuracy of the "technical data" contained in such reports and drawings, but such reports and drawings are not Contract Documents. Such "technical data" is identified in the Supplementary Conditions. Except for such reliance on such "technical data," Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto; or

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or

3. any Contractor interpretation of or conclusion drawn from any "technical data" or any such other data, interpretations, opinions, or information.

4.03 *Differing Subsurface or Physical Conditions*

A. *Notice:* If Contractor believes that any subsurface or physical condition that is uncovered or revealed either:

1. is of such a nature as to establish that any "technical data" on which Contractor is entitled to rely as provided in Paragraph 4.02 is materially inaccurate; or

2. is of such a nature as to require a change in the Contract Documents; or

3. differs materially from that shown or indicated in the Contract Documents; or

4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

then Contractor shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.16.A), notify Owner and Engineer in writing about such condition. Contractor shall not further disturb such condition or perform any Work in connection therewith (except as aforesaid) until receipt of written order to do so.

B. *Engineer's Review*: After receipt of written notice as required by Paragraph 4.03.A, Engineer will promptly review the pertinent condition, determine the necessity of Owner's obtaining additional exploration or tests with respect thereto, and advise Owner in writing (with a copy to Contractor) of Engineer's findings and conclusions.

C. *Possible Price and Times Adjustments:*

1. The Contract Price or the Contract Times, or both, will be equitably adjusted to the extent that the existence of such differing subsurface or physical condition causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

   a. such condition must meet any one or more of the categories described in Paragraph 4.03.A; and

   b. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraphs 9.07 and 11.03.

2. Contractor shall not be entitled to any adjustment in the Contract Price or Contract Times if:

   a. Contractor knew of the existence of such conditions at the time Contractor made a final commitment to Owner with respect to Contract Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract; or

   b. the existence of such condition could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas required by the Bidding Requirements or Contract Documents to be conducted by or for Contractor prior to Contractor's making such final commitment; or

   c. Contractor failed to give the written notice as required by Paragraph 4.03.A.

3. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times, or both, a Claim may be made therefor as provided in Paragraph 10.05. However, neither Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors shall be liable to Contractor for any claims, costs, losses, or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other

professionals and all court or arbitration or other dispute resolution costs) sustained by Contractor on or in connection with any other project or anticipated project.

4.04 *Underground Facilities*

A. *Shown or Indicated:* The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or contiguous to the Site is based on information and data furnished to Owner or Engineer by the owners of such Underground Facilities, including Owner, or by others. Unless it is otherwise expressly provided in the Supplementary Conditions:

1. Owner and Engineer shall not be responsible for the accuracy or completeness of any such information or data provided by others; and

2. the cost of all of the following will be included in the Contract Price, and Contractor shall have full responsibility for:

a. reviewing and checking all such information and data;

b. locating all Underground Facilities shown or indicated in the Contract Documents;

c. coordination of the Work with the owners of such Underground Facilities, including Owner, during construction; and

d. the safety and protection of all such Underground Facilities and repairing any damage thereto resulting from the Work.

B. *Not Shown or Indicated:*

1. If an Underground Facility is uncovered or revealed at or contiguous to the Site which was not shown or indicated, or not shown or indicated with reasonable accuracy in the Contract Documents, Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.16.A), identify the owner of such Underground Facility and give written notice to that owner and to Owner and Engineer. Engineer will promptly review the Underground Facility and determine the extent, if any, to which a change is required in the Contract Documents to reflect and document the consequences of the existence or location of the Underground Facility. During such time, Contractor shall be responsible for the safety and protection of such Underground Facility.

2. If Engineer concludes that a change in the Contract Documents is required, a Work Change Directive or a Change Order will be issued to reflect and document such consequences. An equitable adjustment shall be made in the Contract Price or Contract Times, or both, to the extent that they are attributable to the existence or location of any Underground Facility that was not shown or indicated or not shown or indicated with reasonable accuracy in the Contract Documents and that Contractor did not know of and could not reasonably have been expected to be aware of or to have anticipated. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment in Contract Price

or Contract Times, Owner or Contractor may make a Claim therefor as provided in Paragraph 10.05.

4.05 *Reference Points*

A. Owner shall provide engineering surveys to establish reference points for construction which in Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the established reference points and property monuments, and shall make no changes or relocations without the prior written approval of Owner. Contractor shall report to Engineer whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.06 *Hazardous Environmental Condition at Site*

A. *Reports and Drawings:* The Supplementary Conditions identify those reports and drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at the Site.

B. *Limited Reliance by Contractor on Technical Data Authorized:* Contractor may rely upon the accuracy of the "technical data" contained in such reports and drawings, but such reports and drawings are not Contract Documents. Such "technical data" is identified in the Supplementary Conditions. Except for such reliance on such "technical data," Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by Contractor and safety precautions and programs incident thereto; or

2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings; or

3. any Contractor interpretation of or conclusion drawn from any "technical data" or any such other data, interpretations, opinions or information.

C. Contractor shall not be responsible for any Hazardous Environmental Condition uncovered or revealed at the Site which was not shown or indicated in Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work. Contractor shall be responsible for a Hazardous Environmental Condition created with any materials brought to the Site by Contractor, Subcontractors, Suppliers, or anyone else for whom Contractor is responsible.

D. If Contractor encounters a Hazardous Environmental Condition or if Contractor or anyone for whom Contractor is responsible creates a Hazardous Environmental Condition, Contractor shall immediately: (i) secure or otherwise isolate such condition; (ii) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by

Paragraph 6.16.A); and (iii) notify Owner and Engineer (and promptly thereafter confirm such notice in writing). Owner shall promptly consult with Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such condition or take corrective action, if any. Promptly after consulting with Engineer, Owner shall take such actions as are necessary to permit Owner to timely obtain required permits and provide Contractor the written notice required by Paragraph 4.06.E.

E. Contractor shall not be required to resume Work in connection with such condition or in any affected area until after Owner has obtained any required permits related thereto and delivered written notice to Contractor: (i) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work; or (ii) specifying any special conditions under which such Work may be resumed safely. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times, or both, as a result of such Work stoppage or such special conditions under which Work is agreed to be resumed by Contractor, either party may make a Claim therefor as provided in Paragraph 10.05.

F. If after receipt of such written notice Contractor does not agree to resume such Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under such special conditions, then Owner may order the portion of the Work that is in the area affected by such condition to be deleted from the Work. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if any, of an adjustment in Contract Price or Contract Times as a result of deleting such portion of the Work, then either party may make a Claim therefor as provided in Paragraph 10.05. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 7.

G. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition: (i) was not shown or indicated in the Drawings or Specifications or identified in the Contract Documents to be included within the scope of the Work, and (ii) was not created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 4.06.G shall obligate Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

H. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 4.06.H shall obligate Contractor to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

I. The provisions of Paragraphs 4.02, 4.03, and 4.04 do not apply to a Hazardous Environmental Condition uncovered or revealed at the Site.

ARTICLE 5 – BONDS AND INSURANCE

5.01 *Performance, Payment, and Other Bonds*

A. Contractor shall furnish performance and payment bonds, each in an amount at least equal to the Contract Price as security for the faithful performance and payment of all of Contractor's obligations under the Contract Documents. These bonds shall remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 13.07, whichever is later, except as provided otherwise by Laws or Regulations or by the Contract Documents. Contractor shall also furnish such other bonds as are required by the Contract Documents.

B. All bonds shall be in the form prescribed by the Contract Documents except as provided otherwise by Laws or Regulations, and shall be executed by such sureties as are named in the list of "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Circular 570 (amended) by the Financial Management Service, Surety Bond Branch, U.S. Department of the Treasury. All bonds signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority shall show that it is effective on the date the agent or attorney-in-fact signed each bond.

C. If the surety on any bond furnished by Contractor is declared bankrupt or becomes insolvent or its right to do business is terminated in any state where any part of the Project is located or it ceases to meet the requirements of Paragraph 5.01.B, Contractor shall promptly notify Owner and Engineer and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which shall comply with the requirements of Paragraphs 5.01.B and 5.02.

5.02 *Licensed Sureties and Insurers*

A. All bonds and insurance required by the Contract Documents to be purchased and maintained by Owner or Contractor shall be obtained from surety or insurance companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue bonds or insurance policies for the limits and coverages so required. Such surety and insurance companies shall also meet such additional requirements and qualifications as may be provided in the Supplementary Conditions.

5.03 *Certificates of Insurance*

A. Contractor shall deliver to Owner, with copies to each additional insured and loss payee identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance requested by Owner or any other additional insured) which Contractor is required to purchase and maintain.

B. Owner shall deliver to Contractor, with copies to each additional insured and loss payee identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance requested by Contractor or any other additional insured) which Owner is required to purchase and maintain.

C. Failure of Owner to demand such certificates or other evidence of Contractor's full compliance with these insurance requirements or failure of Owner to identify a deficiency in compliance from the evidence provided shall not be construed as a waiver of Contractor's obligation to maintain such insurance.

D. Owner does not represent that insurance coverage and limits established in this Contract necessarily will be adequate to protect Contractor.

E. The insurance and insurance limits required herein shall not be deemed as a limitation on Contractor's liability under the indemnities granted to Owner in the Contract Documents.

5.04 *Contractor's Insurance*

A. Contractor shall purchase and maintain such insurance as is appropriate for the Work being performed and as will provide protection from claims set forth below which may arise out of or result from Contractor's performance of the Work and Contractor's other obligations under the Contract Documents, whether it is to be performed by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts any of them may be liable:

1. claims under workers' compensation, disability benefits, and other similar employee benefit acts;

2. claims for damages because of bodily injury, occupational sickness or disease, or death of Contractor's employees;

3. claims for damages because of bodily injury, sickness or disease, or death of any person other than Contractor's employees;

4. claims for damages insured by reasonably available personal injury liability coverage which are sustained:

   a. by any person as a result of an offense directly or indirectly related to the employment of such person by Contractor, or

   b. by any other person for any other reason;

5. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefrom; and

6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.

B. The policies of insurance required by this Paragraph 5.04 shall:

1. with respect to insurance required by Paragraphs 5.04.A.3 through 5.04.A.6 inclusive, be written on an occurrence basis, include as additional insureds (subject to any customary exclusion regarding professional liability) Owner and Engineer, and any other individuals or entities identified in the Supplementary Conditions, all of whom shall be listed as additional insureds, and include coverage for the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of all such additional insureds, and the insurance afforded to these additional insureds shall provide primary coverage for all claims covered thereby;

2. include at least the specific coverages and be written for not less than the limits of liability provided in the Supplementary Conditions or required by Laws or Regulations, whichever is greater;

3. include contractual liability insurance covering Contractor's indemnity obligations under Paragraphs 6.11 and 6.20;

4. contain a provision or endorsement that the coverage afforded will not be canceled, materially changed or renewal refused until at least 30 days prior written notice has been given to Owner and Contractor and to each other additional insured identified in the Supplementary Conditions to whom a certificate of insurance has been issued (and the certificates of insurance furnished by the Contractor pursuant to Paragraph 5.03 will so provide);

5. remain in effect at least until final payment and at all times thereafter when Contractor may be correcting, removing, or replacing defective Work in accordance with Paragraph 13.07; and

6. include completed operations coverage:

    a. Such insurance shall remain in effect for two years after final payment.

    b. Contractor shall furnish Owner and each other additional insured identified in the Supplementary Conditions, to whom a certificate of insurance has been issued, evidence satisfactory to Owner and any such additional insured of continuation of such insurance at final payment and one year thereafter.

5.05 *Owner's Liability Insurance*

A. In addition to the insurance required to be provided by Contractor under Paragraph 5.04, Owner, at Owner's option, may purchase and maintain at Owner's expense Owner's own liability insurance as will protect Owner against claims which may arise from operations under the Contract Documents.

5.06 *Property Insurance*

A. Unless otherwise provided in the Supplementary Conditions, Owner shall purchase and maintain property insurance upon the Work at the Site in the amount of the full replacement cost thereof (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). This insurance shall:

1. include the interests of Owner, Contractor, Subcontractors, and Engineer, and any other individuals or entities identified in the Supplementary Conditions, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, each of whom is deemed to have an insurable interest and shall be listed as a loss payee;

2. be written on a Builder's Risk "all-risk" policy form that shall at least include insurance for physical loss or damage to the Work, temporary buildings, falsework, and materials and equipment in transit, and shall insure against at least the following perils or causes of loss: fire, lightning, extended coverage, theft, vandalism and malicious mischief, earthquake, collapse, debris removal, demolition occasioned by enforcement of Laws and Regulations, water damage (other than that caused by flood), and such other perils or causes of loss as may be specifically required by the Supplementary Conditions.

3. include expenses incurred in the repair or replacement of any insured property (including but not limited to fees and charges of engineers and architects);

4. cover materials and equipment stored at the Site or at another location that was agreed to in writing by Owner prior to being incorporated in the Work, provided that such materials and equipment have been included in an Application for Payment recommended by Engineer;

5. allow for partial utilization of the Work by Owner;

6. include testing and startup; and

7. be maintained in effect until final payment is made unless otherwise agreed to in writing by Owner, Contractor, and Engineer with 30 days written notice to each other loss payee to whom a certificate of insurance has been issued.

B. Owner shall purchase and maintain such equipment breakdown insurance or additional property insurance as may be required by the Supplementary Conditions or Laws and Regulations which will include the interests of Owner, Contractor, Subcontractors, and Engineer, and any other individuals or entities identified in the Supplementary Conditions, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, each of whom is deemed to have an insurable interest and shall be listed as a loss payee.

C. All the policies of insurance (and the certificates or other evidence thereof) required to be purchased and maintained in accordance with this Paragraph 5.06 will contain a provision or endorsement that the coverage afforded will not be canceled or materially changed or renewal refused until at least 30 days prior written notice has been given to Owner and Contractor and to each other loss payee to whom a certificate of insurance has been issued and will contain waiver provisions in accordance with Paragraph 5.07.

D. Owner shall not be responsible for purchasing and maintaining any property insurance specified in this Paragraph 5.06 to protect the interests of Contractor, Subcontractors, or others in the Work to the extent of any deductible amounts that are identified in the Supplementary Conditions. The risk of loss within such identified deductible amount will be borne by Contractor, Subcontractors, or others suffering any such loss, and if any of them wishes property

insurance coverage within the limits of such amounts, each may purchase and maintain it at the purchaser's own expense.

E. If Contractor requests in writing that other special insurance be included in the property insurance policies provided under this Paragraph 5.06, Owner shall, if possible, include such insurance, and the cost thereof will be charged to Contractor by appropriate Change Order. Prior to commencement of the Work at the Site, Owner shall in writing advise Contractor whether or not such other insurance has been procured by Owner.

5.07 *Waiver of Rights*

A. Owner and Contractor intend that all policies purchased in accordance with Paragraph 5.06 will protect Owner, Contractor, Subcontractors, and Engineer, and all other individuals or entities identified in the Supplementary Conditions as loss payees (and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them) in such policies and will provide primary coverage for all losses and damages caused by the perils or causes of loss covered thereby. All such policies shall contain provisions to the effect that in the event of payment of any loss or damage the insurers will have no rights of recovery against any of the insureds or loss payees thereunder. Owner and Contractor waive all rights against each other and their respective officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them for all losses and damages caused by, arising out of or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Subcontractors and Engineer, and all other individuals or entities identified in the Supplementary Conditions as loss payees (and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them) under such policies for losses and damages so caused. None of the above waivers shall extend to the rights that any party making such waiver may have to the proceeds of insurance held by Owner as trustee or otherwise payable under any policy so issued.

B. Owner waives all rights against Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them for:

1. loss due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to Owner's property or the Work caused by, arising out of, or resulting from fire or other perils whether or not insured by Owner; and

2. loss or damage to the completed Project or part thereof caused by, arising out of, or resulting from fire or other insured peril or cause of loss covered by any property insurance maintained on the completed Project or part thereof by Owner during partial utilization pursuant to Paragraph 14.05, after Substantial Completion pursuant to Paragraph 14.04, or after final payment pursuant to Paragraph 14.07.

C. Any insurance policy maintained by Owner covering any loss, damage or consequential loss referred to in Paragraph 5.07.B shall contain provisions to the effect that in the event of payment of any such loss, damage, or consequential loss, the insurers will have no rights of recovery

against Contractor, Subcontractors, or Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them.

5.08 *Receipt and Application of Insurance Proceeds*

A. Any insured loss under the policies of insurance required by Paragraph 5.06 will be adjusted with Owner and made payable to Owner as fiduciary for the loss payees, as their interests may appear, subject to the requirements of any applicable mortgage clause and of Paragraph 5.08.B. Owner shall deposit in a separate account any money so received and shall distribute it in accordance with such agreement as the parties in interest may reach. If no other special agreement is reached, the damaged Work shall be repaired or replaced, the moneys so received applied on account thereof, and the Work and the cost thereof covered by an appropriate Change Order.

B. Owner as fiduciary shall have power to adjust and settle any loss with the insurers unless one of the parties in interest shall object in writing within 15 days after the occurrence of loss to Owner's exercise of this power. If such objection be made, Owner as fiduciary shall make settlement with the insurers in accordance with such agreement as the parties in interest may reach. If no such agreement among the parties in interest is reached, Owner as fiduciary shall adjust and settle the loss with the insurers and, if required in writing by any party in interest, Owner as fiduciary shall give bond for the proper performance of such duties.

5.09 *Acceptance of Bonds and Insurance; Option to Replace*

A. If either Owner or Contractor has any objection to the coverage afforded by or other provisions of the bonds or insurance required to be purchased and maintained by the other party in accordance with Article 5 on the basis of non-conformance with the Contract Documents, the objecting party shall so notify the other party in writing within 10 days after receipt of the certificates (or other evidence requested) required by Paragraph 2.01.B. Owner and Contractor shall each provide to the other such additional information in respect of insurance provided as the other may reasonably request. If either party does not purchase or maintain all of the bonds and insurance required of such party by the Contract Documents, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage. Without prejudice to any other right or remedy, the other party may elect to obtain equivalent bonds or insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and a Change Order shall be issued to adjust the Contract Price accordingly.

5.10 *Partial Utilization, Acknowledgment of Property Insurer*

A. If Owner finds it necessary to occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work as provided in Paragraph 14.05, no such use or occupancy shall commence before the insurers providing the property insurance pursuant to Paragraph 5.06 have acknowledged notice thereof and in writing effected any changes in coverage necessitated thereby. The insurers providing the property insurance shall consent by endorsement on the policy or policies, but the property insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy.

ARTICLE 6 – CONTRACTOR'S RESPONSIBILITIES

6.01 *Supervision and Superintendence*

A. Contractor shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction. Contractor shall not be responsible for the negligence of Owner or Engineer in the design or specification of a specific means, method, technique, sequence, or procedure of construction which is shown or indicated in and expressly required by the Contract Documents.

B. At all times during the progress of the Work, Contractor shall assign a competent resident superintendent who shall not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

6.02 *Labor; Working Hours*

A. Contractor shall provide competent, suitably qualified personnel to survey and lay out the Work and perform construction as required by the Contract Documents. Contractor shall at all times maintain good discipline and order at the Site.

B. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site shall be performed during regular working hours. Contractor will not permit the performance of Work on a Saturday, Sunday, or any legal holiday without Owner's written consent (which will not be unreasonably withheld) given after prior written notice to Engineer.

6.03 *Services, Materials, and Equipment*

A. Unless otherwise specified in the Contract Documents, Contractor shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start-up, and completion of the Work.

B. All materials and equipment incorporated into the Work shall be as specified or, if not specified, shall be of good quality and new, except as otherwise provided in the Contract Documents. All special warranties and guarantees required by the Specifications shall expressly run to the benefit of Owner. If required by Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment.

C. All materials and equipment shall be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

6.04 *Progress Schedule*

A. Contractor shall adhere to the Progress Schedule established in accordance with Paragraph 2.07 as it may be adjusted from time to time as provided below.

1. Contractor shall submit to Engineer for acceptance (to the extent indicated in Paragraph 2.07) proposed adjustments in the Progress Schedule that will not result in changing the Contract Times. Such adjustments will comply with any provisions of the General Requirements applicable thereto.

2. Proposed adjustments in the Progress Schedule that will change the Contract Times shall be submitted in accordance with the requirements of Article 12. Adjustments in Contract Times may only be made by a Change Order.

6.05 *Substitutes and "Or-Equals"*

A. Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the specification or description is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or-equal" item or no substitution is permitted, other items of material or equipment or material or equipment of other Suppliers may be submitted to Engineer for review under the circumstances described below.

1. *"Or-Equal" Items:* If in Engineer's sole discretion an item of material or equipment proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, it may be considered by Engineer as an "or-equal" item, in which case review and approval of the proposed item may, in Engineer's sole discretion, be accomplished without compliance with some or all of the requirements for approval of proposed substitute items. For the purposes of this Paragraph 6.05.A.1, a proposed item of material or equipment will be considered functionally equal to an item so named if:

a. in the exercise of reasonable judgment Engineer determines that:

1) it is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;

2) it will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole; and

3) it has a proven record of performance and availability of responsive service.

b. Contractor certifies that, if approved and incorporated into the Work:

1) there will be no increase in cost to the Owner or increase in Contract Times; and

2) it will conform substantially to the detailed requirements of the item named in the Contract Documents.

2. *Substitute Items:*

a. If in Engineer's sole discretion an item of material or equipment proposed by Contractor does not qualify as an "or-equal" item under Paragraph 6.05.A.1, it will be considered a proposed substitute item.

b. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is essentially equivalent to that named and an acceptable substitute therefor. Requests for review of proposed substitute items of material or equipment will not be accepted by Engineer from anyone other than Contractor.

c. The requirements for review by Engineer will be as set forth in Paragraph 6.05.A.2.d, as supplemented by the General Requirements, and as Engineer may decide is appropriate under the circumstances.

d. Contractor shall make written application to Engineer for review of a proposed substitute item of material or equipment that Contractor seeks to furnish or use. The application:

1) shall certify that the proposed substitute item will:

a) perform adequately the functions and achieve the results called for by the general design,

b) be similar in substance to that specified, and

c) be suited to the same use as that specified;

2) will state:

a) the extent, if any, to which the use of the proposed substitute item will prejudice Contractor's achievement of Substantial Completion on time,

b) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item, and

c) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty;

3) will identify:

a) all variations of the proposed substitute item from that specified, and

b) available engineering, sales, maintenance, repair, and replacement services; and

4) shall contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including costs of redesign and claims of other contractors affected by any resulting change.

B. *Substitute Construction Methods or Procedures:* If a specific means, method, technique, sequence, or procedure of construction is expressly required by the Contract Documents, Contractor may furnish or utilize a substitute means, method, technique, sequence, or procedure of construction approved by Engineer. Contractor shall submit sufficient information to allow Engineer, in Engineer's sole discretion, to determine that the substitute proposed is equivalent to that expressly called for by the Contract Documents. The requirements for review by Engineer will be similar to those provided in Paragraph 6.05.A.2.

C. *Engineer's Evaluation:* Engineer will be allowed a reasonable time within which to evaluate each proposal or submittal made pursuant to Paragraphs 6.05.A and 6.05.B. Engineer may require Contractor to furnish additional data about the proposed substitute item. Engineer will be the sole judge of acceptability. No "or equal" or substitute will be ordered, installed or utilized until Engineer's review is complete, which will be evidenced by a Change Order in the case of a substitute and an approved Shop Drawing for an "or equal." Engineer will advise Contractor in writing of any negative determination.

D. *Special Guarantee:* Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any substitute.

E. *Engineer's Cost Reimbursement*: Engineer will record Engineer's costs in evaluating a substitute proposed or submitted by Contractor pursuant to Paragraphs 6.05.A.2 and 6.05.B. Whether or not Engineer approves a substitute so proposed or submitted by Contractor, Contractor shall reimburse Owner for the reasonable charges of Engineer for evaluating each such proposed substitute. Contractor shall also reimburse Owner for the reasonable charges of Engineer for making changes in the Contract Documents (or in the provisions of any other direct contract with Owner) resulting from the acceptance of each proposed substitute.

F. *Contractor's Expense*: Contractor shall provide all data in support of any proposed substitute or "or-equal" at Contractor's expense.

6.06 *Concerning Subcontractors, Suppliers, and Others*

A. Contractor shall not employ any Subcontractor, Supplier, or other individual or entity (including those acceptable to Owner as indicated in Paragraph 6.06.B), whether initially or as a replacement, against whom Owner may have reasonable objection. Contractor shall not be required to employ any Subcontractor, Supplier, or other individual or entity to furnish or perform any of the Work against whom Contractor has reasonable objection.

B. If the Supplementary Conditions require the identity of certain Subcontractors, Suppliers, or other individuals or entities to be submitted to Owner in advance for acceptance by Owner by a specified date prior to the Effective Date of the Agreement, and if Contractor has submitted a list thereof in accordance with the Supplementary Conditions, Owner's acceptance (either in writing or by failing to make written objection thereto by the date indicated for acceptance or objection in the Bidding Documents or the Contract Documents) of any such Subcontractor, Supplier, or

other individual or entity so identified may be revoked on the basis of reasonable objection after due investigation. Contractor shall submit an acceptable replacement for the rejected Subcontractor, Supplier, or other individual or entity, and the Contract Price will be adjusted by the difference in the cost occasioned by such replacement, and an appropriate Change Order will be issued. No acceptance by Owner of any such Subcontractor, Supplier, or other individual or entity, whether initially or as a replacement, shall constitute a waiver of any right of Owner or Engineer to reject defective Work.

C. Contractor shall be fully responsible to Owner and Engineer for all acts and omissions of the Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work just as Contractor is responsible for Contractor's own acts and omissions. Nothing in the Contract Documents:

   1. shall create for the benefit of any such Subcontractor, Supplier, or other individual or entity any contractual relationship between Owner or Engineer and any such Subcontractor, Supplier or other individual or entity; nor

   2. shall create any obligation on the part of Owner or Engineer to pay or to see to the payment of any moneys due any such Subcontractor, Supplier, or other individual or entity except as may otherwise be required by Laws and Regulations.

D. Contractor shall be solely responsible for scheduling and coordinating the Work of Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work under a direct or indirect contract with Contractor.

E. Contractor shall require all Subcontractors, Suppliers, and such other individuals or entities performing or furnishing any of the Work to communicate with Engineer through Contractor.

F. The divisions and sections of the Specifications and the identifications of any Drawings shall not control Contractor in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.

G. All Work performed for Contractor by a Subcontractor or Supplier will be pursuant to an appropriate agreement between Contractor and the Subcontractor or Supplier which specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of Owner and Engineer. Whenever any such agreement is with a Subcontractor or Supplier who is listed as a loss payee on the property insurance provided in Paragraph 5.06, the agreement between the Contractor and the Subcontractor or Supplier will contain provisions whereby the Subcontractor or Supplier waives all rights against Owner, Contractor, Engineer, and all other individuals or entities identified in the Supplementary Conditions to be listed as insureds or loss payees (and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them) for all losses and damages caused by, arising out of, relating to, or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work. If the insurers on any such policies require separate waiver forms to be signed by any Subcontractor or Supplier, Contractor will obtain the same.

6.07 *Patent Fees and Royalties*

A. Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if, to the actual knowledge of Owner or Engineer, its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by Owner in the Contract Documents.

B. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, and its officers, directors, members, partners, employees, agents, consultants, and subcontractors from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device specified in the Contract Documents, but not identified as being subject to payment of any license fee or royalty to others required by patent rights or copyrights.

C. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device not specified in the Contract Documents.

6.08 *Permits*

A. Unless otherwise provided in the Supplementary Conditions, Contractor shall obtain and pay for all construction permits and licenses. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of opening of Bids, or, if there are no Bids, on the Effective Date of the Agreement. Owner shall pay all charges of utility owners for connections for providing permanent service to the Work.

6.09 *Laws and Regulations*

A. Contractor shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of the Work. Except where otherwise expressly required by applicable Laws and Regulations, neither Owner nor Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.

B. If Contractor performs any Work knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all

court or arbitration or other dispute resolution costs) arising out of or relating to such Work. However, it shall not be Contractor's responsibility to make certain that the Specifications and Drawings are in accordance with Laws and Regulations, but this shall not relieve Contractor of Contractor's obligations under Paragraph 3.03.

C. Changes in Laws or Regulations not known at the time of opening of Bids (or, on the Effective Date of the Agreement if there were no Bids) having an effect on the cost or time of performance of the Work shall be the subject of an adjustment in Contract Price or Contract Times. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in Paragraph 10.05.

6.10 *Taxes*

A. Contractor shall pay all sales, consumer, use, and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

6.11 *Use of Site and Other Areas*

A. *Limitation on Use of Site and Other Areas:*

1. Contractor shall confine construction equipment, the storage of materials and equipment, and the operations of workers to the Site and other areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and other areas with construction equipment or other materials or equipment. Contractor shall assume full responsibility for any damage to any such land or area, or to the owner or occupant thereof, or of any adjacent land or areas resulting from the performance of the Work.

2. Should any claim be made by any such owner or occupant because of the performance of the Work, Contractor shall promptly settle with such other party by negotiation or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law.

3. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Engineer, or any other party indemnified hereunder to the extent caused by or based upon Contractor's performance of the Work.

B. *Removal of Debris During Performance of the Work:* During the progress of the Work Contractor shall keep the Site and other areas free from accumulations of waste materials, rubbish, and other debris. Removal and disposal of such waste materials, rubbish, and other debris shall conform to applicable Laws and Regulations.

C. *Cleaning:* Prior to Substantial Completion of the Work Contractor shall clean the Site and the Work and make it ready for utilization by Owner. At the completion of the Work Contractor

shall remove from the Site all tools, appliances, construction equipment and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

D. *Loading Structures:* Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any part of the Work or adjacent property to stresses or pressures that will endanger it.

6.12 *Record Documents*

A. Contractor shall maintain in a safe place at the Site one record copy of all Drawings, Specifications, Addenda, Change Orders, Work Change Directives, Field Orders, and written interpretations and clarifications in good order and annotated to show changes made during construction. These record documents together with all approved Samples and a counterpart of all approved Shop Drawings will be available to Engineer for reference. Upon completion of the Work, these record documents, Samples, and Shop Drawings will be delivered to Engineer for Owner.

6.13 *Safety and Protection*

A. Contractor shall be solely responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the Work. Such responsibility does not relieve Subcontractors of their responsibility for the safety of persons or property in the performance of their work, nor for compliance with applicable safety Laws and Regulations. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury or loss to:

1. all persons on the Site or who may be affected by the Work;

2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and

3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities, and Underground Facilities not designated for removal, relocation, or replacement in the course of construction.

B. Contractor shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection. Contractor shall notify owners of adjacent property and of Underground Facilities and other utility owners when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property.

C. Contractor shall comply with the applicable requirements of Owner's safety programs, if any. The Supplementary Conditions identify any Owner's safety programs that are applicable to the Work.

D. Contractor shall inform Owner and Engineer of the specific requirements of Contractor's safety program with which Owner's and Engineer's employees and representatives must comply while at the Site.

E. All damage, injury, or loss to any property referred to in Paragraph 6.13.A.2 or 6.13.A.3 caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by Contractor (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Engineer or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).

F. Contractor's duties and responsibilities for safety and for protection of the Work shall continue until such time as all the Work is completed and Engineer has issued a notice to Owner and Contractor in accordance with Paragraph 14.07.B that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion).

6.14 *Safety Representative*

A. Contractor shall designate a qualified and experienced safety representative at the Site whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs.

6.15 *Hazard Communication Programs*

A. Contractor shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

6.16 *Emergencies*

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, Contractor is obligated to act to prevent threatened damage, injury, or loss. Contractor shall give Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby or are required as a result thereof. If Engineer determines that a change in the Contract Documents is required because of the action taken by Contractor in response to such an emergency, a Work Change Directive or Change Order will be issued.

6.17 *Shop Drawings and Samples*

A. Contractor shall submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals (as required by Paragraph 2.07). Each submittal will be identified as Engineer may require.

1. *Shop Drawings:*

    a. Submit number of copies specified in the General Requirements.

    b. Data shown on the Shop Drawings will be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Contractor proposes to provide and to enable Engineer to review the information for the limited purposes required by Paragraph 6.17.D.

2. *Samples:*

    a. Submit number of Samples specified in the Specifications.

    b. Clearly identify each Sample as to material, Supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the submittal for the limited purposes required by Paragraph 6.17.D.

B. Where a Shop Drawing or Sample is required by the Contract Documents or the Schedule of Submittals, any related Work performed prior to Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.

C. *Submittal Procedures:*

1. Before submitting each Shop Drawing or Sample, Contractor shall have:

    a. reviewed and coordinated each Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents;

    b. determined and verified all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect thereto;

    c. determined and verified the suitability of all materials offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work; and

    d. determined and verified all information relative to Contractor's responsibilities for means, methods, techniques, sequences, and procedures of construction, and safety precautions and programs incident thereto.

2. Each submittal shall bear a stamp or specific written certification that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review and approval of that submittal.

3. With each submittal, Contractor shall give Engineer specific written notice of any variations that the Shop Drawing or Sample may have from the requirements of the Contract Documents. This notice shall be both a written communication separate from the Shop

Drawings or Sample submittal; and, in addition, by a specific notation made on each Shop Drawing or Sample submitted to Engineer for review and approval of each such variation.

D. *Engineer's Review:*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the Schedule of Submittals acceptable to Engineer. Engineer's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation in the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction (except where a particular means, method, technique, sequence, or procedure of construction is specifically and expressly called for by the Contract Documents) or to safety precautions or programs incident thereto. The review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

3. Engineer's review and approval shall not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has complied with the requirements of Paragraph 6.17.C.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer's review and approval shall not relieve Contractor from responsibility for complying with the requirements of Paragraph 6.17.C.1.

E. *Resubmittal Procedures:*

1. Contractor shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous submittals.

6.18 *Continuing the Work*

A. Contractor shall carry on the Work and adhere to the Progress Schedule during all disputes or disagreements with Owner. No Work shall be delayed or postponed pending resolution of any disputes or disagreements, except as permitted by Paragraph 15.04 or as Owner and Contractor may otherwise agree in writing.

6.19 *Contractor's General Warranty and Guarantee*

A. Contractor warrants and guarantees to Owner that all Work will be in accordance with the Contract Documents and will not be defective. Engineer and its officers, directors, members, partners, employees, agents, consultants, and subcontractors shall be entitled to rely on representation of Contractor's warranty and guarantee.

B. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, modification, or improper maintenance or operation by persons other than Contractor, Subcontractors, Suppliers, or any other individual or entity for whom Contractor is responsible; or

2. normal wear and tear under normal usage.

C. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of Contractor's obligation to perform the Work in accordance with the Contract Documents:

1. observations by Engineer;

2. recommendation by Engineer or payment by Owner of any progress or final payment;

3. the issuance of a certificate of Substantial Completion by Engineer or any payment related thereto by Owner;

4. use or occupancy of the Work or any part thereof by Owner;

5. any review and approval of a Shop Drawing or Sample submittal or the issuance of a notice of acceptability by Engineer;

6. any inspection, test, or approval by others; or

7. any correction of defective Work by Owner.

6.20 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of the Work, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom but only to the extent caused by any negligent act or omission of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work or anyone for whose acts any of them may be liable .

B. In any and all claims against Owner or Engineer or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 6.20.A shall not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Contractor or any such Subcontractor,

Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

C. The indemnification obligations of Contractor under Paragraph 6.20.A shall not extend to the liability of Engineer and Engineer's officers, directors, members, partners, employees, agents, consultants and subcontractors arising out of:

1. the preparation or approval of, or the failure to prepare or approve maps, Drawings, opinions, reports, surveys, Change Orders, designs, or Specifications; or

2. giving directions or instructions, or failing to give them, if that is the primary cause of the injury or damage.

6.21 *Delegation of Professional Design Services*

A. Contractor will not be required to provide professional design services unless such services are specifically required by the Contract Documents for a portion of the Work or unless such services are required to carry out Contractor's responsibilities for construction means, methods, techniques, sequences and procedures. Contractor shall not be required to provide professional services in violation of applicable law.

B. If professional design services or certifications by a design professional related to systems, materials or equipment are specifically required of Contractor by the Contract Documents, Owner and Engineer will specify all performance and design criteria that such services must satisfy. Contractor shall cause such services or certifications to be provided by a properly licensed professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings and other submittals prepared by such professional. Shop Drawings and other submittals related to the Work designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to Engineer.

C. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy and completeness of the services, certifications or approvals performed by such design professionals, provided Owner and Engineer have specified to Contractor all performance and design criteria that such services must satisfy.

D. Pursuant to this Paragraph 6.21, Engineer's review and approval of design calculations and design drawings will be only for the limited purpose of checking for conformance with performance and design criteria given and the design concept expressed in the Contract Documents. Engineer's review and approval of Shop Drawings and other submittals (except design calculations and design drawings) will be only for the purpose stated in Paragraph 6.17.D.1.

E. Contractor shall not be responsible for the adequacy of the performance or design criteria required by the Contract Documents.

ARTICLE 7 – OTHER WORK AT THE SITE

7.01 *Related Work at Site*

A. Owner may perform other work related to the Project at the Site with Owner's employees, or through other direct contracts therefor, or have other work performed by utility owners. If such other work is not noted in the Contract Documents, then:

1. written notice thereof will be given to Contractor prior to starting any such other work; and

2. if Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times that should be allowed as a result of such other work, a Claim may be made therefor as provided in Paragraph 10.05.

B. Contractor shall afford each other contractor who is a party to such a direct contract, each utility owner, and Owner, if Owner is performing other work with Owner's employees, proper and safe access to the Site, provide a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work, and properly coordinate the Work with theirs. Contractor shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating, or otherwise altering such work; provided, however, that Contractor may cut or alter others' work with the written consent of Engineer and the others whose work will be affected. The duties and responsibilities of Contractor under this Paragraph are for the benefit of such utility owners and other contractors to the extent that there are comparable provisions for the benefit of Contractor in said direct contracts between Owner and such utility owners and other contractors.

C. If the proper execution or results of any part of Contractor's Work depends upon work performed by others under this Article 7, Contractor shall inspect such other work and promptly report to Engineer in writing any delays, defects, or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure to so report will constitute an acceptance of such other work as fit and proper for integration with Contractor's Work except for latent defects and deficiencies in such other work.

7.02 *Coordination*

A. If Owner intends to contract with others for the performance of other work on the Project at the Site, the following will be set forth in Supplementary Conditions:

1. the individual or entity who will have authority and responsibility for coordination of the activities among the various contractors will be identified;

2. the specific matters to be covered by such authority and responsibility will be itemized; and

3. the extent of such authority and responsibilities will be provided.

B. Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility for such coordination.

7.03 *Legal Relationships*

A. Paragraphs 7.01.A and 7.02 are not applicable for utilities not under the control of Owner.

B. Each other direct contract of Owner under Paragraph 7.01.A shall provide that the other contractor is liable to Owner and Contractor for the reasonable direct delay and disruption costs incurred by Contractor as a result of the other contractor's wrongful actions or inactions.

C. Contractor shall be liable to Owner and any other contractor under direct contract to Owner for the reasonable direct delay and disruption costs incurred by such other contractor as a result of Contractor's wrongful action or inactions.

ARTICLE 8 – OWNER'S RESPONSIBILITIES

8.01 *Communications to Contractor*

A. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Engineer.

8.02 *Replacement of Engineer*

A. In case of termination of the employment of Engineer, Owner shall appoint an engineer to whom Contractor makes no reasonable objection, whose status under the Contract Documents shall be that of the former Engineer.

8.03 *Furnish Data*

A. Owner shall promptly furnish the data required of Owner under the Contract Documents.

8.04 *Pay When Due*

A. Owner shall make payments to Contractor when they are due as provided in Paragraphs 14.02.C and 14.07.C.

8.05 *Lands and Easements; Reports and Tests*

A. Owner's duties with respect to providing lands and easements and providing engineering surveys to establish reference points are set forth in Paragraphs 4.01 and 4.05. Paragraph 4.02 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of subsurface conditions and drawings of physical conditions relating to existing surface or subsurface structures at the Site.

8.06 *Insurance*

A. Owner's responsibilities, if any, with respect to purchasing and maintaining liability and property insurance are set forth in Article 5.

8.07 *Change Orders*

A. Owner is obligated to execute Change Orders as indicated in Paragraph 10.03.

8.08 *Inspections, Tests, and Approvals*

A. Owner's responsibility with respect to certain inspections, tests, and approvals is set forth in Paragraph 13.03.B.

8.09 *Limitations on Owner's Responsibilities*

A. The Owner shall not supervise, direct, or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Owner will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

8.10 *Undisclosed Hazardous Environmental Condition*

A. Owner's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in Paragraph 4.06.

8.11 *Evidence of Financial Arrangements*

A. Upon request of Contractor, Owner shall furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract Documents.

8.12 *Compliance with Safety Program*

A. While at the Site, Owner's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Owner has been informed pursuant to Paragraph 6.13.D.

ARTICLE 9 – ENGINEER'S STATUS DURING CONSTRUCTION

9.01 *Owner's Representative*

A. Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Engineer as Owner's representative during construction are set forth in the Contract Documents.

9.02 *Visits to Site*

A. Engineer will make visits to the Site at intervals appropriate to the various stages of construction as Engineer deems necessary in order to observe as an experienced and qualified design professional the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Engineer, for the benefit of Owner, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. Engineer will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. Engineer's efforts will be directed toward providing for Owner a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits

and observations, Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work.

B. Engineer's visits and observations are subject to all the limitations on Engineer's authority and responsibility set forth in Paragraph 9.09. Particularly, but without limitation, during or as a result of Engineer's visits or observations of Contractor's Work, Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work.

9.03 *Project Representative*

A. If Owner and Engineer agree, Engineer will furnish a Resident Project Representative to assist Engineer in providing more extensive observation of the Work. The authority and responsibilities of any such Resident Project Representative and assistants will be as provided in the Supplementary Conditions, and limitations on the responsibilities thereof will be as provided in Paragraph 9.09. If Owner designates another representative or agent to represent Owner at the Site who is not Engineer's consultant, agent or employee, the responsibilities and authority and limitations thereon of such other individual or entity will be as provided in the Supplementary Conditions.

9.04 *Authorized Variations in Work*

A. Engineer may authorize minor variations in the Work from the requirements of the Contract Documents which do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. These may be accomplished by a Field Order and will be binding on Owner and also on Contractor, who shall perform the Work involved promptly. If Owner or Contractor believes that a Field Order justifies an adjustment in the Contract Price or Contract Times, or both, and the parties are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in Paragraph 10.05.

9.05 *Rejecting Defective Work*

A. Engineer will have authority to reject Work which Engineer believes to be defective, or that Engineer believes will not produce a completed Project that conforms to the Contract Documents or that will prejudice the integrity of the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Engineer will also have authority to require special inspection or testing of the Work as provided in Paragraph 13.04, whether or not the Work is fabricated, installed, or completed.

9.06 *Shop Drawings, Change Orders and Payments*

A. In connection with Engineer's authority, and limitations thereof, as to Shop Drawings and Samples, see Paragraph 6.17.

B. In connection with Engineer's authority, and limitations thereof, as to design calculations and design drawings submitted in response to a delegation of professional design services, if any, see Paragraph 6.21.

C. In connection with Engineer's authority as to Change Orders, see Articles 10, 11, and 12.

D. In connection with Engineer's authority as to Applications for Payment, see Article 14.

9.07 *Determinations for Unit Price Work*

A. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor. Engineer will review with Contractor the Engineer's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). Engineer's written decision thereon will be final and binding (except as modified by Engineer to reflect changed factual conditions or more accurate data) upon Owner and Contractor, subject to the provisions of Paragraph 10.05.

9.08 *Decisions on Requirements of Contract Documents and Acceptability of Work*

A. Engineer will be the initial interpreter of the requirements of the Contract Documents and judge of the acceptability of the Work thereunder. All matters in question and other matters between Owner and Contractor arising prior to the date final payment is due relating to the acceptability of the Work, and the interpretation of the requirements of the Contract Documents pertaining to the performance of the Work, will be referred initially to Engineer in writing within 30 days of the event giving rise to the question.

B. Engineer will, with reasonable promptness, render a written decision on the issue referred. If Owner or Contractor believes that any such decision entitles them to an adjustment in the Contract Price or Contract Times or both, a Claim may be made under Paragraph 10.05. The date of Engineer's decision shall be the date of the event giving rise to the issues referenced for the purposes of Paragraph 10.05.B.

C. Engineer's written decision on the issue referred will be final and binding on Owner and Contractor, subject to the provisions of Paragraph 10.05.

D. When functioning as interpreter and judge under this Paragraph 9.08, Engineer will not show partiality to Owner or Contractor and will not be liable in connection with any interpretation or decision rendered in good faith in such capacity.

9.09 *Limitations on Engineer's Authority and Responsibilities*

A. Neither Engineer's authority or responsibility under this Article 9 or under any other provision of the Contract Documents nor any decision made by Engineer in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise, or performance of any authority or responsibility by Engineer shall create, impose, or give rise to any duty in contract, tort, or otherwise owed by Engineer to Contractor, any Subcontractor, any Supplier, any other individual or entity, or to any surety for or employee or agent of any of them.

B. Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Engineer will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

C. Engineer will not be responsible for the acts or omissions of Contractor or of any Subcontractor, any Supplier, or of any other individual or entity performing any of the Work.

D. Engineer's review of the final Application for Payment and accompanying documentation and all maintenance and operating instructions, schedules, guarantees, bonds, certificates of inspection, tests and approvals, and other documentation required to be delivered by Paragraph 14.07.A will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests, and approvals that the results certified indicate compliance with, the Contract Documents.

E. The limitations upon authority and responsibility set forth in this Paragraph 9.09 shall also apply to the Resident Project Representative, if any, and assistants, if any.

9.10 *Compliance with Safety Program*

A. While at the Site, Engineer's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Engineer has been informed pursuant to Paragraph 6.13.D.

ARTICLE 10 – CHANGES IN THE WORK; CLAIMS

10.01 *Authorized Changes in the Work*

A. Without invalidating the Contract and without notice to any surety, Owner may, at any time or from time to time, order additions, deletions, or revisions in the Work by a Change Order, or a Work Change Directive. Upon receipt of any such document, Contractor shall promptly proceed with the Work involved which will be performed under the applicable conditions of the Contract Documents (except as otherwise specifically provided).

B. If Owner and Contractor are unable to agree on entitlement to, or on the amount or extent, if any, of an adjustment in the Contract Price or Contract Times, or both, that should be allowed as a result of a Work Change Directive, a Claim may be made therefor as provided in Paragraph 10.05.

10.02 *Unauthorized Changes in the Work*

A. Contractor shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents as amended, modified, or supplemented as provided in Paragraph 3.04, except in the case of an emergency as provided in Paragraph 6.16 or in the case of uncovering Work as provided in Paragraph 13.04.D.

10.03 *Execution of Change Orders*

A. Owner and Contractor shall execute appropriate Change Orders recommended by Engineer covering:

1. changes in the Work which are: (i) ordered by Owner pursuant to Paragraph 10.01.A, (ii) required because of acceptance of defective Work under Paragraph 13.08.A or Owner's correction of defective Work under Paragraph 13.09, or (iii) agreed to by the parties;

2. changes in the Contract Price or Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive; and

3. changes in the Contract Price or Contract Times which embody the substance of any written decision rendered by Engineer pursuant to Paragraph 10.05; provided that, in lieu of executing any such Change Order, an appeal may be taken from any such decision in accordance with the provisions of the Contract Documents and applicable Laws and Regulations, but during any such appeal, Contractor shall carry on the Work and adhere to the Progress Schedule as provided in Paragraph 6.18.A.

10.04 *Notification to Surety*

A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times), the giving of any such notice will be Contractor's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

10.05 *Claims*

A. *Engineer's Decision Required*: All Claims, except those waived pursuant to Paragraph 14.09, shall be referred to the Engineer for decision. A decision by Engineer shall be required as a condition precedent to any exercise by Owner or Contractor of any rights or remedies either may otherwise have under the Contract Documents or by Laws and Regulations in respect of such Claims.

B. *Notice:* Written notice stating the general nature of each Claim shall be delivered by the claimant to Engineer and the other party to the Contract promptly (but in no event later than 30 days) after the start of the event giving rise thereto. The responsibility to substantiate a Claim shall rest with the party making the Claim. Notice of the amount or extent of the Claim, with supporting data shall be delivered to the Engineer and the other party to the Contract within 60 days after the start of such event (unless Engineer allows additional time for claimant to submit additional or more accurate data in support of such Claim). A Claim for an adjustment in Contract Price shall be prepared in accordance with the provisions of Paragraph 12.01.B. A Claim for an adjustment in Contract Times shall be prepared in accordance with the provisions of Paragraph 12.02.B. Each Claim shall be accompanied by claimant's written statement that the adjustment claimed is the entire adjustment to which the claimant believes it is entitled as a result of said event. The

opposing party shall submit any response to Engineer and the claimant within 30 days after receipt of the claimant's last submittal (unless Engineer allows additional time).

C. *Engineer's Action*: Engineer will review each Claim and, within 30 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any, take one of the following actions in writing:

1. deny the Claim in whole or in part;

2. approve the Claim; or

3. notify the parties that the Engineer is unable to resolve the Claim if, in the Engineer's sole discretion, it would be inappropriate for the Engineer to do so. For purposes of further resolution of the Claim, such notice shall be deemed a denial.

D. In the event that Engineer does not take action on a Claim within said 30 days, the Claim shall be deemed denied.

E. Engineer's written action under Paragraph 10.05.C or denial pursuant to Paragraphs 10.05.C.3 or 10.05.D will be final and binding upon Owner and Contractor, unless Owner or Contractor invoke the dispute resolution procedure set forth in Article 16 within 30 days of such action or denial.

F. No Claim for an adjustment in Contract Price or Contract Times will be valid if not submitted in accordance with this Paragraph 10.05.

ARTICLE 11 – COST OF THE WORK; ALLOWANCES; UNIT PRICE WORK

11.01 *Cost of the Work*

A. *Costs Included:* The term Cost of the Work means the sum of all costs, except those excluded in Paragraph 11.01.B, necessarily incurred and paid by Contractor in the proper performance of the Work. When the value of any Work covered by a Change Order or when a Claim for an adjustment in Contract Price is determined on the basis of Cost of the Work, the costs to be reimbursed to Contractor will be only those additional or incremental costs required because of the change in the Work or because of the event giving rise to the Claim. Except as otherwise may be agreed to in writing by Owner, such costs shall be in amounts no higher than those prevailing in the locality of the Project, shall not include any of the costs itemized in Paragraph 11.01.B, and shall include only the following items:

1. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by Owner and Contractor. Such employees shall include, without limitation, superintendents, foremen, and other personnel employed full time on the Work. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits, which shall include social security contributions, unemployment, excise, and payroll taxes, workers' compensation, health and retirement benefits, bonuses, sick leave, vacation and holiday pay applicable thereto. The expenses of performing Work outside of regular working hours, on

Saturday, Sunday, or legal holidays, shall be included in the above to the extent authorized by Owner.

2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts shall accrue to Contractor unless Owner deposits funds with Contractor with which to make payments, in which case the cash discounts shall accrue to Owner. All trade discounts, rebates and refunds and returns from sale of surplus materials and equipment shall accrue to Owner, and Contractor shall make provisions so that they may be obtained.

3. Payments made by Contractor to Subcontractors for Work performed by Subcontractors. If required by Owner, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner, who will then determine, with the advice of Engineer, which bids, if any, will be acceptable. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee shall be determined in the same manner as Contractor's Cost of the Work and fee as provided in this Paragraph 11.01.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys, and accountants) employed for services specifically related to the Work.

5. Supplemental costs including the following:

    a. The proportion of necessary transportation, travel, and subsistence expenses of Contractor's employees incurred in discharge of duties connected with the Work.

    b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office, and temporary facilities at the Site, and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value, of such items used but not consumed which remain the property of Contractor.

    c. Rentals of all construction equipment and machinery, and the parts thereof whether rented from Contractor or others in accordance with rental agreements approved by Owner with the advice of Engineer, and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof. All such costs shall be in accordance with the terms of said rental agreements. The rental of any such equipment, machinery, or parts shall cease when the use thereof is no longer necessary for the Work.

    d. Sales, consumer, use, and other similar taxes related to the Work, and for which Contractor is liable, as imposed by Laws and Regulations.

    e. Deposits lost for causes other than negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses.

f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by Contractor in connection with the performance of the Work (except losses and damages within the deductible amounts of property insurance established in accordance with Paragraph 5.06.D), provided such losses and damages have resulted from causes other than the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written consent and approval of Owner. No such losses, damages, and expenses shall be included in the Cost of the Work for the purpose of determining Contractor's fee.

g. The cost of utilities, fuel, and sanitary facilities at the Site.

h. Minor expenses such as telegrams, long distance telephone calls, telephone service at the Site, express and courier services, and similar petty cash items in connection with the Work.

i. The costs of premiums for all bonds and insurance Contractor is required by the Contract Documents to purchase and maintain.

B. *Costs Excluded:* The term Cost of the Work shall not include any of the following items:

1. Payroll costs and other compensation of Contractor's officers, executives, principals (of partnerships and sole proprietorships), general managers, safety managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks, and other personnel employed by Contractor, whether at the Site or in Contractor's principal or branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in Paragraph 11.01.A.1 or specifically covered by Paragraph 11.01.A.4, all of which are to be considered administrative costs covered by the Contractor's fee.

2. Expenses of Contractor's principal and branch offices other than Contractor's office at the Site.

3. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

4. Costs due to the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials or equipment wrongly supplied, and making good any damage to property.

5. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraphs 11.01.A.

C. *Contractor's Fee:* When all the Work is performed on the basis of cost-plus, Contractor's fee shall be determined as set forth in the Agreement. When the value of any Work covered by a Change Order or when a Claim for an adjustment in Contract Price is determined on the basis of Cost of the Work, Contractor's fee shall be determined as set forth in Paragraph 12.01.C.

D. *Documentation:* Whenever the Cost of the Work for any purpose is to be determined pursuant to Paragraphs 11.01.A and 11.01.B, Contractor will establish and maintain records thereof in accordance with generally accepted accounting practices and submit in a form acceptable to Engineer an itemized cost breakdown together with supporting data.

11.02 *Allowances*

A. It is understood that Contractor has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be performed for such sums and by such persons or entities as may be acceptable to Owner and Engineer.

B. *Cash Allowances:*

1. Contractor agrees that:

a. the cash allowances include the cost to Contractor (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at the Site, and all applicable taxes; and

b. Contractor's costs for unloading and handling on the Site, labor, installation, overhead, profit, and other expenses contemplated for the cash allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment on account of any of the foregoing will be valid.

C. *Contingency Allowance:*

1. Contractor agrees that a contingency allowance, if any, is for the sole use of Owner to cover unanticipated costs.

D. Prior to final payment, an appropriate Change Order will be issued as recommended by Engineer to reflect actual amounts due Contractor on account of Work covered by allowances, and the Contract Price shall be correspondingly adjusted.

11.03 *Unit Price Work*

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement.

B. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Determinations of the actual quantities and classifications of Unit Price Work performed by Contractor will be made by Engineer subject to the provisions of Paragraph 9.07.

C. Each unit price will be deemed to include an amount considered by Contractor to be adequate to cover Contractor's overhead and profit for each separately identified item.

D. Owner or Contractor may make a Claim for an adjustment in the Contract Price in accordance with Paragraph 10.05 if:

1. the quantity of any item of Unit Price Work performed by Contractor differs materially and significantly from the estimated quantity of such item indicated in the Agreement; and

2. there is no corresponding adjustment with respect to any other item of Work; and

3. Contractor believes that Contractor is entitled to an increase in Contract Price as a result of having incurred additional expense or Owner believes that Owner is entitled to a decrease in Contract Price and the parties are unable to agree as to the amount of any such increase or decrease.

ARTICLE 12 – CHANGE OF CONTRACT PRICE; CHANGE OF CONTRACT TIMES

12.01 *Change of Contract Price*

A. The Contract Price may only be changed by a Change Order. Any Claim for an adjustment in the Contract Price shall be based on written notice submitted by the party making the Claim to the Engineer and the other party to the Contract in accordance with the provisions of Paragraph 10.05.

B. The value of any Work covered by a Change Order or of any Claim for an adjustment in the Contract Price will be determined as follows:

1. where the Work involved is covered by unit prices contained in the Contract Documents, by application of such unit prices to the quantities of the items involved (subject to the provisions of Paragraph 11.03); or

2. where the Work involved is not covered by unit prices contained in the Contract Documents, by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with Paragraph 12.01.C.2); or

3. where the Work involved is not covered by unit prices contained in the Contract Documents and agreement to a lump sum is not reached under Paragraph 12.01.B.2, on the basis of the Cost of the Work (determined as provided in Paragraph 11.01) plus a Contractor's fee for overhead and profit (determined as provided in Paragraph 12.01.C).

C. *Contractor's Fee:* The Contractor's fee for overhead and profit shall be determined as follows:

1. a mutually acceptable fixed fee; or

2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

a. for costs incurred under Paragraphs 11.01.A.1 and 11.01.A.2, the Contractor's fee shall be 15 percent;

b. for costs incurred under Paragraph 11.01.A.3, the Contractor's fee shall be five percent;

c. where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 12.01.C.2.a and 12.01.C.2.b is that the Subcontractor who actually performs the Work, at whatever tier, will be paid a fee of 15 percent of the costs incurred by such Subcontractor under Paragraphs 11.01.A.1 and 11.01.A.2 and that any higher tier Subcontractor and Contractor will each be paid a fee of five percent of the amount paid to the next lower tier Subcontractor;

d. no fee shall be payable on the basis of costs itemized under Paragraphs 11.01.A.4, 11.01.A.5, and 11.01.B;

e. the amount of credit to be allowed by Contractor to Owner for any change which results in a net decrease in cost will be the amount of the actual net decrease in cost plus a deduction in Contractor's fee by an amount equal to five percent of such net decrease; and

f. when both additions and credits are involved in any one change, the adjustment in Contractor's fee shall be computed on the basis of the net change in accordance with Paragraphs 12.01.C.2.a through 12.01.C.2.e, inclusive.

12.02 *Change of Contract Times*

A. The Contract Times may only be changed by a Change Order. Any Claim for an adjustment in the Contract Times shall be based on written notice submitted by the party making the Claim to the Engineer and the other party to the Contract in accordance with the provisions of Paragraph 10.05.

B. Any adjustment of the Contract Times covered by a Change Order or any Claim for an adjustment in the Contract Times will be determined in accordance with the provisions of this Article 12.

12.03 *Delays*

A. Where Contractor is prevented from completing any part of the Work within the Contract Times due to delay beyond the control of Contractor, the Contract Times will be extended in an amount equal to the time lost due to such delay if a Claim is made therefor as provided in Paragraph 12.02.A. Delays beyond the control of Contractor shall include, but not be limited to, acts or neglect by Owner, acts or neglect of utility owners or other contractors performing other work as contemplated by Article 7, fires, floods, epidemics, abnormal weather conditions, or acts of God.

B. If Owner, Engineer, or other contractors or utility owners performing other work for Owner as contemplated by Article 7, or anyone for whom Owner is responsible, delays, disrupts, or interferes with the performance or progress of the Work, then Contractor shall be entitled to an equitable adjustment in the Contract Price or the Contract Times, or both. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.

C. If Contractor is delayed in the performance or progress of the Work by fire, flood, epidemic, abnormal weather conditions, acts of God, acts or failures to act of utility owners not under the

control of Owner, or other causes not the fault of and beyond control of Owner and Contractor, then Contractor shall be entitled to an equitable adjustment in Contract Times, if such adjustment is essential to Contractor's ability to complete the Work within the Contract Times. Such an adjustment shall be Contractor's sole and exclusive remedy for the delays described in this Paragraph 12.03.C.

D. Owner, Engineer, and their officers, directors, members, partners, employees, agents, consultants, or subcontractors shall not be liable to Contractor for any claims, costs, losses, or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by Contractor on or in connection with any other project or anticipated project.

E. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for delays within the control of Contractor. Delays attributable to and within the control of a Subcontractor or Supplier shall be deemed to be delays within the control of Contractor.

ARTICLE 13 – TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

13.01 *Notice of Defects*

A. Prompt notice of all defective Work of which Owner or Engineer has actual knowledge will be given to Contractor. Defective Work may be rejected, corrected, or accepted as provided in this Article 13.

13.02 *Access to Work*

A. Owner, Engineer, their consultants and other representatives and personnel of Owner, independent testing laboratories, and governmental agencies with jurisdictional interests will have access to the Site and the Work at reasonable times for their observation, inspection, and testing. Contractor shall provide them proper and safe conditions for such access and advise them of Contractor's safety procedures and programs so that they may comply therewith as applicable.

13.03 *Tests and Inspections*

A. Contractor shall give Engineer timely notice of readiness of the Work for all required inspections, tests, or approvals and shall cooperate with inspection and testing personnel to facilitate required inspections or tests.

B. Owner shall employ and pay for the services of an independent testing laboratory to perform all inspections, tests, or approvals required by the Contract Documents except:

1. for inspections, tests, or approvals covered by Paragraphs 13.03.C and 13.03.D below;

2. that costs incurred in connection with tests or inspections conducted pursuant to Paragraph 13.04.B shall be paid as provided in Paragraph 13.04.C; and

3. as otherwise specifically provided in the Contract Documents.

C. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested, or approved by an employee or other representative of such public body, Contractor shall assume full responsibility for arranging and obtaining such inspections, tests, or approvals, pay all costs in connection therewith, and furnish Engineer the required certificates of inspection or approval.

D. Contractor shall be responsible for arranging and obtaining and shall pay all costs in connection with any inspections, tests, or approvals required for Owner's and Engineer's acceptance of materials or equipment to be incorporated in the Work; or acceptance of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work. Such inspections, tests, or approvals shall be performed by organizations acceptable to Owner and Engineer.

E. If any Work (or the work of others) that is to be inspected, tested, or approved is covered by Contractor without written concurrence of Engineer, Contractor shall, if requested by Engineer, uncover such Work for observation.

F. Uncovering Work as provided in Paragraph 13.03.E shall be at Contractor's expense unless Contractor has given Engineer timely notice of Contractor's intention to cover the same and Engineer has not acted with reasonable promptness in response to such notice.

13.04 *Uncovering Work*

A. If any Work is covered contrary to the written request of Engineer, it must, if requested by Engineer, be uncovered for Engineer's observation and replaced at Contractor's expense.

B. If Engineer considers it necessary or advisable that covered Work be observed by Engineer or inspected or tested by others, Contractor, at Engineer's request, shall uncover, expose, or otherwise make available for observation, inspection, or testing as Engineer may require, that portion of the Work in question, furnishing all necessary labor, material, and equipment.

C. If it is found that the uncovered Work is defective, Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such uncovering, exposure, observation, inspection, and testing, and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and Owner shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount thereof, Owner may make a Claim therefor as provided in Paragraph 10.05.

D. If the uncovered Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times, or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement, and reconstruction. If the parties are unable to agree as to the amount or extent thereof, Contractor may make a Claim therefor as provided in Paragraph 10.05.

13.05 *Owner May Stop the Work*

A. If the Work is defective, or Contractor fails to supply sufficient skilled workers or suitable materials or equipment, or fails to perform the Work in such a way that the completed Work will conform to the Contract Documents, Owner may order Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of Owner to stop the Work shall not give rise to any duty on the part of Owner to exercise this right for the benefit of Contractor, any Subcontractor, any Supplier, any other individual or entity, or any surety for, or employee or agent of any of them.

13.06 *Correction or Removal of Defective Work*

A. Promptly after receipt of written notice, Contractor shall correct all defective Work, whether or not fabricated, installed, or completed, or, if the Work has been rejected by Engineer, remove it from the Project and replace it with Work that is not defective. Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or removal (including but not limited to all costs of repair or replacement of work of others).

B. When correcting defective Work under the terms of this Paragraph 13.06 or Paragraph 13.07, Contractor shall take no action that would void or otherwise impair Owner's special warranty and guarantee, if any, on said Work.

13.07 *Correction Period*

A. If within one year after the date of Substantial Completion (or such longer period of time as may be prescribed by the terms of any applicable special guarantee required by the Contract Documents) or by any specific provision of the Contract Documents, any Work is found to be defective, or if the repair of any damages to the land or areas made available for Contractor's use by Owner or permitted by Laws and Regulations as contemplated in Paragraph 6.11.A is found to be defective, Contractor shall promptly, without cost to Owner and in accordance with Owner's written instructions:

1. repair such defective land or areas; or

2. correct such defective Work; or

3. if the defective Work has been rejected by Owner, remove it from the Project and replace it with Work that is not defective, and

4. satisfactorily correct or repair or remove and replace any damage to other Work, to the work of others or other land or areas resulting therefrom.

B. If Contractor does not promptly comply with the terms of Owner's written instructions, or in an emergency where delay would cause serious risk of loss or damage, Owner may have the defective Work corrected or repaired or may have the rejected Work removed and replaced. All claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute

resolution costs) arising out of or relating to such correction or repair or such removal and replacement (including but not limited to all costs of repair or replacement of work of others) will be paid by Contractor.

C. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications.

D. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this Paragraph 13.07, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

E. Contractor's obligations under this Paragraph 13.07 are in addition to any other obligation or warranty. The provisions of this Paragraph 13.07 shall not be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

13.08 *Acceptance of Defective Work*

A. If, instead of requiring correction or removal and replacement of defective Work, Owner (and, prior to Engineer's recommendation of final payment, Engineer) prefers to accept it, Owner may do so. Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) attributable to Owner's evaluation of and determination to accept such defective Work (such costs to be approved by Engineer as to reasonableness) and for the diminished value of the Work to the extent not otherwise paid by Contractor pursuant to this sentence. If any such acceptance occurs prior to Engineer's recommendation of final payment, a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work, and Owner shall be entitled to an appropriate decrease in the Contract Price, reflecting the diminished value of Work so accepted. If the parties are unable to agree as to the amount thereof, Owner may make a Claim therefor as provided in Paragraph 10.05. If the acceptance occurs after such recommendation, an appropriate amount will be paid by Contractor to Owner.

13.09 *Owner May Correct Defective Work*

A. If Contractor fails within a reasonable time after written notice from Engineer to correct defective Work, or to remove and replace rejected Work as required by Engineer in accordance with Paragraph 13.06.A, or if Contractor fails to perform the Work in accordance with the Contract Documents, or if Contractor fails to comply with any other provision of the Contract Documents, Owner may, after seven days written notice to Contractor, correct, or remedy any such deficiency.

B. In exercising the rights and remedies under this Paragraph 13.09, Owner shall proceed expeditiously. In connection with such corrective or remedial action, Owner may exclude Contractor from all or part of the Site, take possession of all or part of the Work and suspend Contractor's services related thereto, take possession of Contractor's tools, appliances, construction equipment and machinery at the Site, and incorporate in the Work all materials and

equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere. Contractor shall allow Owner, Owner's representatives, agents and employees, Owner's other contractors, and Engineer and Engineer's consultants access to the Site to enable Owner to exercise the rights and remedies under this Paragraph.

C. All claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred or sustained by Owner in exercising the rights and remedies under this Paragraph 13.09 will be charged against Contractor, and a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work; and Owner shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount of the adjustment, Owner may make a Claim therefor as provided in Paragraph 10.05. Such claims, costs, losses and damages will include but not be limited to all costs of repair, or replacement of work of others destroyed or damaged by correction, removal, or replacement of Contractor's defective Work.

D. Contractor shall not be allowed an extension of the Contract Times because of any delay in the performance of the Work attributable to the exercise by Owner of Owner's rights and remedies under this Paragraph 13.09.

ARTICLE 14 – PAYMENTS TO CONTRACTOR AND COMPLETION

14.01 *Schedule of Values*

A. The Schedule of Values established as provided in Paragraph 2.07.A will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to Engineer. Progress payments on account of Unit Price Work will be based on the number of units completed.

14.02 *Progress Payments*

A. *Applications for Payments:*

1. At least 20 days before the date established in the Agreement for each progress payment (but not more often than once a month), Contractor shall submit to Engineer for review an Application for Payment filled out and signed by Contractor covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, invoice, or other documentation warranting that Owner has received the materials and equipment free and clear of all Liens and evidence that the materials and equipment are covered by appropriate property insurance or other arrangements to protect Owner's interest therein, all of which must be satisfactory to Owner.

2. Beginning with the second Application for Payment, each Application shall include an affidavit of Contractor stating that all previous progress payments received on account of the

Work have been applied on account to discharge Contractor's legitimate obligations associated with prior Applications for Payment.

3. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.

B. *Review of Applications:*

1. Engineer will, within 10 days after receipt of each Application for Payment, either indicate in writing a recommendation of payment and present the Application to Owner or return the Application to Contractor indicating in writing Engineer's reasons for refusing to recommend payment. In the latter case, Contractor may make the necessary corrections and resubmit the Application.

2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Owner, based on Engineer's observations of the executed Work as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:

   a. the Work has progressed to the point indicated;

   b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, the results of any subsequent tests called for in the Contract Documents, a final determination of quantities and classifications for Unit Price Work under Paragraph 9.07, and any other qualifications stated in the recommendation); and

   c. the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Work.

3. By recommending any such payment Engineer will not thereby be deemed to have represented that:

   a. inspections made to check the quality or the quantity of the Work as it has been performed have been exhaustive, extended to every aspect of the Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to Engineer in the Contract Documents; or

   b. there may not be other matters or issues between the parties that might entitle Contractor to be paid additionally by Owner or entitle Owner to withhold payment to Contractor.

4. Neither Engineer's review of Contractor's Work for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:

   a. to supervise, direct, or control the Work, or

b. for the means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or

c. for Contractor's failure to comply with Laws and Regulations applicable to Contractor's performance of the Work, or

d. to make any examination to ascertain how or for what purposes Contractor has used the moneys paid on account of the Contract Price, or

e. to determine that title to any of the Work, materials, or equipment has passed to Owner free and clear of any Liens.

5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Owner stated in Paragraph 14.02.B.2. Engineer may also refuse to recommend any such payment or, because of subsequently discovered evidence or the results of subsequent inspections or tests, revise or revoke any such payment recommendation previously made, to such extent as may be necessary in Engineer's opinion to protect Owner from loss because:

   a. the Work is defective, or completed Work has been damaged, requiring correction or replacement;

   b. the Contract Price has been reduced by Change Orders;

   c. Owner has been required to correct defective Work or complete Work in accordance with Paragraph 13.09; or

   d. Engineer has actual knowledge of the occurrence of any of the events enumerated in Paragraph 15.02.A.

C. *Payment Becomes Due:*

1. Ten days after presentation of the Application for Payment to Owner with Engineer's recommendation, the amount recommended will (subject to the provisions of Paragraph 14.02.D) become due, and when due will be paid by Owner to Contractor.

D. *Reduction in Payment:*

1. Owner may refuse to make payment of the full amount recommended by Engineer because:

   a. claims have been made against Owner on account of Contractor's performance or furnishing of the Work;

   b. Liens have been filed in connection with the Work, except where Contractor has delivered a specific bond satisfactory to Owner to secure the satisfaction and discharge of such Liens;

   c. there are other items entitling Owner to a set-off against the amount recommended; or

d. Owner has actual knowledge of the occurrence of any of the events enumerated in Paragraphs 14.02.B.5.a through 14.02.B.5.c or Paragraph 15.02.A.

2. If Owner refuses to make payment of the full amount recommended by Engineer, Owner will give Contractor immediate written notice (with a copy to Engineer) stating the reasons for such action and promptly pay Contractor any amount remaining after deduction of the amount so withheld. Owner shall promptly pay Contractor the amount so withheld, or any adjustment thereto agreed to by Owner and Contractor, when Contractor remedies the reasons for such action.

3. Upon a subsequent determination that Owner's refusal of payment was not justified, the amount wrongfully withheld shall be treated as an amount due as determined by Paragraph 14.02.C.1 and subject to interest as provided in the Agreement.

14.03 *Contractor's Warranty of Title*

A. Contractor warrants and guarantees that title to all Work, materials, and equipment covered by any Application for Payment, whether incorporated in the Project or not, will pass to Owner no later than the time of payment free and clear of all Liens.

14.04 *Substantial Completion*

A. When Contractor considers the entire Work ready for its intended use Contractor shall notify Owner and Engineer in writing that the entire Work is substantially complete (except for items specifically listed by Contractor as incomplete) and request that Engineer issue a certificate of Substantial Completion.

B. Promptly after Contractor's notification, Owner, Contractor, and Engineer shall make an inspection of the Work to determine the status of completion. If Engineer does not consider the Work substantially complete, Engineer will notify Contractor in writing giving the reasons therefor.

C. If Engineer considers the Work substantially complete, Engineer will deliver to Owner a tentative certificate of Substantial Completion which shall fix the date of Substantial Completion. There shall be attached to the certificate a tentative list of items to be completed or corrected before final payment. Owner shall have seven days after receipt of the tentative certificate during which to make written objection to Engineer as to any provisions of the certificate or attached list. If, after considering such objections, Engineer concludes that the Work is not substantially complete, Engineer will, within 14 days after submission of the tentative certificate to Owner, notify Contractor in writing, stating the reasons therefor. If, after consideration of Owner's objections, Engineer considers the Work substantially complete, Engineer will, within said 14 days, execute and deliver to Owner and Contractor a definitive certificate of Substantial Completion (with a revised tentative list of items to be completed or corrected) reflecting such changes from the tentative certificate as Engineer believes justified after consideration of any objections from Owner.

D. At the time of delivery of the tentative certificate of Substantial Completion, Engineer will deliver to Owner and Contractor a written recommendation as to division of responsibilities

pending final payment between Owner and Contractor with respect to security, operation, safety, and protection of the Work, maintenance, heat, utilities, insurance, and warranties and guarantees. Unless Owner and Contractor agree otherwise in writing and so inform Engineer in writing prior to Engineer's issuing the definitive certificate of Substantial Completion, Engineer's aforesaid recommendation will be binding on Owner and Contractor until final payment.

E. Owner shall have the right to exclude Contractor from the Site after the date of Substantial Completion subject to allowing Contractor reasonable access to remove its property and complete or correct items on the tentative list.

14.05 *Partial Utilization*

A. Prior to Substantial Completion of all the Work, Owner may use or occupy any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which Owner, Engineer, and Contractor agree constitutes a separately functioning and usable part of the Work that can be used by Owner for its intended purpose without significant interference with Contractor's performance of the remainder of the Work, subject to the following conditions:

1. Owner at any time may request Contractor in writing to permit Owner to use or occupy any such part of the Work which Owner believes to be ready for its intended use and substantially complete. If and when Contractor agrees that such part of the Work is substantially complete, Contractor, Owner, and Engineer will follow the procedures of Paragraph 14.04.A through D for that part of the Work.

2. Contractor at any time may notify Owner and Engineer in writing that Contractor considers any such part of the Work ready for its intended use and substantially complete and request Engineer to issue a certificate of Substantial Completion for that part of the Work.

3. Within a reasonable time after either such request, Owner, Contractor, and Engineer shall make an inspection of that part of the Work to determine its status of completion. If Engineer does not consider that part of the Work to be substantially complete, Engineer will notify Owner and Contractor in writing giving the reasons therefor. If Engineer considers that part of the Work to be substantially complete, the provisions of Paragraph 14.04 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

4. No use or occupancy or separate operation of part of the Work may occur prior to compliance with the requirements of Paragraph 5.10 regarding property insurance.

14.06 *Final Inspection*

A. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Engineer will promptly make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

14.07 *Final Payment*

A. *Application for Payment:*

1. After Contractor has, in the opinion of Engineer, satisfactorily completed all corrections identified during the final inspection and has delivered, in accordance with the Contract Documents, all maintenance and operating instructions, schedules, guarantees, bonds, certificates or other evidence of insurance, certificates of inspection, marked-up record documents (as provided in Paragraph 6.12), and other documents, Contractor may make application for final payment following the procedure for progress payments.

2. The final Application for Payment shall be accompanied (except as previously delivered) by:

   a. all documentation called for in the Contract Documents, including but not limited to the evidence of insurance required by Paragraph 5.04.B.6;

   b. consent of the surety, if any, to final payment;

   c. a list of all Claims against Owner that Contractor believes are unsettled; and

   d. complete and legally effective releases or waivers (satisfactory to Owner) of all Lien rights arising out of or Liens filed in connection with the Work.

3. In lieu of the releases or waivers of Liens specified in Paragraph 14.07.A.2 and as approved by Owner, Contractor may furnish receipts or releases in full and an affidavit of Contractor that: (i) the releases and receipts include all labor, services, material, and equipment for which a Lien could be filed; and (ii) all payrolls, material and equipment bills, and other indebtedness connected with the Work for which Owner might in any way be responsible, or which might in any way result in liens or other burdens on Owner's property, have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, Contractor may furnish a bond or other collateral satisfactory to Owner to indemnify Owner against any Lien.

B. *Engineer's Review of Application and Acceptance:*

1. If, on the basis of Engineer's observation of the Work during construction and final inspection, and Engineer's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, Engineer is satisfied that the Work has been completed and Contractor's other obligations under the Contract Documents have been fulfilled, Engineer will, within ten days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of payment and present the Application for Payment to Owner for payment. At the same time Engineer will also give written notice to Owner and Contractor that the Work is acceptable subject to the provisions of Paragraph 14.09. Otherwise, Engineer will return the Application for Payment to Contractor, indicating in writing the reasons for refusing to recommend final payment, in which case Contractor shall make the necessary corrections and resubmit the Application for Payment.

C. *Payment Becomes Due:*

1. Thirty days after the presentation to Owner of the Application for Payment and accompanying documentation, the amount recommended by Engineer, less any sum Owner is entitled to set off against Engineer's recommendation, including but not limited to liquidated damages, will become due and will be paid by Owner to Contractor.

14.08 *Final Completion Delayed*

A. If, through no fault of Contractor, final completion of the Work is significantly delayed, and if Engineer so confirms, Owner shall, upon receipt of Contractor's final Application for Payment (for Work fully completed and accepted) and recommendation of Engineer, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance to be held by Owner for Work not fully completed or corrected is less than the retainage stipulated in the Agreement, and if bonds have been furnished as required in Paragraph 5.01, the written consent of the surety to the payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by Contractor to Engineer with the Application for such payment. Such payment shall be made under the terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

14.09 *Waiver of Claims*

A. The making and acceptance of final payment will constitute:

1. a waiver of all Claims by Owner against Contractor, except Claims arising from unsettled Liens, from defective Work appearing after final inspection pursuant to Paragraph 14.06, from failure to comply with the Contract Documents or the terms of any special guarantees specified therein, or from Contractor's continuing obligations under the Contract Documents; and

2. a waiver of all Claims by Contractor against Owner other than those previously made in accordance with the requirements herein and expressly acknowledged by Owner in writing as still unsettled.

ARTICLE 15 – SUSPENSION OF WORK AND TERMINATION

15.01 *Owner May Suspend Work*

A. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by notice in writing to Contractor and Engineer which will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be granted an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any such suspension if Contractor makes a Claim therefor as provided in Paragraph 10.05.

15.02 *Owner May Terminate for Cause*

A. The occurrence of any one or more of the following events will justify termination for cause:

1. Contractor's persistent failure to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the Progress Schedule established under Paragraph 2.07 as adjusted from time to time pursuant to Paragraph 6.04);

2. Contractor's disregard of Laws or Regulations of any public body having jurisdiction;

3. Contractor's repeated disregard of the authority of Engineer; or

4. Contractor's violation in any substantial way of any provisions of the Contract Documents.

B. If one or more of the events identified in Paragraph 15.02.A occur, Owner may, after giving Contractor (and surety) seven days written notice of its intent to terminate the services of Contractor:

1. exclude Contractor from the Site, and take possession of the Work and of all Contractor's tools, appliances, construction equipment, and machinery at the Site, and use the same to the full extent they could be used by Contractor (without liability to Contractor for trespass or conversion);

2. incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere; and

3. complete the Work as Owner may deem expedient.

C. If Owner proceeds as provided in Paragraph 15.02.B, Contractor shall not be entitled to receive any further payment until the Work is completed. If the unpaid balance of the Contract Price exceeds all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by Owner arising out of or relating to completing the Work, such excess will be paid to Contractor. If such claims, costs, losses, and damages exceed such unpaid balance, Contractor shall pay the difference to Owner. Such claims, costs, losses, and damages incurred by Owner will be reviewed by Engineer as to their reasonableness and, when so approved by Engineer, incorporated in a Change Order. When exercising any rights or remedies under this Paragraph, Owner shall not be required to obtain the lowest price for the Work performed.

D. Notwithstanding Paragraphs 15.02.B and 15.02.C, Contractor's services will not be terminated if Contractor begins within seven days of receipt of notice of intent to terminate to correct its failure to perform and proceeds diligently to cure such failure within no more than 30 days of receipt of said notice.

E. Where Contractor's services have been so terminated by Owner, the termination will not affect any rights or remedies of Owner against Contractor then existing or which may thereafter accrue. Any retention or payment of moneys due Contractor by Owner will not release Contractor from liability.

F. If and to the extent that Contractor has provided a performance bond under the provisions of Paragraph 5.01.A, the termination procedures of that bond shall supersede the provisions of Paragraphs 15.02.B and 15.02.C.

15.03 *Owner May Terminate For Convenience*

A. Upon seven days written notice to Contractor and Engineer, Owner may, without cause and without prejudice to any other right or remedy of Owner, terminate the Contract. In such case, Contractor shall be paid for (without duplication of any items):

1. completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials, or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses;

3. all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred in settlement of terminated contracts with Subcontractors, Suppliers, and others; and

4. reasonable expenses directly attributable to termination.

B. Contractor shall not be paid on account of loss of anticipated profits or revenue or other economic loss arising out of or resulting from such termination.

15.04 *Contractor May Stop Work or Terminate*

A. If, through no act or fault of Contractor, (i) the Work is suspended for more than 90 consecutive days by Owner or under an order of court or other public authority, or (ii) Engineer fails to act on any Application for Payment within 30 days after it is submitted, or (iii) Owner fails for 30 days to pay Contractor any sum finally determined to be due, then Contractor may, upon seven days written notice to Owner and Engineer, and provided Owner or Engineer do not remedy such suspension or failure within that time, terminate the Contract and recover from Owner payment on the same terms as provided in Paragraph 15.03.

B. In lieu of terminating the Contract and without prejudice to any other right or remedy, if Engineer has failed to act on an Application for Payment within 30 days after it is submitted, or Owner has failed for 30 days to pay Contractor any sum finally determined to be due, Contractor may, seven days after written notice to Owner and Engineer, stop the Work until payment is made of all such amounts due Contractor, including interest thereon. The provisions of this Paragraph 15.04 are not intended to preclude Contractor from making a Claim under Paragraph 10.05 for an adjustment in Contract Price or Contract Times or otherwise for expenses or damage directly attributable to Contractor's stopping the Work as permitted by this Paragraph.

ARTICLE 16 – DISPUTE RESOLUTION

16.01 *Methods and Procedures*

A. Either Owner or Contractor may request mediation of any Claim submitted to Engineer for a decision under Paragraph 10.05 before such decision becomes final and binding. The mediation will be governed by the Construction Industry Mediation Rules of the American Arbitration Association in effect as of the Effective Date of the Agreement. The request for mediation shall be submitted in writing to the American Arbitration Association and the other party to the Contract. Timely submission of the request shall stay the effect of Paragraph 10.05.E.

B. Owner and Contractor shall participate in the mediation process in good faith. The process shall be concluded within 60 days of filing of the request. The date of termination of the mediation shall be determined by application of the mediation rules referenced above.

C. If the Claim is not resolved by mediation, Engineer's action under Paragraph 10.05.C or a denial pursuant to Paragraphs 10.05.C.3 or 10.05.D shall become final and binding 30 days after termination of the mediation unless, within that time period, Owner or Contractor:

1. elects in writing to invoke any dispute resolution process provided for in the Supplementary Conditions; or

2. agrees with the other party to submit the Claim to another dispute resolution process; or

3. gives written notice to the other party of the intent to submit the Claim to a court of competent jurisdiction.

ARTICLE 17 – MISCELLANEOUS

17.01 *Giving Notice*

A. Whenever any provision of the Contract Documents requires the giving of written notice, it will be deemed to have been validly given if:

1. delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended; or

2. delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice.

17.02 *Computation of Times*

A. When any period of time is referred to in the Contract Documents by days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

17.03 *Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Contract Documents. The provisions of this Paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right, and remedy to which they apply.

17.04 *Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract Documents, as well as all continuing obligations indicated in the Contract Documents, will survive final payment, completion, and acceptance of the Work or termination or completion of the Contract or termination of the services of Contractor.

17.05 *Controlling Law*

A. This Contract is to be governed by the law of the state in which the Project is located.

17.06 *Headings*

A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

SECTION 00 7300

SUPPLEMENTARY CONDITIONS

PART 1 GENERAL

1.1 GENERAL

A. These Supplementary Conditions shall modify and supplement the Standard General Conditions of the Construct Contract (Section 00 7215 - EJCDC C-700 2007 Edition), and shall govern whenever they conflict. All provisions which are not so amended or supplemented remain in full force and effect. The Standard General Conditions of the Construction Contract are reproduced herein with no changes.

1.2 MODIFICATIONS TO ARTICLES OF THE GENERAL CONDITIONS

A. ARTICLE 1 – DEFINITIONS

1. Paragraph 1.01.A.19 is supplemented with the following: Where the term "Engineer" is used in the Specification for the approval of materials or work, it shall be understood to mean AECOM.

2. Paragraph 1.01.A.29 is supplemented with the following: Whenever the term "Owner" is used in the Contract Documents, it shall refer to the Warren County Board of Commissioners, or its authorized representative.

B. ARTICLE 2 – PRELIMINARY MATTERS

1. Paragraph 2.02 – Copies of Documents, will be as stated in Division 01 Section "Summary of Work".

2. Paragraph 2.03 – Commencement of Contract Time: Notice to Proceed is amended as follows:
Delete the last sentence.

C. ARTICLE 3 – CONTRACT DOCUMENTS: INTENT, AMENDING, REUSE

1. Paragraph 3.03.A.1 – Add the following after the last sentence:

"By executing the contract, the Contractor also represents and affirms that the Contractor is familiar with federal, state, and local laws, ordinances, rules and regulations that may in any manner affect cost, progress, or performance of the work."

2. Paragraph 3.03.B.1.c – Add the following paragraphs:
"c. If any portion of the Contract Documents conflicts with any other portion, the various documents comprising the Contract Documents govern in the following order of precedence: the Agreement; Supplementary Conditions (including Division 1 documents): these General Conditions; the Specifications; and the Drawings. As between detailed drawings and general drawings, the detailed drawings govern. As between noted materials and graphic indications of materials, the noted materials govern.

d. Should the Contract Documents disagree as to quality or quantity of work required, the Contractor must provide the better quality or greater quantity unless the Owner gives written instructions to the contrary.

e. Where the drawings show only a portion of the work in full detail and the remainder is shown only in outline, the Contractor must execute the portions in outline as required for like portions shown in full detail. Where items are shown in diagrammatic/schematic drawings, the Contractor must verify location with the Construction Manager or as instructed by the Construction Manager before installation."

3. Paragraph 3.04.A – Replace with the following:
"A. The Contract Documents may be amended to provide for additions, deletions, and revisions in the Work which affect the price of the work or contract times, or to modify the terms and conditions thereof, by either a written Change Order or a written Work Change Directive signed by the Owner or its authorized representative(s)."

D. ARTICLE 4 – AVAILABILITY OF LANDS: PHYSICAL CONDITIONS: REFERENCE POINTS

1. Paragraph 4.01.B – Delete paragraph in its entirety and insert the following:

"B. Upon reasonable request, Owner shall furnish Contractor with a current Notice of Commencement."

2. Paragraph 4.02 – Subsurface and Physical Conditions is supplemented with: In the preparation of Drawings and Specifications the ENGINEER has relied upon those indicated in Division 00 Section "Geotechnical Data".

3. Paragraph 4.03.A.4 – Delete paragraph in its entirety and insert the following in its place:
"4. …is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

Then Contractor shall, promptly after becoming aware thereof and in no event later than seventy-two (72) hours after first discovering that condition, and before further disturbing the subsurface or physical conditions or performing any work in connection therewith (except in an emergency as required by paragraph 6.16.A), notify Owner and Engineer in writing about such condition. Contractor shall not further disturb such condition or perform any work in connection therewith (except as aforesaid) until receipt of written order to do so. In the event the condition is continuing, Contractor shall send additional or subsequent notices at intervals of not less than twenty-one (21) consecutive days until the condition ceases or abates. Failure to provide such notices or avoid further disturbance shall constitute a waiver by Contractor of his right to seek adjustment of the contract times or contract price as a result of such condition."

4. Paragraph 4.03.C.1.c – Add the following paragraph:
"c. Contractor has provided written notice to the Owner of the condition as required by Paragraph 4.03.A.4."

5. Paragraph 4.03.C.1.d – Add the following paragraph:

"d. Engineer recommends to the Owner that the requested adjustment to the contract price or contract times is equitable."

6. Paragraph 4.03.C.3 – Add the following language at the end of this paragraph: "In the event a claim is filed, the Contractor will not be relieved of the obligation to continue work during the resolution of the claim."

7. Paragraph 4.05.A – Add the following paragraph to the end:
"The Contractor shall notify the Owner forty-eight (48) hours in advance for the establishment of the base lines, benchmarks, or layout work.

8. Paragraph 4.06 – Add the following subparagraph 4.06.A.1:
   1. Delete Paragraphs 4.06.A and 4.06.B in their entirety and insert the following:
      a. No reports or Drawings related to hazardous Environmental Conditions at site are know to the Owner.
      b. Not used.

9. Paragraph 4.06.G – Delete paragraph in its entirety.

E. ARTICLE 5 – BONDS AND INSURANCE

1. Paragraph 5.01.A – Amend the second sentence to read: "…These bonds shall remain in effect not less than one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 13.07, whichever is later, except as provided otherwise by Laws or Regulations or by the Contract Documents…"

2. Paragraph 5.01.C – At the end of this paragraph, add the following: "…and both of which shall provide coverage security for the interim during which the bond has lapsed."

3. Paragraph 5.01.D – Add the following paragraph:
"D. If the Contractor provided a certified or cashier's check or letter of credit as Bid Security, he shall furnish a Performance Bond in an amount at least equal to 100% of the Contract Price as security for the faithful performance of this agreement."

4. Paragraph 5.01.F – Add the following paragraph:
"F. Each of the Bonds shall be on the forms attached to the Contract Documents, or substantially equivalent forms, and shall have a Surety thereon. Such Surety company or companies as are approved by the Owner and in accordance with Paragraph 5.01. Each of the Bonds shall be submitted in accordance with Paragraph 2.01."

5. Paragraph 5.02.B and 5.02.C – Add the following paragraphs following 5.02.A:
"B. All insurance must be placed with companies with an AM Best's rating of at least: A-VII and be acceptable to Owner; Owner's acceptance will not be unreasonably withheld.

C. All surety and bonds provided must be executed by a surety or surety's license to conduct business in the State of Ohio and named in the current list of "Companies Holding Certificates of Authority as Acceptable Securities on Federal Bonds and as Acceptable Insurance Companies" as published in Circular 570 (amended) by the

Audit Staff Bureau of Accounts, U.S. Treasury Department."

6. Paragraph 5.04.C – Add the following new paragraph immediately after 5.04.B:

"C. The Contractor shall, at his own expense, purchase and maintain the following minimum coverage:

1. Workers Compensation, for claims for bodily injury, sickness, disease or death as follows:
   a. Coverage A Statutory Benefits as described by the applicable law.
   b. Coverage B Employer's Liability:

      $500,000 Bodily Injury by Accident - each employee
      $500,000 Bodily Injury by disease - each employee
      $500,000 Bodily Injury by disease - policy limit

      For Ohio projects, the Contractor shall provide a copy of a certificate of premium payment from the Industrial Commission and Bureau of Workers Compensation, State of Ohio, for the period of time specified during which construction commences and copies of renewal certificates for subsequent periods, so long as the project continues. For work outside the State of Ohio, a Workers Compensation and Employer's Liability policy shall be certified. In this instance, a 60-day notice of cancellation or material change shall be provided to the Owner and Engineer.
2. Comprehensive General Liability Coverage for Bodily Injury and Property Damage - occurrence form.

General Aggregate	$2,000,000	Each occurrence, combined single limit for Bodily Injury and Property Damage
Products – Completed Operations	$1,000,000	Each occurrence
Aggregate	$2,000,000	
Personal and Advertising Liability per Occurrence	$1,000,000	Combined Single Limit for Bodily Injury and Property Damage

Coverage shall be extended to include the following:

a. Per project and per location aggregate.
b. Premises and operations coverage.
c. Coverage for liability of independent contractors.
d. Products and completed operations.
e. Coverage for explosion, collapse and underground hazards.
f. Stop-Gap Liability: All monopolistic states - $1,000,000.
g. Owner and Engineer as additional insureds (alternative: Furnish separate hi. Owner's protective liability including Engineer as a named Insured. Owner and Engineer to be additional insureds under Products and Completed Operation Coverage of Contractor).
h. Waiver of Subrogation against Owner and Engineer.
i. 60-Day Notice of Cancellation or material change.

3. Comprehensive Automobile Liability Insurance - Occurrence Form

Any Automobile	$1,000,000	Bodily Injury and Property Damage, Combined Single Limit
Borrowed, Non-Owned	$1,000,000	Bodily Injury and & Hired Automobile Property Damage, Combined Single Limit

Coverage shall be extended to include:

a. Contractual liability for assumed liability.
b. Owner and Engineer as additional insureds.
c. Waiver of Subrogation against Owner and Engineer.
d. 60 Day Notice of Cancellation or material change.
e. Motor Carrier Act Endorsement MCS-90 (where applicable).
f. Extra Wide/Extra Heavy Hauling Permit Endorsement where applicable.

4. An Umbrella Liability or Excess Liability Policy over primary comprehensive General and Automobile Liability shall be carried in a minimum amount of:

$5,000,000 Each Occurrence
$5,000,000 Aggregate

The Umbrella or Excess Policy shall be following form of:

a. Any Additional Insureds under primary policy.
b. Per project and per location aggregates.
c. Explosion, Collapse or Underground Hazards.
d. Stop-Gap Liability.
e. Waiver of Subrogation against Owner and Engineer.
f. Watercraft (when employed to perform the work).
g. Aircraft (when employed to perform the work).
h. 60-Day Notice of Cancellation or material change shall be given to Owner and Engineer.

7. Paragraph 5.06 – Change to provide that the Contractor shall obtain this policy.

8. Paragraph 5.06 – Add new paragraph 5.06.A.8 as follows:
"8. The maintenance of specified insurance coverage is a material element of the contract and failure to maintain or renew insurance coverage or provide evidence of renewal may be treated as a material breach of the contract."

9. Paragraph 5.06 – Add new paragraph 5.06.A.9 and 10 as follows:
"9. The policies of insurance required to be purchased and maintained by Contractor in accordance with Paragraph 5.06.A shall comply with the requirements of Paragraph 5.06.C."

10. Paragraph 5.06 – Add new paragraph 5.06.A.10 as follows:
"10. The Contractor shall obtain the appropriate amount of flood insurance for physical loss or damage to the Work, temporary buildings, falsework, and materials and equipment in transit. The Contractor shall take into consideration the proximity of their work to rivers, drainage swales, work on or

in proximity to storm sewer systems, unstable soils, work schedule, climate, the Contractor's means and methods, and any other considerations."

11. Paragraph 5.06.B – Delete and replace with the following:
"B. Contractor shall be responsible for any deductible or self-insured retention, and shall have those limits approved by Owner, which approval shall not be unreasonably withheld."

12. Paragraph 5.11 – Add new Article 5.11 as follows:
"5.11 *Adequacy of Climate*
The Owner and Engineer, as well as their officers and employees, assume no responsibility for the adequacy of limits and coverages in the event of any claim(s) against the Contractor, its officers, employees, subcontractors, or any sub-subcontractor or agent of any of them. The types, forms, and amounts of insurance specified should be considered minimal, and in no way does the Owner or Engineer imply expressly or otherwise that the coverages specified will cover all exposures to loss and are in amounts sufficient to assure the Contractor, any subcontractor, or sub-subcontractor that uncovered losses will not occur or insurance limits will be adequate. The contractors should seek outside insurance counsel to determine adequate insurance protection for their particular operations. Meeting the insurance specifications shall in no way relieve any contractor, subcontractor or sub-subcontractor of any obligations under the contract, and any indemnification obligations shall survive the exhaustion of insurance limits carried, and shall be fully enforceable to the extent allowed by governing law, regardless of whether loss or losses are not covered by insurance. All insurance purchased by the Contractor for this work shall be 'primary' and 'non-contributory'."

F. ARTICLE 6 – CONTRACTOR'S RESPONSIBILITIES

1. Paragraph 6.01.A – After the first sentence add: "Contractor's Work shall be performed according to the standard of care normally exercised by construction organizations within Ohio that are engaged in performing comparable services devoting such attention thereto and applying such skills as may be necessary to perform the work in accordance with the Contract Documents."

2. Paragraph 6.02.C – Add a new paragraph as following:

"C. If the Contractor does not perform the work in accordance with the Contractor's construction schedule and the project construction schedule, and it becomes apparent that the work may not be completed within the contract times, the Contractor shall, at no additional cost to the Owner or the Engineer, as necessary to improve the Contractor's progress: (a) increase the number of employees in such crafts as will regain lost scheduled progress; and (b) increase the number of working hours per shift, shifts per working day, working days per week, the amount of equipment, or any combination of the foregoing measures to regain lost scheduled progress. Contractor shall furnish such employees, materials, facilities, and equipment, and shall work such hours, including extra shifts, overtime operations, and Sundays and holidays, as may be necessary to insure the prosecution and completion of the work in accordance with the Contractor's construction schedule and the project construction schedule.

3. Paragraph 6.02.D – Add a new paragraph as follows:

"D. Contractor shall at all times maintain good discipline and order at the site. The Contractor shall not permit employment of unfit persons or persons not skilled in tasks assigned to them. If the Owner or Engineer deems any employee of the Contractor or a subcontractor unsatisfactory, the Contractor must transfer or require its subcontractor to transfer such employee from the project immediately."

4. Paragraph 6.04.A.3 – Add a new paragraph as following:

"3. In addition, the Owner may require the Contractor to prepare and submit a recovery schedule demonstrating the Contractor's program and proposed plan to regain lost schedule progress and to insure completion of the work within the contract times. If the Owner finds the proposed plan not acceptable, the contractor may be required to submit a new plan. If the actions taken by the Contractor or the Contractor's second proposed plan are not satisfactory, the Owner may require the Contractor to take any of the actions set forth in paragraph 6.02.C at no additional cost to the Owner."

5. Paragraph 6.06.B – Add the following sentence to the end of paragraph 6.06.B.: "If requested by Owner, Contractor must furnish names of Subcontractor, Suppliers, or other persons or organizations within five days after Bid opening. See Instruction to Bidders, ARTICLE 12 for additional information."

6. Add Paragraph 6.06.H as follows:

"H. The CONTRACTOR shall furnish to the OWNER and the ENGINEER, in writing, a copy of the Notice of Furnishings for each of the Subcontractors proposed for each portion of the work, prior to commencement of work on the respective subcontract."

7. Add Paragraph 6.06.I as follows:

"I. OWNER or ENGINEER may furnish to any such Subcontractor, Supplier, or other person or organization, to the extent practicable, information about amounts paid to CONTRACTOR in accordance with CONTRACTOR'S Applications for Payment on account of the particular Subcontractor's, Supplier's, or other person's or other organization's work."

8. Paragraph 6.07.B – Delete paragraph in its entirety.

9. Paragraph 6.08 – Replace this paragraph with the following:
"A. The OWNER has or will obtain the following permits:

OHIO EPA DDAGW PLAN APPROVAL
OHIO EPA PTI
WARREN COUNTY BUILDING PERMIT

The CONTRACTOR shall secure and pay for all other permits necessary to complete the construction."

10. Paragraph 6.10 - Taxes, is amended as follows:
"A. OWNER, being a public body, is exempt from taxes on material incorporated in the work. CONTRACTOR, therefore, is not required to pay such materials taxes. The OWNER will provide the tax exemption forms. These forms are to contain all necessary information required by the State.

The CONTRACTOR shall complete all applicable information and submit to OWNER for signature. The CONTRACTOR may submit an additional form with the SUB-CONTRACTOR portion blank, which may be reproduced at later dates for various SUB-CONTRACTORS.

B. Owner's exemption does not apply to construction tools, machinery, equipment, or other property purchased by or leased by Contractor, or to supplies or materials not incorporated into the Work.

C. Contractor is specifically required to abide by all local tax requirements, if any, including income tax requirements to withhold at source. Contractor acknowledges that the Contract work may take place in more than one county and more than one city, and further acknowledges different tax burdens may be imposed in each. Contractor shall indemnify, defend, and hold Owner harmless from any federal, state, or local tax liabilities incurred as a result of Contractor performing the Work."

11. Paragraph 6.11.A.3 – Replace with the following paragraph:
"3. To the fullest extend permitted by law, the Contractor shall indemnify, defend, and hold harmless the Owner and Engineer and the consultants, professionals, agents, and employees of any of them from and against any and all claims, damages, loss and expenses, and all court costs or costs or arbitration or other dispute resolution costs, including but not limited to attorney's fees incurred through such indemnified party's attorney of choice, arising out of or resulting from the performance of the work but only to the extent caused in whole or in part by negligent acts or omissions of the Contractor, a subcontractor (regardless of tier), any one directly or indirectly employed by them or anyone for whose acts they may be liable, regardless of whether or not such claim, damage, loss or expenses was caused in part by a party indemnified hereunder. Such obligations shall not be construed to negate, abridge or reduce other rights or obligations of indemnity which would otherwise exist as to a party or persons described in this Paragraph 6.11.A.3. The Contractor shall promptly and contemporaneously reimburse the Owner, Engineer, and their respective successors and assigns for any cost, expense or attorneys' fees incurred on account of any such suit or claim where incurred in enforcing the terms of the contract. The Contractor shall cause

this indemnification provision to be included in every subcontract, regardless of tier, entered into with regard to the work."

12. Paragraph 6.11.E – Add the following paragraph:
"E. The Contractor shall construct and maintain all necessary temporary drainage and do all pumping necessary to keep all excavations, floors, pits, and trenches relating to the work free from water. Unless specifically assigned to another, the Contractor shall at all times provide protection for its work from rain, wind, storms, frost, or heat, so as to maintain all work, materials, apparatus, and fixtures free from injury and damage. At the end of each day's work, the Contractor shall cover and/or protect to the extent possible all work likely to be damaged. If low temperatures make it impossible to continue operations in spite of cold-weather precautions, the Contractor shall cease operation and notify the Owner and Engineer in writing."

13. Paragraphs 6.13 and 6.14 - Safety and Protection, are supplemented with the following: "All construction work under this Agreement is subject to Chapter XVII of Title 29, Code of Federal Regulations (CFR) Part 1926 (formerly Chapter XIII of Title 29, CFR, Part 1518) titled, "Safety and Health Regulations for Construction" and subsequent amendments."

14. Paragraph 6.17 - Shop Drawings and Samples – Delete this paragraph entirely.

15. Paragraph 6.19.A – Replace with the following paragraph:
"A. Contractor warrants and guarantees to Owner that all work will be performed in accordance with the Contract Documents, will be performed in a workmanlike manner, and will not be defective. In addition, the Contractor warrants to the Owner and Engineer that the Contractor and its subcontractors (regardless of tier) will exercise in the performance of the work the standard of care normally exercised by construction organizations within Ohio, which are engaged in performing comparable services."

16. Paragraph 6.19.D – Add the following paragraph:
"D. Upon final payment, the Contractor must assign and transfer to Owner all guarantees, warranties and agreements from and with all contractors, subcontractors, vendors, suppliers, and manufacturers regarding their performance, quality of workmanship, or quality of materials supplied in connection with the work. Contractor represents and warrants that all such guarantees, warranties, and agreements will be in place and enforceable by the Owner in accordance with their terms. The Owner, however, will not assume through any assignment or transfer required under this subparagraph any of the Contractor's payment obligations to any entities."

17. Paragraph 6.20.A – Delete entire paragraph and replace with the following:
"A. To the fullest extent permitted by law, the Contractor shall indemnify, defend, and hold harmless the Owner and Engineer and the consultants, professionals, agents, and employees of any of them from and against any and all claims, damages, loss and expenses, and all court costs or costs of arbitration or other dispute resolution costs, including but not limited to attorneys' fees incurred through such indemnified party's attorney of choice, arising out of or resulting in whole or in part from the performance of the work but only to the extent caused in whole or in part by negligent acts or omissions of the Contractor, a

subcontractor (regardless of tier), anyone directly or indirectly employed by them or anyone for whose acts they may be liable, regardless of whether or not such claim, damage, loss, or expenses caused in part by a party indemnified hereunder. Such obligations shall not be construed to negate, abridge, or reduce other rights or obligations of indemnity which would otherwise exist as to a party or persons described in this Paragraph 6.20.A. The Contractor shall promptly and contemporaneously reimburse the Owner, Engineer, and their respective successors and assigns for any cost, expense or attorneys' fees incurred on account of any such suit or claim where incurred in enforcing the terms of the contract. The Contractor shall cause this indemnification provision to be included in every subcontract, regardless of tier, entered into with regard to the work."

G. ARTICLE 9 – ENGINEER'S STATUS DURING CONSTRUCTION

1. Paragraph 9.01.A – Replace the first sentence with the following:
   "A. Engineer will be the Owner's representative during the construction period to the extent outlined in this Article 9 and subject to the limits set forth therein and in the contract documents."

2. Paragraph 9.03.B – Add a new paragraph as follows:
   "B. The responsibilities and authority and limitation thereon of the Resident Project Representative will be as provided in these Supplementary Conditions:
      1. Conduct on site observations of the Work in progress to assist ENGINEER in determining if the Work is in general proceeding in accordance with the Contract Documents.
      2. Report to ENGINEER whenever any Work will not produce a completed Project that conforms generally to the Contract Documents or will prejudice the integrity of the design concept of the completed Project as a functioning whole as indicated in the Contract Documents, or has been damaged, or does not meet the requirements on any inspection, test or approval required to be made; and advise ENGINEER of Work that should be corrected, rejected or should be uncovered for observation, or requires special testing, inspection or approval.
      3. Verify that tests, equipment and systems start-ups and operating and maintenance training are conducted in the presence of the appropriate personnel, and that CONTRACTOR maintains adequate records thereof; and observe, record and report to ENGINEER appropriate details relative to the test procedures and start-ups.
      4. Accompany visiting inspectors representing public or other agencies having jurisdiction over the Project, record the results of these inspections and report to ENGINEER.
      5. Report to ENGINEER when clarifications and interpretations of the Contract Documents are needed and transmit to CONTRACTOR clarifications and interpretations as issued by ENGINEER.
      6. Consider and evaluate CONTRACTOR's suggestions for modifications in Drawings or Specifications and report recommendations to ENGINEER.
      7. Limitations of authority by Resident Project Representative:
         a) Shall not authorize any deviation from the Contract Documents or substitution of materials or equipment (including "or-equal" items), unless authorized by ENGINEER.

b) Shall not exceed limitations of ENGINEER's authority as set forth in the General Conditions or Contract Documents.
c) Shall not undertake any of the responsibilities of CONTRACTOR, Subcontractor, Suppliers, or CONTRACTOR's superintendent.
d) Shall not advise on, issue directions relative to or assume control over any aspect of the means, methods, techniques, sequences or procedures of construction unless such advise or directions are specifically required by the Contract Documents.
e) Shall not advise on, issue directions regarding or assume control over safety precautions and programs in connection with the Work.
f) Shall not accept Shop Drawings or Sample submittals from anyone other than CONTRACTOR.
g) Shall not authorize OWNER to occupy the Project in whole or in part.
h) Shall not participate in specialized field or laboratory tests or inspections conducted by others except as specifically authorized by ENGINEER."

3. Paragraph 9.09.F – Add the following paragraph:
"F. Under no circumstances is Engineer or resident project representative authorized to approve on behalf of Owner variations in the work which result in adjustments to the contract times or contract price. Contractor may not rely upon any verbal communication from any party as to the authorization to perform work which may give rise to adjustments in contract times or contract price."

H. ARTICLE 10 – CHANGES IN THE WORK; CLAIMS

1. Paragraph 10.03.A.4 – Add the following paragraph:
"4. In no event is the Contractor entitled to reserve any rights or take other similar action with respect to a change order if the effect or intent of such reservation or action would be to accommodate a further adjustment in the contract times, contract price, or both, after the Contractor executes the change order. By executing a change order, the Contractor irrevocably certifies that the elements of the change order described are completely satisfied and waives all rights to seek further adjustment of the contract times, contract price, or both, at a later date with respect to the associated change in the work."

2. Paragraph 10.05.G – Add the following:
"Owner makes no representations with regard to subsurface conditions or site availability other than those set forth in the Contract Documents. Contractor acknowledges and agrees he will make no claim against Owner which would affect additional contract price in the event that actual subsurface conditions do not conform to those indicated by the Contract Documents or other subsurface investigations conducted by Contractor. Contractor assumes the risk of the assumptions made with regard to subsurface conditions in formulating the bid. Contractor's sole remedy in such an event shall be an increase in contract times which may be granted by Engineer and Owner should Contractor make a claim therefore as required by General Conditions 10.05."

I. ARTICLE 11 – COST OF THE WORK; ALLOWANCES; UNIT PRICE WORK

1. Paragraph 11.01.A.5.c – Add the following sentence to the end of the paragraph: "Equipment or machinery with a value of less than $1,000 will be considered small tools."

2. Replace Paragraph 11.03.D.1 with the following:
"If the quantities in the Contract documents are changed by more than 25% in a proposed Change Order such that application of the agreed unit prices to the quantities of work proposed causes substantial inequity to the owner or the Contractor, the applicable unit prices may be negotiated and equitably adjusted for those quantities in excess of 25%."

J. ARTICLE 12 – CHANGE OF CONTRACT PRICE; CHANGE OF CONTRACT TIMES

1. Paragraph 12.01.A – The first sentence of Paragraph 12.01.A should be replaced in its entirety with the following: "The contract price may only be changed by a written change order signed by the Contractor and the Owner or its authorized representative(s)."

2. Paragraph 12.01.B – Replace the paragraph to read as follows: "B. The value of any Work covered by a Change Order, any claim for an increase or decrease in the Contract Price, or any claim for damages shall be determined as follows:…"

3. Paragraph 12.01.C.2.e – Add the following at the end of paragraph GC-12.01.C.2.e: "Any change that results in a net decrease in cost shall include the appropriate overhead and profit added thereto calculated as set forth in ARTICLE 12 of the General Conditions."

4. Paragraph 12.01.D – Insert new paragraph as follows: "D. In no event shall Contractor be entitled to any increase in the Contract Price on account of any adverse weather."

5. Paragraph 12.02.A – The first sentence of Paragraph 12.02.A should be replaced with the following: "The contract times may only be changed by a written change order signed by the Contractor and the Owner or its authorized representative(s)."

6. Paragraph 12.02.B – Replace Paragraph 12.02.B with the following language:
"B. If the Contractor wishes to make a claim for an increase in the contract times, prompt written notice as provided herein shall be given. The Contractor's claim shall include an estimate of cost and of probable effect of delay on progress of the work, a detailed schedule which identifies the critical portions of the work impacted by the delaying event and the dates of such impact, and a statement from Contractor that the increase requested is the entire increase in the contract time associated with the claim. The failure to provide such information and statement within the time period established in Paragraph 10.05.B shall constitute an irrevocable waiver of the claim. In the case of a continuing delay occurring on consecutive days, only one claim is necessary, provided, however, that within ten (10) days of the cessation of the cause of the continuing delay, the Contractor shall notify the construction manager in writing that the cause of the delay has ceased. The failure to give notice of the cessation of the cause of the continuing delay shall constitute an irrevocable waiver of any claim based upon the continuing delay."

7. Add the following paragraph as Paragraph 12.02.C:
"In addition to the requirements of Paragraph 12.02.B, if adverse weather conditions are the basis for a claim for additional time, the contractor shall support such claim with data acceptable to the Owner and Engineer that substantiates that weather conditions were significantly abnormal for the period of time and could not have reasonably been anticipated and that weather conditions had an adverse effect on a critical element of the scheduled construction. Notwithstanding any other provision of the Contract Documents to the contrary, the project times will not be adjusted on account of the impact of any normal adverse weather or any of the work or on account of the impact of any abnormal

adverse weather on non-critical elements of the work. The support for and evaluation of all adverse-weather claims resulting in lost work days shall be based upon criteria as provided for in the State of Ohio Department of Transportation (ODOT) Construction and Material Specifications dated January 1, 2013. ODOT Specification 108.06.C lists the number of days that the Contractor may expect to be lost due to the weather as follows:

Month	Number of Days Lost Due to Weather
January	8
February	8
March	7
April	6
May	5
June	5
July	4
August	4
Spetember	5
October	6
November	6
December	6

8. Paragraph 12.03.F – Add new paragraph as follows:
"F. Any proposed time extensions for delays requested because of abnormal weather conditions shall be subject to Paragraph 12.02.C."

K. ARTICLE 14 – PAYMENT TO CONTRACTOR AND COMPLETION

1. Paragraph 14.02.A.2 – Replace in its entirety with the following:
"2. Beginning with the second application for payment, each application shall include a notarized affidavit of contractor stating that all previous progress payments received on account of the work have been applied to discharge Contractor's legitimate obligations associated with the prior applications for payment. In addition to any other information that the Owner or Engineer may require, the Contractor's notarized application for payment package shall include: (1) a partial conditional lien waiver from the Contractor for the total payment requested in the application for payment; (2) a partial conditional lien waiver from all subcontractors (regardless of tier) and material and equipment suppliers on those account the Contractor is seeking payment in the application for payment for the total amount of such payment requested; (3) a partial unconditional lien waiver from the Contractor for the sum of all previous paid progress payments. Preliminary copy of the Application for Payment shall have quantities reviewed and agreed by the Engineer's Resident Project Representative, if on site."

2. Add new Paragraph to 14.02.A.4 as follows:
"4. Each progress payment shall be accompanied by an approved and updated schedule or acceptable recovery schedule or progress payment shall be rejected."

3. Add new Paragraph 14.02.A.5 as follows:

"5. Partial Payment

Partial payments to the CONTRACTOR for labor performed and materials delivered to the site or incorporated into the Project under either a unit or lump sum price contract shall be made at the rate of 92 percent of the estimates as prepared by the CONTRACTOR and approved by the ENGINEER until the work under this Contract is determined by the ENGINEER to be 50 percent complete.

Labor performed and material incorporated into the Project after the work under this Contract is approved as 50 percent complete, will be paid for on the basis of 100 percent of the estimates as prepared by the CONTRACTOR and approved by the ENGINEER.

A Contract shall be considered 50 percent complete when the CONTRACTOR has been paid an amount equal to 50 percent of the total cost of the labor of the Contract and 50 percent of the total cost of the material of the Contract.

All material furnished and delivered but not actually included in the construction and approved by the ENGINEER, after the work under this Contract is 50 percent complete, shall be paid for at the rate of 92 percent of the invoiced value of the materials. The balance of such estimates shall be paid when the material is incorporated into and becomes a part of the building construction.

4. Paragraph 14.02.A.6 – Add new paragraph as follows:

6. Final Estimate

A final estimate shall be made as soon as practicable after completion of the work under this Contract and final approval by the ENGINEER and acceptance by the OWNER, in writing. After such approval, the CONTRACTOR will be paid such portion of the remaining Contract Price as is necessary to bring the aggregate partial payments received to 96 percent of this Final Estimate. The final estimate shall be based on a total costs including all change orders.

5. Paragraph 14.02.A.7 – Add new paragraph as follows:

7. Retention

After the Contract is 50 percent complete all retained funds will be placed in an escrow account and the OWNER agrees to pay the CONTRACTOR the accumulated interest thereon upon release of the retainage, less expenses incurred in the establishment and maintenance of that escrow account by the Owner.

Upon acceptance of Substantial Completion, the amount retained will be reduced to 4%. The 4% balance shall be retained for 30 days after completion and final approval by the OWNER in writing.

If at any time prior to Final Payment the Contractor is found to be in violation of Paragraph 14.02 of the General Conditions, the Owner will retain 10% of the amount of all Progress Payments."

6. Paragraph 14.02.B.6, add new paragraph as follows:

"6. Engineer may also refuse to recommend a minimum of 25% up to a maximum of 100% of any payment if any of the following occur:

a. Third party claims filed or reasonable evidence indicating probable filing of such claims.
b. Failure of the Contractor to make payments properly to Subcontractors or for labor, materials, or equipment. Reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Sum.
c. Damage to the Owner or another Contractor.
d. Reasonable evidence that the Work will not be completed within the. Contract Time.
e. Persistent failure to carry out the Work in accordance with the Contract Documents.
f. Failure to maintain updating of "As-Built Drawings.
g. Failure to properly coordinate with other Contractors.
h. O&M Manual not submitted to the Engineer when equipment is delivered to job site."

7. Paragraph 14.02.D.4 – Insert the following paragraphs immediately following paragraph 14.02.D.3:

"4. Notwithstanding any other provision of the contract documents to the contrary, if Contractor disputes any determination by the Owner or Engineer with regard to an application for payment or a certificate for payment, the Contractor must nevertheless continue to prosecute the work expeditiously.

5. The Contractor shall keep the funds encumbered for the work free and clear of all claims as defined under Ohio Revised Code Section 1311.25, et seq ., which claims are also referred to throughout the Contract Documents as liens. Notwithstanding any other provision of the Contract Documents to the contrary, if any such claim is filed or asserted, or where there is any reason to believe that any such claim may be filed or asserted at any time, the Owner may refuse to make any payment otherwise due to the Contractor or withhold from any payment due the Contractor a sum sufficient, in the opinion of the Owner or as required by law, to pay all obligations and expenses necessary to satisfy such claim and to indemnify the Owner against any such claim and until the Contractor furnishes satisfactory evidence that the indebtedness and the claim in respect thereof, if any, has been satisfied, discharged, and released of record, if any, as provided by law pending the resolution of any dispute between the Contractor and the entity filing such claim. If such evidence is not furnished by the Contractor to the Owner within a period of seven (7) days after demand therefore, the Owner may discharge such indebtedness as provided by law and deduct the amount required therefore together with any and all losses, costs, damages and attorneys' fee (incurred through an attorney of the Owner's choosing) suffered or incurred by the Owner from any sum payable to the Contractor. If payments then and thereafter due to the Contractor are not sufficient to cover such amount, the Contractor shall immediately pay the difference to the Owner. Final payment to the Contractor may be withheld until the work and any funds encumbered therefore are free and clear of any and all claims or rights thereto arising because of the work performed or materials furnished under the Contract Documents."

8. Paragraph 14.04.F – add new paragraph as follows:
   "F. The Owner and the Engineer shall have the option to correct or conclude any and all Construction Punch List items not completed by the Contractor within the time specified in the Substantial Completion Certificate by utilizing its own forces or by hiring others, pursuant to Termination of the Contract under Article 15. The cost of such correction of remaining Construction Punch List items by the Owner or others shall be deducted from remaining monies due the Contractor. If the Contractor does not complete certain Construction Punch List items within specified time periods, all warranties and guarantees related to such incomplete Construction Punch List items shall not begin to elapse until issuance of Final Payment for the work.."

9. Paragraph 14.05 – Add the following new paragraph immediately after 14.05.A.1:
   "2. Owner may at any time request Contractor in writing to permit Owner to take over operation of any such part of the Work although it is not substantially complete. A copy of such request will be sent to Engineer and within a reasonable time thereafter Owner, Contractor, and Engineer shall make an inspection of that part of the Work to determine its status of completion and will prepare a list of the items remaining to be completed or corrected thereon before final payment. If Contractor does not object in writing to Owner and Engineer that such part of the Work is not ready for separate operation by Owner, Engineer will finalize the list of items to be completed or corrected and will deliver such lists to Owner and Contractor together with a written recommendation as to the division of responsibilities pending final payment between Owner and Contractor with respect to security, operation, safety, maintenance, utilities, insurance, warranties, and guarantees for that part of the Work, which will become binding upon Owner and Contractor at the time when Owner takes over such operation (unless they shall have otherwise agreed in writing and so informed Engineer). During such operation and prior to Substantial Completion of such part of the Work, Owner shall allow Contractor reasonable access to complete or correct items on said list and to complete other related Work."

10. Paragraph 14.05.A.2 shall be renumbered to 14.05.A.3.

11. Paragraph 14.05.A.3 shall be renumbered to 14.05.A.4.

12. Paragraph 14.05.A.4 shall be renumbered to 14.05.A.5.

13. Paragraph 14.07.D – Add this additional paragraph following 14.07.C.1:
    "Not withstanding any provision of the Contract Documents to the contrary, (a) the Owner may make final payment or any part thereof jointly to the Contractor and its subcontractors (regardless of tier) and material and equipment suppliers; and (b) final completion of the work will not occur until:
    1. The work is entirely complete in accordance with the Contract Documents;
    2. The Contractor has fulfilled all of its duties and obligations under the contract (other than warranty and similar obligations that survive final completion);
    3. The Contractor delivers to the Owner a final unconditional lien waiver from the Contractor and each of the Contractor's subcontractors (regardless of tier) and material and equipment suppliers; and
    4. The Contractor has fulfilled all of his project closeout obligations, including, but not limited to, providing all maintenance and operating instructions and manuals, and all

drawings, certificates, bonds, guarantees, and other documents required by the Contract Documents to the construction manager or Owner as appropriate."

14. Paragraph 14.10 – Add new paragraph as follows:
"10. The CONTRACTOR, ENGINEER, and OWNER will execute a final Contract Completion Certificate for the Contract which indicates the date of acceptance. The form will be provided by the ENGINEER upon written notification by the Contractor that the Work is complete."

L. ARTICLE 15 – SUSPENSION OF WORK AND TERMINATION

1. Paragraph 15.01.A – Replace the third sentence of Paragraph 15.01.A with the following sentence: "Contractor shall be granted an extension of the Contract Times directly attributable to any such suspension if Contractor makes a Claim therefor as provided in Paragraph 10.05."

2. Paragraph 15.02.C – Replace the second sentence of Paragraph 15.02.C with the following sentence: "If the unpaid balance of the contract price exceeds all claims, losses and damages (including but not limited to all fees and charges of Engineers, Architects, attorneys, consultants, and other professionals, all as chosen by the Owner, and all court or arbitration or other dispute resolution costs) sustained by Owner arising out of or relating to completing work, such excesses will be paid to Contractor."

3. Paragraph 15.02.G – Add the following new paragraph immediately after Paragraph 15.02.F:
"G. In the event that the Owner's termination for cause pursuant to this paragraph is determined by an arbitrator, arbitration panel or court to have been unjustified, such termination shall be deemed to have been a termination pursuant to Paragraph 15.03."

4. Paragraph 15.02.H – Add the following new paragraph:
"H. Upon termination pursuant to this Paragraph 15.02, the Contractor shall, unless the notice of termination specifically directs otherwise, immediately discontinue the work, place no further orders or subcontracts for materials, equipment, services, or facilities, except as may be necessary for completion of such portion of the work as is not discontinued; promptly make every effort to procure cancellation upon terms satisfactory to the Owner of all orders and subcontracts to the extent that they relate to the performance of a discontinued portion of the work; and thereafter do only such work as may be necessary to preserve and protect the work already in progress and to protect materials and equipment on the Project site or in transit thereto, and deliver such materials and equipment to Owner upon demand."

5. Paragraph 15.02.I – Add the following new paragraph:
"I. When the Owner has terminated the Contractor's services pursuant to this Paragraph 15.02, the termination shall not affect any rights or remedies of the Owner against the Contractor then existing or which may thereafter accrue. Any retention or payment of funds due the Contractor by the Owner shall not release the Contractor from liability for performance of the work in accordance with the requirements of the Contract Documents."

6. Paragraph 15.03.A.1 – Replace with the following:

"1. Completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such work not to exceed fifteen percent (15%) of the cost of the completed and acceptable Work;…"

7. Paragraph 15.03.A.3 – Delete paragraph in its entirety.

8. Paragraph 15.03.C – Add the following new paragraph immediately after paragraph 15.03.B:
"C. If the Owner terminates the contract without cause and for Owner's convenience, and there exists an event of default by the Contractor, the Contractor shall only be entitled to receive such sums as it would be entitled to receive under Paragraph 15.02.
1. Upon receipt of written notice from the Owner of such termination for the Owner's convenience, the Contractor shall:
a. cease operations as directed by the Owner in the notice;
b. take actions necessary, or that the Owner may direct, for the protection and preservation of the work; and
b. except for work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders."

M. ARTICLE 16 – DISPUTE RESOLUTION

1. Paragraph 16.02, Dispute Resolution – Insert the following new paragraph:
"16.02 *Dispute Resolution*:

A. This Contract shall be construed under the laws of the State of Ohio, and the parties hereby stipulate to the venue for any and all claims, disputes, interpretations, litigation of any kind arising out of this Contract being exclusively in the Warren County, Ohio Court of Common Pleas. Unless both parties mutually agree in writing to alternate dispute resolution, disputes shall be resolved with litigation. Further, parties waive any right to bring or remove such matters in or to any other state or federal court."

N. ARTICLE 17 – MISCELLANEOUS

1. Paragraph 17.01.A.1 and A.2 – Replace Paragraphs 17.01.A.1 and A.2 in their entirety with the following:
"1. Delivered in person to the individual referenced in the Agreement, or
2. Delivered or sent by registered or certified mail, postage prepaid, to the persons or individual set forth in the Agreement.
3. If the individual referred in the Agreement is no longer employed with said party, then it shall be delivered to an officer of the Corporation for whom it is intended."

1.3 ADDITIONAL PROVISIONS

A. Access to Places of Manufacture

1. The ENGINEER, OWNER, and their inspectors and agents shall, at all times, have immediate access to all places of manufacture where materials specifically identified for

the projects are being made. The CONTRACTOR shall, whenever so requested, give the ENGINEER access to the proper invoices, bills of lading, etc., and shall provide scales and assistance for weighing or other assistance for measuring and testing any of the materials.

B. Liquidated Damages

1. The CONTRACTOR, and his Surety, acknowledges that time is of the essence in performing the work stipulated in the Agreement. Should CONTRACTOR fail to meet the completion dates set forth in the Agreement, OWNER will suffer added administrative and engineering costs, the necessity of adjusting its start-up program for employing the improvements constructed pursuant to this Agreement along with substantial costly inconveniences, thereby reducing the value to OWNER of this Agreement. Thus, for each day by which CONTRACTOR fails to meet a completion date, CONTRACTOR'S compensation shall be reduced by the following amount of liquidated administrative cost damages per day.

Item	Damages
Substantial Completion	$500.00
Completion of Work	$500.00

In the event that the Substantial Completion date has surpassed the Final Completion date, the liquidated damages shall be cumulative. Owner's identification of the liquidated damage figure does not include a component for fines or administrative penalty from governmental agencies.

2. The CONTRACTOR shall guarantee that he can and will complete the work within the time limit stated in this Contract or within the times as extended as provided elsewhere in this Contract. For the reason that the damage and loss and additional expenses, fees, etc., to the OWNER which will result from the failure of the CONTRACTOR to complete the work within the stipulated time, and will be most difficult or impossible to accurately assess the CONTRACTOR shall be assessed liquidated damages for each calendar day including Saturdays, Sundays, and holidays by which the CONTRACTOR shall fail to complete the work of any part thereof, in accordance with provisions hereof and such liquidated damages shall not be considered as a penalty. The OWNER will deduct and retain out of any money due or to become due hereunder the amount of the liquidated damages, and in case these amounts are less than the amount of liquidated damages, the CONTRACTOR shall be liable for the payment of the difference upon demand of the OWNER.

3. It is agreed that time is of the essence of each and every portion of the work wherein a definite and certain length of time is fixed for the performance of any act whatsoever; and where, under the Agreement, an additional time is allowed for completion of any work, the new time limit fixed by such extension shall be of the essence of this Agreement; provided that the CONTRACTOR shall not be charged with liquidated damages or any excess cost when the delay in completion of the work is due:
   a. To any preference, priority or allocation order duly issued by the Government.
   b. To any unforeseeable cause beyond the control and without the fault or negligence of the CONTRACTOR, including, but not restricted to, acts of God or of a public enemy, acts of the OWNER, acts of another CONTRACTOR in the performance of

an Agreement with the OWNER, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and unusually severe weather; and

c. To any delays of Subcontractors or suppliers occasioned by any of the causes specified in sub-sections 1) and 2) of this Article.

4. All claims for an extension of the Contract Time must conform to the requirements of G.C. Article 12. The granting of an extension of the Contract Time is not a requisite to relieving the CONTRACTOR from the assessment of liquidated damages.

C. Archeological Discoveries

1. When the CONTRACTOR'S excavating operations encounter remains of prehistoric people's dwelling sites or artifacts of historical or archeological significance, the operations shall be temporarily discontinued. The ENGINEER will contact archeological authorities to determine the disposition thereof. After consultation with the archeological authorities, the ENGINEER may elect to discontinue the work in the area indefinitely, resume normal excavation, or excavate for artifacts. When directed by the ENGINEER to excavate for artifacts, the CONTRACTOR shall excavate the site in such a manner as to preserve the artifacts encountered and shall remove them for delivery to the custody of the proper authorities. Such excavation will be considered and paid for as extra work.

D. Chemicals, Substances, and Materials in Contact with Potable Water

1. All chemicals, substances, and materials that come in contact with potable water shall conform to Ohio Administrative Code OAC 3745-83-03 which reads as follows:

"All chemicals, substances, and materials added to or brought in contact with water in or intended to be used in a public water system or used for the purpose of treating, conditioning, altering, or modifying the characteristics of such water shall be shown by either the manufacturer, distributor, or purveyor to be non-toxic and harmless to humans when used in accordance with the formulation and concentration as specified by the manufacturer, and shall conform with the "American National Standards Institute/National Sanitation Foundation" (ANSI/NSF) standard 60 or 61. Any organization certified by the "American National Standards Institute" may certify in writing that a product conforms with these standards.

All chemicals, substances, and materials approved by the Ohio Environmental Protection Agency prior to the effective date of this rule shall retain approval for one year."

2. The two organizations that are currently certified by the "American National Standards Institute" are:
   a. NSF International: Phone (313) 769-8010
   b. Underwriters Laboratories, Inc. Phone (708) 272-8800

E. Chemicals, Substances, and Materials in Contact with Potable Water

1. All chemicals, substances, and materials that come in contact with potable water shall conform to Ohio Administrative Code OAC 3745-83-03 which reads as follows:

"All chemicals, substances, and materials added to or brought in contact with water in or intended to be used in a public water system or used for the purpose of treating, conditioning, altering, or modifying the characteristics of such water shall be shown by

either the manufacturer, distributor, or purveyor to be non-toxic and harmless to humans when used in accordance with the formulation and concentration as specified by the manufacturer, and shall conform with the "American National Standards Institute/National Sanitation Foundation" (ANSI/NSF) standard 60 or 61. Any organization certified by the "American National Standards Institute" may certify in writing that a product conforms with these standards.

2. The two organizations that are currently certified by the "American National Standards Institute" are:
   a. NSF International: Phone (313) 769-8010
   b. Underwriters Laboratories, Inc. Phone (708) 272-8800

SECTION 00 7343

WAGE RATE REQUIREMENTS

PART 1 GENERAL

1.1 REFERENCE

A. Prevailing wage rates, as determined by the United States Department of Labor for Warren County, the county in which the project is located, shall be used in accordance with the provisions of the Davis-Bacon Wage determinations as provided in 29 CFR 1.5 and 1.6(b). A copy of these rates is attached.

1.2 USE

A. Keep posted at all times throughout the Contract period the wage rate pages that are effective at the time of Bid opening.

B. Maintain, throughout the construction period, a legible up-to-date copy. Post in a conspicuous place accessible to workers and protected from the weather.

C. The successful Bidder shall be required to conform to all provisions of the Federal Davis-Bacon and Related Acts (The Act) which requires that all laborers and mechanics employed by contractors and subcontractors performing on federal contracts (and contractors and subcontractors performing on federally assisted contracts under the related ACTS) in excess of $2,000 pay their laborers and mechanics not less than the prevailing wage rates and fringe benefits, as determined by the Secretary of Labor, for corresponding classes of laborers and mechanics employed on similar projects in the area.

D. All Bidders must abide by the latest prevailing wage rate listing effective at the time of Bid opening.
